Foreword

Though the year 2009 was a gloomy one in terms of the deep recession that gripped the globe and the H1N1 flu pandemic that infected hundreds of thousands, the year also offered a chance to reflect upon the 200th anniversary of the births of two historical giants—Abraham Lincoln and Charles Darwin—who were born on the same day in 1809, as well as the 40th anniversary of the musical experience that became known as Woodstock. Though Mexico grappled with ferocious drug wars, Pakistan battled Islamist extremists, and the recruitment of child soldiers remained a scourge, the future looked promising in some respects. China prospered; electric cars geared up; and unmanned aerial vehicles helped fight wars and defend borders. In the sciences, autism therapies were tailored for youngsters, primate research became a key to understanding what it means to be human, and “Ardi,” a possible ancestor older than the hominin skeleton Lucy, captured headlines. All of these topics are featured in Special Reports.

Safety also became a byword during the year as the National Football League adopted new rules to protect players, particularly quarterbacks; central banks and regulatory bodies adopted measures to avert another banking crisis, such as the one experienced in 2008–09; the Chalk River nuclear reactor in Ontario experienced a long-term shutdown (probably into 2010) following a power outage and the detection of heavy water; and the Australian Country Fire Authority urged homeowners to vacate their properties rather than defend them following the deadly bushfires in February that claimed 173 lives on “Black Saturday.” In the swimming world, the advent of nontextile swimwear led to the smashing of hundreds of records. The Cuban Revolution marked a record of its own—a 50-year anniversary. In India, elections gave the governing Congress Party a stronger mandate. Meanwhile, the online microblogging service Twitter became a worldwide sensation as devotees “tweeted” in 140-character submissions, and the service’s users became adept at circumventing censorship, especially during the Iranian elections.

The arts and music world experienced a particularly grave loss of talent with the deaths of American painter Andrew Wyeth, German-born American composer Lukas Foss, American author John Updike, and pop superstar Michael Jackson. Also leaving the scene were Walter Cronkite, the dean of American journalism, and Edward Kennedy, the lion of the U.S. Senate. People in the news include U.S. Supreme Court Justice Sonia Sotomayor, Ponzi schemer Bernie Madoff, boxing phenomenon Manny Pacquiao, singing sensations Susan Boyle and Taylor Swift, and first lady Michelle Obama.

I thus offer the *Britannica Book of the Year 2010*—a compilation of those events and milestones of 2009 that stimulated our imaginations and provoked controversy. Was 2009 the end of the decade?

January

“

In reaffirming the greatness of our nation, we understand that greatness is never a given. It must be earned.

Our journey has never been one of shortcuts or settling for less.

”

U.S. Pres. Barack Obama
in his inauguration address, January 20

1 With the beginning of the new year, the Czech Republic, led by Prime Minister Mirek Topolánek, assumes the presidency of the European Union.

Russia ceases shipment of natural gas to Ukraine; the previous day Ukraine had rejected sharp price increases demanded by Russia.

The Green Zone, a 14.5-sq-km (5.6-sq-mi) area in Baghdad that has been the centre of the U.S. occupation, is turned over to Iraqi control.

Two newspapers in Mexico report that more than 5,000 people were killed by gangsters in drug-related violence in 2008, more than twice as many as died in 2007.

2 The government of Sri Lanka announces that its military has captured the city of Kilinochchi, the administrative centre of the Liberation Tigers of Tamil Eelam.

At a gathering of leaders of a large tribe in Yusufiyah, Iraq, to discuss national rec-

onciliation, a suicide bomber kills at least 24 people.

3 After a week of aerial and naval assaults against Hamas targets in the Gaza Strip, Israeli troops and tanks cross the border into Gaza, initiating a ground war there.

John Atta Mills is declared the winner of the runoff presidential election held in Ghana in late December 2008.

4 A suicide bomber detonates his weapon among a crowd of pilgrims visiting a Shi'ite shrine in Baghdad; at least 40 people, many of them Iranians, are killed.

For the second time since it halted natural gas delivery to Ukraine, Russia raises the price that it requires Ukraine to pay for delivery of the fuel.

5 India gives Pakistan evidence that the terrorists who attacked

Mumbai (Bombay) in November 2008 were linked to Pakistan; it demands that those responsible be tried in India.

The new U.S. embassy compound in Baghdad is dedicated; it is the largest U.S. embassy in the world.

At a meeting of the American Astronomical Society, researchers report their finding that the Sun is moving more quickly around the

centre of the Milky Way Galaxy than had been believed, which indicates that the Galaxy is approximately as large as Andromeda, much larger than previously thought.

6 Some 40 Palestinians are killed by Israeli shelling outside a UN educational facility that was being used as a refuge in the Gaza Strip.

Nearly all natural gas delivered from Russia through Ukraine to Europe and Turkey is halted.

Sheikh Hasina Wazed takes office as prime minister of Bangladesh; she previously held the post in 1996–2001. (Photo left.)

In South Korea opposition lawmakers end a 12-day occupation of the parliament building after successfully blocking a vote on a free-trade agreement with the U.S. as well as other legislation.

U.S. Pres. George W. Bush creates the largest marine reserve in the world, totaling

Qamruzzaman—Xinhua/Landov

505,773 sq km (195,280 sq mi) in area, by designating the Mariana Trench, Pacific Remote Islands, and Rose Atoll as marine national monuments.

At the Macworld Expo trade show in San Francisco, Apple official Philip W. Schiller announces that anti-copying software will be removed from songs in its iTunes Store, that record companies may set a variety of prices for songs, and that users of iPhones will for the first time be able to download songs from iTunes over wireless networks.

7 B. Ramalinga Raju resigns as chairman of giant outsourcing company Satyam Computer Services in one of India's largest-ever accounting scandals.

North Korea sets legislative elections for March 8; the decision had been postponed for several months.

Violent protests take place in Oakland, Calif., where demonstrators are angry over the slow response to an incident in which an unarmed young black man was shot and killed early on January 1 by a transit policeman on the platform of a Bay Area Rapid Transit station.

The centenary of the U.K.'s domestic intelligence agency, MI5, is marked by the first-ever interview of the agency's head by the press as Jonathan Evans meets with reporters at MI5 headquarters in London.

8 The Bank of England lowers its benchmark interest rate by half a percentage point, to 1.5%, in an effort to help the economy of the U.K., which is in recession for the first time in 17 years; the interest rate

is at its lowest level since the founding of the bank in 1694.

Venezuela's central bank reports that the country's rate of inflation in 2008 was 30.9%, higher than it had been for more than a decade.

The U.S. Department of Labor releases statistics showing that the number of people receiving unemployment benefits at the end of 2008 reached 4.61 million, the highest number since November 1982.

The University of Florida defeats the University of Oklahoma 24-14 in college football's Bowl Championship Series title game in Miami to win the NCAA Football Bowl Subdivision championship.

9 The *Sirius Star*, a Saudi-owned supertanker that was seized by Somali pirates in November 2008, is released in return for the payment of \$3 million in ransom; however, a boat carrying pirates to shore capsizes, which results in the drowning of five of the pirates and the loss of some of the ransom money.

Julie L. Gerberding resigns her post as head of the U.S. Centers for Disease Control and Prevention.

Former U.S. treasury secretary Robert E. Rubin resigns as an adviser to the board of banking giant Citigroup, which is negotiating to sell its brokerage business Smith Barney to financial services provider Morgan Stanley.

10 Israel warns residents of the Gaza Strip that it intends to intensify its operations against Hamas, which

have so far left some 820 Palestinians dead, while heavy rocket fire from Gaza into Israel continues.

11 At the Golden Globe Awards in Beverly Hills, Calif., best picture honours go to *Slumdog Millionaire* and *Vicky Cristina Barcelona*; the award for best director goes to Danny Boyle for *Slumdog Millionaire*.

12 Pres. Lee Myung-Bak of South Korea and Prime Minister Taro Aso of Japan agree to embark on a program of economic cooperation in view of the global economic crisis.

An appellate court in South Africa rules that charges against African National Congress (ANC) leader Jacob Zuma should not have been dismissed and thereby makes it possible for the charges to be reinstated.

Health officials in Minnesota report that they have linked an outbreak of salmonella that has affected some 400 people in 43 states with peanut butter that is sold to institutions.

13 Ethiopian troops complete their withdrawal from Mogadishu, Som.; various Islamist groups, notably al-Shabaab, take over vacated posts, and fighting between Islamist forces and Ethiopian troops leaves at least 15 people dead.

Some 10,000 people demonstrate in Riga to show their unhappiness with the troubled economy and with corruption in government in Latvia; rioting erupts.

Carol Bartz, executive chairman of the design software company Autodesk, is cho-

sen as CEO of Internet company Yahoo!.

14 Protests against economic conditions in Sofia, Bulg., turn violent.

The U.S. Supreme Court rules that evidence found by arresting officers who had been misled by a computer file that had not been updated into believing that there was an outstanding warrant for the defendant is not subject to the exclusionary rule and can be used in trial.

After several days of severe flooding in Fiji, the country's sugar farms have been decimated, 9,000 people have been evacuated, and at least 11 people have died.

Nortel Networks, once one of the biggest telecommunications equipment makers in the world, files for bankruptcy protection in Canada, where it is based.

15 Israeli armed forces shell a hospital run by the Palestine Red Crescent Society and the headquarters of the United Nations Relief and Works Agency in Gaza City; another attack kills Said Siam, the head of Hamas security forces.

The U.S. Senate votes to allow the release of the second half of the fund created for the rescue of financial institutions affected by the subprime lending debacle.

Science Express, the online component of *Science* magazine, publishes a report by a team of scientists who found that the atmosphere of Mars contains methane, a gas that would decompose quickly in the Martian environment; the presence of the gas indicates that the planet is geologically alive or contains biological life.

A U.S. Airways A320 jet loses power in both engines because of bird strikes shortly after taking off from New York City's La Guardia Airport; pilot Chesley B. Sullenberger III successfully lands the plane in the Hudson River, and all 155 aboard are safely rescued. (Photo right.)

16 A demonstration in Vilnius by thousands of people opposed to proposed adjustments to economic austerity in Lithuania turns into rioting.

A 20-year sentence for corruption imposed in 2003 against Arnaldo Alemán, who was president of Nicaragua in 1997–2002, is overturned by the country's Supreme Court.

The American electronics retailer Circuit City Stores, with 567 outlets and 34,000 employees, announces that it is going out of business.

17 Israel declares that it will begin a cease-fire early the following day in its operations against Hamas in the Gaza Strip; some 1,200 Palestinians and 13 Israelis have died during the 22-day operation.

The organization Human Rights Watch details massacres in which at least 620 people have been slaughtered by the Lord's Resistance Army militia group in the Democratic Republic of the Congo over the past month.

The Dakar Rally, which began January 3 in Buenos Aires with some 530 teams who followed a 9,574-km (5,949-mi) loop that took them south and into Chile and then back to Buenos Aires, concludes; the winners are South African driv-

er Giniel De Villiers in a Volkswagen automobile, Spanish driver Marc Coma on a KTM motorcycle, Russian driver Firdaus Kabirov in a Kamaz truck, and Czech driver Josef Machacek in a Yamaha ATV.

18 Prime Minister Vladimir Putin of Russia and Prime Minister Yuliya Tymoshenko of Ukraine reach an agreement on the price that Ukraine will pay for Russian natural gas; previous accords have fallen through, and at least 12 people have frozen to death while some 20 countries are cut off from gas supplies from Russia.

McKee Foods Corp. recalls Little Debbie brand peanut butter crackers; the previous day the U.S. government had advised consumers to avoid cookies, cakes, and other items made with peanut butter paste, much of which comes from the Blakely, Ga., plant of the Peanut Corp. of America that has been implicated in a large salmonella outbreak.

19 In the Swat valley in Pakistan, five schools closed for winter vacation are bombed; authorities believe the culprits are Taliban fighters

determined to prevent the education of girls.

Prominent Russian human rights lawyer Stanislav Markelov and a freelance reporter for the independent newspaper *Novaya Gazeta* are shot down in broad daylight in Moscow.

20 Barack Obama is inaugurated as the 44th president of the United States before what is perhaps the largest crowd ever to attend a presidential inauguration.

A partnership is announced between troubled American car company Chrysler LLC and the Italian automobile manufacturer Fiat, which will acquire a stake in Chrysler and will sell its Fiat and Alfa Romeo brand cars in Chrysler dealerships.

21 Hillary Rodham Clinton is confirmed as U.S. secretary of state, and Janet Napolitano is sworn in as U.S. secretary of homeland security.

Former KGB agent and now wealthy capitalist Aleksandr Y. Lebedev announces that he will buy a majority stake in the iconic London newspaper *The Evening Standard*.

The online marketplace company eBay reports its first-ever revenue decline.

Richard D. Parsons is named chairman of financial services giant Citigroup.

22 Japan reports that its export rate in December 2008 fell drastically, while China announces a sharp slowdown in growth in the final quarter of the year, and South Korea says that its economy shrank in the same period; all these results are related to the economic crisis in the U.S. and Europe.

U.S. Pres. Barack Obama signs executive orders requiring that the military prison at Guantánamo Bay in Cuba be closed within a year, insisting that interrogation methods fall within the guidelines of the Army Field Manual, and ending the CIA's secret overseas prison program.

To the surprise of observers, Rwandan military forces capture Laurent Nkunda, the Tutsi warlord who has terrorized the eastern region of the Democratic Republic of the Congo for several years, during most of which time he was supported by Rwanda.

Prosecutors in India claim that B. Ramalinga Raju, the former head of the outsourcing company Satyam Computer Services, whose clients include a third of the Fortune 500 companies, confessed to falsely claiming more than 10,000 more employees than the company had and buying land with the money paid to the imaginary employees.

The computer software behemoth Microsoft, for the first time in its 34-year history, announces a major lay-off; it plans to shed about 5% of its workforce, amounting to some 5,000 employees.

23 The British Office for National Statistics releases data showing that the U.K. officially went into recession in the final quarter of 2008, and Spain's National Statistics Institute reveals that the country's unemployment rate during the last quarter of 2008 reached 13.9%, the highest in the euro zone.

The biggest wind-power complex that has been built in Latin America is ceremonially inaugurated along the southern coast of Mexico's Isthmus of Tehuantepec.

DC Comics announces that beginning in April the monthly satiric magazine *Mad* will begin publishing only quarterly.

24 A suicide car bomber detonates his weapon near an African Union peacekeeping base in Mogadishu, Som., as a public bus is passing; at least 15 people are killed.

Pope Benedict XVI revokes the excommunications of four bishops who were consecrated in 1988 without

Vatican permission by Archbishop Marcel Lefebvre, who opposed the reforms of the Second Vatican Council; one of the bishops has denied that the Holocaust took place.

25 A new constitution supported by Pres. Evo Morales is approved in a voter referendum in Bolivia.

The Sri Lankan military reports that it has taken control of Mullaitivu, the last major town controlled by the Liberation Tigers of Tamil Eelam.

26 The coalition government of Iceland falls, a victim of the collapse of the country's economy.

The Islamist insurgent group al-Shabaab takes control of Baidoa, the seat of Somalia's transitional national government, and the following day announces the imposition of Shari'ah rule.

Tens of thousands of protesters riot in the streets of Antananarivo, Madag., to demand the resignation of the government in response to the shutdown of a television channel owned by the head of the opposition; at least 25 people are killed.

Timothy F. Geithner is confirmed and sworn in as U.S. secretary of the treasury.

A merger of the pharmaceutical companies Pfizer Inc. and Wyeth is announced by Pfizer CEO Jeffrey B. Kindler; some 19,000 people will be laid off in the combined company, which will be the fourth largest in the U.S.

At Thoroughbred horse racing's 2008 Eclipse Awards, Curlin is named Horse of the Year for the second consecutive year.

In the field of children's literature, the Newbery Medal is awarded to Neil Gaiman for *The Graveyard Book*, and Beth Krommes wins the Caldecott Medal for her illustrations for *The House in the Night* by Susan Marie Swanson.

27 The U.K. offers a package of £2.3 billion (about \$3.2 billion) in aid to the faltering automobile manufacturers Jaguar Land Rover, owned by India's Tata Motors, and Vauxhall, owned by General Motors of the U.S.

Metropolitan Kirill of Smolensk and Kaliningrad is chosen by more than 700 delegates to replace the late Aleksey II as patriarch of the Russian Orthodox Church; he is to be enthroned on February 1.

28 The U.S. House of Representatives passes an \$819 billion economic stimulus package supported by Pres. Barack Obama.

The World Economic Forum convenes in Davos, Switz., in an atmosphere of crisis.

The Peanut Corp. of America expands its recall of goods to include all peanut butter products made since Jan. 1, 2007, at its now-closed plant in Blakely, Ga.; the salmonella outbreak identified as having originated at the plant has caused at least eight deaths.

29 Afghanistan's Independent Election Commission postpones the country's presidential election until August 20, saying it would be impossible to be ready sooner; the constitution requires that an election be held at least 30 days

before May 22, when Pres. Hamid Karzai's term of office ends.

The Illinois state Senate votes unanimously that Gov. Rod Blagojevich is guilty of abuse of power and removes him from office; Pat Quinn becomes governor in his place.

Ford Motor Co. reports that it suffered a net loss of \$14.6 billion in 2008, a record for the company.

30 Morgan Tsvangirai agrees to become prime minister of Zimbabwe in a coalition government with Pres. Robert Mugabe; the Southern African Development Community pushed for this solution to the impasse.

North Korea announces the nullification of all of its previous agreements with South Korea.

Grigol Mgaloblishvili resigns as prime minister of Georgia.

31 In Djibouti, Somalia's transitional legislature elects Sheikh Sharif Sheikh Ahmed, former head of the Islamic Courts Union, president; the news is greeted with exultation in Mogadishu.

Andry Rajoelina, mayor of Antananarivo, announces that he is now president of Madagascar; Pres. Marc Ravalomanana disagrees.

Elections to provincial councils are held throughout Iraq in relative peace.

American Serena Williams defeats Dinara Safina of Russia to win the Australian Open women's tennis championship; the following day Rafael Nadal of Spain defeats Roger Federer of Switzerland to win the men's title.

February

“*Hell in all its fury has visited the good people of Victoria. This is an appalling tragedy.*”

Australian Prime Minister Kevin Rudd in response to wildfires that have consumed 1,995 sq km (770 sq mi) and left dozens dead, February 8

1 Jóhanna Sigurðardóttir is sworn in as prime minister of Iceland at the head of a caretaker coalition government.

Michel Desjoyeaux of France crosses the finish line at Les Sables d'Olonne, France, to win the Vendée Globe around-the-world solo sailing race 84 days 3 hr 9 min after he started the 45,549-km (28,303-mi) journey, breaking the race record by more than 3 days; he is the first skipper to have won the race twice. (Photo below.)

In Tampa, Fla., the Pittsburgh Steelers defeat the Arizona Cardinals 27–23 to win the National Football League's Super Bowl XLIII.

2 A roadside bomb explodes near an African Union peacekeeping base in Mogadishu, Som., killing at least 20 people; the city's deputy mayor says that the peacekeepers responded by firing into a crowd of civilians, killing 39, but the peacekeepers deny that allegation.

At a meeting in Addis Ababa, Eth., Muammar al-Qaddafi of Libya is elected

chairman of the African Union.

Farmers from southern Crete attempt to reach government buildings in Athens with some 300 farm vehicles to demand greater economic help from the government; fighting with riot police takes place.

Eric Holder is confirmed as U.S. attorney general; he is the first African American to hold that position.

A government report in South Korea shows that the country's exports declined by a record 32.8% in January.

3 Iran announces that it has for the first time launched a satellite into orbit.

In Moscow, Kyrgyz Pres. Kurmanbek Bakiyev announces that he will close the Manas air base used by

the U.S. as a staging area for military forces in Afghanistan.

Carmakers report that new-car sales in the U.S. fell 37% in January in the industry's worst January figures since 1963.

The government of Madagascar removes Mayor Andry Rajoelina of Antananarivo from office; Rajoelina has been attempting to take over the country.

The International Court of Justice creates a new boundary between Romania and Ukraine in the Black Sea; about 80% of the disputed maritime area is awarded to Romania.

The government of Indonesia reports that the previous day it rescued some 200 ethnic Rohingya men who had been drifting in a wooden boat for close to three weeks and that 22 of the boat's passengers had perished during that time.

4 U.S. Pres. Barack Obama announces new rules that will cap the salary of top executives in companies receiving government financial assis-

Charles Platiau—Reuters/Landov

tance at \$500,000 and impose restrictions on bonus and severance pay for such company leaders.

In Puthukkudiyiruppu, Sri Lanka, the last operational hospital in the region where government forces are fighting the remnants of the Liberation Tigers of Tamil Eelam comes under fire, and patients, doctors, and other staff flee; it is thought that as many as 250,000 Tamil civilians are trapped in the war zone.

India signs an agreement with French energy company Areva that envisions Areva building and supplying a nuclear power plant in Jaitapur, Maharashtra state.

5 Scientists from Liberia and neighbouring countries announce that they will meet to try to find a way to contain a massive infestation of *Achaea catocaloides rena* caterpillars that is devastating forests and crops in northern Liberia.

A suicide bomber near a Shi'ite mosque in Dera Ghazi Khan, Pak., kills at least 24 people.

After the payment of \$3.2 million in ransom, the *Faina*, a Ukrainian ship carrying millions of dollars of military weaponry, is released by the Somali pirates who hijacked it in September 2008; the ship, which had been surrounded by U.S. warships to keep the pirates from unloading the weapons, arrives safely at Mombasa, Kenya, on February 12.

The journal *Nature* publishes a report describing the discovery in Colombia of a giant snake, dubbed *Titanoboa cerrejonensis*, that lived some 60 million years ago and was about 13 m (42 ft) long; the find also sheds light on the climate conditions in the

tropics during a time when the planet was much warmer than it is at present.

Pat Summitt, coach of the University of Tennessee Lady Vols women's basketball team, becomes the first NCAA Division I college basketball coach to win 1,000 games.

6 The U.S. Department of Labor releases figures showing that job losses in November and December were worse than previously reported, and job losses for January reached 598,000, the worst figure since December 1974; since the recession began in December 2007, 3.6 million jobs have disappeared.

The U.S. Food and Drug Administration approves a drug made with antithrombin, an anticlotting protein, extracted from the milk of goats that have been engineered with a human protein by GTC Biotherapeutics; the genetically engineered goats are also approved.

Nika Gilauri is confirmed as Georgia's prime minister by the legislature.

The Aragua Tigers (Tigres) of Venezuela defeat the Mazatlán Deer (Venados) of Mexico 5–3 to win baseball's Caribbean Series.

7 Supporters of opposition figure Andry Rajoelina clash with government troops in Antananarivo, Madag., and some 25 people are killed; the death toll in political violence is said to have reached 130.

8 Wildfires race through the Australian state of Victoria for a second day, consuming 1,995 sq km (770 sq mi) of forest and farmland, two towns, and 750 homes

and leaving at least 173 people dead; some of the fires are believed to have been deliberately set.

At the Grammy Awards in Los Angeles, the top winner is British and American duo Robert Plant and Alison Krauss, who win five awards, including album of the year for *Raising Sand* and record of the year for "Please Read the Letter"; the award for song of the year goes to Coldplay's "Viva la Vida," and the best new artist is British singer Adele.

9 As refugees fleeing the war zone in northern Sri Lanka are being searched by Sri Lankan soldiers at a checkpoint, a suicide bomber detonates her weapon, killing at least 28 people.

U.S. Attorney General Eric H. Holder, Jr., declares that the government will no longer seek to prosecute people distributing marijuana in compliance with state medical marijuana laws.

Data from the U.S. National Center for Health Statistics indicate that more babies were born in 2007 than in 1957, the height of the post-war baby boom, setting a new record.

Lance Mackey wins the Iditarod Trail Sled Dog Race for the third consecutive year, crossing the Burled Arch in Nome, Alaska, after a journey of 9 days 21 hours 38 minutes 46 seconds.

19 At a meeting in Tromsø, Nor., representatives of the U.S., Canada, Russia, Denmark, and Norway—all signatories of a 1973 treaty that limited polar bear hunting—issue a joint statement that the greatest long-term threat to the survival of polar bears is climate change.

Brazil's Supreme Court agrees to the creation of the Raposa Serra do Sol indigenous reserve, first established in 2005 by Pres. Luiz Inácio Lula da Silva, in Roraima state; this allows for the removal of rice farmers who petitioned to be permitted to remain in the 1.6 million-ha (4 million-ac) reserve.

Dad Mohammad Khan, a member of Afghanistan's legislature from Helmand province—together with three bodyguards and a local military commander—is killed by a roadside bomb outside Lashkar Gah.

20 The African Union suspends Madagascar's membership, saying that the country must restore a constitutional government within the next six months.

Former Puerto Rico governor Aníbal Acevedo Vilá is acquitted on all nine charges of corruption by a jury in San Juan.

The governing body of Formula 1 automobile racing announces that a new scoring method, in which the driver with the most wins would win the championship, will not be introduced until the 2010 season; the participating teams had objected to its immediate introduction.

21 Prime Minister Ferenc Gyurcsany of Hungary surprises observers by offering his resignation.

In Oakland, Calif., a man stopped by police opens fire, killing two officers; after a chase followed by a shootout, two more officers and the suspect are dead.

With its 17–15 defeat of Wales, Ireland wins its first

Six Nations Rugby Union championship, having achieved a won-lost record of 5–0.

22 Presidential and local elections are held in Macedonia; they are regarded as largely free and fair, and they result in the need for the holding of a presidential runoff.

When several men believed to be members of a motorcycle gang disembark from a plane in the airport at Sydney, they are ambushed by members of a rival gang, and a violent brawl ensues in the terminal; one man is beaten to death.

The 3,100-m (10,200-ft) volcano Mt. Redoubt in Alaska begins erupting, throwing ash on several cities north of Anchorage; it last erupted for a five-month period in 1989–90.

23 U.S. Secretary of the Treasury Timothy Geithner unveils a detailed and comprehensive three-part plan to help free banks from bad housing loans and mortgage-related securities; stock markets rise dramatically in response.

A suicide bomber kills at least 19 people at a wake in Jalawla, Iraq; earlier, at least 8 people died in a bomb explosion in the town of Abu Ghraib.

In an exciting final game, Japan defeats South Korea 5–3 in 10 innings in Los Angeles to win its second World Baseball Classic championship.

In New Delhi, Tata Motors introduces the much-anticipated Tata Nano, a small four-passenger fuel-efficient car that will sell for about \$2,230.

Bertrand Guay—AFP/Getty Images

24 The Czech Republic's legislature votes no confidence in Prime Minister Mirek Topolánek and his government; the Czech Republic holds the rotating presidency of the European Union.

Iranian-American journalist Roxana Saberi, who was arrested in Iran in January and accused of having worked after her press credentials had been revoked, reports that she has been told that she may remain imprisoned for months or years.

The winner of the Astrid Lindgren Memorial Award for Literature is announced as the Palestinian reading-promotion organization the Tamer Institute.

25 In a visit to Mexico, U.S. Secretary of State Hillary Rodham Clinton acknowledges that U.S. demand for illegal drugs and its failure to prevent arms from being smuggled from the U.S. into Mexico are significant contributing factors to the drug trade and the violence attending it in Mexico.

The U.S. Congress passes a law that will designate some 800,000 ha (2,000,000 ac) of public land in nine states as

protected wilderness area; the measure is signed on March 30.

Five days of battles between Islamic militants and Indian army troops in Kashmir have left some 25 combatants dead.

British photographer Paul Graham wins the Deutsche Börse Photography Prize for *A Shimmer of Possibility*, a 12-volume collection of photographic stories about life in the U.S.

26 A car bomb explodes in a market area in Baghdad; at least 16 people are killed.

Argentina's legislature approves a plan to hold legislative elections on June 28 instead of the previously agreed-on date of October 25.

The Norwegian Academy of Science and Letters awards its annual Abel Prize for outstanding work in mathematics to Russian-born French mathematician Mikhail L. Gromov for his contributions to geometry.

27 A suicide bomber detonates his

weapon in a mosque near Peshawar, Pak., during Friday prayers; the explosion causes the building to collapse, and some 40 people are killed.

Dylan Ratigan, who for five years has been the host of the CNBC television show *Fast Money*, suddenly leaves both the show and the network.

The Grand Palais in Paris opens an exhibition, "Tag," that celebrates graffiti art; among those represented are American graffiti artists Quick, Rammellzee, Seen, and Toxic. (Photo left.)

28 Researchers at the Munk Centre for International Studies at the University of Toronto reveal that they have found a sophisticated China-based computer-spying operation that has infiltrated some 1,300 computers in 103 countries; the network seems to be focused on the Dalai Lama, Tibetan exiles, and the governments of countries in South and Southwest Asia.

Well Armed wins the Dubai World Cup, the world's richest horse race, by a record 14 lengths.

29 Rick Wagoner resigns as chairman of the automobile manufacturer General Motors Corp., reportedly at the behest of the U.S. government's car industry task force.

A gunman invades a nursing home in Carthage, N.C., and kills seven elderly residents and a nurse before being stopped by police.

Volcano monitors report that the eruption of Mt. Redoubt in Alaska appears to have ended.

Oxford defeats Cambridge in the 155th University Boat

Race; Cambridge still leads the series, however, by 79–75.

Fiji wins the Hong Kong Sevens rugby title for a record 12th time with its 26–24 defeat of South Africa.

30 At the Arab League's annual summit, in Doha, Qatar, indicted Sudanese Pres. Omar al-Bashir is among the attendees, and other members express strong support for him.

U.S. Pres. Barack Obama announces that carmaker Chrysler LLC must complete a merger with Italian automobile company Fiat by April 30 and that General Motors has 60 days in which to greatly restructure itself, requiring major concessions from the United Auto Workers union, in order to remain eligible for government financial assistance.

31 Benjamin Netanyahu is sworn in as prime minister of Israel at the head of the country's largest-ever cabinet, which includes Avigdor Lieberman as foreign minister and Ehud Barak as minister of defense.

Mars500, an experiment in which six people will live in a facility under circumstances similar to what they would experience during a mission to Mars, with almost no outside contact for 105 days, begins in Moscow; the experiment is supported by, among others, the European Space Agency.

Computer-security experts say that the malicious Conficker computer program, which has infected at least 12 million computers and could operate the infected computers as a single entity called a botnet, has been making attempts to communicate with a control server.

April

“Taken together, these actions will constitute the largest fiscal and monetary stimulus and the most comprehensive support program for the financial sector in modern times.”

statement from the Group of 20 economic meeting, April 2

1 A protest against capitalism by some 4,000 people in London's financial district turns violent as some demonstrators attack the Royal Bank of Scotland building and fight with riot police.

•
The U.S. Department of Justice asks that the conviction of former U.S. senator Ted Stevens of Alaska for corruption be voided in light of new evidence of prosecutorial misconduct.

•
Sweden's legislature votes to permit same-sex couples to marry; the law will take effect on May 1, when Sweden will become the fifth country in Europe to allow gay marriage.

•
The television channel CBS announces the cancellation of the soap opera *Guiding Light*, broadcasting's longest-running scripted program; the final episode of the serial, which began on NBC radio in 1937 and moved to television in 1952, will air on September 18.

2 At the end of a meeting in London of the Group of 20 of the

world's major advanced and emerging economies, the members produce an agreement that, among other things, increases the resources available to the IMF by \$1.1 trillion, creates new regulations for hedge funds and rating companies, and sets new rules to govern the pay of bankers.

3 The U.S. Department of Labor reports that more than two million jobs were lost in the first quarter of 2009 and that the unemployment rate has reached 8.5%.

•
Datuk Seri Najib Razak is sworn in as prime minister of Malaysia the day after the resignation of Datuk Seri Abdullah Ahmad Badawi.

•
The Iowa Supreme Court lets stand a lower-court ruling that a law limiting marriage to heterosexual couples violates the civil rights of same-sex couples wishing to marry and thereby makes such marriages legally permissible.

•
After blocking the rear exit with a car, a gunman enters the American Civic Association

building in Binghamton, N.Y., where immigrants take classes in citizenship and language, and begins shooting; he kills 13 people before turning the gun on himself.

4 On a road that leads to a wealthy neighborhood in Islamabad, Pak., a suicide bomber attacks a post of paramilitary security personnel, killing eight officers; also, a missile attack from a U.S. drone kills 11 militants in North Waziristan, and shortly thereafter a suicide car bomber kills eight people near the capital of North Waziristan.

•
Ivan Gasparovic wins the runoff presidential election in Slovakia.

•
An ice bridge that is believed to hold the Wilkins Ice Shelf in Antarctica in place shatters at its narrowest point.

•
In a ceremony in Cleveland, the Rock and Roll Hall of Fame inducts solo musicians Jeff Beck, Bobby Womack, and Wanda Jackson, sidemen Bill Black, D.J. Fontana, and Spooner Old-

ham, and the groups Little Anthony and the Imperials, Metallica, and Run-DMC.

5 North Korea's test launch of a long-range missile rocket intended to put a satellite into orbit fails, though North Korea declares it a success; on April 13 the UN Security Council responds with a call for sanctions against the country to be strengthened.

•
A suicide bomber detonates his weapon at the entrance of a Shi'ite mosque in Chakwal, Pak., killing at least 26 people.

•
Lars Løkke Rasmussen takes office as prime minister of Denmark, replacing Anders Fogh Rasmussen, who is expected to become secretary-general of NATO.

•
Gjorge Ivanov is elected president of Macedonia in a runoff election with a turnout of only 43%.

6 In South Africa prosecutors drop corruption charges against African National Congress (ANC) leader Jacob Zuma.

Alessandra Tarantino/AP

A magnitude-6.3 earthquake centred on L'Aquila, Italy, causes widespread devastation; at least 294 people are killed, and some 60,000 are left homeless. (Photo above.)

A bomb goes off in a market in Baghdad's Sadr City neighbourhood, killing at least 11 people, while two bombings in a different neighbourhood leave at least 12 dead, and various other bombings bring the day's death toll up to 33.

The member countries of the European Union adopt restrictions on fishing intended to help the endangered bluefin tuna to return to a healthy population size.

The National Collegiate Athletic Association championship in men's basketball is won by the University of North Carolina, which defeats Michigan State University 89-72; the following day the University of Connecticut defeats the University of Louisville 76-54 to win the women's title, to become the fifth team in women's college basketball to achieve an undefeated season.

7 In Chisinau, Moldova, more than 10,000 young people attack government buildings and fight with police, protesting the apparent Communist vic-

tory in legislative elections held on April 5; the large crowd was convened via notices on Twitter and other social networking sites.

Jim Webb on August 16.

Armed forces in Yemen begin an offensive against Shi'ite rebels in Sa'dah province.

12 The Philippine military begins an offensive against two encampments of the militant Muslim organization Abu Sayyaf on Basilan island; at least 20 insurgents and 23 soldiers are killed.

The World Trade Organization rules that China's limits on imported books, movies,

and songs, which may be sold only through state-approved distributors, violate international trade rules.

It is reported that the *Arctic Sea*, a Maltese-flagged, Russian-crewed cargo ship carrying timber from Finland to Algeria, was apparently hijacked off Sweden on July 24 and has not been sighted since July 31; it was due in Algeria on August 4.

U.S. Pres. Barack Obama bestows the Presidential Medal of Freedom on 16 people, among them Sen. Edward M. Kennedy, former Supreme Court justice Sandra Day O'Connor, historian Joseph Medicine Crow, actor Sidney Poitier, tennis star Billie Jean King, and physicist Stephen Hawking.

13 The government of Taiwan for the first time agrees to accept foreign help in responding to the disaster caused by Typhoon Morakot.

The journal *Cell* publishes a study by a team at the Broad Institute who found a way to identify drugs that kill cancer stem cells but not other cells; the finding could lead to more effective ways to treat cancer.

14 Pakistani Pres. Asif Ali Zardari lifts the ban, in place since the period of British rule, on political organization and activity in the Federally Administered Tribal Areas.

The U.K. revokes self-rule in Turks and Caicos, removing its premier, cabinet, and assembly, suspending many provisions of the constitution, and imposing rule by its governor, who represents Queen Elizabeth II; the action is in response to pervasive corruption.

U.S. federal regulators seize the Colonial BancGroup in the largest bank failure of 2009 and broker its sale to North Carolina's BB&T Corp.

A riot breaks out in a state penitentiary housing federal inmates in Gómez Palacio, Mex.; 19 prisoners are killed.

The U.S. National Oceanic and Atmospheric Administration reports that the average temperature of the surface waters of the world's oceans in July reached 16.98 °C (62.56 °F), the highest temperature ever recorded.

15 In the city of Rafah in the Gaza Strip, fighting between Hamas security forces and members of the Warriors of God, a radical Islamist group that had taken over a mosque, ends with 22 people, including the leader of the Warriors of God, 'Abd al-Latif Musa, dead.

A suicide car bomb in Kabul, outside the headquarters of the NATO forces in Afghanistan and the Ministry of Transportation building, kills seven civilians.

At the Bethel Woods Center for the Arts in Bethel, N.Y., the 40th anniversary of the legendary Woodstock Music and Art Fair is celebrated with a concert by the so-called Heroes of Woodstock, bands that performed at, or otherwise had a connection with, the original three-day festival; among the performers is Levon Helm. *(Photo right.)*

16 The bodies of 18 Taliban militants are found in the streets of six towns in Pakistan's Swat valley.

Usain Bolt of Jamaica breaks his own world record

in the 100-m sprint by 0.11 sec with a time of 9.58 sec at the track-and-field world championships in Berlin.

At the Hazeltine National Golf Club in Chaska, Minn., Yang Yong-Eun of South Korea defeats Tiger Woods of the U.S. by three strokes in the Professional Golfers' Association championship to become the first Asian-born man to win a major golf tournament.

17 North Korea agrees to reopen its border with South Korea to tourism.

Government figures in Japan show that the country's economy grew by 0.9% in the second fiscal quarter of 2009, which means that Japan is no longer in recession.

In the Russian republic of Ingushetiya, a suicide truck

bomber rams the police headquarters in Nazran; at least 25 people are killed.

A person said to be the former wife of the groom confesses to having set fire to the women's tent at a wedding on August 15 in Al-Jahra, Kuwait; the fire consumed the tent and incinerated 41 people.

The Kenya Wildlife Service declares that the population of lions in the country has fallen to 2,000 from its 2002 total of 2,749 and that the species could disappear from Kenya within 20 years.

Russia reports that the missing cargo ship *Arctic Sea* has been found 483 km (300 mi) off Cape Verde; the crew is reported to be safe.

18 The UN World Food Programme says that in spite

of its efforts to provide food to people in Kenya suffering from a lengthy drought, some 1.3 million people there are still going hungry.

19 In Baghdad a powerful truck bomb explodes outside the Ministry of Finance, collapsing an elevated highway and killing at least 35 people; within three minutes a stronger explosion from a truck bomb at the Foreign Ministry kills a minimum of 60 people.

The major Swiss bank UBS agrees to disclose information to the U.S. Internal Revenue Service on 4,450 holders of secret accounts whom the U.S. suspects of tax evasion.

Germany introduces a program that is intended to make the country a leader in the use of electric cars, with a stated aim of having one million of the vehicles on the road by 2020.

20 A presidential election is held in Afghanistan in spite of Taliban intimidation; turnout is close to 40%.

'Abd al-Basit al-Megrahi, the only person convicted in the 1988 bombing of Pan Am Flight 103 over Lockerbie, Scot., returns to a hero's welcome in Libya after having been released from prison for compassionate reasons (he has terminal prostate cancer) by a magistrate in Scotland; Megrahi served 8 years of a 27-year sentence.

A law is enacted in Mexico that decriminalizes possession of small amounts of marijuana, cocaine, heroin, methamphetamine, and LSD.

Switzerland sells its stake in investment banking giant

Craig Ruttle/AP

UBS for about \$1.1 billion more than it paid to shore up the bank in October 2008.

At the track-and-field world championships in Berlin, Jamaican phenomenon Usain Bolt breaks his own record in the 200-m sprint by an astonishing 0.11 sec, with a time of 19.19 sec.

21 The Islamist militant organization al-Shabaab attacks an African Union peacekeeping base in Mogadishu, Som.; at least 24 people die in the ensuing battle.

Delegates to the national assembly of the Evangelical Lutheran Church in America in Minneapolis, Minn., vote to allow people in committed same-sex relationships to serve as clergy.

At a meeting of central bankers from around the world, the chairman of the U.S. Federal Reserve Board, Ben Bernanke, indicates that the worst of the global financial crisis may be over.

22 The government of Greece declares a state of emergency as wildfires that started the previous day near Grammatiko spread to Varnava and Marathon.

A fire, possibly started by a mosquito net's igniting from a candle used by a student for light by which to study, burns to death at least 12 girls in a dormitory at Idodi Secondary School in Tanzania.

23 On the occasion of the state funeral of former president Kim Dae-Jung, South Korean Pres. Lee Myung-Bak meets with a delegation of officials from North Korea who went to Seoul to pay their respects.

The Picasso Museum in Paris closes for an extensive renovation and expansion that is expected to take about two years.

England defeats Australia by 197 runs in a cricket Test match at the Oval in London to retake the Ashes series.

24 The Bank of Israel becomes the first central bank to raise its benchmark interest rate since the onset of the global financial crisis; it increases the rate by a quarter of a percentage point, to 0.75%.

In Iraq bombs attached to two buses traveling from Baghdad to Al-Kut go off, killing at least 20 passengers.

The U.S. government's popular cash-for-clunkers program ends; it provided financial incentives of up to \$4,500 to consumers who traded in old cars for new, more fuel-efficient ones.

25 Palestinian Prime Minister Salam Fayad presents a plan that maps out the government of a Palestinian state; it is intended to be in place within two years and is to be pursued in parallel with peace negotiations with Israel.

Stalwart liberal Sen. Edward M. Kennedy of Massachusetts dies at his home in Hyannis Port, Mass.

Argentina's Supreme Court strikes down laws mandating penalties for the private possession and use of marijuana by an adult.

Leaders of the Taliban in Pakistan acknowledge that the organization's leader, Baitullah Mehsud, was in fact killed in a missile strike on August 5.

26 Prime Minister Zinaida Greceanii of Moldova announces the resignation of the country's government.

A plan to create a system for voluntary organ donation is announced in China, where much of the need for organ transplantation goes unmet and organs that are available often come from executed prisoners or black-market sellers.

27 The U.S. Federal Deposit Insurance Corp. reports that the country's banking industry lost \$3.7 billion in the second fiscal quarter of 2009.

At a post in Pakistan on the main route for delivering supplies to NATO forces in Afghanistan, a suicide bomber ostensibly offering food to security officers gathering in the evening to break the Ramadan fast detonates his explosives, killing at least 22 people.

28 The International Atomic Energy Agency reports that Iran has increased its number of centrifuges for enriching uranium but has slowed its production of enriched uranium since June and that it has increased its cooperation with the agency in some but not all areas.

North Korea and South Korea agree to resume cross-border family reunions beginning in late September.

Iceland's legislature votes to allow the government to repay to the U.K. and The Netherlands some \$6 billion that the governments of those countries gave depositors who lost money in savings accounts in Icelandic banks when the institutions collapsed in 2008.

29 Suicide truck bombers kill 10 people at and near a police garrison in the Iraqi village of Hamad; another truck bomb, in Sinjar, leaves 4 people dead.

India's space agency loses contact with its lunar orbiter, Chandrayaan-1.

30 In legislative elections in Japan, the opposition Democratic Party of Japan wins a landslide victory with 308 of the 480 seats in the lower house; the Liberal Democratic Party had held almost uninterrupted power since the end of World War II.

A presidential election is held in Gabon; Ali Ben Bongo, the son of the late president, Omar Bongo, wins handily, though many Gabonese believe the election was rigged.

Former Israeli prime minister Ehud Olmert is indicted on three charges of corruption; all of the alleged incidents took place before Olmert was prime minister.

In Tulsa, Okla., Byeong-Hun ("Ben") An, age 17, wins the U.S. men's amateur golf championship; he is the youngest to have won.

The Park View team from Chula Vista, Calif., defeats the Kuei-Shan team from Taoyuan, Taiwan, 6-3 to win baseball's 63rd Little League World Series.

31 Turkey and Armenia announce that they have agreed to take steps toward establishing diplomatic relations.

The Walt Disney Co. announces that it will acquire the comic book publisher and movie studio Marvel Entertainment.

September

“

This is a savagery that can't be explained. What's going on with us here is horrible. The people are in shock here.

”

Thierno Maadjou Sow of the Guinean Organization for Human Rights, on the massacre of pro-democracy demonstrators in Conakry, September 28

1 The Afghan Electoral Complaints Commission declares that it has so far received more than 2,600 reports of vote fraud, including vote stealing; close to half of the votes from the August 20 presidential election in Afghanistan have been counted.

A ban on the purchase or import of frosted-glass incandescent light bulbs by retailers goes into effect throughout the European Union.

Pakistani forces destroy four bases belonging to the militant group Lashkar-e-Islam near the Khyber Pass, killing some 40 insurgent fighters.

Eurostat, the European Union's statistical agency, reports that the unemployment rate in the euro zone in July rose to 9.5%, its highest level in a decade.

2 A suicide bomber outside the main mosque in Mehtar Lam, Afg., kills at least 16 people, including Abdullah Laghmani, deputy director

of Afghanistan's intelligence service.

In Juárez, Mex., masked men carrying automatic guns invade a drug-rehabilitation centre and slaughter 18 recovering addicts; more than 300 people in the city died violently in August alone.

Members of a faction of the Sendero Luminoso (Shining Path) guerrilla organization shoot down an air force helicopter in Peru, killing three military personnel; the crew had been attempting to rescue soldiers wounded by the rebels earlier.

Greek Prime Minister Kostas Karamanlis announces that elections will be held early.

Vanuatu's electoral college elects Iolu Abil president of the country on the third ballot.

3 A belief that the August 30 presidential election was stolen leads to rioting in Port-Gentil, Gabon; the French embassy is set on fire.

South Korean Pres. Lee Myung-Bak replaces Prime Minister Han Seung-Soo with Chung Un-Chan as part of a cabinet shake-up.

The world premiere of *The Orphans' Home Cycle*, a three-part, nine-play work by Horton Foote, takes place at Hartford (Conn.) Stage.

4 A NATO air strike near Kunduz, Afg., called for by German forces, causes two fuel trucks that had been stolen by the Taliban to explode; scores of people are believed to have been killed, but it is unclear how many of them were militants and how many civilians.

The U.S. Bureau of Labor Statistics reports that that country's unemployment rate rose to 9.7% in August, its highest level in 26 years, in spite of a decreased number of job losses.

The journal *Science* publishes a study saying that the Earth's slow momentum toward an ice age in some 20,000 years has been abruptly and decisively

stopped by warming in the Arctic that began in 1900 and accelerated after 1950.

5 After two days of protests by Han Chinese who say that Uighurs have been stabbing people with needles, the Communist Party secretary of Urumqi, China, is removed from his post.

6 North Korea unexpectedly releases water from a dam on the Imjin River, which flows through both North and South Korea; the resultant wall of water sweeps away six South Koreans who were camping and fishing on the river.

Finnish driver Mikko Hirvonen is named the winner of the Rally Australia after time penalties are assessed against Sébastien Loeb, Dani Sordo, and Sébastien Ogier.

Manuel Zelaya, the deposed president of Honduras, contrives to reenter the country and takes up residence in the Brazilian embassy in Tegucigalpa.

The Philippine military seizes control of the main

camp of the Islamist group Abu Sayyaf on the island of Jolo; some 20 militants are killed.

An avant-garde staging of the Puccini opera *Tosca* by director Luc Bondy is booed by the opening-night audience at the Metropolitan Opera in New York City.

22 The U.S. Environmental Protection Agency issues new rules that from Jan. 1, 2010, will require the biggest emitters of greenhouse gases in the country to track and report to the agency their emissions; some 10,000 industrial sites and fossil-fuel suppliers will have to start reporting their emissions at the beginning of 2011.

Irina Bokova of Bulgaria is elected director general of UNESCO. (Photo below.)

The U.S. Food and Drug Administration bans the sale of cigarettes infused with chocolate, clove, and other such flavours.

Thibault Camus/AP

In a massive raid, police in Los Angeles arrest 45 suspected members of the violent Avenues street gang.

The heavy rain of the past several days in the southeastern region of the U.S. begins to taper off; most of the damage has occurred in Georgia, where at least eight people drowned.

23 Libyan leader Muammar al-Qaddafi gives a 90-minute address before the UN General Assembly in which he demands that a seat on the Security Council be opened for Africa and raises a large number of often bizarre other issues; about 75 minutes into the speech, his translator declares that he cannot go on.

A dust storm blankets Sydney and other parts of Australia's east coast with red dust; it is the worst such event Sydney has experienced since the 1940s.

24 Federal charges of having acquired and prepared explosive materials are brought against Najibullah Zazi.

The U.S. Federal Reserve decides to scale back two emergency lending programs that it put in place to shore up the faltering economy; the previous day it chose to slow a program intended to push down mortgage rates.

The journal *Science* publishes online a report that data from three different spacecraft indicate the presence on the Moon of water or of hydroxyl (one hydrogen atom plus one oxygen atom).

25 The Group of 20 countries with industrialized

and emerging economies agree to coordinate their economic strategies with each other in an effort to prevent future global meltdowns and to attempt to reach a new international trade agreement; it is also decided that global economic issues will now be discussed by the Group of 20 rather than by the Group of 7 industrialized countries.

Police in Mexico arrest five men, said to be members of the Sinaloa drug cartel, in connection with the killings of 45 people, including two massacres at drug-treatment centres in Juárez earlier in September.

Vlad Filat is sworn in as prime minister of Moldova.

26 Typhoon Ketsana strikes the main island of Luzon in the Philippines, causing massive flooding in Manila and leaving at least 464 people dead and some 380,000 homeless.

For the first time since late 2007, reunions of families that had been split up by the Korean War (1950–53) take place in a resort in North Korea.

Film director Roman Polanski is arrested in Switzerland in connection with a 1977 sex-offense conviction in the U.S., from where he fled before being sentenced.

27 Legislative elections in Germany result in a win for the ruling Christian Democratic Union; its coalition partner, the Social Democratic Party, loses ground.

28 As tens of thousands of people demonstrate in an association football (soc-

cer) stadium to demand democracy in Guinea, guard troops embark on a brutal rampage during which they viciously attack women and open fire on the rally, killing some 157 people.

Revisions to North Korea's constitution made in April are for the first time made public; Kim Jong Il is given the new title of supreme leader.

The large utility company Exelon announces that it will leave the U.S. Chamber of Commerce because of the chamber's opposition to government policies to limit greenhouse-gas emissions; it is the second major utility to take the step.

29 A magnitude-8.0 earthquake takes place under the South Pacific Ocean about the same distance from both American Samoa and Samoa, causing a tsunami that damages both island groups as well as Tonga and leaves at least 190 people, most of them in Samoa, dead.

Typhoon Ketsana makes landfall in Vietnam; at least 99 people are killed.

A roadside bomb destroys a bus traveling from Herat to Kandahar in Afghanistan; at least 30 passengers perish.

30 A magnitude-7.6 earthquake strikes some 50 km (30 mi) off the coast of Padang, Indon., collapsing buildings and killing at least 1,100 people.

To the shock of all concerned, the Penske Automotive Group ceases talks with the carmaker General Motors to acquire its Saturn unit; as a result, Saturn models will be discontinued, and all 350 Saturn dealerships will close.

October

“

My message today is very simple: Thank you, Ireland. Ireland has given Europe a new chance.

”

José Manuel Barroso, president of the European Commission, on learning that Ireland had approved the Lisbon Treaty, October 3

1 In a significant constitutional development, the first-ever Supreme Court of the United Kingdom is sworn in; the independent body replaces the Appellate Committee of the House of Lords.

After the resignation of nine ministers from the Social Democratic Party in reaction to the firing of the minister of the interior, Romania is left with a minority government.

A team of scientists reports the finding of a new hominin species, exemplified by a nearly complete skeleton dating from 4.4 million years ago in Ethiopia; the skeleton, dubbed Ardi and classified as *Ardipithecus ramidus*, is of a species that lived after the human line diverged from that of chimpanzees and has features that resemble those of extinct apes; “Ardi” was also at least somewhat bipedal and lived in a forest environment.

The Roscoe Wind Complex, with 627 turbines the world's largest wind farm, begins operations in Texas, generating 781.5 MW of electricity.

A huge and spectacular military parade in Beijing marks

the 60th anniversary of the proclamation by Mao Zedong of the People's Republic of China.

2 Voters in Ireland take part in a second referendum on the Lisbon Treaty to change the governing structure of the European Union; this time the pact is overwhelmingly approved.

The U.S. Department of Labor reports that the country's unemployment rate in September rose to 9.8%.

Al-Shabaab militants take control of the port city of Kismaayo in Somalia, ousting the militant group Hizbul Islam; the two groups previously shared control of the town.

At its meeting in Copenhagen, the International Olympic Committee chooses Rio de Janeiro as the site of the Olympic Games to be held in summer 2016.

3 Flood levels in the Indian states of Karnataka and Andhra Pradesh begin to recede after astonishingly heavy rains that left at least 221 people

dead in Karnataka and 63 dead in Andhra Pradesh.

Gustavo Dudamel of Venezuela conducts the Los Angeles Philharmonic in a free concert taking place at the Hollywood Bowl in his debut as the orchestra's artistic director.

4 Mohamed ElBaradei, head of the International Atomic Energy Agency, says that Iran has agreed to allow nuclear inspectors to visit its newly disclosed facility in Qom on October 25 and that it will engage in talks about exporting low-enriched uranium to be made into fuel for medical nuclear reactors.

Legislative elections in Greece result in a convincing victory for the opposition Panhellenic Socialist Movement party; Georgios Papandreou is sworn in as prime minister two days later.

With his win in the Prix de l'Arc de Triomphe, Irish colt Sea The Stars wins his sixth consecutive Group 1 race and becomes the only horse to have won the 2,000 Guineas, the Derby, and the Prix de l'Arc de Triomphe.

5 The U.S. Federal Trade Commission announces that under new rules to go into effect on December 1, people reviewing products in blogs, in social networks on the Internet, or on talk shows must disclose any relationship they have with advertisers, including having received gifts.

Rafael Ángel Calderón, who was president of Costa Rica in 1990–94, is convicted of embezzlement and sentenced to five years in prison.

At a conference organized by the environmental group Greenpeace in São Paulo, four major meat-producing companies agree to eschew the purchase of cattle from deforested areas of Brazil; Greenpeace has documented the link between increased cattle farming and expanded deforestation of the rainforest.

The Nobel Prize for Physiology or Medicine is awarded to Elizabeth Blackburn, Carol Greider, and Jack Szostak of the U.S. for their discoveries about the functioning of telomeres (structures at the ends of chromosomes) and of the enzyme telomerase.

6 Australia's central bank raises its benchmark interest rate a quarter percentage point, to 3.25%; it is the first member of the Group of 20 countries with industrialized or emerging economies to raise its rate.

International mediators announce an agreement whereby Andry Rajoelina will serve as president of a transitional government in Madagascar but will not be a candidate in elections to be held in 2010.

In Stockholm the Nobel Prize for Physics is awarded to Charles Kao of the U.K. for his work in developing the light-carrying properties of fibre-optic cables and to Americans Willard Boyle and George Smith for their invention of the charge-coupled device, the first digital sensor.

The Man Booker Prize goes to British writer Hilary Mantel for her historical novel *Wolf Hall*.

7 Italy's Constitutional Court rules that a law shielding Prime Minister Silvio Berlusconi and other top officials from prosecution in criminal cases while they hold office violates the constitution.

The Nobel Prize for Chemistry is awarded to Venkatesan Ramakrishnan of the U.K., Thomas Steitz of the U.S., and Ada Yonath of Israel for their research on the atomic structure and function of the ribosome, a cellular structure that transcribes DNA to make protein.

8 Landslides caused by Typhoon Parma in the Philippine provinces of Benguet and Mountain Province leave at least 193 people dead; inten-

tional dam releases to limit flooding caused some of the damage.

Maoist militants known as Naxalites ambush a patrol by 45 police commandos in Maharashtra state in India; 17 police officers are killed, and their weapons are taken.

The Nobel Prize for Literature is awarded to Romanian-born German writer Herta Müller.

9 A massive car bomb kills at least 48 people in Peshawar, Pak.; most of the dead were passengers in a public minibus that was alongside the car when it exploded.

The Nobel Peace Prize is awarded to U.S. Pres. Barack Obama.

The Phoenix Mercury defeats the Indiana Fever 94-86 in game five of the finals to win the Women's National Basketball Association championship by three games to two.

10 Militants dressed in military fatigues shoot their way into the Pakistani army headquarters compound in Rawalpindi, killing six people and taking several others hostage; by the time the siege has ended the following day, 23 people have been killed, but 42 hostages have been rescued.

In Zürich the foreign ministers of Armenia and Turkey ceremonially sign an agreement to establish diplomatic relations and to open their borders.

With his first-place finish in the Indy 300 race in Homestead, Fla., Scottish driver Dario Franchitti wins the overall IndyCar drivers' championship.

14 A truck bomb explodes at a police checkpoint in Peshawar, Pak., killing at least 12 people.

In an act of political theatre, a mock funeral is held for Venice by a group decrying the shrinking of the city's historic centre, the population of which has fallen from 108,300 in 1971 to 74,000 in 1993 to fewer than 60,000 in 2009. (Photo left.)

In Las Vegas, Manny Pacquiao of the Philippines defeats Miguel Cotto of Puerto Rico in a technical knockout in the 12th round to win the World Boxing Organiza-

Manuel Silvestri—Reuters/Landov

tion welterweight title, his seventh title in as many different weight classes.

In a tournament in Moscow, Magnus Carlsen of Norway becomes at age 18 the youngest person to hold the number one ranking in chess when he defeats Peter Leko of Hungary.

15 U.S. Pres. Barack Obama attends a summit meeting of the Association of Southeast Asian Nations (ASEAN) in Singapore, where he also engages in substantive talks with Russian Pres. Dmitry Medvedev and attends Asia-Pacific Economic Cooperation (APEC) talks; later he flies to Shanghai to meet with Chinese leaders.

Patriarch Pavle, since 1990 the head of the Serbian Orthodox Church, dies.

16 The government of Japan announces that the country's GDP grew at an annual rate of 4.8% in its third fiscal quarter, its second consecutive quarter of growth.

The automobile manufacturer General Motors announces that it will begin paying back to the U.S. government some of the \$50 billion it was given to keep it from going under.

The U.S. Preventive Services Task Force, an independent panel of experts, releases revised guidelines on mammograms: rather than having a mammogram every one to two years starting at age 40, as was recommended in 2002, women are now advised to have a mammogram every two years between ages 50 and 74.

Paul McCartney is named the winner of the third Gershwin Prize for Popular Song.

17 The legislature of Honduras declares that on December 2 it will vote on whether ousted president Manuel Zelaya should be restored to office until the end of his term in January 2010; a presidential election is scheduled to take place on November 29.

Israel announces that plans to build 900 housing units in a part of Jerusalem that Palestinians believe belongs to them have advanced closer to approval.

The U.S. Internal Revenue Service says that in the past few months 14,700 Americans have revealed their secret bank accounts in foreign banks; many are clients of the Swiss bank UBS.

The Original of Laura, an unfinished novel written by Vladimir Nabokov, is published in the U.S. and the U.K.

18 Tariq al-Hashimi, one of Iraq's two vice presidents, reports that the previous day he vetoed the election law passed by the legislature on November 8; all three members of the country's presidency council are required to approve the law for it to go into effect.

The National Book Award for fiction is presented to Colum McCann for *Let the Great World Spin*.

19 Belgian Prime Minister Herman Van Rompuy is elected to become the first president of the European Council under the Lisbon Treaty when it enters into force on December 1; he will serve a term of office of two and a half years.

Just outside the courthouse complex in Peshawar, Pak.,

a suicide bomber detonates his weapons when challenged by a police officer; at least 17 people are killed.

Egypt recalls its ambassador to Algeria amid complaints of violence following Algeria's defeat of Egypt the previous day in a World Cup qualifying association football (soccer) match in Khartoum, Sudan.

A report is published in the journal *Nature* on a study showing that the proportion of atmospheric carbon dioxide absorbed by the world's oceans has slowed since the 1980s and more dramatically since 2000; the carbon dioxide absorbed changes the ocean's chemistry to make it less able to absorb more.

20 In the city of Farah in western Afghanistan, a suicide bomber on a motorcycle kills at least 16 people in a marketplace.

Officials at Britain's University of East Anglia acknowledge that hackers have taken 13 years of e-mail messages from the servers of its Climatic Research Unit and made them public; many of the e-mails reveal contempt for those who are skeptical of the evidence for man-made global warming, and such skeptics say other e-mails show willingness on the part of the university researchers to manipulate data.

The legislature in Croatia ratifies an agreement with Slovenia that calls for international arbitrators to determine the border between the countries in the Adriatic Sea.

Rioting takes place outside the Algerian embassy in Cairo.

Pakistani authorities release the names of the more than 8,000 politicians who have benefited from an amnesty

decree issued in 2007 that dismissed past allegations of criminal activity; the decree will expire at the end of the week.

The second movie in the Twilight saga, *New Moon*, opens in midnight showings throughout the U.S.; it sets a box-office record for midnight openings.

Phenomenally popular television talk-show host Oprah Winfrey announces that she will end *The Oprah Winfrey Show* in September 2011, in its 25th season, to concentrate on her cable TV channel, OWN: the Oprah Winfrey Network.

21 A Sri Lankan government official declares that the 136,000 people still in government-run ethnic Tamil refugee camps will be permitted to leave the camps beginning December 1 and that the camps will be closed by the end of January 2010.

22 Voters in Romania choose to abolish the upper house of its legislature and reduce the number of seats in its lower house from 471 to 300; the presidential election, however, results in the need for a runoff.

After the final auto race of the season, Jimmie Johnson is crowned winner of the NASCAR drivers' championship for a record fourth year in a row.

Real Salt Lake wins the Major League Soccer title with a 5-4 victory in a penalty shoot-out over the Los Angeles Galaxy in the MLS Cup in Seattle.

23 In Maguindanao province on Mindanao island in the Philippines, in

what appears to be part of a feud between clans, members of the entourage of a gubernatorial candidate, consisting of relatives, supporters, and journalists, are abducted and massacred; the dead number at least 57.

Iranian Pres. Mahmoud Ahmadinejad meets with Brazilian Pres. Luiz Inácio Lula da Silva in Brasília, where they agree on cooperation in several areas; Ahmadinejad is the first Iranian leader to visit Brazil since 1965.

The first particle collisions are produced by the Large Hadron Collider near Geneva, sooner than had been expected; though the particles have energies of only 450 billion electron volts, scientists celebrate the milestone.

24 The U.S. Federal Deposit Insurance Corp. (FDIC) declares that as of the end of the third fiscal quarter on September 30, its deposit fund had a negative balance of \$8.2 billion.

A consortium led by Swedish carmaker Koenigsegg Group AB withdraws from an agreement to buy General Motors Corp.'s Saab division.

25 The government of Dubai in the United Arab Emirates and the conglomerate Dubai World ask to put off debt repayments for six months; the action causes a shock wave in the world's stock markets.

Formal charges are brought in Pakistan against seven people believed to be behind the attacks in Mumbai (Bombay) in November 2008 that killed at least 174 people.

Israeli Prime Minister Benjamin Netanyahu announces a planned 10-month morato-

Geert Vanden Wijngaert/AP

rium on new construction of housing in Jewish settlements in the West Bank.

Election officials in Haiti announce that the Lavalas Family, the political party founded by former president Jean-Bertrand Aristide, will be barred from participation in legislative elections scheduled for February 2010.

Yves Leterme is sworn in as prime minister of Belgium. (Photo above.)

A new constitution that would have replaced the British queen as head of state with a president chosen by the legislature is rejected in a referendum in Saint Vincent and the Grenadines.

26 Andal Ampatuan, Jr., the mayor of the Philippine city of Datu Unsay, surrenders to authorities in connection with the massacre of supporters of a rival politician three days earlier; 20 others have also been arrested.

Gen. Wolfgang Schneiderhan resigns as chief of staff of Germany's armed forces after German media reported that the military had been aware of civilian casualties in an airstrike in Afghanistan in September during the time that

it had denied that civilians had been killed; the following day Minister of Labour Franz Josef Jung, who had been defense minister at the time, also resigns.

27 The Nevsky Express, a luxury train traveling from Moscow to St. Petersburg, derails when it encounters a homemade bomb on the tracks; the explosion causes the deaths of at least 30 passengers.

The governing board of the International Atomic Energy Agency, meeting in Vienna, passes a resolution demanding that Iran immediately stop work at its nuclear enrichment plant in Qom.

Meeting in Rambouillet, France, French Prime Minister François Fillon and Russian Prime Minister Vladimir Putin sign several agreements on oil pipelines and automobile manufacturing.

Golf star Tiger Woods crashes his car into a fire hydrant and a neighbour's tree during an apparent domestic dispute in Florida; in the following weeks his personal life begins to unravel as infidelities are made public and his wife leaves him.

28 At the end of two days of voting, Pres. Hifikepunye Pohamba of Namibia wins reelection, and his party, the South West Africa People's Organization (SWAPO), gains the majority of seats in the legislature; both victories are landslides.

Rwanda becomes the 54th member of the Commonwealth of Nations.

29 A presidential election of questionable validity is held in Honduras; the con-

servative candidate, Porfirio Lobo, wins resoundingly.

The central bank of the United Arab Emirates announces that it will lend money to banks in Dubai in hopes of heading off a more general financial crisis caused by Dubai's inability to make timely payments on its debt.

José Mujica of the ruling Broad Front coalition wins the presidential runoff election in Uruguay.

Teodoro Obiang Nguema Mbasogo is overwhelmingly reelected president of Equatorial Guinea.

Voters in Switzerland ban the construction of minarets in the country.

Yokozuna Hakuho defeats *yokozuna* Asashoryu to win the Kyushu grand sumo tournament with a 15-0 record; Hakuho's 86-4 score for the year is a record number of wins in a single season.

30 A preliminary report is issued that shows the inflation rate in the euro zone in November to have reached 0.6%, its first rise above zero in five months; on November 13 data were released showing that the euro zone is no longer in recession, with 1.6% annualized growth in the third fiscal quarter.

Government figures show that Canada's economy grew at an annualized rate of 0.4% in the third fiscal quarter; the country thus joins those that have officially exited recession.

Beams of protons are sent at 1.18 trillion electron volts in the Large Hadron Collider near Geneva, setting a new record for proton acceleration; the previous record, not quite 1 trillion electron volts, was set at the Tevatron collider at Fermilab in Batavia, Ill.

December

“ *This progress did not come easily, and we know that this progress alone is not enough.* ”

U.S. Pres. Barack Obama,
announcing a limited agreement at the UN conference
on climate change in Copenhagen, December 18

1 U.S. Pres. Barack Obama in a nationally televised speech at the U.S. Military Academy in West Point, N.Y., lays out his plan for the war in Afghanistan, saying that he intends to send 30,000 extra troops in the next few months but will begin pulling the U.S. military out of the country in 2011.

South African Pres. Jacob Zuma addresses his country to describe a new approach to the AIDS epidemic that is in line with recommendations issued the previous day by the World Health Organization, including early treatment for HIV-positive pregnant women, babies, and those with tuberculosis; he urges the consistent use of condoms as well.

Hearings open at the International Court of Justice in The Hague on a petition by Serbia for the court to find that Kosovo's declaration of independence in 2008 was illegal.

2 The legislature of Honduras overwhelmingly votes to deny ousted president Manuel Zelaya the right to

finish out the final two months of his term of office.

The Bank of America declares that it will repay the U.S. government the \$45 billion in financial aid that it accepted during the worst of the financial crisis.

The state Senate of New York decisively votes down a bill to legalize same-sex marriage in the state.

3 Shooting breaks out in Conakry, Guinea, possibly between rival factions of the military, and the country's military ruler, Moussa Dadis Camara, is wounded in an apparent assassination attempt.

In Mogadishu, Som., a suicide bomber disguised as a veiled woman kills at least 15 people, including the ministers of education, health, and higher education, at a college graduation ceremony.

The European Central Bank decides to phase out low-interest loans intended to help keep banks solvent but to leave the benchmark interest rate at 1%.

Gold prices close at a record high of \$1,217.40 an ounce.

It is announced that an agreement has been reached that will see control of the media company NBC Universal pass from General Electric to the cable television company Comcast.

4 At a mosque attended by military officers in a secure area of Rawalpindi, Pak., several attackers make an assault with guns and grenades; at least 38 people, several of them high-ranking officers, are killed.

The U.S. Department of Labor reports that the unemployment rate in November decreased to 10% and that only 11,000 jobs were lost during the month.

5 Tens of thousands of people rally in Rome to demonstrate their displeasure with the administration of Italian Prime Minister Silvio Berlusconi.

The Strategic Arms Reduction Talks (START) treaty of

1991 between the U.S. and Russia expires; negotiations on a treaty to replace it continue.

In a case that has riveted Italy, American college student Amanda Knox and her Italian former boyfriend, Raffaele Sollecito, are found guilty of having murdered Knox's British roommate, Meredith Kercher, in 2007; Knox and Sollecito both receive lengthy prison sentences.

Spain defeats the Czech Republic 5-0 to win the Davis Cup in men's international team tennis for the second consecutive year.

6 Iraq's legislature reaches a new agreement on a law that will permit national elections to be held in 2010; the law expands the number of seats in the legislature from 275 to 325.

In elections in Bolivia, Evo Morales wins reelection as president by a comfortable margin, and his Movement Toward Socialism party wins a majority in both houses of the legislature.

Toby Melville—Reuters/Landov

In the runoff presidential election in Romania, Pres. Traian Basescu wins by a slim margin.

The annual Kennedy Center Honors are presented in Washington, D.C., to jazz musician Dave Brubeck, opera singer Grace Bumbry, filmmaker Mel Brooks, actor Robert De Niro, and rock musician Bruce Springsteen.

7 At a market in Lahore, Pak., the detonation of two bombs kills at least 49 people.

Britain's Turner Prize is presented in London to artist Richard Wright for work that includes a gold-leaf wall painting; Wright stresses the ephemerality of his work, which is always to be painted over at the conclusion of its exhibition. *(Photo right.)*

8 Five car bombings in Baghdad leave at least 121 people dead; on the same day, national elections in Iraq are set for March 2010.

Antigovernment protests and fights between the protesters and Basij militia members continue for a second day on university campuses in Iran.

The human rights group Amnesty International releases a report saying that in Mexico's drug wars, the country's army engaged in illegal killings, torture, and detentions; earlier reports by Human Rights Watch and similar organizations based in Mexico had raised similar issues.

Japanese Prime Minister Yukio Hatoyama introduces a new \$81 billion economic stimulus plan, saying that Japan's economy is in danger of falling back into recession.

The U.S. government announces a tentative settlement of a class-action suit brought in 1996 that accused the government of mismanaging American Indian trust funds; the complex settlement envisions payment from the government of \$3.4 billion.

9 Alistair Darling, British chancellor of the Exchequer, announces a one-time 50% tax on bonuses of more than £25,000 (about \$40,700) received by banking-company executives.

King 'Abdullah of Jordan accepts the resignation of Prime Minister Nader Dahabi and appoints Samir al-Rifai in his place; in November the king dissolved the legislature without setting a date for a new election.

After Indian politician K. Chandrasekhar Rao has engaged in a fast for 10 days and people in Hyderabad have staged a general strike, the national government accedes to their demands and agrees to begin the process of creating a new

state of Telangana from the southern portion of Andhra Pradesh.

10 Lebanon's legislature approves the new government and its policy platform, one part of which allows the militant group Hezbollah to retain its arms.

Switzerland permanently closes a geothermal project to extract renewable energy near Basel after a study is released showing that the project would likely generate earthquakes that would cause millions of dollars' worth of damage annually.

The CIT Group, which finances small and midsize companies, emerges from bankruptcy 38 days after entering.

The 120-m (394-ft) cable-stayed Samuel Beckett Bridge, designed by Santiago Calatrava, opens in Dublin.

11 The constitutional court in Turkey disbands the Democratic Society Party, the only pro-Kurdish political party, citing its cooperation

with the Kurdistan Workers' Party rebel organization.

Leaders of the European Union say that they will provide \$10.5 billion to help less-developed countries address the effects of global warming.

Beleaguered American golf star Tiger Woods announces on his personal Web site that he will take an "indefinite break" from playing professional golf.

12 Authorities in Bangkok seize a North Korean cargo plane loaded with weapons, including missiles, that had stopped to refuel en route to an unknown destination; the UN forbids the export of such weapons from North Korea.

Steer roper Trevor Brazile of Texas wins his seventh all-around cowboy world championship at the 51st annual Wrangler National Finals Rodeo in Las Vegas.

13 At a political rally in Milan, Italian Prime Minister Silvio Berlusconi is struck in the face by a man wielding a

souvenir model of Milan's cathedral; Berlusconi suffers a broken nose and broken teeth.

Sergei V. Bagapsh is reelected president of the separatist region of Abkhazia in Georgia; Georgia views the election as invalid, as ethnic Georgians living in Abkhazia are denied the vote.

14 Greek Prime Minister Georgios Papandreou announces an ambitious plan to revive Greece's economy, including a 90% tax on private-sector bank bonuses and a pledge to reduce federal spending by 10%.

The energy company Exxon Mobil agrees to buy the natural-gas producer XTO Energy.

In the United Arab Emirates, the emirate of Abu Dhabi, where the central government is located, agrees to grant the troubled emirate of Dubai a \$10 billion bailout.

Citigroup and Wells Fargo become the last major American banks to exit the federal Troubled Asset Relief Program as both declare that they will repay the money that they received from the fund.

Austria nationalizes the Hypo Group Alpe Adria bank to prevent its collapse, which would have had deleterious effects on the economies of Croatia, Serbia, and Slovenia.

Chinese Pres. Hu Jintao ceremonially opens a natural-gas pipeline that runs from Turkmenistan through Kazakhstan and Uzbekistan into China's autonomous region of Xinjiang.

15 The members of the Gulf Cooperation Council at a

summit meeting in Kuwait agree to launch a single currency similar to the euro in the region; the first step will be the creation of a monetary council in 2010.

In return for foreign aid from Russia, Nauru becomes the fourth country to recognize Abkhazia in Georgia as an independent country; the following day it extends recognition to South Ossetia as well.

16 Pakistan's Supreme Court rules as unconstitutional an amnesty created in 2007 for politicians charged with corruption; the decision affects some 6,000 people, including Pres. Asif Ali Zardari.

In view of the logistic impossibility of holding an election, the central council of the Palestine Liberation Organization indefinitely extends the term of office of Palestinian Authority Pres. Mahmoud Abbas as well as that of its currently non-functioning legislature.

It is reported that British singing sensation Susan Boyle's debut album, *I Dreamed a Dream*, has scored its third consecutive week at the top of the *Billboard* album chart.

The final leg of the farewell tour of venerable French rock hero Johnny Hallyday is canceled because of Hallyday's health difficulties.

17 The Yemeni military conducts strikes against al-Qaeda bases in the mountainous area of Abyan and in Sanaa; at least 34 militants are reportedly killed.

U.S. drone missile attacks in Pakistan's North Waziristan region kill at least 15 people.

18 At international climate talks in Copenhagen, the U.S., China, India, Brazil, and South Africa forge an agreement to be presented to the conference that calls for developed countries to reduce their greenhouse-gas emissions and to provide financial assistance to less-developed countries to monitor and report their greenhouse-gas emissions, and for the world to keep the global temperature from rising as far as 2 °C (3.6 °F) above preindustrial levels by 2050.

A law goes into effect permitting citizens of 25 of the member countries of the European Union to travel freely among those countries without the need for a visa.

Pres. Andry Rajoelina of Madagascar dismisses Prime Minister Eugène Mangalaza, replacing him with Cécile Manoroahanta; two days later he appoints Albert Camille Vital prime minister and rejects all power-sharing agreements.

The American car company General Motors announces that it will have to shut down its Saab division, based in Sweden, as it is unable to close a deal with a potential buyer.

The wrought-iron sign reading "Arbeit Macht Frei" ("Work Makes [You] Free") at the entrance to the Nazi death camp Auschwitz in Poland is stolen; it is found, cut into three pieces, three days later. (Photo above.)

19 Over the objections of the U.S. and the UN, Cambodia deports to China 20 Uighurs who had sought asylum in Cambodia.

20 A large protest by Maoists and their sympathizers in Kathmandu, Nepal, is met by riot police, and fighting breaks out; some 70 people are arrested.

The giant American radio broadcasting company Citadel Broadcasting Corp. files in New York City for bankruptcy protection.

21 Tens of thousands of people in Iran turn the funeral of Grand Ayatollah Hossein Ali Montazeri into an antigovernment protest.

Large protests continue for a second day in Nepal, which has been largely shut

down by a general strike called by Maoists.

Cambodia signs several agreements with China that involve investments by China in Cambodia worth some \$850 million.

The legislature of Mexico City passes a law giving same-sex couples the same rights as opposite-sex couples, including the rights to marry, adopt, and inherit.

22 Serbia applies for membership in the European Union.

Canada's Supreme Court issues two rulings that loosen the country's stringent libel laws, setting guidelines for responsible reporting that would not be construed as libel.

Gennady Pavlyuk, a well-known opposition journalist in Kyrgyzstan, dies of injuries he sustained when he was thrown out of a window in Almaty, Kazakh., where he had traveled on business; opposition politicians maintain that Kyrgyz Pres. Kurmanbek Bakiyev is behind the murder.

23 The UN Security Council imposes sanctions on Eritrea, saying that it supports Islamist militants in Somalia.

Mohammed Younus, a member of the House of Elders, the upper house of Afghanistan's legislature, is shot to death by Afghan police officers when he fails to stop at a checkpoint set up in an area in which fighting with militants had recently taken place.

24 Greece's legislature passes an austerity budget

in an attempt to rein in the budget deficit.

The Yemeni military makes an air strike against what is believed to be a gathering of al-Qaeda leaders in the southern part of the country; some 30 people are killed.

A report in the journal *Nature* analyzes the first genomes of the first 56 microbial species sequenced in the online Genomic Encyclopedia of Bacteria and Archaea, created by the Joint Genome Institute of the U.S. Department of Energy; the analysis yields nearly 2,000 new gene families.

The journal *Nature* publishes a report describing data from NASA's Voyager spacecraft as they exit the solar system, which show that the Local Interstellar Cloud just outside the solar system is extremely strongly magnetized, allowing it to withstand the pressure of the hot gas surrounding it; physicists had been at a loss as to how the cloud was able to survive.

25 As Northwest Airlines Flight 253 from Amsterdam is approaching its destination of Detroit, Umar Farouk Abdulmutallab of Nigeria apparently makes a not entirely successful attempt to ignite a powerful explosive that he had concealed in his underwear; he is immediately subdued by passengers and crew and is arrested upon the plane's safe landing in Detroit.

Democracy advocate Liu Xiaobo is sentenced to 11 years in prison in China after having been convicted of incitement to subvert state power.

26 During a Shi'ite holiday, clashes take place between antigovernment

protesters and government forces in several public squares in Tehran.

Narayan Dutt Tiwari resigns as governor of India's state of Andhra Pradesh.

27 On the holiday of 'Ashura', police in Iran fire their guns into huge crowds of government protesters; at least 10 people, including a nephew of opposition leader Mir Hossein Moussavi, are killed.

Legislative elections in which all parties support the government of Pres. Islam Karimov take place in Uzbekistan.

28 Military officers in Thailand armed with riot shields and clubs begin to forcibly return some 4,000 Hmong refugees seeking asylum to Laos.

In Bauchi, Nigeria, fighting among members of the Islamic militant group Kata Kalo and between them and the Nigerian military leaves at least 38 people dead.

Alfa Romeo is the first across the finish line and *Two True* is the overall winner of the 2009 Sydney Hobart Yacht Race in Australia.

29 In spite of the lack of a new election law deemed necessary for fair balloting by the UN and the U.S., Afghanistan announces that legislative elections will be held in spring 2010.

A tax on carbon emissions in France that was to take effect at the beginning of the new year is rejected by the Constitutional Council, which rules that it unfairly targeted only some sources of emissions.

Pres. Lee Myung-Bak of South Korea pardons Lee Kun-Hee, who resigned in 2008 after some 20 years as chairman of the conglomerate Samsung and was later convicted of tax evasion and embezzlement.

30 A double agent viewed as a valuable informant blows himself up at a meeting with CIA agents at a CIA base in Afghanistan's Khost province, killing eight CIA employees, a significant loss to intelligence operations working against Taliban and al-Qaeda on the border between Afghanistan and Pakistan.

For the third time in his administration, Canadian Prime Minister Stephen Harper prorogues Parliament, shutting it down until March 3, 2010.

A gun battle takes place between government and al-Qaeda forces in western Yemen; al-Qaeda forces operating in Yemen have claimed responsibility for the attempted bombing of Northwest Airlines Flight 253 on December 25.

A car bomber and a suicide bomber at a checkpoint in Al-Ramadi, Iraq, kill at least 24 people and injure 58, including the governor of Anbar province.

31 By the last bell of the year at the New York Stock Exchange, the Dow Jones Industrial Average has risen 18.8% since the beginning of the year; the Standard & Poor's 500-stock index has risen 23.5%, and the Nasdaq composite has gained 43.9%.

Al-Houthi rebels in Yemen post on the Internet an offer of peace talks with Saudi Arabia.

Disasters

Listed here are **MAJOR** disasters that occurred in 2009. The list includes **NATURAL** and **NONMILITARY** mechanical disasters that claimed more than 15 lives and/or resulted in significant damage to **PROPERTY**.

Aviation

February 7, Brazil. A twin turboprop plane operated by Manaus Aerotaxi and chartered by a family to fly from Coari to Manaus plunges into the Manacapuru River; 24 of the 28 aboard die.

February 12, Near Buffalo, N.Y. Continental Connection Flight 3407, a Bombardier Dash 8 Q400 turboprop traveling from Newark, N.J., to Buffalo, goes down on its approach and crashes into a house in Clarence Center, N.Y., killing all 49 on board as well as an occupant of the house; icing on the wings is suspected of being the cause.

March 12, Off Newfoundland. A helicopter ferrying workers to offshore oil platforms plummets into the Atlantic Ocean; 17 passengers are lost.

April 1, Scotland. A Super Puma helicopter ferrying workers to Aberdeen from a North Sea oil platform operated by the energy company BP goes down in calm weather 14 nautical miles off Peterhead; all 16 aboard are lost.

April 6, Indonesia. A military training flight ends in disaster when the Fokker 27 airplane crashes while attempting to land at an air base in West Java; all 24 military personnel aboard are killed.

May 20, Indonesia. A C-130 Hercules military transport plane crashes into four houses in the East Java village of Geplak and thence into a rice field, after which it bursts into flames; at least 98 of the 112 people aboard perish.

June 1, Atlantic Ocean. Air France Flight 447, an Airbus A330-200 that is flying from Rio de Janeiro to Paris, disappears; wreckage and bodies found over the following few weeks indicate that it went down some 970 km (600 mi) off northern Brazil, that all 228 aboard died, and that faulty air speed indicators may have played a role in the disaster.

June 30, Off Comoros. Yemenia Flight 626, which had taken off from Sanaa, Yemen, en route to Moroni, Comoros, goes down in the Indian Ocean

off Comoros; 152 of the 153 aboard are killed.

July 3, Northwestern Pakistan. A Pakistani military transport helicopter crashes in Chapri Ferozkhel, killing at least 26 and possibly as many as 41 military personnel; it is unclear whether the disaster is due to overloading, bad weather, or insurgent gunfire.

July 15, Iran. A Caspian Airlines Tupolev Tu-154M jetliner en route from Tehran to Yerevan, Arm., crashes near the village of Jannatabad and explodes; all 168 people aboard perish.

July 19, Afghanistan. A Russian-made transport helicopter working for the NATO-led military crashes as it attempts to take off from the military base in Kandahar, killing 16 civilians.

July 24, Iran. An Aria Air airplane skids off the runway during an emergency landing at the airport in Mashhad; at least 17 of the 153 aboard perish.

Fires and Explosions

January 1, Bangkok. At Santika, a nightclub, fireworks set off to celebrate the new year cause a fire, which quickly spreads; the conflagration and resulting stampede result in the deaths of 66 people.

January 9, Karachi. A deadly blaze of unknown origin kills at least 40 people in a shantytown.

January 28, Nairobi. A large fire consumes a Nakumatt supermarket; some 39 people perish.

January 31, Near Molo, Kenya. After a tanker transporting high-grade gasoline overturns, looters rush to collect the fuel; an explosion, possibly caused by a tossed match, kills at least 115 villagers.

January 31, Fujian province, China. Fireworks set off at a birthday celebration in a restaurant in Changle ignite a fire that leaves at least 15 people dead.

January 31, Podyelsk, Russia. A fire quickly spreads through a wooden structure housing a nursing home; at least 23 of the residents perish.

Rescuers search for victims of a C-130 military transport plane in a rice field in East Java, Indon., where it crashed and burst into flames on May 20, killing at least 98 of the 112 people aboard.

AP

Apichart Weerawong/AP

Firefighters in Bangkok finish extinguishing a fire in the nightclub Santika that was started by fireworks and killed 66 partygoers on January 1.

April 13, Kamien Pomorski, Pol. A quickly spreading fire at a three-story building housing the homeless results in the deaths of 23 residents.

April 29, Dar es Salaam, Tanz. A series of explosions as ammunition detonates at the Mbagala military depot flattens hundreds of houses and kills at least 22 people.

June 5, Hermosillo, Mex. A fire that may have started in a neighbouring warehouse sweeps through a day-care centre, killing at least 47 babies and small children.

September 13, Taldykorgan, Kazakh. A quickly moving fire kills at least 39 patients and staff members at a drug-treatment centre with barred windows.

December 5, Perm, Russia. As the Lame Horse nightclub celebrates its eighth anniversary, pyrotechnic fountains ignite a suspended ceiling decorated with twigs, and panicked patrons stampede the single exit; at least 152 people die.

Marine

January 4, Nepal. A river ferry capsizes in the Kosi River; two bodies are recovered, and some 20 other people are missing.

January 11, Indonesia. A ferry traveling from Parepare across the Makassar Strait to Samarinda is caught in a storm and sinks; some 300 people are lost.

January 11, Off Guinea-Bissau. An open wooden boat capsizes

in the Atlantic Ocean; more than 40 people, among them members of the National Islamic Council, which runs mosques and schools in the country, are missing.

January 16, Thailand. Officials in Thailand deny a report in Hong Kong's *South China Morning Post* that the country had repeatedly turned away ethnic Rohingya people attempting to migrate from Myanmar (Burma) and Bangladesh and had sent them back to

In the port of Tripoli, Libya, the bodies of some of the more than 230 migrants who drowned when their vessel capsized in late March lie on a ship that took part in a rescue operation.

AP

sea in unseaworthy vessels; the report said that at least 300 of the Rohingya have disappeared at sea.

January 19, Near Tunis, Tun. A boat carrying would-be migrants to Italy strikes a rock and capsizes; as many as 30 Tunisian passengers are believed to have drowned.

January 25, Quang Binh province, Vietnam. A greatly overloaded ferry sinks in the Gianh River; at least 42 of the passengers, mostly women and children, drown.

February 1, Indonesia. The Indonesian navy rescues some 200 Rohingya men who were spotted by fishermen after drifting in a wooden boat for close to three weeks, during which time 22 of the boat's passengers perished.

February 15, Off the Canary Islands. A small fishing boat carrying African migrants capsizes; at least 21 of the occupants drown.

February 19, Southern Bangladesh. A trawler collides with a small ferry on a river, causing the ferry to capsize; at least 17 people are drowned.

March 30, Off the coast of Libya. At least one of several boats carrying migrants from various countries in Africa and Asia capsizes; more than 230 people are believed to have lost their lives.

April 22, Off Yemen. A smuggler's boat capsizes in the Gulf of Aden, and some 35 would-be migrants from Somalia and Ethiopia drown.

July 13, Kiribati. A double-hulled catamaran ferrying passengers from Tarawa to Maiana island sinks; 33 of the 55 passengers lose their lives.

July 26-27, Off the Turks and Caicos Islands. A sailboat grossly overloaded with Haitian would-be migrants sinks; 15 bodies are recovered, and a further 67 people are believed to have drowned.

August 5, Tonga. The MV *Princess Ashika*, an interisland ferry traveling from Nuku'alofa to Ha'afeva island, sinks; some 74 passengers drown.

August 20, Off the coast of Lampedusa, Italy. Italian border police rescue five Eritreans; the Eritreans say that 75 others perished during a three-week trip from Libya, and Italy and Malta blame each other for having failed to prevent the tragedy.

September 5, Macedonia. The *Ilinden*, a tourist boat plying the waters of Lake Ohrid, sinks; though most of the passengers

are rescued, 15 Bulgarian tourists lose their lives.

September 6, Mindanao, Phil. A ferry carrying 968 passengers and crew capsizes during the night off the coast of Zamboanga del Norte province; though more than 900 are rescued, 9 bodies are recovered and 33 people are missing.

September 8, Sierra Leone. In waters off Freetown, an overloaded boat carrying children returning from school holidays encounters a storm and sinks; at least 150 passengers perish.

September 13, Democratic Republic of the Congo. An overloaded ferry sinks in darkness in the Congo River near Ankoro; at least 15 passengers die, and some 90 others are missing.

September 19, Mediterranean Sea. An inflatable dinghy crowded with Africans attempting to migrate sinks off the Spanish islet of Perejil, near Morocco; there are 11 survivors and 8 bodies, and dozens are feared lost.

September 30, Kerala state, India. A sightseeing boat in Periyar Lake capsizes when the passengers flock to one side to see an elephant; at least 41 tourists die.

November 1, Near the Cocos Islands, Australia. A boat sinks in open waters in the Indian Ocean; though a merchant ship rescues 17 survivors, it is feared that two dozen people perished.

November 15, Myanmar (Burma). Shortly after leaving the town of Patheingyi, a ferry collides with a barge in the Ngazun River; at least 50 people are believed to have lost their lives.

November 22, Indonesia. A passenger ferry sinks in heavy seas off Sumatra; more than 240 passengers are rescued, but 29 bodies are found and at least 17 people are missing.

November 25, Democratic Republic of the Congo. A logging boat illegally carrying passengers sinks on Lake Mai Ndombe, in the northeastern part of the country; at least 73 passengers die, and many more are missing.

November 27, Bangladesh. An overloaded triple-deck ferry carrying passengers from Dhaka to Nazir Hat capsizes in the Tetulia River as it approaches the dock; at least 77 people perish.

December 4, Bangladesh. A ferry sinks on the Dairia River; at least 46 passengers, most of them women and children, drown.

December 17, Off Lebanon. A cargo ship carrying livestock sinks; the bodies of nine crew members are recovered, and 35 more of those aboard are reported missing.

Soldiers pass the 2,300-year-old Danok pagoda in Yangon (Rangoon), the former capital of Myanmar (Burma), on May 31, the day after it collapsed during renovations, reportedly killing at least 20 people.

Khin Maung Win/AP

Mining and Construction

February 22, Shanxi province, China. An unusually deadly coal mine accident takes place in the Tunlan coal mine in Gujiao when a gas explosion kills at least 74 miners, with a further 114 hospitalized with carbon monoxide poisoning.

May 30, Myanmar (Burma). The 2,300-year-old Danok pagoda in Yangon (Rangoon), while undergoing the final stages of renovation, collapses, reportedly killing at least 20 people.

June 1, Near Welkom, S.Af. The Harmony Gold Mining Co. in South Africa reports that at least 36 illegal miners were killed in an underground fire in a closed shaft; eventually at least 76 bodies are found.

June 5, China. A landslide buries the Jiwei Mountain iron ore mine and several homes and buildings in Wulong county; at least 26 people, 19 of them miners, are killed, but 27 miners are believed to have survived.

July 23, Sichuan province, China. A landslide caused by heavy rains destroys a dam project at a hydropower plant in Kangding county; at least 4 construction workers are killed, with some 50 more missing.

August 4, Northern China. An unfinished iron casting factory building in Shijiazhuang collapses in a thunderstorm; at least 17 people, among them construction workers, lose their lives.

August 10, Slovakia. An explosion in a coal mine in Handlova kills 20 miners.

September 8, Henan province, China. An explosion at a coal mine in Pingdingshan leaves 35 miners dead and a further 44 workers trapped.

September 23, Chhattisgarh state, India. In Korba a chimney being built at a power plant collapses into the building's cafeteria; at least 40 people are crushed to death, with dozens more believed to have been trapped in the rubble.

October 8, Hunan province, China. An accident in a tin ore mine in Lengshuijiang kills 26 miners.

November 21, Heilongjiang province, China. A gas explosion at the state-owned Xinxing coal mine kills at least 104 miners and leaves a further 4 people trapped.

December 10, Western Turkey. A gas explosion collapses a shaft and starts a fire in a coal mine in Devicikoni; 19 miners are killed.

December 24, Rajasthan state, India. A 50-m (164-ft) section of a 1,100-m (3,609-ft) cable-stayed bridge that is being built some 50 m (164 ft) above the Chambal River collapses, killing at least 45 people, with many more missing.

Natural

January 4, Northern Guatemala. Part of a mountain collapses, creating a large landslide that leaves at least 37 people,

mostly coffee plantation workers, dead and a further 50 missing.

January 8, Costa Rica. A magnitude-6.1 earthquake with its epicentre about 32 km (20 mi) north-northwest of San José creates devastation and leaves at least 34 people dead, with more than 60 others missing.

January 14, Fiji. After several days of severe flooding, the country's sugar farms have been decimated, 9,000 people have been evacuated, and at least 11 people have died.

January 24, Spain and France. Feroocious winds cause the collapse of the roof of a sports centre in Sant Boi de Llobregat, Spain, killing four children, which brings the death toll from the windstorm in France and Spain over the past two days to at least 15; another casualty of the storm is a weeping beech tree that was planted at Versailles in France in 1786 as a gift to Queen Marie Antoinette.

January 28, U.S. A winter storm that began the previous day causes power failures and traffic accidents in Texas, Arkansas, Kentucky, Indiana, and Ohio; at least 23 deaths are attributed to the weather system.

February 8, Victoria state, Australia. Wildfires, some of which may have been deliberately set, burn for a second day; two towns and 750 homes are destroyed, and 173 people lose their lives.

February 9, Solomon Islands. Flash flooding on the island of Guadalcanal leaves at least 13 people dead and 7 missing.

March 2, Huanchumay, Peru. A landslide precipitated by heavy rainfall sweeps through a gold-mining camp, leaving at least 13 people dead and 22 others missing.

March 17, Namibia. Pres. Hifikepunye Pohamba declares a state of emergency in the northern and north-eastern areas of the country, where massive flooding over the past few weeks has left at least 92 people dead and devastated agriculture.

March 27, Cireundeu, Indon. Heavy rains cause an earthen dam impounding Setu Gintung lake to collapse, sending a wall of water into the town; at least 100 people drown, and some 500 homes are swept away or submerged.

April 15, Kyrgyzstan. A landslide destroys five houses in a mountain village, leaving at least 16 people dead.

April 17, Afghanistan. Two earthquakes, of magnitudes 5.5 and 5.1, in Nangarhar province cause the collapse of houses in four villages and leave at least 21 people dead.

May 1, India. Officials report that a heat wave that has brought temperatures as high as 48 °C (118 °F) has left at least 18 people dead.

May 10, Northern Brazil. Floodwaters fed by two months of heavy rains begin to recede; at least 40 people have died, and some 300,000 have been left homeless.

May 25, Bangladesh and eastern India. Cyclone Aila makes landfall, displacing half a million people in Bangladesh and leaving some 200 people, most in Bangladesh, dead.

June 5, China. A landslide buries the Jiwei Mountain iron ore mine and several homes and buildings in Wulong county; at least 26 people, 19 of them miners, are killed, and some 72 people aboveground are missing.

June 29, India. Monsoon rains in Uttar Pradesh, Rajasthan, and Jharkhand leave at least 15 people dead.

July 4, Myanmar (Burma). Landslides reportedly caused by the blockage of a river by debris from jade mines kill some 30 people in the Phakant region.

July 6, Northern Vietnam. Authorities report that recent mountain storms have caused the death of at least 22 people.

July 6, Southern China. A week of heavy rains causes catastrophic flooding that leaves at least 75 people dead and forces hundreds of thousands of people to evacuate; some 300 students are stranded in a school in Guangxi.

July 12, Peru. It is reported that since March some 246 children have perished in mountainous areas as a result of extreme cold.

July 23, Sichuan province, China. A landslide caused by heavy rains destroys a dam project at a hydropower plant in Kangding; at least 4 construction workers are killed, with some 50 more reported missing.

July 24, Novito, Colom. A landslide sweeps away some 30 prospectors who are panning for gold in a river; five bodies are recovered, while the rest remain missing.

August 8, Taiwan. Typhoon Morakot inundates the island with several days of exceptionally heavy rainfall, leading to massive landslides and mud slides that leave more than 600 people dead, nearly 500 of them in the village of Hsiao-lin; earlier the typhoon killed 22 people in the Philippines.

August 8, Uttarakhand state, India. A cloudburst causes a landslide that obliterates three villages, leaving 18 people dead and 48 people missing.

August 9, China. Typhoon Morakot levels more than 6,000 homes in Fujian and Zhejiang provinces, and it is reported that Tropical Storm Goni, which carved a path through southern China beginning on August 4, left 3 mariners dead and at least 26 more missing.

September 9, Istanbul. Unusually heavy rains lead to flash flooding that inundates homes, offices, and highways; at least 31 people in the area drown.

September 15, North Sumatra province, Indon. Flash flooding submerges homes and sweeps away bridges and roads in Mandailing Natal district; at least 38 people perish, and several more are reported missing.

The landscape in the township of Kinglake, Vic., is left ravaged after wildfires swept through the Australian state in February.

Rick Rycroft/AP

September 26, Philippines. Typhoon Ketsana makes landfall on the main island, Luzon, and inundates much of Manila; at least 464 people lose their lives, while some 380,000 are left homeless.

September 29, South Pacific Ocean. A magnitude-8.0 earthquake some 18 km (11 mi) under the seabed causes a tsunami that hits Samoa, American Samoa, and Tonga; at least 190 people, most of them in Samoa, perish.

September 29, Vietnam. Typhoon Ketsana roars through the country, leaving behind rising floods; at least 99 people expire.

September 30, Padang, Indon. A magnitude-7.6 undersea earthquake collapses hundreds of buildings and leaves the large city without power or communications; at least 1,100 people are killed.

October 2, Sicily. Near Messina, Italy, mud slides cause the collapse of dozens of buildings, leaving at least 23 people dead and a further 35 people missing.

October 3, India. Several days of exceptionally heavy monsoon rains leave at least 221 people dead in Karnataka and 63 people dead in Andhra Pradesh.

October 3, Philippines. Typhoon Parma brushes the northeastern area, causing landslides and flooding that leave at least 16 people dead.

October 5, Southern India. After four days of heavy rains, more than 240 people have perished.

Egyptians rush to rescue the victims of a train crash outside Cairo on October 24 in which 18 passengers perished.

Charles Dharapak/AP

Officials work to clear the tracks near Washington, D.C., after a Metro transit train crashed into the back of a stopped Metro train on June 22 in an accident that killed nine people.

October 8, Philippines. At least 193 people die in Benguet and Mountain Province in landslides caused by Typhoon Parma as well as by intentional dam releases that were an attempt to limit flooding.

October 13, Nepal. Flooding and landslides in the western part of the country are reported to have killed 143 people.

November 8, El Salvador. Pres. Mauricio Funes declares a state of emergency as flooding and landslides that were initially believed to have been caused by Hurricane Ida but were later found

to have been the result of a weaker storm have left at least 157 people dead and more than 12,000 homeless.

November 10, Tamil Nadu state, India. Officials report that at least 38 people have died in landslides following heavy rains over the past two days.

November 14, North-central China. Chinese officials say that waves of snowstorms that began on November 9 have left at least 40 people dead and more than 9,000 buildings collapsed.

November 25, Saudi Arabia. Rare heavy rain causes flash flooding; some 116 people in Jiddah lose their lives, and at least 4 people die in Mecca.

December 21, Europe. Three days of unusually severe winter weather have left at least 42 people in Poland and 27 people in Ukraine dead from the cold.

December 31, Brazil. Flooding and landslides in the area of Rio de Janeiro after heavy rains result in the deaths of at least 18 people.

Railroad

February 13, Orissa state, India. The Coromandel Express train, traveling from Haora to Chennai (Madras), derailed, and three cars are crushed; at least 9 people are killed, and some 40 people are critically injured.

June 22, Outside Washington, D.C. A Metro public transit train slams into the back of a stopped train so hard that the first car rides up on top of the last car of the stopped train; nine people are killed.

June 29, Viareggio, Italy. Fires caused by the derailment and explosion of a freight train carrying liquefied petroleum gas lead to the collapse of buildings and the deaths of at least 22 residents.

October 21, Mathura, India. A Delhi-bound express train slams into a stopped train, crumpling several cars and killing at least 22 passengers and railroad employees.

October 24, Egypt. Just outside Cairo, a southbound passenger train slams into a second passenger train that had unexpectedly stopped on the tracks; at least 18 passengers are said to have died in the incident.

Traffic

January 10, Northern Peru. A bus traveling over wet roads in the Cajamarca region slips off the road and

Tarek Ali/AP

AP

Ashes and bones are all that remains after a bus was engulfed in flames as a result of a collision with a fuel tanker truck in western Peru on April 13 that claimed the lives of at least 20 bus passengers.

slides into a ravine; at least 32 passengers are killed.

March 31, Punjab state, India. The driver of a truck carrying Hindu and Sikh pilgrims to a temple in the foothills of the Himalayas loses control of his vehicle, and it overturns; at least 20 passengers perish.

April 13, Western Peru. A bus carrying 30 passengers crashes into a fuel tanker truck; the ensuing explosion incinerates at least 20 of the bus passengers.

April 19, The Sudan. A passenger bus collides head-on with a truck not far from Khartoum; 21 bus passengers perish.

July 24, Southern Russia. A tanker truck carrying gasoline collides head-on with a passenger bus near Samarskoye; at least 21 people are killed.

August 13, Panama. On the outskirts of Panama City, a truck trying to overtake another vehicle while crossing a bridge hits a bus head-on; at least 24 bus passengers die.

October 9, Southern Nigeria. A fuel tanker on a highway riven with potholes falls over and is then hit by a car, causing an explosion that engulfs six commuter buses; some 70 people are thought to have been killed.

November 6, Himachal Pradesh state, India. Near the town of Haripur, a crowded bus rolls into a gorge; at least 34 passengers perish.

December 6, Bangladesh. A head-on collision between two crowded buses in the Faridpur district kills 20 or more people.

December 24, Southern Peru. A passenger bus in the Andes goes off the road and falls into a ravine; 40 passengers die.

Miscellaneous

February 6, Nigeria. The Ministry of Health reports that at least 84 children in the country have died after ingesting teething medication produced by Barewa Pharmaceuticals that contained the industrial solvent diethylene glycol.

March 29, Abidjan, Côte d'Ivoire. At a World Cup association football (soccer) qualifying match between the home country's team and Malawi, a stampede results as crowds try to force their way into the stadium before the start of the game (survivors report that police fired tear gas into the crowd, adding to the

panic); at least 22 people are crushed to death.

April 4, Pakistan. A shipping container being trucked from Afghanistan to Iran through Pakistan is stopped by Pakistani police; it is found to be packed with would-be migrants from Afghanistan, at least 62 of whom have expired.

May 24, Rabat, Mor. At the close of the Mawazine music festival, a stampede erupts in the departing crowd; at least 11 concertgoers perish.

July 3, Eastern Cape, S.Af. Officials report that the death toll among teenage boys so far this year from ritual circumcisions has reached 31.

July 5, Ahmadabad, India. Hundreds of slum dwellers imbibe illegally brewed alcohol that is poisonous; by July 10, 112 of them have died, and 225 remain hospitalized.

July 31, Karachi. A five-story building, evidently undermined by monsoon rains, collapses, crushing to death 23 people, mostly women and children.

August 17, Southern Siberia. At the aging Sayano-Shushenskaya hydroelectric power plant, the largest such facility in Russia, a water conduit bursts, unleashing flooding that leaves 75 workers dead; the cause of the disaster is unclear.

September 14, Karachi. At a location where food is being distributed to the poor, as is traditional during Ramadan, at least 19 women are crushed to death in a stampede to be first in line.

An injured spectator is carried out of a stadium in Abidjan, Côte d'Ivoire, after a stampede at a World Cup association football (soccer) qualifying match between the host team and Malawi on March 29 in which at least 22 people died.

Brazilians gathered on Copacabana beach on October 2 celebrate following the announcement by the International Olympic Committee that Rio de Janeiro has been selected to host the 2016 Olympic Games.

Sergio Moraes—Reuters/Landov

Nobel Prizes

Nobels in 2009 were **AWARDED** to eight men and a **RECORD-SETTING** five women; recipients included a sitting U.S. **PRESIDENT** for strengthening **INTERNATIONAL DIPLOMACY**, a Romanian-born novelist for her depictions of the **DISPOSSESSED**, two scholars for research in **ECONOMIC GOVERNANCE**, and scientists for deciphering **RIBOSOME STRUCTURE**, inventing fibre-optics communication and **DIGITAL IMAGING** technologies, and revealing how **CHROMOSOMES** are protected.

PRIZE FOR PEACE

The Nobel Prize for Peace for 2009 was awarded to U.S. Pres. Barack Obama in recognition of “his extraordinary efforts to strengthen international diplomacy and cooperation between peoples.” The announcement by the Norwegian Nobel Committee cited a number of the president’s initiatives—arms control, multinational diplomacy through the United Nations and other international institutions, and support for efforts to combat climate change. Obama became the third sitting U.S. president to receive the prize, after Theodore Roosevelt in 1906 and Woodrow Wilson in 1919. In addition, former president Jimmy Carter received the prize in 2002, two decades after he had left office.

Barack Hussein Obama, Jr., was born on Aug. 4, 1961, in Honolulu. His father, a black African from Kenya, and his mother, a white woman from Kansas, met and married while they were students at the University of Hawaii. They subsequently divorced (1964), and for several years the boy lived with his mother and stepfather in Indonesia and then with his maternal grandparents in Hawaii. He received a B.A. degree (1983) from Columbia University, New York City, and a J.D. degree (1991) from Harvard Law School, where he was the first African American editor of the *Harvard Law Review*. In 1992 he began teaching constitutional law at the University of Chicago. Obama was elected

to the Illinois Senate in 1996 and to the U.S. Senate in 2004. In 2008 he won the Democratic nomination for the presidency, the first African American to be chosen by a major party, and he won a decisive victory in the general election.

The Nobel Prize, which came less than nine months after Obama’s inauguration as president, was a surprise, and many people were puzzled, even shocked, by the committee’s decision, given that not enough time had elapsed for the president’s major policies to come to fruition. While coping with a severe financial and economic crisis at home, he had nonetheless made a number of dramatic shifts in foreign policy from his immediate predecessor, Pres. George W. Bush. Obama indicated that the U.S. would rejoin international efforts against climate change, reached an agreement with Russia to reduce nuclear weapons, attempted to restart peace talks between Israelis and Palestinians, and showed a willingness to engage in diplomatic discussions with Iran and other previously ostracized countries. Some observers saw the award as a recognition of this new atmosphere that Obama had created. As German Chancellor Angela Merkel said, “In a short time he has been able to set a new tone throughout the world and to create a readiness for dialogue.”

Obama indicated that he did not consider himself “to be in the company of so many of the transformative figures who have been honored by this prize.”

He agreed to accept the prize, however, “as a call to action, a call for all nations to confront the challenges of the 21st century.” (ROBERT RAUCH)

PRIZE FOR ECONOMICS

The Nobel Memorial Prize in Economic Sciences was awarded in 2009 to Americans Elinor Ostrom and Oliver E. Williamson, who, through their understanding of human behaviour and transactions not covered by detailed contracts or law, established economic governance as a field of research. This extended the traditional focus of the theory of the market and market prices. The results of Ostrom’s work challenged conventional thinking that those common natural resources where use by one person reduces the amount available to others—such as water and fisheries—are badly managed unless regulated by a central authority or privatized. Williamson’s work offered a new theory to explain why firms exist and why some transactions are kept within firms rather than opened to the marketplace.

In her work Ostrom challenged the conventional theory “tragedy of the commons,” which dictates that under common ownership vital national

Elinor Ostrom

Indiana University/Getty Images

natural resources to which many have access are polluted and depleted because individual users do not recognize the effect of their actions on others. She found that societies and people often devised sophisticated methods of governance to ensure that shared natural resources are not overexploited and that these methods were often more appropriate and effective than rules imposed by a less-well-informed government. In her seminal book *Governing the Commons: The Evolution of Institutions for Collective Action* (1990), Ostrom used case studies to show that private associations often avoided the “tragedy of commons” by developing the efficient use of resources. She found that a flaw in the “tragedy” was its failure to take account of the often repeated interaction of people sharing a resource, which made credible use of a range of punishments.

Williamson received his share of the award for his analysis of economic governance, especially the boundaries of the firm, which broadened understanding of why large companies evolve in some industries and explained the conditions under which it is more efficient to carry out some transactions associated with buying and selling inside a firm rather than outside by another competing firm or individuals. This advanced the 1937 theory of British-born economist Ronald Coase, who won the Nobel Prize in 1991 for his work in institutional economics. Williamson realized that it did not necessarily cost more for a firm with adequate administrative infrastructure in place to expand its boundaries to bring more of its business activities inside the firm. In papers and books beginning in 1971, notably *Markets and Hierarchies* (1975), Williamson argued that where transactions were complex, negotiating in the market was more difficult, given the greater scope for haggling and disagreement. In such cases the high cost of writing and enforcing contracts would make it more competitive to integrate the activity into the firm, where conflicts could be resolved via the use of rules and hierarchy. The greater the mutual dependence of the two parties, the stronger the likelihood of integration, so a firm with several suppliers in close proximity might opt for the market but would choose greater integration if there was only one.

Ostrom, the first woman to receive the Nobel Prize for Economic Science, was born in Los Angeles on Aug. 7,

Paul Sakuma/AP

Oliver E. Williamson

1933, and studied political science at the University of California, Los Angeles (B.A., 1954; M.A., 1962; Ph.D., 1965). Almost her entire academic career was spent at Indiana University, where she held professorships in the departments of government (1965–69) and political science (1969–91) and in the School of Public and Environmental Affairs. At the time she was awarded the Nobel Prize, Ostrom was Arthur F. Bentley Professor of Political Science and remained a co-director of the Workshop in Political Theory and Policy Analysis, which she had co-founded (1973) with her husband and fellow political science professor, Vincent Ostrom.

Williamson was born in Superior, Wis., on Sept. 27, 1932, and was educated at the Massachusetts Institute of Technology (S.B., 1955), Stanford University (M.B.A., 1960), and Carnegie Mellon University, Pittsburgh (Ph.D., 1963). He began his academic career in economics at the University of California, Berkeley (1963–65), and then became an economics professor at the University of Pennsylvania (1965–83) and Yale University (1983–88). In 1988 he returned to the faculty in Berkeley, where in 2004 he was named Edgar F. Kaiser Professor Emeritus of Business, Economics and Law. Williamson's other books include *The Economic Institutions of Capitalism: Firms, Markets, Relational Contracting* (1985).

(JANET H. CLARK)

PRIZE FOR LITERATURE

The 2009 Nobel Prize for Literature was awarded to Romanian-born German author Herta Müller, a distinct and compelling voice of opposition against political oppression and the anguish of human existence defined by intimidation, fear, and persecution. Known primarily as a novelist, Müller was also prolific as a short-story writer, poet, and essayist whose works portrayed the harsh reality of life in Romania under the repressive dictatorship of Nicolae Ceausescu as well as the ambiguity and disjuncture of emigration and exile. Although she was highly regarded by those who read her, Müller for much of her career was limited to a German-speaking audience. She was the 12th woman to receive the literature prize and the first German writer to win since 1999, when the award was presented to Günter Grass. Outspoken in her criticism of all forms of totalitarian rule, she was drawn to those victimized by the abuse of authority, in particular the plight of women traumatized by emotional and sexual exploitation. One of the preeminent literary figures of her generation, Müller was cited by the Swedish Academy as a writer “who, with the concentration of poetry and the frankness of prose, depicts the landscape of the dispossessed.”

Müller was born on Aug. 17, 1953, in the village of Nitchidorf in the German-dominated Banat region of Romania. Her parents belonged to Romania's German-speaking minority. Her father served in the Waffen SS during World War II; her mother, like members of other ethnic minorities in postwar Romania, was deported to the Soviet Union and spent five years in a labour camp in present-day Ukraine. From 1973 to 1976 Müller studied German and Romanian literature at the West University of Timisoara, where she was associated with Aktionsgruppe Banat, a group of German-language authors seeking freedom of expression under the Ceausescu regime. She then worked as a translator of trade materials, and after being dismissed for refusing to cooperate with the Securitate, the Romanian secret police, she found employment as a kindergarten teacher and private tutor. In 1982 she published her first book, *Niederungen*, a collection of stories that depicted ethnic intolerance and the hypocrisy of village life governed by corruption and exclusion. Originally published in a redacted version, the uncensored manuscript was

published in 1984 in West Germany and later released in a bilingual German-English edition as *Nadirs* (1999). As a result of her public condemnation of the Ceausescu dictatorship, Müller was prohibited from publishing in her native Romania.

Risking reprisal, she continued to publish in the West; her novel *Der Mensch ist ein grosser Fasan auf der Welt* appeared in 1986, the first of her works translated into English (*The Passport*, 1989). In 1987, when Müller was permitted to leave Romania, she immigrated to West Germany. In her next novel, *Reisende auf einem Bein* (1989; *Traveling on One Leg*, 1998), Müller explored the condition of exile and the difficulties of assimilation. In 1994 she published *Herztier*, translated as *The Land of Green Plums* (1996) by Michael Hofmann, with whom she shared the International IMPAC Dublin Literary Award (1998). Acknowledged as one of Müller's most distinctive works, the semiautobiographical novel is narrated by a female protagonist who escapes the brutality and harassment encountered in Romania by starting a new life as an émigré in Germany. In her next novel, *Heute wär ich mir lieber nicht begegnet* (1997; *The Appointment*, 2001), Müller explored the humiliation and indignity suffered by another female narrator deemed by the state as subversive and parasitic. Subjected to degrading interrogation, the narrator laments, "I don't want to think about anything at all, there's nothing to think about, because I myself am nothing, apart from being summoned."

Müller was the recipient of numerous literary awards. In 2009 she published her novel *Atemschaudel*, a work set against the backdrop of the ethnic deportation to the Soviet Union and inspired in part by the experience of her mother. Her works of nonfiction include *Der Teufel sitzt im Spiegel* (1991), *Eine warme Kartoffel ist ein warmes Bett* (1992), *Hunger und Seide* (1995), and *Der König verneigt sich und tötet* (2003). For Müller the act of writing was born of a sense of duty both to preserve the past and to reconcile the present, a means to "be certain that I am still myself, that I exist."

(STEVEN R. SERAFIN)

PRIZE FOR CHEMISTRY

The 2009 Nobel Prize for Chemistry was awarded to Venkatraman Ramakrishnan of the Medical Research Council Laboratory of Molecular Biol-

Alastair Grant/AP

Venkatraman Ramakrishnan

ogy, Cambridge, Eng., Thomas A. Steitz of Yale University, New Haven, Conn., and Ada E. Yonath, of the Weizmann Institute of Science, Rehovot, Israel. The selection and contribution of these three individuals illustrated vividly how the traditional lines between the sciences had blurred and virtually disappeared. Their research elucidated the structure and function of the ribosome—the biological engine that reads the genetic information stored in DNA and builds the corresponding proteins from amino acids.

The process of building proteins requires cells to translate DNA into an RNA molecule that moves from the cell nucleus to the cytoplasm, where it acts as a messenger (and hence is called mRNA, or messenger RNA), carrying the genetic information to the ribosome. A second kind of RNA, called transfer RNA (tRNA) retrieves and carries the amino acids needed to build the specific protein to which the mRNA corresponds. The process of matching the sequence carried from the DNA to mRNA and thence to tRNA is the job of the ribosome.

The first big step toward achieving this understanding was uncovering the structure of the ribosome. It consists of two subunits. The small subunit is made of one large RNA molecule and roughly 32 proteins. The large subunit is made of three RNA molecules and about 46 proteins. Determining the structure of these pieces is accomplished by passing X-rays through a very nearly perfect crystal composed of the ribosome units. The pattern formed by the scattering of the X-rays when

UPI/Landov

Thomas A. Steitz

they travel through the ribosome crystal produces an image that contains information about where every atom in the entire structure lies. This process is known as X-ray crystallography. Generating a nearly perfect crystal, however, is by no means an easy task.

Ada E. Yonath was born on June 22, 1939, in Jerusalem. She received a Ph.D. in 1968 from the Weizmann Institute. After taking a position as a postdoctoral scientist at the Massachusetts Institute of Technology in the late 1960s, she became interested in deciphering the atomic structure of ribosomes by using X-ray crystallography. This seemed to many people, however, to be an impossibly complex task. Still, working with ribosomes from a bacterium that survives at high temperatures, she was able to produce her first crystals of the large ribosomal subunit in 1980, and by 2000 she had achieved her goal.

Thomas A. Steitz was born on Aug. 23, 1940, in Milwaukee, Wis. He earned a Ph.D. (1966) in molecular biology and biochemistry from Harvard University, and in 1970 he joined the faculty of Yale University as a professor of chemistry. In 1998, using high-resolution X-ray crystallography techniques, Steitz revealed the location of the RNA molecules in the large ribosomal subunit. This still did not show the locations of individual atoms, though. Finally achieving higher resolution, Steitz determined the full structure of the large subunit in 2000.

Venkatraman Ramakrishnan was born in 1952 in Chidambaram, India. He earned a doctorate degree in

Micheline Pelletier/Corbis

Ada E. Yonath

physics from Ohio University in 1976 and later studied biology at the University of California, San Diego. Ramakrishnan's background in physics and biology enabled him to study ribosome structure in *Escherichia coli*, using a technique called neutron scattering. He later also used X-ray crystallography to elucidate the structure of several different cellular components, including ribosomes. He succeeded in showing how the pairing of mRNA with tRNA avoids errors and even how there can be some tolerance regarding the identity of the third base in certain three-base coding units of mRNA.

The researchers' elucidation of ribosomal structure helped them to make their subsequent discoveries about ribosome function: the mRNA, acting via the ribosome, selects the small tRNA that then fetches precisely the correct amino acid and takes it back to the ribosome, whose large subunit puts it into position to be attached to the growing protein. Steitz's ability to crystallize and determine structures of the large subunit in intermediate stages revealed the pathway for protein growth. The work of all three scientists also provided insight into the atomic structure of antibiotics and how these agents bind to ribosomes, opening the way to the design of new antibiotics.

(R. STEPHEN BERRY)

PRIZE FOR PHYSICS

The 2009 Nobel Prize for Physics was awarded to three physicists who in separate ways made possible the world-

wide information explosion. Half of the prize money went to Charles K. Kao for groundbreaking work on the use of optical fibres for information transmission; the other half went jointly to Willard S. Boyle and George E. Smith for the invention of the charge-coupled device (CCD), a vital element in digital photography.

Charles K. Kao was born on Nov. 4, 1933, in Shanghai. After graduating (1957) with a degree in electrical engineering from Woolwich Polytechnic (now University of Greenwich), London, Kao worked as an engineer for Standard Telecommunication Laboratories (STL [later part of Nortel Networks]), Harlow, Eng. He was awarded a Ph.D. (1965) by the University of London. After leaving STL, he joined ITT Corp. as director of research, served as vice chancellor of the Chinese University of Hong Kong, and then became CEO of Transtech Optical Communication Ltd. He was awarded the Charles Stark Draper Prize of the U.S. National Academy of Engineering in 1999. In 2000 he became chairman and chief executive officer of ITX Services.

In the 1960s Kao led a small research group at STL. With his collaborator George Hockham, he studied the properties of optical fibres (thin glass filaments). At that time, existing telephone cables based on copper wires were reaching the limit of the speed at which they could transfer data. Systems using light in the visible or near-infrared region of the spectrum would enable data transfer at much higher rates. At the time, it was generally believed that the intrinsic attenuation losses in optical fibres made it impossible for them to replace copper. In 1966 Kao and Hockham published a paper demonstrating that these losses were far smaller than expected and that the main sources of loss were impurities in the glass itself. Presciently, Kao predicted that such fibres could be made into optical waveguides for communications purposes. Within a few years fibres of ultrapure silica were being produced that confirmed his analysis. The first fibre-optic telephone cables were installed in 1975, and the first transatlantic fibre-optic cable was laid in 1988. Modern-day global communication is based primarily on fibre-optic transmission systems.

Willard S. Boyle was born on Aug. 19, 1924, in Amherst, N.S. He served in the Royal Canadian Navy in World War II and then gained a B.S. (1947) and a

Ph.D. (1950) from McGill University, Montreal. In 1953 he joined Bell Labs, Murray Hill, N.J. In 1962 he became director of Space Science and Exploratory Studies at the Bell Labs subsidiary Bellcomm, but he returned to Bell Labs in 1964 and was executive director of research from 1975 until his retirement in 1979.

George E. Smith was born on May 10, 1930, in White Plains, N.Y. He served in the U.S. Navy and then earned a B.S. (1955) at the University of Pennsylvania and a Ph.D. (1959) from the University of Chicago. He worked at Bell Labs from 1959 until his retirement in 1986.

Smith and Boyle jointly received the Franklin Institute's Stuart Ballantine Medal in 1973 and the IEEE Morris N. Liebmann Memorial Award in 1974. The two were also awarded the Charles Stark Draper Prize in 2006.

Smith and Boyle played a significant part in the revolution in electronic technology that occurred over the past 50 years. The first solid-state transistors of the 1950s were soon joined up into "integrated circuits," but the major advance came with very large-scale integration (VLSI) when thousands of transistors could be manufactured together on a small sheet of silicon and then connected to make circuits. An individual transistor comprises a dot of metal on an insulating layer of silicon oxide deposited on a silicon substrate. In 1969 Smith and Boyle realized that such devices could be used for light detection. Light incident on the surface induces charges that can be transported and "read" at the edge of the device (hence the name charge-coupled device). A detector is composed of a matrix of such CCD cells (known as "pixels"), and the intensity of light falling on each cell is recorded and stored. The number of pixels defines the resolution of the detector. Multi-megapixel detectors became ubiquitous. Their use revolutionized the storage and transmission of photographic images.

(DAVID G.C. JONES)

PRIZE FOR PHYSIOLOGY OR MEDICINE

The 2009 Nobel Prize for Physiology or Medicine was awarded to three American scientists for their discovery of the enzyme telomerase and of how chromosomes are protected by telomeres. Telomeres are structures at the ends of chromosomes that help control when cells divide. Sharing the prize

Paul Sakuma/AP

Elizabeth H. Blackburn

equally were Elizabeth H. Blackburn, professor of biology and physiology at the University of California, San Francisco, Carol W. Greider, professor of molecular biology and genetics at the Johns Hopkins University School of Medicine, Baltimore, Md., and Jack W. Szostak, professor of genetics at Harvard Medical School. The three researchers had previously shared the 2006 Albert Lasker Basic Medical Research Award for their research into telomeres and telomerase.

Blackburn's interest in telomeres began with her postdoctoral research at Yale University, where she studied the chromosomes of *Tetrahymena*, a protozoal organism. She determined the DNA sequence of *Tetrahymena* and found that telomeres consist of short, repetitive segments of DNA. After joining (1978) the biology faculty at the University of California, Berkeley, Blackburn began to focus on telomere function.

Szostak was independently studying telomeres when he met Blackburn at a conference in 1980. They began a collaborative investigation of telomere function in yeast and *Tetrahymena*. In 1983 Greider joined Blackburn's lab as a graduate student, and Greider and Blackburn jointly discovered telomerase, an enzyme that appeared to control telomere behaviour.

Several of the repeated DNA segments of telomeres are lost each time a cell divides, shortening telomere length. When telomeres are shortened to a particular length, the cell dies. In this way telomeres play an important

role in determining cell life span. Szostak's later work connected the loss of telomerase activity and cell death. This provided the initial link between telomeres and the aging process of cells. Greider and Blackburn subsequently also confirmed that telomerase was the key to stopping telomeres from overshortening.

Greider suspected that abnormal telomerase regulation contributed to tumour development. Since telomerase adds DNA to telomeres, the cell never gets short enough to "turn off." Cells continue to divide and grow, forming a tumour. Greider found that blocking telomerase activity in cancer cells forces telomeres to shorten. This process stops cells from surviving indefinitely and slows tumour growth. These findings brought a surge of new interest in developing anticancer drugs that target telomerase.

Elizabeth H. Blackburn was born on Nov. 26, 1948, in Hobart, Tasmania, Australia, and later obtained U.S. citizenship. She received a Ph.D. (1975) in molecular biology from the University of Cambridge and did postdoctoral research (1975–77) at Yale University. She continued her research and taught molecular biology at the University of California, Berkeley (1978–90). In 1990 she became a professor of biochemistry and biophysics and of microbiology and immunology at the University of California, San Francisco, and she became chair of the microbiology and

Carol W. Greider

Susan Merrell—UPI/Landov

Jack W. Szostak

immunology department in 1993. Blackburn became a fellow of the Royal Society of London in 1992 and a foreign associate of the National Academy of Sciences in 1993. She received the 1999 Lewis S. Rosenstiel Award for distinguished work in basic medical science, which she shared with Greider.

Carol W. Greider was born on April 15, 1961, in San Diego, Calif. She earned a Ph.D. (1987) in molecular biology from the University of California, Berkeley. After completing a fellowship at Cold Spring Harbor (N.Y.) Laboratory, she remained there as an investigator (1990–97). In 1997 she joined the faculty of Johns Hopkins University School of Medicine in Baltimore, and in 2003 she was made director of the department of molecular biology and genetics. In 2003 Greider became a member of the National Academy of Sciences. She shared the 2006 Wiley Prize in biomedical sciences with Blackburn.

Jack W. Szostak was born on Nov. 9, 1952, in London and later obtained U.S. citizenship. He received a Ph.D. (1977) in biochemistry from Cornell University, Ithaca, N.Y., where he completed his postdoctoral research (1977–79). He joined the faculty of Harvard Medical School in 1979 as an assistant professor of biological chemistry and gradually advanced to professor of genetics in 1988. He became a Howard Hughes Medical Institute investigator and a member of the National Academy of Sciences in 1998.

(LINDA BERRIS)

Biographies

The **SUBJECTS** of these biographies are the people who in the editors' opinions captured the **IMAGINATION** of the world in 2009—the most **INTERESTING** and/or **IMPORTANT PERSONALITIES** of the year.

Abrams, J.J.

(b. June 27, 1966, New York, N.Y.)

In 2009, J.J. Abrams, the brains behind the cult-sensation television show *Lost*, wowed his fans again with one of the biggest summer blockbusters of the year: *Star Trek*, the 11th film of the franchise inspired by the 1960s science-fiction TV show that many thought had run its course in the 23 years since its last bona-fide hit installment, *Star Trek IV: The Voyage Home* (1986). The key to *Star Trek*'s revitalization was the decision to hand the reins of the franchise over to Abrams, the new film's 42-year-old director, who had already earned a reputation as the "it boy" among the "geek set" for his intelligent and stylish television shows.

Jeffrey Jacob Abrams's father was a producer of made-for-television movies, and the younger Abrams followed him into the entertainment industry at an early age by making short Super-8 movies as a boy. He got his first job in the film industry at age 16, when he scored the low-budget sci-fi film *Nightbeast* (1982). Soon after graduating (1988) from Sarah Lawrence College, Bronxville, N.Y., he co-wrote (with Jill Mazursky) the screenplay for the comedy *Taking Care of Business* (1990). While the movie was not a success, Abrams nevertheless had his foot in the filmmaking door, and he penned the script for the 1991 drama *Regarding Henry* (for which he also received co-producer credit). He then wrote the screenplay *Forever Young* (1992), which he followed by co-writing two critically lambasted movies: *Gone Fishin'* (1997) and *Armageddon* (1998).

In 1998 Abrams turned to television and co-created the series *Felicity* (1998–2002), which followed the trials and tribulations of a college student in New York City. Even though it lasted only 4 seasons, *Felicity* was a hit, and Abrams's newfound clout allowed him to get another series creation of his

made: *Alias* (2001–06), a fast-paced modern spy drama. The well-reviewed program was a testament to creator-executive producer (and even theme song composer) Abrams's drive, but he felt frustrated by the network over the series' frequent time-slot moves, which he believed contributed to its relatively poor ratings and eventual cancellation.

Abrams's next venture proved to be the project that catapulted him to stardom: *Lost*, the story of a group of plane-crash survivors marooned on a mysterious island, which premiered in September 2004. The show's byzantine plots and unique supernatural mythology quickly drew fans in—it averaged more than 15 million viewers per week in its first two seasons—and made it arguably the single-most-discussed television show of its time. Abrams was then chosen by actor Tom Cruise to direct *Mission: Impossible III* (2006). Although the film was not as large a box-office hit as the franchise's first two installments, many reviewers praised Abrams's direction. In 2008 he saw his fourth TV series creation, *Fringe*, begin airing.

(ADAM AUGUSTYN)

Agassi, Shai

(b. April 19, 1968, Ramat Gan, Israel) In May 2009 in Yokohama, Japan, Israeli entrepreneur Shai Agassi unveiled the prototype for a robot that could quickly remove the depleted battery from an electric car and replace it with a freshly charged battery. Developed by his start-up company, Better Place, the automated device was designed for battery-exchange stations, a key component in Agassi's sweeping plan for an infrastructure that would spur the public to adopt more-efficient all-electric vehicles in place of gasoline-powered cars. Such stations would allow the driver of an electric car to travel long distances without waiting to recharge the battery along the way. Another key element of his plan was to set up a network of

ubiquitous recharging spots in parking lots and other places for recharging electric cars whenever they were not being driven. Agassi's business plan positioned Better Place as a service company to provide drivers of electric cars with batteries and an electric-charging infrastructure on a subscription basis.

Agassi graduated (1990) from Technion (the Israel Institute of Technology) with a degree in computer science. In 1992 he founded TopTier Software, an information-portal provider. He also started several other businesses, including software companies Quicksoft (as cofounder) and TopManage. In 2001 TopTier was bought by SAP, a leading German software company, for \$400 million. Agassi served on the SAP executive board (2002–07) and became president of SAP's Products and Technology Group. *Time* magazine named him one of the most influential businesspeople in the world in 2003, and he was considered to be in line for the company's CEO position.

Auto innovator Shai Agassi

David Silverman/Getty Images

In 2005 Agassi was invited to join the Forum of Young Global Leaders, organized by the World Economic Forum (Davos, Switz.). Following an induction meeting in which the participants were entreated to find ways to make the world a better place, Agassi looked into climate change, especially in the area of transportation. He outlined his ideas for creating an electric-car infrastructure in a 2006 speech at the Saban Center for Middle East Policy, Washington, D.C. Former Israeli prime minister Shimon Peres, who had been present for the speech, subsequently encouraged him to take action on his vision, and in a surprise move Agassi left SAP and in 2007 launched Better Place (originally named Project Better Place). Known as a persuasive visionary with a command of the facts, he soon had more than \$200 million lined up from investors. By 2009 he had also reached governmental agreements to establish Better Place's open recharging system in a number of countries, including Denmark and the U.S. (Hawaii and California), and French automaker Renault had begun development on a mass-production electric vehicle that would be suitable for the system. Israel became the first country to agree to implement Agassi's electric-car infrastructure, and plans were under way to have 150,000 recharging spots and 100 battery-exchange stations installed throughout Israel by 2011.

(DAVID C. HAYES)

Akasaki, Isamu

(b. Jan. 30, 1929, Chiran, Japan)

Japanese materials scientist Isamu Akasaki was chosen as the 2009 recipient of the \$500,000 Kyoto Prize for lifetime achievement in advanced technology for his pioneering work conducted during the 1980s in the development of blue-light-emitting diodes (LEDs). Prior to that time scientists had produced LEDs that emitted red or green light, but blue LEDs had been considered impossible or impractical to make. Once blue LEDs became available commercially in 1993, they achieved importance in a range of applications, including electronic displays and indicators, outdoor signage and traffic signals, and vehicle lamps. Further work led to the development of blue semiconductor lasers, which proved useful for high-capacity optical-media devices, such as Blu-ray disc players. In addition, the availability of blue LEDs made possible the development of white LED lighting—which combined light from red, green, and blue LEDs—

as a promising form of high-efficiency general-purpose lighting.

Akasaki and colleagues succeeded in finding techniques for producing blue LEDs through many years of research on the semiconductor gallium nitride (GaN). (LEDs are semiconductor diodes that contain an interface between two types of semiconductor materials—n-type and p-type materials—which are formed by doping [introducing] different impurities into each.) A major breakthrough was the team's discovery, reported in 1986, that a materials-forming technique called metalorganic vapour phase epitaxial growth could be used to create high-quality GaN crystals on a sapphire substrate. A second breakthrough in Akasaki's work in developing blue LEDs, reported in 1989, was the discovery that p-type GaN could be formed by doping GaN crystals with magnesium atoms and then irradiating them with electron beams. This p-type material was then used with existing n-type material to form GaN diodes. Akasaki continued research into GaN materials through the 1990s and early 2000s, which helped lead to the development of blue semiconductor lasers and other electronics applications.

After Akasaki received a B.S. (1952) from Kyoto University, he worked for Kobe Kogyo Corp. (later named Fujitsu) until 1959. He then attended Nagoya University, where he held several teaching positions while he obtained a doctorate in engineering (1964). He subsequently served as the head of a basic research laboratory at the Matsushita Research Institute Tokyo, Inc., until he returned (1981) to Nagoya University as a professor. In 1992, when Akasaki left Nagoya University, he was made professor emeritus; he then joined the faculty of Meijo University in Nagoya. Nagoya University gave Akasaki the title of university professor in 2004 and named the Akasaki Research Center, completed in 2006, in his honour. Akasaki was a fellow of the IEEE (formerly the Institute of Electrical and Electronics Engineers), an honorary member of the Institute of Electronics, Information and Communication Engineers, and a foreign associate to the U.S. National Academy of Engineering.

(DAVID C. HAYES)

Amano, Yukiya

(b. May 9, 1947, Kanagawa, Japan)

In July 2009 Japanese veteran diplomat Yukiya Amano was elected the director

Japanese diplomat Yukiya Amano

general of the International Atomic Energy Agency (IAEA), an intergovernmental organization headquartered in Vienna whose role as the United Nations watchdog to safeguard against nuclear proliferation had gained prominence with concerns that Iran might be developing nuclear weapons. These concerns were heightened by the disclosure in September 2009 that Iran was operating a clandestine nuclear facility. Amano, an expert in nuclear disarmament and nonproliferation, had worked for more than 36 years in the Japanese foreign service, notably as Japan's envoy (2005–09) to the IAEA and member of the IAEA board of governors, the organization's policy-making body.

Amano was elected director general on the sixth round of voting with the support of 23 member countries of the board of governors—the minimum two-thirds majority required. The vote was divided between Amano and South Africa's IAEA envoy, Abdul Samad Minty. Amano was largely perceived as the preferred candidate of Western industrialized countries and Minty as the favoured candidate of less-developed countries (LDCs). The split reflected the multiple mandates of the IAEA, with Western industrialized countries being more concerned about nuclear proliferation and LDCs generally giving higher priority to the sharing of nuclear technology among all countries for the generation of nuclear energy for economic development. Amano said that he was “resolute in opposing the spread of nuclear arms because I am from a country that experienced Hiroshima and Nagasaki” and that he supported the IAEA's

mandate of helping countries make safe use of nuclear energy and technology. On December 1 Amano formally succeeded Mohamed ElBaradei, an Egyptian lawyer who had held the position of director general for three four-year terms, and some observers believed that under Amano's leadership the organization would be less politicized than it had been under ElBaradei.

Amano graduated from Tokyo University's law faculty in 1972, and he joined Japan's Foreign Ministry in the same year. In 1988 he was appointed director for research coordination and senior research fellow of the Japan Institute of International Affairs (Tokyo). He was subsequently appointed director (1990) of the publications and information centre of the Organisation for Economic Co-operation and Development in Tokyo and director (1993) of the nuclear energy division of the Japanese Foreign Ministry. As Amano's expertise on international issues concerning nuclear weapons grew, he participated in arms-control talks that led to the 1995 extension of the Nuclear Non-proliferation Treaty and the 1996 Comprehensive Test Ban Treaty. He then held positions in Japan's Foreign Ministry as director general (2002) for arms control and scientific affairs and director general (2004) of the disarmament, nonproliferation, and science department. During his career, Amano also held posts in the Japanese embassies in Brussels; Vientiane, Laos; and Washington, D.C. In 2005 the IAEA and its then director general ElBaradei were jointly awarded the Nobel Prize for Peace. As chairman (2005–06) of the board of governors at the time, Amano accepted the IAEA's share of the Nobel Prize on behalf of the organization. (DAVID C. HAYES)

Ashton, Baroness

(CATHERINE MARGARET ASHTON, BARONESS ASHTON OF UPHOLLAND, OF ST. ALBANS IN THE COUNTY OF HERTFORDSHIRE) (b. March 20, 1956, Upholland, Lancashire, Eng.) On Dec. 1, 2009, British politician Baroness Ashton, who had previously served as leader of the House of Lords (2007–08) and as European Union trade commissioner (2008–09), took office as the EU's high representative for foreign affairs and security policy. On assuming her new position, Ashton became one of the most powerful women in the world, acting as the voice of the EU in all matters of foreign policy.

Ashton studied economics at Bedford College (later part of Royal Holloway,

University of London) and earned a bachelor's degree in sociology in 1977. Upon graduating, she worked as a secretary for the Campaign for Nuclear Disarmament before taking a job in management consultancy in 1979. From 1983 to 1989 Ashton was a director of Business in the Community, an organization that encouraged corporate responsibility and facilitated partnerships between the public and private sectors. She spent the 1990s working as a policy adviser, and in 1998 she was tapped to head the county of Hertfordshire's health authority. The following year she was awarded a life peerage by Labour Prime Minister Tony Blair, and she entered the House of Lords.

Throughout her parliamentary career, Ashton focused on education and human rights issues. She served (2001–04) as a junior education minister and in 2002 assumed leadership of the early-childhood-development initiative Sure Start. In 2004 Ashton switched portfolios, becoming a junior minister for constitutional affairs. She was admitted to the Privy Council in May 2006, and later that year her efforts to promote equality earned her recognition as Politician of the Year by the gay and lesbian rights group Stonewall. In 2007 Ashton served briefly as a junior justice minister before being promoted to leader of the House of Lords by Prime Minister Gordon Brown. In that role she was instrumental in easing the passage of the EU's Lisbon Treaty through the upper house. The following year she was appointed EC trade commissioner. Although in that post Ashton lacked the name recognition of her predecessor, British politician Peter Mandelson, she earned the admiration of the European Commission president, José Manuel Barroso, for her efficiency.

With the final ratification of the Lisbon Treaty in November 2009, European leaders were faced with the task of filling the newly created roles of president of the European Council and high representative for foreign affairs and security policy. After support for Blair for the presidency flagged in the face of French and German opposition, Belgian Prime Minister Herman Van Rompuy (*q.v.*) emerged as the favourite for the presidency, and Barroso and Brown championed Ashton for the high representative office. Although some members of the European Parliament expressed reservations about Ashton's perceived lack of foreign-policy experience, she responded, "I bring to this role 28 years of experience in negotiat-

ing, building consensus and advocacy and I hope it will be recognized as relevant and pertinent for what is to come." (MICHAEL RAY)

Beck, Glenn

(b. Feb. 10, 1964, Mount Vernon, Wash.) When conservative pundit Glenn Beck debuted his self-titled television talk show on Fox News in January 2009, it was to a ready-made audience of nearly two and a half million viewers. Building upon the popularity of his Cable News Network (CNN) show (2006–08), Beck took his trademark blend of sentimentality, theatrics, and unpredictable, divisive commentary to an audience that felt marginalized by the political shifts reflected in the November 2008 election of U.S. Pres. Barack Obama.

Beck grew up in Mount Vernon, where his father owned a bakery. He developed a fascination with radio at a young age, and he won an hour-long disc-jockey debut on a local station when he was 13. His parents divorced later that year, and he moved with his mother to Puyallup, Wash. His mother, who had battled depression and substance abuse, died in a boating accident in 1979; Beck would later characterize her death as a suicide. Beck returned to live with his father, and by age 15 he had a job at a radio station in Seattle. He later worked at stations in Provo, Utah; Corpus Christi, Texas; and Louisville, Ky. Beck's Louisville show, *Captain Beck and the A-Team*, followed the newly popular "zoo crew" format, which featured wacky hosts and humorous stunts and skits. At that time Beck began politiciz-

Conservative pundit Glenn Beck

Mike Mergen/AP

ing his on-air act, inserting blunt patriotism into a largely lighthearted morning show. He spent 1987–89 in Phoenix, where he employed increasingly outrageous tactics to drum up publicity. In one incident Beck sabotaged a free concert sponsored by a rival station, using it as a platform to call further attention to his own show.

Beck was fired from his radio job in Houston in 1990 and later moved to Connecticut, where he cohosted the *Glenn and Pat Show* with fellow disc jockey Pat Gray. Around this time Beck's dependence on drugs and alcohol, long a factor in his life, increased. He went sober in the mid-1990s with the help of Alcoholics Anonymous, and in 1999 he joined the Mormon church.

The radio show that catapulted Beck to household-name status was *The Glenn Beck Program*, which began airing in Tampa, Fla., in 2000. It was Beck's first foray into talk radio, and it gave him a pulpit from which to air his right-wing political beliefs. Two years later the show went national, and in 2006 Beck was invited to take an evening television slot on CNN's *Headline News*. His flair for the dramatic carried over from radio, and he quickly drew a devoted audience with his showmanship and biting commentary.

Beck's profile only grew with the ascendancy of a Democratic president. Following the election that brought Obama to power, Beck's was among the loudest cries of the alienated right. By late 2009 he was drawing millions of people to his show, podcast, and Web site. The book *Glenn Beck's Common Sense*, released in 2009, quickly became a best seller. Among Beck's other works were *The Real America* (2003) and *An Inconvenient Book* (2007).

(MELISSA ALBERT)

Benjamin, Regina

(b. Oct. 26, 1956, Mobile, Ala.)

In July 2009 Regina M. Benjamin, an American physician who had spent most of her medical career serving poor families in a shrinking village on the Gulf Coast of Alabama, was nominated by U.S. Pres. Barack Obama to be the U.S. surgeon general. She was confirmed unanimously by the Senate in October. Benjamin had achieved distinction for the dedication she had shown in providing health care to her medically underserved community and patients, many of whom were uninsured and unable to pay for their treatment. Benjamin was the only doctor in the village, Bayou La Batre, and she

persevered in running the community's health clinic despite having had to rebuild it three times—in 1998 after it was flooded by Hurricane Georges, in 2005 after it was destroyed by Hurricane Katrina, and again in 2006 after it was extensively damaged by fire. She mortgaged her house to help finance the clinic's reconstruction after Hurricane Katrina, and while the clinic was being rebuilt, she made house calls to see her patients. Benjamin's new high-profile post would give her the opportunity to champion health care for those unable to afford it. She promised that she would "communicate directly with the American people, to help guide them through whatever changes may come with health care reform," and make certain that "no one falls through the cracks."

Benjamin received a B.S. (1979) from Xavier University of Louisiana. After first attending (1980–82) the Morehouse School of Medicine, Atlanta, Benjamin obtained an M.D. (1984) from the University of Alabama and completed (1987) a residency in family practice at the Medical Center of Central Georgia. Benjamin attended medical school with the aid of funding from the National Health Service Corps, a U.S. federal program that paid medical-school tuition in exchange for a commitment to work for a defined period in an area with few or no doctors. In 1990 Benjamin founded the Bayou La Batre Rural Health Clinic, and the following year she obtained an MBA from Tulane University, New Orleans.

Throughout her career Benjamin was active in medical organizations and advisory groups. She served (1986–87) on the American Medical Association's (AMA's) Women in Medicine Panel, and in 1995 she became the first African American woman and the first person below the age of 40 to be elected to the AMA's board of trustees. As president (2002–03) of the Medical Association of the State of Alabama, she was also the first African American woman to preside as president of a state medical society. She served (1996–2002) on the board of Physicians for Human Rights, and in 1998 she received the Nelson Mandela Award for Health and Human Rights. Benjamin also worked with the University of South Alabama's College of Medicine, and from 2000 to 2001 she was in charge of the university's telemedicine distance-learning program, which offered medical education and health care to clinicians and patients in rural areas through a telecommunications network.

In 2008 Benjamin was awarded a John D. and Catherine T. MacArthur Foundation fellowship. (DAVID C. HAYES)

Bird, Andrew

(b. July 11, 1973, Chicago, Ill.)

After years of playing music in relative obscurity, the eclectic American pop songwriter and multi-instrumentalist Andrew Bird appeared poised to break out in 2009. His latest solo recording, *Noble Beast*, debuted in January at number 12 on the *Billboard* album chart (a career high), and he performed to increasingly larger audiences, selling out shows at New York City's Carnegie Hall and Chicago's Civic Opera House. A darling of the indie-rock set, Bird was known to fans for his virtuosic skill on the violin, which he often sampled and looped onstage, and for his meticulously crafted songs that combine wistful melodies with hyperliterate lyrics.

Andrew H. Walker/Getty Images

Multifaceted American musician Andrew Bird

Bird was immersed in music from early childhood. He began taking Suzuki-method violin lessons at age four and later earned a degree in violin performance (1996) from Northwestern University, Evanston, Ill. He chafed at the rigid expectations of the classical-music world, however, and after graduation supported himself by playing his instrument everywhere from weddings to Renaissance fairs. Having developed an interest in vintage jazz, he soon fell in with the popular swing-revival band the Squirrel Nut Zippers, appearing on

three of their albums in the late 1990s. In the meantime, he landed a recording contract of his own.

Andrew Bird's Bowl of Fire, as his new Chicago-based band became known, won critical notice for its impressive command and fusion of early 20th-century musical idioms, drawing on traditions as varied as swing-era jazz, calypso, German cabaret, and Central European folk songs over the course of three full-length albums, *Thrills* (1998), *Oh! The Grandeur* (1999), and *The Swimming Hour* (2001). The band failed to catch on among audiences, though, and Bird consequently decided to strike out on his own.

After testing the waters with a series of solo gigs, Bird recorded *Weather Systems* (2003) at his family's rural Illinois farm. The album marked a turning point in his songwriting; the idiosyncratic pre-rock-and-roll touches were now filtered through a sound that owed more to contemporary folk and pop-rock music than his previous pastiche-driven work had. (He also, notably, revealed a knack for whistling.) Bird expanded his fan base by frequently opening for more famous musicians (he called the 30-minute performances "guerrilla attacks"), and widespread praise for his next record, *The Mysterious Production of Eggs* (2005), brought him further attention. The success continued with the sprawling *Armchair Apocrypha* (2007), which sold more than 100,000 copies—a considerable number for an independent release.

Bird remained in the public eye the following year by contributing to a *New York Times* blog in which he chronicled the process of writing and recording *Noble Beast*. He was expected to tour in support of the album through 2010.

(JOHN M. CUNNINGHAM)

Bouteflika, Abdelaziz

(b. March 2, 1937, Oujda, Mor.)

On April 9, 2009, Moroccan-born Algerian politician Abdelaziz Bouteflika was reelected president of Algeria by a landslide margin; according to the official tally, he garnered 90.2% of the vote, and turnout was reported to have been 74.5%. The election, however, was harshly criticized by opposition groups, who claimed that the poll was marred by widespread fraud and voter intimidation. Many observers believed that the president had collected only about half of the vote total and estimated that the actual turnout was closer to 30%. Bouteflika had served as Algeria's president since 1999.

Bouteflika's family was from Tlemcen, Alg., and he spent much of his early life living in Algeria. In 1957, three years into the Algerian war for independence (1954–62), he joined the National Liberation Front (FLN) in its fight against French rule. He became an officer in the National Liberation Army in 1960. After Algerian independence in 1962, Bouteflika was appointed minister for youth, sports, and tourism, and a year later he was made foreign minister.

Bouteflika participated in the 1965 coup, led by Houari Boumedienne, that removed Algerian Pres. Ahmed Ben Bella from power and installed Boumedienne. Bouteflika continued to serve as foreign minister in the new government, and by the time of Boumedienne's death in 1978, Bouteflika seemed well positioned to replace him in the presidency. Nevertheless, the army instead appointed Defense Minister Chadli Bendjedid, and soon afterward Bouteflika lost his position as foreign minister. In 1981 corruption charges drove him into self-imposed exile.

On his return to Algeria in 1987, Bouteflika again became a member of the FLN. Although he won the presidency in 1999, the election was marred by claims of rigging and the subsequent withdrawal of the other candidates. As president, Bouteflika focused on rebuilding the country and strengthening Algeria's international reputation. He also granted wide-ranging amnesty to militant Islamist groups within the country in an effort to resolve a long-standing civil conflict.

Bouteflika won reelection in 2004. Though his previous efforts to reduce the country's rebel activity and its attendant violence were somewhat successful, during his second term insurgents re-formed as an arm of al-Qaeda and were responsible for a number of suicide bombings. In 2005 Bouteflika experienced health problems, which led to continued speculation about his physical well-being. In November 2008 the Algerian parliament approved a constitutional amendment abolishing presidential term limits. The arrangement gave Bouteflika the opportunity to run for his third consecutive term.

(EDITOR)

Boyle, Danny

(b. Oct. 20, 1956, Manchester, Eng.)

At the 2009 Academy Awards ceremony, Danny Boyle was named best director for *Slumdog Millionaire* (2008), his unconventional romance that had become an unlikely international sensation. The film—a modern take on Charles Dickens's *Oliver Twist* set in India with elements of Bollywood—earned seven other Oscars, including best picture. *Slumdog* had almost failed to receive a theatrical release after its initial distributor folded. It eventually landed at Fox Searchlight, but many questioned whether audiences would see a movie that contained scenes of extreme child abuse and torture, featured extensive dialogue in Hindi with English subtitles, and cast first-time performers who actually lived in Mumbai (Bombay) slums. Such doubts proved unfounded, however, as Boyle crafted an energetic and ultimately optimistic film that connected with both moviegoers and critics. In addition to winning the Oscars, he and his film also received BAFTAs, Golden Globes, and a host of other awards.

Before stepping behind the camera, Boyle worked in the theatre. He served as the artistic director (1982–85) at the Royal Court Theatre Upstairs and as deputy director (1985–87) at the Royal Court Theatre. In 1987 he made his directorial debut with the television movie *Scout*. He directed various other TV projects before helming his first feature film, *Shallow Grave* (1994). The crime thriller was noted for its bold visual imagery, which became a trademark of Boyle's work, and was written by John Hodge, who became a frequent

Oscar-winning director Danny Boyle

Giles Keyte—Mission Pictures/20th Century Fox/The Kobal Collection

collaborator. In 1996 the director scored his big breakthrough with *Trainspotting*. The darkly humorous look at heroin addicts, written by Hodge and featuring *Shallow Grave* star Ewan MacGregor, became an international hit and one of the U.K.'s highest-grossing films. MacGregor reteamed with Boyle on the romantic comedy *A Life Less Ordinary* (1997), but it failed to match the success of their previous efforts. Boyle next directed his first big-budget Hollywood film, *The Beach* (2000), which featured a screenplay by Hodge based on Alex Garland's popular novel about a seemingly utopian community on a remote Thai island. Despite starring Leonardo DiCaprio, it earned mixed reviews and failed to find an audience. In 2002 Boyle had a sleeper hit with the postapocalyptic zombie film *28 Days Later*. He continued to show his versatility with *Millions* (2004), a heart-warming story about a motherless boy who finds the proceeds of a bank robbery. After directing the science-fiction thriller *Sunshine* (2007), Boyle received the greatest accolades of his career for *Slumdog*. The film, however, was not without controversy. Some charged that it romanticized poverty, and others complained that the child actors were exploited, especially when it was revealed that two of the young stars continued to live in the Mumbai slums. Boyle (with the film's producer) subsequently purchased homes for the children's families and donated over \$750,000 to a fund to help other Mumbai children. (AMY TIKKANEN)

Boyle, Susan

(b. June 15, 1961, Blackburn, West Lothian, Scot.) On April 11, 2009, the virtually unknown Scottish singer Susan Boyle appeared as a contestant on an episode of the British television talent show *Britain's Got Talent*. Boyle's unconventional appearance belied her stunning singing voice, and her rendition of the song "I Dreamed a Dream" from the musical *Les Misérables* immediately silenced the cynicism of both the judges and the audience, earning her a standing ovation and quickly transforming her into an international media sensation.

Boyle grew up in Blackburn, a small Scottish industrial town, as the youngest of nine children born to two middle-class Irish immigrants. Owing to complications during her birth, she was briefly deprived of oxygen, which left her with mild brain damage; in school

Scottish singer Susan Boyle

she was diagnosed with learning disabilities, for which she was frequently teased and bullied. Boyle was drawn to music and singing as a young child, however, and at age 12 began participating in musical productions at school. Her talent was quickly recognized by her teachers, who encouraged her to persist.

After high school, Boyle worked briefly as a cook trainee at West Lothian College before beginning studies at the Edinburgh Acting School. She continued to cultivate her voice, singing in her church choir, at local karaoke bars, and at the Edinburgh Festival Fringe, the largest arts festival in the world.

In 1995 Boyle unsuccessfully auditioned for the British TV talent show *My Kind of People*. Four years later her rendition of "Cry Me a River," which had been featured on a local charity CD, received positive reviews. She consequently exhausted her monetary savings to record a professional demo tape, which she mailed to record companies, radio and TV networks, and various talent competitions. Boyle's career ambitions were put on hold in 2000 after her sister died. She resumed with professional singing lessons in 2002 and subsequently produced several recordings for local performances and benefits.

Devastated by the death of her mother in 2007, Boyle completely withdrew from singing for nearly two years. In late 2008, however, she applied to audition for *Britain's Got Talent* to honour the memory of her mother, who had been a fan of the show and had encouraged her to become a contestant. Videos

of Boyle's debut on the show (and a later appearance as a semifinalist) were viewed on the Internet by an estimated 100 million people worldwide and made her an international phenomenon. She placed second in the final competition and then briefly disappeared from the limelight during a period of exhaustion. Boyle performed during the show's talent stage tour in June and sang on the finale of its counterpart in the U.S., *America's Got Talent*, in September. Her first studio album, *I Dreamed a Dream*, debuted at number one on the *Billboard* charts in late November and was the second-best-selling album of 2009 with more than 3.1 million copies sold.

(JEANNETTE L. NOLEN)

Brodeur, Martin

(b. May 6, 1972, Montreal, Que.)

On March 17, 2009, French Canadian ice hockey player Martin Brodeur became the all-time winningest goaltender in the National Hockey League (NHL) when he passed the great Patrick Roy with his 552nd victory: a 3–2 triumph over the Chicago Blackhawks. Despite having missed 16 weeks of the 2008–09 season because of surgery on a damaged tendon in his arm, Brodeur finished the season with 557 career wins (including 101 shutouts) and 299 losses in 999 games played. Early in the 2009–10 season, he racked up the 1,000th game of his professional career, the only goalie other than Roy (with 1,029) to have achieved that milestone.

As a boy Brodeur traveled with his father, Denis Brodeur, a member of Canada's 1956 bronze-medal-winning Olympic team and a longtime photographer for the NHL Montreal Canadiens. The younger Brodeur was a first-round choice of the 1990 NHL entry draft and signed with the New Jersey Devils. In 1993–94 he won the Calder Memorial Trophy as the league's top rookie, having recorded a 2.40 goals against average (GAA) for the season and a 1.95 GAA during the 17 play-off games.

In 1994–95 Brodeur helped his team win the Stanley Cup championship, compiling a record of 19 wins, 11 losses, and 6 ties. After that season he became a fixture in goal for the Devils and in the NHL's All-Star Game; between the 1997–98 and 2007–08 seasons, he played in at least 70 regular-season games each year. An excellent stickhandler, Brodeur in 1997 became the second goaltender in NHL history to have scored a goal in a play-off game. He also led the Devils

to Stanley Cup victories in 2000 and 2003 and won the Vezina Trophy for the league's most outstanding goaltender four times (2002–03, 2003–04, 2006–07, and 2007–08). By 2009 he held the NHL record for 40-win seasons (7) and was tied with Roy for the most consecutive 30-win seasons (12).

Brodeur was a member of Team Canada in the Olympic Winter Games of 1998, 2002, and 2006, and in 2002 he played a significant role in the team's gold-medal win. He also represented his home country at the 1996 and 2005 International Ice Hockey Federation world championships, with Canada taking the silver both times. In 2004 Brodeur helped Team Canada win the World Cup championship. (EDITOR)

Bryce, Quentin

(b. Dec. 23, 1942, Brisbane, Australia) In 2009 Quentin Bryce enjoyed a lively first full year as Australia's governor-general. A former governor of the state of Queensland and a noted lawyer, educator, and human rights activist, Bryce was appointed governor-general by Prime Minister Kevin Rudd, and upon being sworn in on Sept. 5, 2008, she became the first woman ever to hold the high-profile post of Queen Elizabeth II's viceregal representative in Australia. Bryce's historic appointment was hailed by numerous Australian media outlets, as well as by many government officials. In announcing his selection, Rudd cited her long record of public service and praised her as some-

one who "captures the spirit of modern Australia." Bryce was to serve a five-year term, during which time she intended to devote much of her attention to human rights issues; she indicated that she would place "special emphasis" on promoting and protecting the rights of the country's indigenous peoples.

Bryce was born Quentin Strachan. She grew up in Ilfracombe, which she described as "a little bush town in western Queensland of two hundred people," and earned bachelor of arts and bachelor of laws degrees from the University of Queensland. She married architect and graphic designer Michael Bryce in 1964 (the couple eventually had five children) and was admitted to the Queensland bar the following year. She served (1968–83) as a lecturer in law at the University of Queensland and in 1984 was named the first director of the Queensland Women's Information Service. In the late 1980s and early 1990s, she worked for the Australian Human Rights and Equal Opportunity Commission, first as the commission's Queensland director and then as the organization's federal sex discrimination commissioner.

In 1993 Bryce became the founding chairperson and CEO of the National Childcare Accreditation Council, in which position she led efforts to ensure and improve the quality of child-care services in Australia. She later served (1997–2003) as the principal and CEO of the Women's College at the University of Sydney. Bryce was appointed governor of Queensland in 2003, the same year that she was made a Companion of the Order of Australia. Her five-year appointment as Queensland's governor was extended for an additional two years in January 2008, but it was only three months later that Rudd announced his selection of Bryce for the governor-general's post.

In her new position, Bryce maintained a busy travel schedule, visiting Australian troops in Afghanistan, addressing the World Future Energy Summit in Abu Dhabi, U.A.E., and undertaking a diplomatic trip to nine African countries in March and April. After the deadliest bushfires in Australia's history ravaged much of the state of Victoria early in the year and heavy flooding also occurred across northern Queensland, Bryce toured both states and made a national televised address on February 10, urging her fellow Australians to "do whatever needs to be done" to help survivors of the disasters. (SHERMAN HOLLAR)

Burnett, T Bone

(b. Jan. 14, 1948, St. Louis, Mo.)

T Bone Burnett, one of popular music's most prolific and successful producers, began 2009 with an impressive showing at the Grammy Awards, where he was honoured three times for his work on the Alison Krauss and Robert Plant album *Raising Sand* and once for B.B. King's *One Kind Favor*. Although *Raising Sand* boasted impressive sales and near-universal critical acclaim, Burnett was unimpressed with the sound quality of the final recording. In an era in which many producers were mixing music to be louder and denser for the low-fidelity iPod and ringtone markets, Burnett returned to the basics of audio engineering with his XOΔE (rendered in English as "CODE") technology. CODE offered a listening experience that replicated the original studio master recording as faithfully as possible, with no additional cost to the consumer—CODE audio DVDs were included in the standard CD package, and listeners could thus compare the two formats side-by-side. CODE was further refined for the 2009 debut album from the psychedelic rock supergroup Moonalice.

Joseph Henry Burnett spent his childhood in Fort Worth, Texas, and it was there that he acquired the nickname "T Bone" and became involved in the local music scene, initially as a guitarist with local blues bands and later as the founder of his own recording studio. He moved to Los Angeles in the early 1970s and recorded his debut solo album, *The B-52 Band & the Fabulous Skylarks* (1972), a straightforward collection of bluesy rock tunes. In 1975 he received his major break into the industry, touring as a guitarist on Bob Dylan's Rolling Thunder Revue tour. His second solo album, *Truth Decay* (1980), showed Burnett's maturation as an artist, but he found greater success in the production booth than he did as a performer. He produced the critically acclaimed major label debut from Los Lobos, *How Will the Wolf Survive?* (1984), and worked with Elvis Costello, whose *King of America* (1986) and *Spike* (1989) featured Burnett as both producer and performer. Burnett continued to record solo material, with the Grammy-nominated *The Criminal Under My Own Hat* (1992) providing an excellent window into Burnett's evolving lyrical sensibilities, but he remained outside the mainstream of popular music. That changed dramatically when he selected and composed the music for the film *O Brother, Where Art Thou?* (2000). Burnett earned

Quentin Bryce, Australia's first female governor-general

Record producer and guitarist **T Bone Burnett**

four Grammy Awards and was thrust into the public spotlight. He earned two more Grammys, the first for the Tony Bennett and k.d. lang duet *A Wonderful World* (2002) and the second for the sound track of the Johnny Cash film biography *Walk the Line* (2005). Although he spent most of the 1990s and early 2000s involved in producing, Burnett returned to performing with *True False Identity* (2006) and *Tooth of Crime* (2008).

(MICHAEL RAY)

Buzek, Jerzy

(b. July 3, 1940, Smilowice, Silesia, Pol. [now in Czech Republic]) The election of Polish politician Jerzy Buzek to the presidency of the European Parliament in July 2009 marked the first time that a major European Union institution had been headed by a representative of a former communist country. Buzek, the European People's Party candidate and a five-year parliament veteran, garnered 555 of the 644 valid votes cast, while his opponent, Swedish Green Party candidate Eva-Britt Svenson, won 89. The centre-right Buzek would relinquish power to a socialist candidate halfway through the five-year term in a power-sharing compromise between the conservative and liberal contingents. While the post was primarily ceremonial, Buzek's victory was considered a positive, if symbolic, indication that stigmatization of former Soviet bloc countries was on the wane.

Jerzy Karol Buzek was raised in an area of southern Poland ceded to Czechoslovakia after World War II. His family moved to Chorzow, where his father worked as an engineer. Buzek attended the Silesian University of Technology in Gliwice, earning (1963) a degree in chemical engineering. He conducted research at the Institute of Chemical Engineering of the Polish Academy of Sciences in Gliwice and spent a year (1971–72) at the University of Cambridge on a research grant.

In 1980 Buzek joined the newly formed trade union Solidarity. He ascended to power rapidly, chairing the union's first National Congress the following year. Beginning in 1989, having emerged from Solidarity's underground years unscathed by communist persecution, Buzek presided over three additional congresses as the union worked to secure political legitimacy. Continuing his work at the Polish Academy of Sciences, where until 1997 he served as director, Buzek was also appointed (1992) representative to the International Energy Agency's Greenhouse Gas R&D Programme.

Buzek was approached in 1997 by Solidarity Electoral Action (AWS), the political wing of Solidarity, to be a candidate for the Sejm (the lower house of parliament). Soon after, he was appointed prime minister by the controlling AWS, presiding over a coalition with the free-market Freedom Union (UW). Though Buzek, a Protestant, was greeted skeptically in predominately Roman Catholic Poland, he successfully initiated discussions for accession to the EU in 1997 and negotiated Poland's NATO membership in 1999. His economic reforms, however, enacted in part to facilitate EU and NATO acceptance, entailed rapid downsizing and privatization and proved to be unpopular as the cost in jobs became apparent. Compounding matters, in 2000 the UW dissolved the coalition, leaving Buzek with a minority government for the remainder of his term, which ended in 2001. He served (2002–04) as vice-rector of Polonia University in Czestochowa, where he founded the Polonia School of Diplomacy. When Poland formally joined the EU in 2004, Buzek was elected to the European Parliament, where he became vice president of the European Energy Forum.

(RICHARD T. PALLARDY)

Castroneves, Helio

(b. May 10, 1975, São Paulo, Braz.) In May 2009 Brazilian race-car driver Helio Castroneves capped a personally

tumultuous year in triumphant fashion by winning the premier auto race in the U.S., the Indianapolis 500, for the third time. His victory came little more than five weeks after a U.S. federal jury had acquitted him on six counts of income-tax evasion—charges that could have netted him six years in prison—and just two days after prosecutors had dropped a remaining conspiracy charge against him. Finally able to put his monthslong legal battle behind him, the 34-year-old Castroneves turned in a stirring performance before some 300,000 fans at the Indianapolis Motor Speedway. Starting on the pole, he surrendered the lead after seven laps but rallied late to beat the second-place finisher, Englishman Dan Wheldon, by 1.98 seconds and thus became only the ninth driver in Indy 500 history to take the checkered flag three times.

Castroneves was involved in motor sports from a young age with the support of his father, an auto dealer in São Paulo who owned a stock-car-racing team. As a teenager, Castroneves won a national go-kart-racing title in Brazil before advancing in 1994 to Formula Three auto racing in Europe. He attracted the attention of Brazilian racing great Emerson Fittipaldi, who helped him to get started on the Championship Auto Racing Teams IndyCar circuit in 1998. After signing in 2000 with Penske Racing, one of the powerhouse teams in the IndyCar Series, Castroneves quickly became one of the team's dominant drivers. In 2001 he collected his first Indy 500 title, edging Penske teammate and fellow Brazilian Gil de Ferran by 1.74 seconds for the win.

Castroneves repeated as Indy 500 champion in 2002—the first driver since American racing legend Al Unser in 1970–71 to win the race in consecutive years. He was also the youngest driver ever to accomplish the back-to-back feat and the first to win the classic race in each of his two initial attempts. Castroneves took second place in the Indy 500 in 2003 and finished third in 2007. By this time the immensely affable Brazilian had become one of the Indy Racing League's most popular drivers. In 2007 he broadened his fan base by appearing on the hit American television show *Dancing with the Stars*, winning the competition with his professional dance partner, Julianne Hough.

A federal indictment handed down in 2008 alleged that he had helped to create a Panama-based shell company with the intention of avoiding paying taxes on some \$5 million in income.

Castroneves, however, steadfastly maintained his innocence. Following his acquittal, he tearfully expressed his relief at being able to return to racing. With his third Indy 500 win, Castroneves was one step closer to matching the only four-time winners of the race—Americans A.J. Foyt, Rick Mears, and Unser.

(SHERMAN HOLLAR)

Cave, Nick

(b. Feb. 4, 1959, Jefferson City, Mo.)

In 2009 the extravagant objects known as *Soundsuits*, the creations of artist Nick Cave, traveled from coast to coast in the U.S., having enjoyed exhibits at the Jack Shainman Gallery in New York City and the Yerba Buena Center for the Arts in San Francisco. Since the early 1990s, Cave had been immersed in fashioning the *Soundsuits* that qualified as fashion, sculpture, and performance art. These wearable mixed-media constructions, named for the sounds made when worn by performers, were fabricated through a complex layering of found materials, ranging from manufactured castoffs (such as fabrics, buttons, and old toys) to natu-

ral objects (such as twigs and hair). Equally reminiscent of African religious ceremonial costumes and high fashion garments, these hybrid objects referenced Cave's ongoing interest in the construction and concealment of identity. Simultaneously acting as ornate art objects and as instruments for sound and movement, the *Soundsuits* had an interdisciplinary and transformative nature that won Cave numerous awards, including the Joan Mitchell Foundation Award in 2008.

Cave began exploring fibre arts and fashion during his studies at the Kansas City (Mo.) Art Institute (B.F.A.; 1982). During his time there he also studied with Alvin Ailey's modern dance company, initiating his active interest in constructing a bridge between dance, fashion, and art. He earned a master's in fine arts (1989) at the Cranbrook Academy of Art, Bloomfield Hills, Mich., and later became chairman of the Fashion Design program at the School of the Art Institute of Chicago. Throughout his career, Cave made use of found and ready-made materials to reference cultural, political, and autobiographical issues. He made his first *Soundsuit* out of twigs in the early 1990s by wiring cut and drilled sticks to a handmade cotton undergarment, realizing its performative potential only once it had been completed. He later employed a myriad of techniques and traditions to create the *Soundsuits*, which range from formfitting bodysuits composed of intricately sewn fabrics and beads complete with ceramic head-dresses to amorphous suits made of woven hair in vibrant colours. When worn, the *Soundsuits* simultaneously conceal and transform the identity, race, and gender of their wearer, encouraging movement and creating sounds that correspond to their chosen materials and construction.

The *Soundsuits'* meanings shift and multiply with each exhibition and performance, set in places as varied as the theatre stage, fashion runway, and city street. Cave used these contexts to emphasize his reliance on community to activate his work—whether the skilled professionals and friends he recruited to assist him in the creation of the suits, the models and trained dancers that performed in them, or the audience that interpreted the combination of form and movement. Echoing his ongoing exploration of issues relating to identity and politics, Cave also used recycled materials in a series of sculptures and installations that equally cited crafts

and rituals. With these objects and his *Soundsuits*, Cave continued to borrow from a wide range of disciplines and cultures in an effort to examine and challenge notions of personal and cultural identity. (MICHAL RAZ-RUSSO)

Chaudhry, Iftikhar Muhammad

(b. Dec. 12, 1948, Quetta, Balochistan, Pak.) In March 2009, Iftikhar Muhammad Chaudhry resumed his duties as chief justice of the Pakistan Supreme Court more than a year after he was dismissed by Pakistani Pres. Gen. Pervez Musharraf. Although demands for Chaudhry's reinstatement served as the focal point of sustained efforts by Pakistan's legal community to pressure Musharraf into vacating his role as head of the Pakistan government, the chief justice's entire tenure on the court had been filled with drama and event-defining moments.

Chaudhry received his early education in Balochistan before moving to Sind province, where he studied law at Hyderabad University, receiving an LL.B with special concentration in constitutional law, criminal law, and tax and revenue law. He established a legal practice as an advocate in 1974 and became an advocate for the Balochistan High Court in 1976. In 1985 he enrolled as an advocate before the Pakistan Supreme Court. Chaudhry was then named (1989) advocate general of the Balochistan High Court, was designated (1990) additional judge of the Balochistan High Court, and held several other judiciary positions. While serving simultaneously as chairman of the Balochistan Local Council Election Authority, he was twice presiding officer of the Balochistan Local Council Bodies Authority. After being appointed (1999) chief justice of the Balochistan High Court, Chaudhry played a key role in the establishment of the Circuit Bench of the Balochistan High Court at Sibi.

He was named to the Pakistan Supreme Court in 2000 and was elevated to chief justice in 2005. Never one to avoid controversy, Chaudhry presided over the court during much of the military dictatorship headed by Musharraf, who seized power in 1999. Removed from his post as chief justice in late 2007, ostensibly because he appeared to threaten Musharraf's political authority, Chaudhry became the lightning rod for sustained efforts by Pakistan's legal community not only to seek his reinstatement but also to drive Musharraf out of office. Musharraf resigned in August 2008, and after elec-

Artist Nick Cave unveils one of his *Soundsuits*.

Pakistani jurist Iftikhar Muhammad Chaudhry

Aamir Qureshi—AFP/Getty Images

tions were held, a new central government emerged under Pres. Asif Ali Zardari, widower of slain former prime minister Benazir Bhutto.

After more than a year of unrelenting demonstrations following Chaudhry's dismissal—culminating in the declaration of a “Long March” arranged by the country's lawyer community but joined by political leaders led by former prime minister Nawaz Sharif, who also had been deposed by Musharraf—in March 2009 the court ordered that the chief justice be reinstated. Zardari's hesitation in returning Chaudhry to the court caused a rift between himself and Sharif until Zardari finally relented and restored Chaudhry to office. In May 2009 the court, again led by Chief Justice Chaudhry, lifted the ban on Sharif's ability to run for political office, which appeared to lay the groundwork for yet another confrontation between Sharif and Zardari. The decision, however, also reinforced Chaudhry's authority and the role of the Supreme Court in sustaining an independent Pakistani judiciary. (LAWRENCE ZIRING)

Contador, Alberto

(b. Dec. 6, 1982, Madrid, Spain)

Spanish cyclist Alberto Contador firmly established himself as the greatest stage racer in the world in 2009 as he claimed the second Tour de France victory of his young career on July 26 in Paris at the culmination of the 23-day, 3,460-km (2,150-mi) race. Contador, who won the race in 2007, dominated

the 2009 Tour's overall standings, finishing 4 minutes 11 seconds ahead of runner-up Andy Schleck of Luxembourg and 5 minutes 24 seconds ahead of former champion Lance Armstrong of the U.S., who placed third. Although Contador was just 26 years old, the win was his fourth victory at a major national, or grand, tour; he had also captured both the Tour of Italy (Giro d'Italia) and the Tour of Spain (Vuelta a España) in 2008. Followers of cycling marveled at the Spaniard's versatility, regarding him as a “complete rider”—a peerless climber who was also a formidable competitor in individual time trials—and many believed he had the potential to challenge Armstrong's record of seven Tour de France titles.

Contador competed as an amateur from his mid-teens and made his professional debut in 2003. He showed early promise, winning a time trial that year at the Tour of Poland, but in 2004 his future was left in doubt after he suffered a fall during a race and subsequently underwent brain surgery to remove a blood clot. He made a remarkable recovery, however, and resumed racing in 2005, winning a stage of the Tour Down Under in Australia and earning his first overall victory as a professional rider at the Catalan Cycling Week.

His emergence as one of the elite figures of road cycling came in 2007, but at the close of that season, his Discovery Channel team disbanded. Although Contador was the defending champion, he was unable to participate in the 2008 Tour de France because his new team, Astana, was excluded from the race for prior doping offenses. During the 2009 Tour, reports surfaced of a rift between Contador and his teammate Armstrong over the leadership of Astana. Any doubt as to who was the stronger rider vanished on stage 15, however, when the Spaniard produced the fastest climb in Tour history, making the final ascent to the Alpine village of Verbier, Switz., at an estimated rate of more than 1,850 m (6,070 ft) per hour. Contador seized the leader's yellow jersey on that stage and never relinquished it. Armstrong left Astana at the end of the Tour, vowing to assemble his own team in 2010. Contador, meanwhile, celebrated his victory and fielded offers from several other teams eager for his services. (SHERMAN HOLLAR)

Cruz, Penélope

(b. April 28, 1974, Madrid, Spain)

Spanish actress Penélope Cruz solidified her international stardom in 2009,

earning rave reviews for her performance as an ill-fated aspiring actress in *Los abrazos rotos* (*Broken Embraces*), directed by Pedro Almodóvar. Cruz, who was known for her classic beauty and her sultry roles, also appeared in the musical film *Nine*, in which she portrayed the mistress of a movie director played by British actor Daniel Day-Lewis. In February, Cruz won her first Academy Award—for best supporting actress, for her work in Woody Allen's *Vicky Cristina Barcelona* (2008), in which she starred alongside Scarlett Johansson and Javier Bardem.

Cruz grew up outside Madrid, where she studied ballet for nine years at Spain's National Conservatory; she also received intensive training in classical and jazz dance and studied theatre in New York City. At age 15 she won a modeling agency competition and began appearing in music videos and on Spanish television. Her first film roles were in *El laberinto griego* (although the film was completed in 1991, its release was delayed until 1993) and *Jamón, jamón* (1992). She came to international attention with *Belle époque* (1992), a film about an army deserter taken in by an elderly man and his four enchanting daughters. It won an Academy Award for best foreign film. Cruz first collaborated with Almodóvar in his *Carne trémula* (1997; *Live Flesh*) and teamed with the director again in *Todo sobre mi madre* (1999; *All About My Mother*).

Cruz's first English-language role came in *Talk of Angels* (1998). She then appeared in the contemporary western *The Hi-Lo Country* (1998). Cruz quickly established herself as a prominent actress in Hollywood. She starred alongside Matt Damon in *All the Pretty Horses* (2000), a film adaptation of Cormac McCarthy's novel of the same name, and opposite Johnny Depp in *Blow* (2001), a film based on the life of George Jung, the most prolific cocaine dealer in the U.S. during the 1970s. In 2001 Cruz also appeared in *Vanilla Sky*—a remake of a successful film in which she had earlier starred, *Abre los ojos* (1997; *Open Your Eyes*)—and afterward was involved in a highly publicized relationship with costar Tom Cruise.

In the early 21st century, Cruz continued to act in both English- and Spanish-language productions. After performing in *Head in the Clouds* (2004), she appeared as an unhappily married mother in Almodóvar's critically acclaimed *Volver* (2006; *To Return*), for which she received an Academy Award nomination. Cruz played a

Carlos Alvarez/Getty Images

Actress Penélope Cruz

woman dreamed of by a man undergoing a midlife crisis in *The Good Night* (2007) and portrayed the young lover of an aging college professor in *Elegy* (2008), a Spanish-language film adaptation of the Philip Roth novel *The Dying Animal* (2001). (EDITOR)

Daldry, Stephen

(b. May 2, 1961, Dorset, Eng.)

British film and theatre director Stephen Daldry's hybrid talent was on full display in 2009 as he propelled both a film, *The Reader* (2008), and a stage musical, *Billy Elliot* (opened Nov. 13, 2008), to their respective zeniths of professional acclaim, the 2009 Academy and Tony awards. *The Reader*, which was adapted by playwright David Hare from German author Bernhard Schlink's novel, peers at the spectre of the Holocaust in post-World War II Germany through the lens of an affair between an illiterate woman, played by British actress Kate Winslet, and a teenage boy who, as an adult, agonizes over the revelation that his lover was previously a concentration camp guard. The film earned 2009 Academy Award nominations for best picture and for Daldry's direction, as well as an Oscar for Winslet. Meanwhile, *Billy Elliot, the Musical*, adapted from Daldry's 2000 film *Billy Elliot*, about a boy who finds refuge in ballet, duplicated on Broadway the success of his earlier London stage production, garnering the Tony Award for best musical and securing best director honours for Daldry. Though his screen adaptation of Michael Chabon's Pulitzer Prize-winning novel *The Amazing Adventures of Kavalier and Clay* was still stalled as

2009 came to a close, Daldry maintained that the project would prevail.

Daldry's father—a bank manager who died when Daldry was 15—discouraged his interest in theatre. Abetted by his cabaret singer mother, however, Daldry joined a theatre troop in Taunton and by age 15 had resolved to direct. He attended the University of Sheffield on a Royal Air Force scholarship, earning a bachelor's degree (1982) in English. At Sheffield he directed the university theatre company and cultivated his radical bona fides with forays into socialism and a penchant for wearing pillbox hats.

Daldry then further flouted convention as an apprentice clown in Italy. Upon returning to England, he became artistic director of the Metro Theatre (1984–86) and apprenticed at the Crucible Theatre in Sheffield (1986–88). While presiding over London's Gate Theatre (1989–92), he championed obscure works by international writers, an ethos equally apparent during his tenure as artistic director of the Royal Court Theatre (1992–98). Daldry's direction of J.B. Priestley's *An Inspector Calls* (1992) for the National Theatre earned him a Laurence Olivier Award and, when the production traveled to Broadway (1994), a Tony. He returned to Broadway in 1999 as the director of David Hare's one-man show *Via Dolorosa*.

Daldry—at the time credited with one short film—was then unexpectedly tapped to direct *Billy Elliot*. The film was nominated for several Academy Awards, including best director. Daldry then helmed *The Hours* (2002), Hare's adaptation of Michael Cunningham's Pulitzer Prize-winning novel. A series of three meditations on Virginia Woolf's *Mrs. Dalloway*, the film starred Julianne Moore, Meryl Streep, and—as Woolf—Nicole Kidman. Daldry again received an Oscar nomination for best director, and Kidman claimed best actress honours. Daldry was created CBE in 2004. (RICHARD T. PALLARDY)

Daniels, David

(b. March 12, 1966, Spartanburg, S.C.) Critics' enthusiasm for the work of American opera singer David Daniels continued undiminished 15 years after Daniels's stage debut at Glimmerglass Opera in Cooperstown, N.Y., and his performing schedule remained full. The planned 2009–10 season included European recitals with his longtime collaborator, pianist Martin Katz; opera productions in Atlanta and Houston; a holiday-season tour of Canada and the U.S. with Les Violons

du Roy; and his debut with the Chicago Symphony Orchestra performing Bach's *St. John Passion*.

As the preeminent countertenor of his generation, Daniels was best known for his lead roles in Handel's operas, including *Giulio Cesare*, *Rinaldo*, and *Radamisto*. These and similar parts had been written for the 18th century's wildly popular *castrati*, men who had been castrated as boys in order to maintain their soprano voices as they grew. (The practice died out after its cruelty was acknowledged.) When the Baroque operas of Handel and others were revived in the 20th century, female mezzo-sopranos played the male roles. Daniels and other modern countertenors sang the roles by using their trained falsetto voices.

Singing was Daniels's passion from an early age. The son of two voice teachers, he became an accomplished boy soprano, and he attended performances by a number of acclaimed singers. By age 17 he was studying voice as a tenor, and in his senior year of high school he won a major voice competition. He won a full scholarship to the University of Cincinnati (Ohio) College-Conservatory of Music, where he received a bachelor's degree; he completed a master's degree at the University of Michigan, where he studied with George Shirley. Meanwhile, although he was formally a tenor, he continued to be happiest singing in his higher range. Nearly at the end of his studies, at age 25 he made the switch to the higher voice. He studied with countertenor Drew Minter and immersed himself in the performance of 17th- and 18th-century music. Within a few years he made his debut (1994) at Glimmerglass Opera and was launched onto the world stage.

In addition to the Handel roles that were the mainstay of his repertoire, Daniels performed regularly in operas by Claudio Monteverdi, Christoph Willibald Gluck, Mozart, and Benjamin Britten. On the concert stage he sang Bach, Handel, and Hector Berlioz, among others, and in recitals he stretched the countertenor repertoire to sing, with pronouns unchanged, mezzo-soprano works by Maurice Ravel, Ralph Vaughn Williams, and other 19th- and 20th-century composers.

Daniels won the 1997 Richard Tucker Award, conferred by the Richard Tucker Music Foundation to an emerging American opera singer, and was named Vocalist of the Year (1998) by *Musical America* magazine. Daniels was praised by music critics and fans alike

for his solid acting and commanding stage presence, as well as for his “luminous,” “flexible and true,” and “impeccably controlled” voice.

(NOLA HEALY LYNCH)

The Decemberists

The American indie-rock band the Decemberists scored an unexpected hit when in March 2009 a new album, the uninterrupted hour-long rock opera *The Hazards of Love*, debuted at number 14 on the *Billboard* album charts. Though some questioned the Decemberists’ decision to produce their second record on a major label as a concept album—especially one with a story line featuring a fair maiden, her shape-shifting lover, a forest queen, and a nefarious man called only “the Rake”—the album was viewed by the Decemberists’ numerous fans as simply a logical step in the quirky band’s musical progression.

The band—lead singer and guitarist Colin Meloy (b. Oct. 5, 1974, Helena, Mont.), keyboardist and accordionist Jenny Conlee (b. Dec. 12, 1971, Seattle, Wash.), guitarist Chris Funk (b. Nov. 28, 1971, Valparaiso, Ind.), drummer John Moen (b. Aug. 23, 1968, Brainerd, Minn.), and bassist Nate Query (b. Sept. 5, 1973, Bellevue, Wash.)—had gained a reputation earlier in the decade for its highly stylized, literate songs. Formed in 2000 in Portland, Ore., the Decemberists (with drummers Ezra Holbrook to 2002 and Rachel Blumberg from 2002 to 2005) initially hewed to a primarily folk-pop sound built around acoustic guitar melodies.

Their first album, however, *Castaways and Cutouts* (2002), featured the baroque instrumentation and narrative song structures (as well as Meloy’s idiosyncratically nasal voice) that would become the band’s hallmarks.

In 2003 the group released *Her Majesty the Decemberists*, which built on the first album’s sound to include prominent horn and string sections. Their EP (a format intermediate in length between a single and an album) *The Tain* (2004) consisted of a single song broken into multiple movements and foreshadowed the Decemberists’ future direction. As the band grew more successful, its live shows developed a distinct theatrical bent, replete with elaborate stage designs and props, and the Decemberists became one of indie rock’s most popular concert draws. Their third full record, *Picaresque* (2005), featured a wide-ranging set of songs that tell the stories of a diverse cast of characters, including a widowed peddler, spies who tragically fall in love, a pair of homeless runaways, and two men trapped inside the belly of a whale. The latter track, “The Mariner’s Revenge Song,” was an eight-minute epic in the style of a sea shanty, which, when played live in concert with a massive papier-mâché whale, became one of the band’s signature numbers.

After the Decemberists signed in 2005 with major-label Capitol Records, some observers speculated that the band might be required to make artistic compromises for the mainstream label. However, the group’s first album with

Capitol, *The Crane Wife* (2006), assuaged those fears. It featured elegant ballads about a man falling in love with and marrying a wounded crane alongside sprawling prog-rock-infused jams. *The Crane Wife* cracked the *Billboard* top 50 and was atop many critics’ lists of the year’s best albums.

(ADAM AUGUSTYN)

Dennard, Robert

(b. Sept. 5, 1932, Terrell, Texas)

In recognition of his key contributions to the microelectronics industry, American engineer Robert H. Dennard was awarded both the 2009 Medal of Honor from the IEEE (formerly the Institute of Electrical and Electronics Engineers) and the National Academy of Engineering’s 2009 Charles Stark Draper Prize, one of the top honours for engineering achievement. Dennard was credited with the invention in the late 1960s of the one-transistor cell for dynamic random-access memory (DRAM) and with pioneering in the early 1970s the set of consistent scaling principles that underlie the improved performance of increasingly miniaturized integrated circuits, two pivotal innovations that helped spur more than three decades of growth in the computer industry. DRAM consists of an array of semiconductor memory cells that are integrated on a silicon chip. The type of memory cell invented by Dennard used a single metal-oxide-semiconductor (MOS) transistor to store and read binary data as an electrical charge on a MOS capacitor, and the high-density memory made possible by this design resulted in relatively low production costs and power requirements for DRAM. Following its introduction as a commercial product in the 1970s, one-transistor-cell DRAM was extensively used in computers and other electronic devices. With miniaturization, it was possible to develop DRAM chips that contain billions of memory cells.

Dennard, who attended a one-room schoolhouse as a child, received a B.S. (1954) and an M.S. (1956) in electrical engineering from Southern Methodist University, Dallas, and a Ph.D. (1958) from Carnegie Institute of Technology (now Carnegie Mellon University), Pittsburgh. He joined IBM Research in 1958 as a staff engineer and first worked on memory and logic circuits and the development of data communication techniques. In the early 1960s he began focusing on microelectronics. His design for one-transistor-cell DRAM improved upon other types of

The Decemberists: (left to right) John Moen, Chris Funk, Colin Meloy, Jenny Conlee, and Nate Query

Autumn de Wilde—HO/AP

computer memory that were then in development (including a memory system consisting of wire mesh and magnetic rings), and in 1968 Dennard was granted a patent for the design. It was one of more than four dozen patents that he was eventually issued. Dennard was given the title of IBM fellow in 1979, and he held several positions over the length of his career of more than 50 years with the company.

Dennard was elected to the U.S. National Academy of Engineering in 1984 and was inducted into the U.S. National Inventors Hall of Fame in 1997. Among the other awards and honours that Dennard garnered were the U.S. National Medal of Technology, which he received (1988) from Pres. Ronald Reagan, and the 2005 Lemelson-MIT (Massachusetts Institute of Technology) Lifetime Achievement Award.

(DAVID C. HAYES)

Dodson, Mick

(b. April 10, 1950, Katherine, N.Terr., Australia) On Jan. 25, 2009, on the lawn of the Parliament House in Canberra, Australian Prime Minister Kevin Rudd presented the Australian of the Year Award to Mick Dodson, an Aboriginal political activist and scholar, in recognition of Dodson's work to help better the lives of the country's indigenous peoples and to promote reconciliation between Australia's indigenous and nonindigenous residents. Through his Aboriginal mother, Dodson was a member of the Yawuru people of the Broome region of Western Australia, and since 2005 he had served as the director of the National Centre for Indigenous Studies at the Australian National University (ANU). He was also a moving force behind the organization Reconciliation Australia, which had pushed for the historic formal apology that Rudd delivered in February 2008 for wrongs committed by past governments against generations of Aborigines. In addition, Dodson, who had long campaigned for the establishment of a national indigenous representative body, was appointed at the end of 2008 to be a key adviser to the federal government on the formation of such a body.

Michael James Dodson studied at Monash University in Melbourne, where he earned Bachelor of Jurisprudence and Bachelor of Laws degrees before joining (1976) the Victorian Aboriginal Legal Service. He later directed the Northern Land Council and, from 1988 to 1990, served as counsel to the Royal Commission into Aboriginal

National Australia Day Council

Aboriginal activist Mick Dodson, the 2009 Australian of the Year

Deaths in Custody. In 1993 he was appointed the country's first Aboriginal and Torres Strait Islander social justice commissioner, a post he held until 1998. In 2003 he became the first indigenous Australian to be named a law professor at the ANU College of Law.

Aside from his work on behalf of Australian Aborigines, Dodson was also involved in advocating for the rights of other indigenous peoples around the world. Since 2005 he had been a member on the UN Permanent Forum on Indigenous Issues, and he had previously served on the board of trustees of the UN Voluntary Fund for Indigenous Populations. Dodson assisted in drafting the Declaration on the Rights of Indigenous Peoples that was adopted by the UN General Assembly in September 2007.

In accepting the Australian of the Year Award, Dodson spoke eloquently of his wish "to build our understanding of what it means to protect the rights and human dignity of all Australians" and emphasized the importance of "taking the idea of fairness seriously." He welcomed the greater public visibility that the award afforded him and hoped to use it to raise awareness of problems facing both indigenous and nonindigenous Australians. He was particularly concerned with the lack of access to quality education in many communities and embarked on a national schools tour in mid-2009 as part of his stated goal of having every Australian child enrolled and adequately equipped for the beginning of the 2010 school year. (SHERMAN HOLLAR)

Dorsey, Jack; Stone, Christopher Isaac ("Biz"); and Williams, Evan

(b. Nov. 19, 1976, St. Louis, Mo.), (b. March 10, 1974, Boston, Mass.), and (b. March 31, 1972, near Clarks, Neb.) Twitter—the online messaging service cofounded by social-media entrepreneur Evan Williams, social-networking expert Christopher Isaac ("Biz") Stone, and messaging-software engineer Jack Dorsey—found itself in the media spotlight in 2009 when the application received a Webby Award for Breakout of the Year and moved toward becoming a mainstream means of communication adopted and endorsed by celebrities, news outlets, and corporations. Although Twitter did not charge a fee for its service and had no discernible income, it was flush with new venture capital, and Williams, Stone, and Dorsey said that the company would eventually introduce a financial plan to generate revenue. In the meantime, the trio sought to expand and improve the service.

Williams grew up on a farm but had aspirations of starting his own business, and he left the University of Nebraska at Lincoln without graduating. In the mid-1990s he briefly ran a company that he and his father set up to provide instructional material about the World Wide Web. He then worked as a Web developer for several California-based computer companies before cofounding (1999) Pyra Labs to make project-management software. Williams developed a side project at the company into a software tool for publishing personal commentary on the Web. The software, which he called Blogger, formed the basis of the wave of Web logs, or blogs, that soon swelled over the Internet. The new company that Williams had formed, Blogger.com, was bought in 2003 by Google. Williams left Google in 2004 and became a cofounder of Odeo, a podcasting company. His interest soon turned to an Odeo side project—Twitter, which was launched in 2006. He formed a new parent company, Obvious, that acquired Odeo and then spun off Twitter, Inc., as a separate entity in 2007. Williams was initially chairman of the board of Twitter, but he moved to the role of CEO in late 2008.

Stone attended two universities in Boston (Northeastern University and the University of Massachusetts) for one year each and then worked as a designer at Little, Brown and Co. He was creative director (1999–2001) at Xanga, a Web-log community that he had helped

form. Williams invited him to take a role in developing Blogger, and Stone joined new owner Google in 2003 but then left (2005) to join Williams in shaping Odeo. After cofounding Twitter, he served as creative director for the company. Stone wrote two books on blogging: *Blogging: Genius Strategies for Instant Web Content* (2002) and *Who Let the Blogs Out?: A Hyperconnected Peek at the World of Weblogs* (2004). He also served as an adviser to several other Web-site companies.

As a teenager Dorsey created taxi-dispatching software that was adopted by taxicab companies. He attended New York University before moving (1999) to San Francisco, where he set up a company that used the Internet to handle the dispatching of couriers and emergency vehicles as well as taxis. In 2006 he approached Williams and Stone with the idea of using text messaging and instant messaging (based on the principles of dispatch software) as a way of keeping in touch with friends. Together they developed a prototype of what would become the Twitter platform. Dorsey served as CEO of the new company until October 2008, when he became chairman of the board. In late 2009 he began beta testing Square, an iPhone device for accepting credit-card payments.

(DAVID C. HAYES)

Duffy, Carol Ann

(b. Dec. 23, 1955, Glasgow, Scot.)

In 2009 poet Carol Ann Duffy achieved what prodigious talents such as Christina Rossetti and Elizabeth Barrett Browning did not: she became Britain's first-ever female poet laureate since the post was established in 1668. Duffy, who was passed over for the laureateship in 1999, allegedly because she was bisexual, accepted the post "purely because they hadn't had a woman," remarking, "I look on it as recognition of the great women poets we now have writing."

Duffy's father was a trade unionist, and her mother was a gifted storyteller, known for her rhymes. Duffy described her Staffordshire upbringing as "left wing, Catholic, working class." By age 10, encouraged by teachers, she was filling notebooks with poetry. While reading philosophy at Liverpool University, where she graduated in 1977, she was involved with poet and painter Adrian Henri, who initiated her into poetry circles. Duffy's verse appeared in pamphlets until 1983, when she won the National Poetry Competition and landed a publishing deal. She was soon winning

major poetry awards and fellowships. Duffy also became an acclaimed playwright (*Take My Husband* [1982] and *Little Women, Big Boys* [1986]), children's author (*Underwater Farmyard* [2002] and *The Tear Thief* [2007]), broadcaster, and reviewer, and in the 1990s her poetry was incorporated into school curricula. She moved in 1996 from London to a Manchester suburb and began lecturing at the Writing School at Manchester Metropolitan University.

Duffy's at times radical feminism and the occasional controversy her poetry inspired did little to impede her ascent to the ranks of Britain's best-loved poets. While her rhymes and everyday language made her a favourite with the public, her literariness and range of styles impressed critics. Famous for her "voicings" or dramatic monologues of characters from Mrs. Faust to a potential killer, she also excelled in using traditional sonnet and ballad forms as vehicles for postmodern themes. The 1999 publication of *The World's Wife*—which won less critical acclaim than some of her earlier volumes—brought her mass appeal and challenged the dominance of men in written history by retelling events from an irreverent female perspective. The birth of Duffy's daughter in 1995 broadened her poetry, influencing explorations of motherhood in *Feminine Gospels* (2002). Duffy's volume *Rapture* (2005), a sequence of poems narrating a love affair from its beginning through its demise, meanwhile, was widely celebrated for its emotive power and extraordinary craftsmanship.

Duffy's list of prizes includes the Somerset Maugham Award for *Selling Manhattan* (1987), the Cholmondeley Award (1992), the Dylan Thomas Award (1989), the Whitbread Poetry Award and the Forward Poetry Prize (Best Poetry Collection of the Year) for *Mean Time* (1993), and the 2005 T.S. Eliot Prize for *Rapture*. Duffy was made OBE in 1995 and CBE in 2002. (CAROL PEAKER)

Eggers, Dave

(b. March 12, 1970, Boston, Mass.)

In 2009 the long-awaited film version of Maurice Sendak's *Where the Wild Things Are* was released concurrently with writer Dave Eggers's novelization of the screenplay, which he had co-written with director Spike Jonze. The movie and book were loose adaptations of Sendak's original, inspired as much by its wistful beauty and loving approach to the child mind as by its story.

In 2009 the prolific Eggers also saw the film *Away We Go*—which he co-

wrote with his wife, Vendela Vida—appear on the big screen. His nonfiction book *Zeitoun*, an account of a Syrian American man and his experiences in New Orleans following Hurricane Katrina, was also released in 2009.

Eggers grew up in Boston and in Illinois, and for a time he studied journalism at the University of Illinois. When he was 21, however, the death of both of his parents within a very brief period led him to drop his studies in order to help raise his 8-year-old brother, Christopher (Toph). The two moved to California, where Eggers cofounded the short-lived satiric *Might* magazine. Eggers was an editor at Salon.com and a writer for a number of publications, including *Esquire* magazine, before releasing *A Heartbreaking Work of Staggering Genius* (2000). The memoir, which was enriched with postmodern writing techniques and fictionalized encounters, detailed Eggers's experiences raising Toph. The work earned Eggers instant acclaim and literary stardom, as well as a Pulitzer Prize nomination.

Daide Lanzilao—Contrasto/Redux

American writer Dave Eggers

In an effort to create a platform for other young writers, Eggers founded McSweeney's publishing house, which started with the 1998 launch of the literary magazine *Timothy McSweeney's Quarterly Concern*. In 2003 it was joined by fellow publication *The Believer*, a journal of literary reviews and interviews and other, often esoteric, pop-culture musings. McSweeney's also served as a book imprint and in 2005 originated the DVD "magazine" *Wholphin*, featuring new or underexposed short films.

The creation in 2002 of Eggers's non-profit organization 826 Valencia, based in San Francisco, was a further foray into literary advocacy. It was a volunteer-based writing laboratory devoted to developing kids' creativity and love of books through programs that included free tutoring and writing workshops. Soon after, branches of 826 Valencia opened in other major cities, including Chicago, Seattle, and New York, and the organization became known as 826 National.

A number of fiction books followed Eggers's memoir, but none received the praise awarded to his 2006 work *What Is the What: The Autobiography of Valentino Achak Deng*. The book, which chronicled the story of a Sudanese man who had survived the destruction of his family's village during The Sudan's civil war and made his way to the U.S., was a finalist for the National Book Critics Circle award. In 2007 the Heinz Family Foundation made Eggers the youngest-ever recipient of its arts and humanities award, noting his contributions not only to literature but also to the writing community. (MELISSA ALBERT)

Espagnat, Bernard d'

(b. Aug. 22, 1921, Fourmagnac, France) In March 2009 French physicist and philosopher of science Bernard d'Espagnat was awarded the Templeton Prize, which is given annually to the "living person who has made an exceptional contribution to affirming life's spiritual dimension." The Templeton Foundation saw such a contribution in d'Espagnat's notion of a "veiled reality" (*réel voilé*) beyond the reach of science. D'Espagnat's research into the philosophical foundations of quantum physics addressed the conflict between the realist and instrumentalist views of the results of quantum mechanics—that is, whether they reflect underlying physical reality or are merely rules for predicting the outcomes of experiments. D'Espagnat's work on Bell's theorem (which indicates that the realist interpretation is not viable and which appears to have received experimental confirmation) led him to reject conventional realism, but the fact that scientific theories remain falsifiable by experiment steered him to the idea that a veiled reality underlies the phenomena of physics.

D'Espagnat was educated at the Lycée Condorcet and the École Polytechnique in Paris. In 1950 he received a doctorate in physics, under the direction of Louis de Broglie, from the University of Paris. After a year as a research assis-

tant to Enrico Fermi at the University of Chicago, d'Espagnat worked at CERN (European Organization for Nuclear Research). In 1959 he was appointed to the faculty of what later became the University of Paris-Sud in Orsay; he was made a full professor in 1967 and professor emeritus in 1987. He was also director of the Laboratory of Theoretical Physics and Elementary Particles at Paris-Sud. D'Espagnat's more important publications include *Conceptions de la physique contemporaine* (1965), which was awarded the Prix Lecomte du Noüy; *Conceptual Foundations of Quantum Mechanics* (1971); *À la recherche du réel: le regard d'un physicien* (1979; *In Search of Reality*, 1983); "The Quantum Theory and Reality" (*Scientific American*, November 1979); *Un Atome de sagesse: propos d'un physicien sur le réel voilé* (1982), which was awarded the Prix Robert Blanché; *Penser la science ou les enjeux du savoir* (1990); *Le Réel voilé, analyse des concepts quantiques* (1994; *Veiled Reality: An Analysis of Present-Day Quantum Mechanical Concepts*, 1995); and *Traité de physique et de philosophie* (2002; *On Physics and Philosophy*, 2006). D'Espagnat was elected to the International Academy of Philosophy of Science in 1975 and to the Académie des Sciences Morales et Politiques in 1996. (MARTIN L. WHITE)

Fosso, Samuel

(b. 1962, Kumba, Cameroon)

In his photographic series "African Spirits," an exhibit held from October 2008 to April 2009 at the Jean Marc Patras/Galerie in Paris, Cameroonian photographer Samuel Fosso presented what appeared to be portraits of black leaders, politicians, and cultural icons, ranging from former South African president Nelson Mandela to American boxer Muhammad Ali to American activist and academic Angela Davis. In fact, these 14 images were "autoportraits," as Fosso transformed himself into people and characters drawn from popular culture and politics. His work incited comparisons to traditional African studio photographers (such as Seydou Keita of Mali) and Western photographers who utilized self-portraiture (such as American Cindy Sherman), but Fosso operated in relative isolation in his studio in Bangui, C.A.R. Yet by 2009 Fosso's work was regularly featured in solo and group exhibitions around the world, including the 2008 edition of the "Festival des rencontres de la photographie d'Arles" in France.

Fosso lived in Nigeria as a child, but in the early 1970s the Biafran war forced his family to flee to Bangui, where he ultimately settled after the war destroyed their Nigerian home. He discovered photography in his early teens while working as a shoemaker, and by 1975, after a brief apprenticeship with a local photographer, he had opened his own studio. He lived and worked at the studio, creating portraits of the local residents by using studio lights fashioned from pots and backgrounds made from traditional African fabrics or hand painted by friends. At the day's end he would often step in front of the camera to finish a roll of film. While Fosso used these images to communicate his well-being to his grandmother in Nigeria, the staged self-portraits also became agents of transformation and expression for the young artist, who was acutely aware of shifting cultural and political climates. In many of his early images, Fosso borrowed elements from popular culture that he admired, even having local tailors replicate outfits worn by celebrities. In 1993 these images were discovered by French photographer Bernard Deschamps, who was looking for photographers to be included in the first edition of "Rencontres de la photographie africaine" in Bamako, Mali. That 1994 exhibition launched Fosso's career as an artist, and he later went on to win the Afrique en Création award in 1995 and the prestigious Prince Claus Award in 2001.

Fosso evolved and expanded the scope of his autoportraits, using these constructed images to critically narrate and reference cultural and political events. In the Tati series, commissioned by the Parisian department store Tati in 1997, Fosso depicted himself as characters ranging from an African chief draped in gold jewelry and leopard skins to a glamorous African American woman. Regardless of his international success, Fosso continued to live and operate his photography studio in Bangui, where the local community remained largely unaware of his achievements as an artist. (MICHAEL RAZ-RUSSO)

Franken, Al

(b. May 21, 1951, New York, N.Y.)

When on Jan. 5, 2009, U.S. Senate candidate Al Franken of the Democratic-Farmer-Labor Party was declared the winner of Minnesota's Senate seat with a lead of only 225 votes, the resultant controversy over his slim victory did not seem to faze Franken, a onetime comedian and longtime acid-tongued

opponent of the right. Though initially he had been narrowly beaten in the November 2008 election by the incumbent senator, Republican Norm Coleman, Franken came out ahead in the mandatory recount of the 2.9 million undisputed ballots (along with thousands of other disputed and absentee ballots). Coleman contested the result, but on April 13, 2009, Franken was again declared the winner. Coleman then took his fight to court. After a statewide recount ended with Franken ahead by 312 votes, Coleman again appealed, but on June 30 the Minnesota Supreme Court dismissed the challenge and ruled that Franken was entitled to be certified the winner. Because Coleman's term had expired on January 3, Minnesota's Senate seat was left vacant for six months while the matter played out in the courts. Franken's Senate campaign was an unexpected move for the comic-turned-politician, who previously had been best known for playing self-help guru Stuart Smalley on NBC television's *Saturday Night Live* (SNL) and for penning such satiric books as *Rush Limbaugh Is a Big Fat Idiot and Other Observations* (1999), *Lies and the Lying Liars Who Tell Them: A Fair and Balanced Look at the Right* (2004), and *The Truth (with Jokes)* (2005).

When Alan Stuart Franken was four years old, his family moved from New York City to Minnesota, where his father ran a factory. Franken earned a bachelor's degree (1973) in political science at Harvard University, but after graduation he returned to Minnesota to perform in Minneapolis's Brave New Workshop comedy troupe, which in 1975 led to a job with SNL. Franken worked for that show as a writer and performer until 1980, again during 1985–95, and briefly in 2008. He shared four Emmy Awards for writing on the show and an additional nine nominations. He also did some acting, wrote and starred in a 1995 film featuring his Stuart Smalley character, and penned the screenplay for the dramatic film *When a Man Loves a Woman* (1994).

After leaving SNL in 1995, Franken became an outspoken political satirist for the left, publishing a number of books. He was also, from 2004 to 2007, the host of the Air America radio program *The Al Franken Show* (originally called *The O'Franken Factor*). Conceived by Franken as a weapon in the fight to get Pres. George W. Bush "unelected," the program used interviews and commentary to advance Franken's progressive political views. The show's final

episode, on Feb. 14, 2007, ended with a bang when Franken announced his candidacy for the Minnesota Senate seat.

It would have been easy to mistake the announcement for a joke in line with comedian Stephen Colbert's later 2008 presidential bid. Franken, however, gained respect—if grudging from some quarters—for his tireless campaigning and emerged as a real threat to incumbent Coleman. When Franken took office on July 7, the Senate Democrats (supported by the two independents with seats) held a filibuster-proof 60–40 majority. (MELISSA ALBERT)

Funes, Mauricio

(b. Oct. 18, 1959, San Salvador, El Sal.) On March 15, 2009, Mauricio Funes was elected president of El Salvador, with a five-year term to begin on June 1. As the candidate of the Farabundo Martí Front for National Liberation (FMLN), Funes defeated National Republican Alliance (ARENA) candidate Rodrigo Ávila by 51.3–48.7%.

Carlos Mauricio Funes Cartagena, the son of an accountant and a secretary, was educated in Roman Catholic elementary and secondary schools before majoring in communications at the Jesuit Central American University of José Simeón Cañas (UCA). There he was greatly influenced by sociology professor Francis Miguel ("Hato") Hasbún, a leftist activist. The violent death of his older brother, who was killed by police during a student protest in August 1980, induced Funes to leave the university before completing his degree. Despite leftist leanings, he did not join a political party or participate in the ongoing guerrilla warfare. Instead he taught literature in Catholic schools, where he emphasized audiovisual methods of communication.

In 1986 Funes became a reporter for the state educational channel, launching a highly successful career in television journalism. In 1987 he moved to Channel 12, where he became popular for his analytic coverage of Salvadoran politics, which reflected leftist and working-class interests. He interviewed leaders of the FMLN and other leftist parties, as well as leftist leaders from abroad. In 1991 Funes assisted Hasbún in developing an audiovisual centre and radio station at the UCA. He also was a longtime correspondent for CNN TV's Spanish-language telecasts.

Funes's investigative reporting on Channel 12 won him several awards, including the prestigious Maria Moors Cabot Prize in inter-American journal-

ism in 1994. He was promoted to news director at Channel 12 in 1997, but his harsh criticism of the ARENA government led to censorship and death threats, and in 2005 Channel 12 fired him and several other journalists. Funes continued to appear on other channels, however, and remained a national celebrity among leftists. With Hasbún as his adviser, Funes exploited his popularity to become the FMLN candidate for the presidency in September 2007, the first FMLN presidential candidate who had not been a guerrilla fighter in the 1980s.

In the long electoral campaign, Funes criticized ARENA for doing nothing for the Salvadoran people in its nearly 20-year reign. He promised social justice, economic reform, improved standards of living, universal health care, and better access to education, housing, and pensions, as well as policies to stem the rising crime and gang violence. Once elected, he took a pragmatic and conciliatory tone toward the opposition. He emphasized that he was not a Marxist, or even a socialist; promised that he had no interest in imposing such ideologies as systems of government in El Salvador; and pledged not to align the country's foreign relations too closely with either Venezuela or the U.S. Shortly after his inauguration, however, Funes signed a document that provided for the reestablishment of diplomatic relations with Cuba, which had been severed 50 years earlier.

(RALPH LEE WOODWARD, JR.)

Geithner, Timothy

(b. Aug. 18, 1961, New York, N.Y.) Having been nominated to serve as secretary of the U.S. Department of the Treasury in the administration of Pres. Barack Obama, Timothy Geithner was confirmed by the Senate in a 60–34 vote on Jan. 26, 2009. Geithner had formerly served (2003–09) as president of the Federal Reserve Bank of New York. As treasury secretary, he was tasked with leading the administration's efforts toward financial recovery amid the ongoing global economic crisis. In March he laid out a comprehensive plan to help free banks from bad housing loans and mortgage-related securities—a move that ignited a stock-market rally. On December 9, Geithner announced that the \$700 billion financial bailout program that Congress had approved in the fall of 2008 would be extended until October 2010. Although critics had argued for the program to be shut down, Geithner defended the

extension as necessary in order to assist homeowners and small businesses and to ensure that the federal government would be able to respond effectively if financial conditions worsened.

Geithner, whose father was a consultant on international development, attended high school in Thailand, and in 1983 he earned a bachelor's degree in government and Asian studies from Dartmouth College, Hanover, N.H. Two years later he received a master's degree in international economics and East Asian studies from Johns Hopkins University, Baltimore, Md.

After having completed his education, Geithner took a job as a research assistant at Kissinger Associates, an international consulting firm founded by former U.S. secretary of state Henry Kissinger. Geithner joined the Treasury Department in 1988, and he held a number of positions within the agency's international affairs division. While there he worked closely with Lawrence H. Summers, who identified Geithner as a gifted official with a deft political touch. In 1999 Geithner was promoted to undersecretary for international affairs, and he represented the Treasury Department at meetings of the Group of Eight.

In 2001 Geithner left the Treasury Department, and later that year he was named director of policy development and review at the IMF. He remained in that role until 2003, when the Federal Reserve Bank of New York's board of directors nominated him to serve as its president and CEO. While not formally trained as an economist, Geithner brought to the position extensive experience with international monetary policy, and he became an advocate for greater transparency and increased government oversight within the financial industry. As the federal government's unofficial liaison to Wall Street, Geithner was a key participant in the response to the credit crisis that began in 2007. He personally oversaw JPMorgan Chase's federally backed takeover of the failed investment bank Bear Stearns in March 2008, and he spent the rest of the year helping to craft the Federal Reserve's response to a series of corporate meltdowns within the banking and insurance industries. (MICHAEL RAY)

Ghosh, Amitav

(b. July 11, 1956, Calcutta [now Kolkata], India) In 2009, a year after its publication, Amitav Ghosh's epic novel *Sea of Poppies* continued to draw accolades. It was a finalist for the Man

Katja Lenz—AFP/Getty Images

Best-selling author Amitav Ghosh

Booker Prize in 2008, and in July 2009 it was co-winner of the Vodafone-Crossword Award, a prominent Indian prize awarded to a book written in English by an author of Indian origin. Among the books against which Ghosh's novel was competing was *The Enchantress of Florence* by Salman Rushdie, another Indian-born writer to whose work Ghosh's had often been compared.

As a child, Ghosh, whose father was a diplomat, lived in India, Bangladesh, Sri Lanka, and Iran. He received a B.A. (1976) and an M.A. (1978) from the University of Delhi; at about the same time, he also worked as a newspaper reporter and editor. He subsequently attended the University of Oxford, where he received a Ph.D. (1982) in social anthropology. Ghosh went on to teach at the University of Delhi, the American University in Cairo, Columbia University, New York City, and Queens College of the City University of New York, among other institutions. After a stint at Harvard University that began in 2004, Ghosh turned to writing full time and split his time between the United States and India.

Ghosh's ambitious novels use complex narrative strategies to probe the nature of national and personal identity, particularly of the people of India and Southeast Asia. His first novel, *The Circle of Reason* (1986), follows an Indian protagonist who, suspected of being a terrorist, leaves India for northern Africa and the Middle East. Blending elements of fable and picaresque fiction, it is distinctly postcolonial in its marginalization of Europe and post-

modern in its nonlinear structure and thick intertextuality. *The Shadow Lines* (1988) is a sweeping history of two families (one Indian and the other English) that are deeply shaped by events following the departure of the British from India in 1947. *The Circle of Reason* and *The Shadow Lines*, both written in English, were widely translated and gained Ghosh an international readership.

The Calcutta Chromosome: A Novel of Fevers, Delirium, and Discovery (1995) represented his foray into science fiction and earned him the Arthur C. Clarke Award; this densely layered novel offers an alternate history of the discovery of the parasite that causes malaria. Ghosh's subsequent novels include *The Glass Palace* (2000), a familial history centred on Burma in the late 19th and early 20th centuries, and *The Hungry Tide* (2004), set in Bengal and featuring American and Indian characters. *Sea of Poppies* shows Ghosh turning away from his earlier novels' formal experimentation and toward a more traditional form of storytelling. The first book of a projected trilogy, this novel describes individuals who are on a ship in Southeast Asia carrying coolies (indentured labourers) and opium.

Ghosh also wrote *In an Antique Land* (1992), a book that straddles several genres—travel writing, autobiography, memoir—and also blurs fiction and nonfiction. His nonfiction works include *Dancing in Cambodia, at Large in Burma* (1998), *The Imam and the Indian* (2002), and *Incendiary Circumstances: A Chronicle of the Turmoil of Our Times* (2005). (J.E. LUEBERING)

Gilbert, Alan

(b. Feb. 23, 1967, New York, N.Y.)

On Sept. 16, 2009, American conductor Alan Gilbert opened the 2009–10 season of the New York Philharmonic Orchestra as its new music director. At the age of 42, he was one of the youngest music directors in the orchestra's history, and he was the first native New Yorker to hold the position. Known for programming contemporary music along with the traditional repertoire and for his ability to communicate with and engage audiences, he promised to bring new energy to one of the most prominent orchestras in the U.S. The appointment was also a kind of homecoming for Gilbert, the son of longtime Philharmonic violinists Michael Gilbert, who retired in 2001, and Yoko Takebe, who would now perform under her son's direction.

Jennifer Taylor—The New York Times/Redux

American conductor Alan Gilbert

Gilbert received his early music education, including lessons on the violin and viola, from his parents. He graduated from Harvard University in 1989 and received (1994) a master's degree in music from the Juilliard School, New York City; he also studied at the Curtis Institute of Music. He was assistant conductor (1995–97) of the Cleveland Orchestra and in 1997 won the Seaver/National Endowment for the Arts Conductor Award. In 2000 Gilbert became the chief conductor and artistic adviser of the Royal Stockholm Philharmonic Orchestra, a post he held until 2008. It was in Stockholm that he developed a reputation for venturesome programming, which included festivals devoted to such living composers as Henri Dutilleux, Hans Werner Henze, and John Adams. In addition, with that orchestra he recorded music by Daniel Börtz and Christopher Rouse. In 2004 Gilbert became the principal guest conductor of the NDR Symphony Orchestra of Hamburg. During this period he also conducted a number of other major orchestras, including the Berlin Philharmonic, the Royal Concertgebouw of Amsterdam, the Chicago Symphony Orchestra, the Los Angeles Philharmonic, and orchestras in Japan and China. At the same time, Gilbert worked in opera, first at the Santa Fe (N.M.) Opera, where in 2003 he became the company's first music director, and later at such major houses as the Zürich Opera, the Vienna State Opera, and the Metropolitan Opera in New York City.

Gilbert conducted the New York Philharmonic on many occasions before his appointment in June 2007 as the 25th music director. His debut took place in 2001, when he led the orchestra in music of Charles Ives, part of a festival devoted to the composer. In 2008 he con-

ducted a concert in Carnegie Hall honoring Leonard Bernstein. In early 2009 the Juilliard School appointed Gilbert the first holder of the newly created William Schuman Chair in Musical Studies; he was to undertake a number of teaching duties and to serve as guest conductor of the Juilliard Orchestra.

(ROBERT RAUCH)

Gladwell, Malcolm

(b. Sept. 3, 1963, London, Eng.)

Popular-culture journalist Malcolm Gladwell coasted into 2009 on the zeitgeistian torrent generated by the previous year's release of his third book, *Outliers: The Story of Success*, which hovered persistently near the top of the *New York Times* best-seller list. In *Outliers*, a series of concisely encapsulated theories purporting to explain the dynamics of success, Gladwell employed his trademark blend of sociological anecdotes, pop culture, and snappy vocabulary, a style so distinctive that it had already spawned a new adjective—"Gladwellian." The book cites paragons of success such as the Beatles—who often played eight-hour sets at a Hamburg bar before they achieved international fame—in support of the assertion that ascendancy of the pop star sort is due more to extraordinary circumstance and effort than to extraordinary talent. Gladwell's critics dismissed some of his conclusions (for example, that Asian students are good at math because they come from agricultural societies emphasizing hard work) as spurious and found his simplistic rhetorical style patronizing. A raft of panegyric articles deemed Glad-

well a guru, however, and while the staying power of his ideas remained to be seen, he had already proved himself adept at treading the delicate boundary between popularizer and intellectual.

Gladwell's family moved in 1969 from the U.K. to Elmira, Ont., where his father taught at the nearby University of Waterloo and his Jamaican mother practiced psychotherapy. Gladwell's mixed ethnicity made him unique in the agrarian surroundings of Elmira, a largely Mennonite area, and he later cited the singular perspective afforded by his heritage as a motivating factor in what he called his intellectual adventuring. As a teen he immersed himself in conservative politics: he idolized American pundit William F. Buckley, and during his time at Trinity College, University of Ontario, he displayed a poster of U.S. Pres. Ronald Reagan on his wall. (Gladwell later became more liberal, however, and lamented that he could not vote for Barack Obama in the 2008 presidential election, as he lacked U.S. citizenship.)

Having graduated in 1984 with a degree in history, Gladwell moved to the U.S. and obtained a position at the conservative magazine *The American Spectator*. After being fired in 1985, he worked for a conservative think tank in Washington, D.C., while freelancing for several periodicals. He was hired (1987) as a business and science writer for the *Washington Post* newspaper and then served (1993–96) as the *Post's* New York bureau chief before catching the eye of *The New Yorker* editor Tina Brown, who in 1996 offered him a position as a staff writer for that magazine.

In 2000 Gladwell released his first book, *The Tipping Point: How Little Things Can Make a Big Difference*, which contends that social epidemics result from a combination of seemingly arbitrary contextual details and the actions of a few key types of people. It became a best seller, as did its successor, *Blink: The Power of Thinking Without Thinking* (2005), which extols the untold virtues of snap judgment. He also compiled some of his best *New Yorker* columns, including his award-winning profile of inventor Ron Popeil, into the collection *What the Dog Saw and Other Adventures* (2009). (RICHARD T. PALLARDY)

Joe Tabacca/AP

Graham, Dan

(b. March 31, 1942, Urbana, Ill.)

Dan Graham: Beyond, the first American retrospective of the career and works of contemporary artist Dan Graham, opened on Feb. 15, 2009, at the

Museum of Contemporary Art, Los Angeles, in collaboration with the Whitney Museum of American Art in New York, where the show ran from June 25 to October 11. The retrospective spanned more than 40 years of Graham's works, including films, videos, installations (often utilizing objects such as mirrors and partitions), photography, writing, and architecture designed to defamiliarize spectators via juxtapositions.

Graham grew up in Westfield, N.J. As a teenager he was an avid reader and was heavily influenced by the writings of French *nouveau roman* ("new novel") writers, including Alain Robbe-Grillet and Michel Butor. Graham moved to New York City in 1963 and initially began a career as a writer; he addressed a wide variety of topics, including art, architecture, television, music, and self-awareness. The following year he cofounded and directed the John Daniels Gallery, which exhibited the works of new conceptual and minimalist artists, such as Sol LeWitt, Robert Smithson, and Donald Judd. Graham closed the gallery in 1965 owing to insolvency and began instead to create his own artworks, which not surprisingly showed heavy literary influence. Graham explored systematic repetition in the conceptual works *March 31, 1966* (1966) and *Schema (March 1966)* (1966–67) and again in his magazine piece on suburban American housing, *Homes for America* (1966–67).

During the 1970s Graham delved into film and video performances featuring actors, including himself, in what he termed *pavilions*—steel, essentially roomlike architectural structures featuring two-way reflective-glass mirrors intended to allow individuals to view themselves as others viewed them—a technique that created a new form of art. He often reflected on these performances, such as *Opposing Mirrors and Video Monitors on Time Delay* (1974; 1993)—which used videos, wall mirrors, and partitions to confuse the spacial sense of the observer—and *Performer/Audience/Mirror* (1977), in various essays, including *Video-Architecture-Television* (1979).

In the 1980s Graham began to explore art in its social context. His examination of modern art themes and popular culture—as evidenced in his video documentary *Rock My Religion* (1982–84), which focused on rock-and-roll music and culture—gained him somewhat of a cult following among younger artists.

Graham's works were featured in several important exhibitions, including

Public/Private (1994), which opened at the Moore College of Art and Design in Philadelphia. He also published several collections of essays, including *Rock My Religion: Writings and Projects 1965–1990* (1993) and *Two-Way Mirror Power: Selected Writings by Dan Graham on His Art* (1999).

Dan Graham, Works 1965–2000, a major retrospective, opened in 2001 at the Museu Serralves in Porto, Port. The following year he completed the commissioned *Yin/Yang Pavilion* at the Massachusetts Institute of Technology. In 2004 Graham collaborated with the rock-music group Japanther and the artists Laurent P. Berger, Rodney Graham, Bruce Odland, and Tony Oursler on the puppet rock opera *Don't Trust Anyone over Thirty: Entertainment by Dan Graham with Tony Oursler and Other Collaborators*, which featured puppets, live music, sound recordings, and video projections. He continued to create pavilions into the 21st century and in 2009 completed *Crazy Spheroid: Two Entrances*. (JEANNETTE NOLEN)

Gromov, Mikhail Leonidovich

(b. Dec. 23, 1943, Boksitogorsk, Russia, U.S.S.R.) In a formal ceremony in Oslo on May 19, 2009, the 2009 Abel Prize (awarded by the Norwegian Academy of Science and Letters for "outstanding scientific work in the field of mathematics") was bestowed on Soviet-born French mathematician Mikhail Gromov for his "revolutionary contributions to geometry." Gromov's work in Riemannian geometry, global symplectic geometry, and geometric group theory was cited by the academy.

Among Gromov's principal results were Gromov's compactness theorem, the Gromov-Hausdorff convergence, the theorem of almost flat manifolds, Gromov's Betti number theorem, and the Bishop-Gromov inequality in Riemannian geometry; the theory of pseudoholomorphic (or *J*-holomorphic) curves, the Gromov-Witten invariants, and the Gromov nonsqueezing theorem in symplectic geometry; Gromov's theorem on groups of polynomial growth and Gromov hyperbolic groups in geometric group theory; and the h-principle and the theory of complex integration in the theory of partial differential equations. Gromov's work had applications not only in mathematics but also in physics (for example, the measurement of black holes and heavy stars) and biology (for example, pattern recognition, which was a research interest of Gromov's).

Gromov received master's (1965), Ph.D. (1969), and D.Sc. (1973) degrees from Leningrad State University (now St. Petersburg State University), where he served as an assistant professor (1967–74). He taught at the State University of New York at Stony Brook (1974–81) before moving to France (becoming a citizen in 1992), where he taught at the University of Paris VI, now Pierre and Marie Curie University (1981–82), and the Institut des Hautes Études Scientifiques (from 1982). He also continued to teach part of each academic year in the United States, first at the University of Maryland (1991–96) and then at New York University (from 1996), where he was Jay Gould Professor of Mathematics in the Courant Institute for Mathematical Sciences. Gromov was elected to the American Academy of Arts and Sciences (1989) and the French Académie des Sciences (1997). In addition to the Abel Prize, Gromov was the recipient of the Élie Cartan (1984), Wolf (1993), Steele (1997), Lobatchewski (1997), Balzan (1999), and Kyoto (2002) prizes.

(MARTIN L. WHITE)

Grybauskaite, Dalia

(b. March 1, 1956, Vilnius, U.S.S.R. [now Vilnius, Lith.]) On July 12, 2009, former EU budget commissioner Dalia Grybauskaite was inaugurated as the president of Lithuania, becoming the first woman to serve as chief of state of the Baltic country. Following violent protests in the Lithuanian capital of Vilnius in January as the global economic crisis deepened, Grybauskaite announced her decision to leave her EU post to run as an independent candidate in Lithuania's May 17 presidential election. Touting her extensive experience in finance and economics, she swept to an overwhelming victory, capturing more than 69% of the vote to just under 12% for her nearest rival—the largest-ever margin of victory for a Lithuanian presidential candidate.

Grybauskaite studied at Zdanov University, Leningrad (now St. Petersburg) and earned (1988) a doctorate in economics from the Moscow Academy of Public Sciences. From 1983 to 1990 she was a lecturer at the Communist Party's training college in Vilnius, and after Lithuania gained full independence in 1991, she held posts in the country's Ministry of International Economic Relations and Ministry of Foreign Affairs. After serving (1996–99) as the plenipotentiary minister at the Lithuanian embassy in the U.S., she returned to Vil-

Lithuanian Pres. Dalia Grybauskaitė

nius to assume the office of deputy finance minister and became Lithuania's chief negotiator with the IMF and the World Bank.

In 2000 Grybauskaitė was appointed deputy foreign affairs minister and took a leadership role within the delegation responsible for negotiating Lithuania's accession to the EU. She was named (2001) finance minister, in which position she strongly supported privatization and liberalization efforts, among other reform measures. She also developed a reputation for toughness and blunt talk; numerous media outlets began calling her Lithuania's "Iron Lady," a reference to former British prime minister Margaret Thatcher, for whom Grybauskaitė had publicly expressed admiration. In 2004 Grybauskaitė was tapped to serve in Brussels as the European commissioner responsible for financial programming and budget; her stellar performance in this role was recognized when she was selected as the 2005 EU Commissioner of the Year.

As president of Lithuania, Grybauskaitė aimed to lift the country's economic fortunes in part by stimulating exports, cutting public expenditures, working to efficiently implement EU aid, and offering tax relief to owners of small businesses. On the foreign policy front, she was expected to pursue improved economic relations with Russia as well as to strengthen the country's alliances with other EU member states.

Grybauskaitė also appeared to be eager for Lithuania to take a more visible role on the international stage. Addressing the UN General Assembly in September, she declared that large and small countries shared equal responsibilities toward global society and pledged Lithuania's help in promoting UN values and objectives. (SHERMAN HOLLAR)

Hanna, Jack

(b. Jan. 2, 1947, Knoxville, Tenn.)

American zoologist and television personality Jack Hanna continued to exhibit his passion for wildlife and his inexhaustible energy in 2009 as he made personal appearances across the United States with his diverse assortment of animal ambassadors. Meanwhile, his Emmy Award-winning (2008) television series *Jack Hanna's Into the Wild* entered its third season, and his newest book, *Jungle Jack's Wackiest, Wildest, Weirdest Animals in the World* (2009), was published.

Jack Bushnell Hanna was raised on a farm in Tennessee and showed an early interest in pursuing a career with animals, volunteering to work for his family's veterinarian at the age of 11. After he earned (1969) a bachelor's degree from Muskingum College, New Concord, Ohio, Hanna and his wife opened a pet shop in Knoxville. He began his zoological career in Florida as director (1973–75) of the Central Florida Zoo in Sanford, Fla.

In 1978 Hanna became director of the Columbus (Ohio) Zoo, which he transformed from a small run-down facility into a nationally acclaimed zoological park. His first order of business was to raise zoo attendance by offering nu-

merous educational programs and hosting events that also provided entertainment. In addition, he networked with local business leaders to raise funds to develop larger, more natural habitats to replace the zoo's antiquated cagelike animal enclosures. To increase public awareness of the zoo after the birth of twin gorillas there in 1983, he accepted an invitation to appear on the television program *Good Morning America*. This engagement led to numerous other TV opportunities for Hanna, including regular visits with his critters on *Late Night with David Letterman* and *Larry King Live* and a stint as wildlife correspondent for FOX News, CNN, and other news programs. Hanna's likable, easy-going character and the fun and entertaining way in which he showed off the zoo's animals made him extremely popular. In 1992 he was named director emeritus of the Columbus Zoo so that he could dedicate more time to his media obligations.

Hanna then launched his own series of television shows, *Jack Hanna's Animal Adventures* (debuted 1992), *ZooLife with Jack Hanna* (1992–94), and *Jack Hanna's Into the Wild* (debuted 2007). He also authored several books, including *Monkeys on the Interstate* (1989), *Jungle Jack Hanna's What Zookeepers Do* (1998), and *Jungle Jack: My Wild Life* (2008).

With the addition of a manatee exhibit in 1999, the Columbus Zoo changed its name to the Columbus Zoo and Aquarium; other expansions include the Zoombezi Bay water park, Jungle Jack's Landing amusement park, and the Safari Golf Club. In 2008 Hanna was honoured with the Association of Zoos and Aquariums' R. Marlin Perkins Award for Professional Excellence, and in February 2009 the *USA Travel Guide* named the Columbus Zoo and Aquarium the country's number one zoo.

Hariri, Saad al-

(b. April 18, 1970, Riyadh, Saudi Arabia) In June 2009 Saudi-born businessman and politician Saad al-Hariri, the son of former Lebanese prime minister Rafiq al-Hariri, was named prime minister of Lebanon. With relatively little political experience, the younger Hariri, who had entered politics following his father's assassination in February 2005, was faced with the task of forming a unity government in

one of the world's most complex political environments.

Hariri received his elementary education at the school of Frères Maristes in Rmaila (al-Rumaylah), Leb. (near Sidon), and completed his secondary education in France and Saudi Arabia. After receiving a degree (1992) in international business from Georgetown University, Washington, D.C., Hariri worked at Saudi Oger, a large Saudi Arabia-based firm owned by his father, where he oversaw construction work and served as a maintenance contractor for the Saudi royal palaces. After he gained the position of general manager at age 26, Hariri also worked to extend the business into the telecommunications sector and helped orchestrate Saudi Oger's acquisition of Turk Telekom. (The deal, completed in 2006, was at that time the largest private business deal in Turkey's history.)

After his father's assassination in a Beirut car bombing, Hariri was selected by his family to follow in his father's political footsteps. Although initially hesitant, Hariri soon took charge of his father's political party, Future Movement (Tayyar al-Mustaqbal). A powerful Sunni bloc, the Future Movement was the largest contingent within the March 14 coalition (named to commemorate the date, in 2005, of massive anti-Syrian protests in Beirut), which opposed Syrian influence in Lebanon's affairs. Although the coalition won a clear majority in the 2005 parliamentary elections, Hariri did not consider himself politically mature enough to serve as prime minister; instead, he supported Fouad Siniora, a former finance minister and close ally of his father, for the position.

During the next four years, Hariri worked to forge and refine his own political identity. Significant political successes included those in January 2007, when his lobbying helped to secure a sizable financial aid package from the United States to assist in Lebanese reconstruction, and in late May 2007, when the United Nations Security Council approved the establishment of a special court in which to try suspects linked to his father's assassination. In May 2008—with Lebanon in the midst of a dangerous political stalemate that had followed the departure of Pres. Émile Lahoud from office in November 2007—Hariri helped to negotiate a unity government and navigate the country away from violent confrontation.

In elections in June 2009, Hariri again led the March 14 coalition to victory.

Shortly thereafter he was named prime minister and was asked by Pres. Michel Suleiman to take on the complex task of forming a new government. Despite setbacks that threatened to derail the negotiations, in early November Hariri announced that a unity government had been successfully formed. He was formally sworn in on November 9.

(LAURA ETHEREDGE)

Hatoyama, Yukio

(b. Feb. 11, 1947, Tokyo, Japan)

On Aug. 30, 2009, Japanese politician Yukio Hatoyama led the main opposition Democratic Party of Japan (DPJ) to a historic triumph over the ruling Liberal-Democratic Party (LDP) in Japan's general election. Although the LDP had dominated political life in the country since the mid-1950s for all but a brief period in the 1990s, its public standing had faltered since the popular Junichiro Koizumi stepped down as prime minister in 2006. By July 2009, when Prime Minister Taro Aso announced the date on which the general election was to be held, it had become clear that the LDP was in trouble. As the DPJ candidate, Hatoyama promised to end wasteful spending and move toward government decentralization. Predictions of a landslide DPJ victory came true as scores of LDP lawmakers were swept from office. The DPJ secured 308 of the 480 seats in the lower house of the Diet (parliament), while the LDP was left with just 119 seats. Hatoyama succeeded Aso as prime minister on September 16.

Hatoyama hailed from a Japanese political dynasty. His great-grandfather Kazuo Hatoyama served in the Imperial Diet in the 1890s. His grandfather Ichiro Hatoyama founded the LDP and served (1954–56) as the prime minister. In addition, Hatoyama's maternal grandfather, Shojiro Ishibashi, was the founder of the tire manufacturer Bridgestone Corp.

Hatoyama was educated as an engineer, earning a bachelor's degree (1969) from the University of Tokyo and a doctorate (1976) from Stanford University. He taught at Senshu University in Tokyo beginning in 1981 and then became private secretary to his father, Ichiro Hatoyama, a member of the upper house of the Diet.

He began his own political career as a member of the LDP, winning election in 1986 to the lower house as a representative from Hokkaido. Hatoyama held his seat in the Diet through consecutive elections thereafter.

In 1993 Hatoyama broke with family tradition and left the LDP; he took a position as deputy chief cabinet secretary in the coalition government of Morihiro Hosokawa, the founder of the reform Japan New Party. Hatoyama served under Hosokawa until the coalition government collapsed in 1994. Over the next few years, Hatoyama became a founding member of the DPJ and rose through the party's ranks. From September 1999 to December 2002, he served as president of the party. He was elected again to that position in May 2009, only days after the resignation of powerful DPJ leader Ichiro Ozawa amid a financial corruption scandal.

(LORRAINE MURRAY)

Henry, Lenny

(b. Aug. 29, 1958, Dudley, West Midlands, Eng.) In February 2009 British comedian Lenny Henry made his stage debut in the lead role of Shakespeare's *Othello* at the West Yorkshire Playhouse in Leeds. His performance won rave reviews (one critic called it "one of the most astonishing debuts in Shakespeare [he had] ever seen"), and the production was transferred to London's celebrated West End theatre district in September.

Lenworth George Henry was the son of Jamaican immigrants. As a teenager, he performed a comedy act in local nightclubs, which led to a successful

British actor-comedian Lenny Henry promotes the charity organization Comic Relief's Red Nose Day.

Suzan—PA Photos/Landov

appearance on the television talent program *New Faces* when he was 16 years old. The national exposure he gained from that show helped to secure him a role in *The Fosters* (1976–77), the first British situation comedy with an all-black cast. He followed this stint with a number of short television appearances that varied from Saturday morning children's shows (*Tiswas*) to surreal alternative sitcoms (*The Young Ones*).

In 1984 Henry married fellow comedian Dawn French. That same year he was given his own series on the BBC, *The Lenny Henry Show*. The program consisted of a mix of stand-up comedy and sketches that featured him playing a number of offbeat, catchphrase-spouting characters, routines that quickly became his comedic calling card. Although his impersonations were mostly crowd-pleasing, they also drew criticism for playing up racial stereotypes, and Henry later lamented that some of his roles were “self-detrimental.” The popular show went through a series of cancellations and relaunches, including a short-lived format change to a pseudositcom during 1987–88. Henry founded his own production company, Crucial Films, in 1991. That same year he attempted to break into Hollywood by starring in the film *True Identity*, which was both a critical and a commercial flop.

Henry rebounded by returning to the BBC to star in the sitcom *Chef!* (1993–96), in which he played against type as the imperious perfectionist chef-restaurateur Gareth Blackstock. He was given the Radio and Television Industry Club Award for BBC Personality of the Year in 1993. He took on purely dramatic roles as a drug dealer in *Alive and Kicking* (1991) and as the head teacher of Hope Park, a down-trodden inner-city school in *Hope and Glory* (1999–2000). Henry's serious performances won many positive notices from critics, and he was encouraged to take on varied small parts in films such as *Harry Potter and the Prisoner of Azkaban* (2004) and *MirrorMask* (2005).

In 1988 Henry began hosting the annual charity telethon Comic Relief, and he soon became one of the most public faces of that organization's annual fundraising Red Nose Day. In 1999 he was made CBE in honour of his entertainment and charity work. After years of part-time study, Henry graduated (2007) from Open University with a degree in English literature, which he cited as the source of his newfound love of theatrical drama.

(ADAM AUGUSTYN)

Holzer, Jenny

(b. July 29, 1950, Gallipolis, Ohio)

In March 2009 a 15-year survey of the work of American installation and conceptual artist Jenny Holzer traveled from the Museum of Contemporary Art in Chicago (where it had originated in October 2008) to the Whitney Museum of American Art in New York City. The exhibition *Jenny Holzer: Protect Protect* highlighted her ongoing practice of utilizing original and borrowed text as a primary medium to create works that were alternately soothing and unsettling, meditative and confrontational, and seductive and frightening. Holzer emerged in the early 1980s as part of a generation of artists who gained recognition for employing and appropriating various aspects of mass culture in an effort to explore and question contemporary issues. While her critical texts take form as objects ranging from ephemeral posters to stone benches, she is best known for her flashing electronic LED sign sculptures that display carefully composed yet fleeting phrases that act as verbal meditations on power, trauma, knowledge, and hope.

Holzer initially explored abstract painting during her studies at Ohio University and the Rhode Island School of Design before moving to New York City in 1977. That same year she was accepted into the Whitney Museum of American Art's Independent Study Program, where her interest in social and cultural theory culminated in the *Truisms* series (1977–79). The works, composed of seemingly familiar slogans such as “Abuse of power comes as no

surprise,” were originally presented by Holzer as phrases on anonymous posters and later on T-shirts, billboards, and electronic signs. These texts, fraught with cynicism and political implications, were followed by the more structured and complex *Inflammatory Essays* (1979–82), the *Living* series (1981–82), and the *Survival* series (1983–85), which were seamlessly integrated into various urban landscapes as plaques and signs. In the mid-1980s, during a period in which she produced a series of introspective and mournful works, including *Under a Rock* (1986) and *Laments* (1989), Holzer began inscribing her texts on stone benches, sarcophagi, and floor tiles. These accompanied her LED signs in numerous exhibitions and were installed independently as site-specific works. Holzer's installation for the United States Pavilion at the 1990 Venice Biennale, which won the Golden Lion Award, exemplified the tension inherent in her chosen words through the juxtaposition of texts set in austere marble tiles and benches and aggressively flashing across commercial LED signs.

From 1996 Holzer expanded her installations to include large-scale outdoor light projections, choosing public locations that demanded viewer attention. Beginning in 2001 she started incorporating borrowed texts in her work, including poetry, literature, and bureaucratic documents. In 2005 Holzer turned to reportage with the *Redaction* paintings, a series of silk-screened canvases of enlarged declassified and redacted government documents per-

Artist Jenny Holzer appears before her installation For the City, which was featured on buildings at Rockefeller Center in New York City.

Hiroko Masuike/AP

taining to wars past and present. Similar to her original texts, these paintings underscore the impossibility of fixed meaning and the multiple viewpoints always present in her work. With these projects and others, Holzer continued to utilize words to question the relationship between the private and the public.

(MICHAL RAZ-RUSSO)

Huffington, Arianna

(b. July 15, 1950, Athens, Greece)

When *Forbes* magazine named Arianna Huffington to its list of the most influential women in media in 2009, citizen journalism was at its height, as dozens of bloggers and small news outlets contended with the mass of information and misinformation disseminated before and after the 2008 U.S. presidential election. Huffington—editor in chief and cofounder of The Huffington Post, a blog turned respected online news outlet—led the charge, printing posts written by personalities outside the traditional news cycle and opening every article on HuffingtonPost.com to reader comments. In a politically contentious time, Huffington's left-wing Web site served as a forum for discussion and, frequently, vociferous disagreement.

Huffington, the daughter of a Greek newspaper owner, moved at age 16 to England, where she later pursued an economics degree at the University of Cambridge (M.A., 1972). While at Cambridge she served as president of the esteemed debate society, the Cambridge Union, becoming the first foreign-born student to do so. After graduation she lived for a time in London before relocating in 1980 to the U.S.

She started her political and journalistic career as a Republican and a proponent of small government and limited welfare. She contributed to the conservative journal *National Review*, and in her coverage of the 1996 presidential election for the television cable station Comedy Central, she was positioned as a conservative foil to lifelong Democrat Al Franken (*q.v.*). For a time Huffington wrote for the TV show *Politically Incorrect*, and she also tried her hand in front of the camera, as when she took a bit part in the film *Edtv*. She also became a prolific and best-selling author. Her debut work, *The Female Woman* (1974), was followed by biographies of opera diva Maria Callas and artist Pablo Picasso, several inspirational self-help volumes, and a number of political books, such as *How to Overthrow the Government* (2000) and *Right Is Wrong* (2008).

Chester Higgins Jr.—The New York Times/Redux

Online entrepreneur Arianna Huffington

By the early 1990s Huffington was living in California with Republican politician Michael Huffington, whom she had married in 1986. There she presided over frequent salons and hosted the television talk show *Critical Mass*. She also worked on her husband's 1994 campaign for a Senate seat, which he failed to gain. The couple divorced in 1997. Huffington's place on the political spectrum had already begun to shift in the 1990s, starting with her opposition to U.S. intervention in the civil wars in former Yugoslavia. In 2003 she ran in California's gubernatorial race as an independent, but she later withdrew her candidacy.

The Huffington Post Web site was launched in 2005. It was structured as a "group blog," which published the words of hundreds of guest contributors. The next year HuffingtonPost.com received its first Webby Award, for best political blog. In August 2008 the blog's first local outpost, HuffPost Chicago, was introduced, and Huffington announced her intention to roll out city-specific "HuffPosts" all over the United States.

(MELISSA ALBERT)

Jackman, Hugh

(b. Oct. 12, 1968, Sydney, Australia)

As host of the 2009 Academy Awards, Australian actor Hugh Jackman demonstrated that he was far more than just another pretty face. He had been chosen as *People* magazine's Sexiest Man Alive the previous November, but in a ceremony that drew rave reviews, he showcased his skills as a premiere song-and-dance man. The show opened with

an elaborately choreographed musical number that paid tribute to each of the best picture nominees. Filled with sly comments about the state of the global economy and self-deprecating humour about the film industry, the routine closed with Jackman declaring, "I'm Wolverine!"—a reference to his character in the *X-Men* films, the latest of which, *X-Men Origins: Wolverine*, was one of the most hotly anticipated action films of the year.

Hugh Michael Jackman grew up in Sydney, and he made his acting debut as King Arthur in a production of *Camelot* when he was just five years old. After graduating (1991) from the University of Technology, Sydney, with a degree in communications, Jackman began working temporary jobs to pay for classes at the Actors Centre Australia. Though offered a role in the long-running television soap opera *Neighbours*, Jackman chose to further refine his acting skills at the Western Australian Academy of Performing Arts in suburban Perth. Shortly after graduating (1994), he landed a role in the 10-part TV prison drama *Correlli* (1995). Cast as an inmate who begins a dangerous flirtation with his psychologist (played by Deborah-Lee Furness), Jackman won fans as attractive bad boy Kevin Jones. Jackman and Furness continued their relationship offscreen, and the two were married in 1996. That same year he took to the stage, scoring the lead in the Australian premiere of Andrew Lloyd Webber's musical adaptation of Billy Wilder's noir classic *Sunset Boulevard*. That performance led Jackman to London's Royal National Theatre, where he won the role of Curly in a revival of Rodgers and Hammerstein's *Oklahoma!* (1998). The sold-out run set box-office records.

Jackman next turned to film, making his Hollywood debut in *X-Men* (2000), in which his portrayal of the tortured antihero Wolverine established him as a bankable action star. He demonstrated his range with a pair of romantic comedies, *Someone like You* (2001) and *Kate & Leopold* (2001), before once again unsheathing Wolverine's trademark razor claws in *X2* (2003). Jackman made his Broadway debut in 2003 as singer-songwriter Peter Allen in the biographical musical *The Boy from Oz*. For American filmgoers who were unfamiliar with his work in *Oklahoma!*, Jackman's flamboyantly spot-on performance was a revelation, and it won him a Tony Award in 2004. Now an established star both in Hollywood and on Broadway, Jackman returned to the

big screen with the ambitious science-fiction romance *The Fountain* (2006) and the dramatic thriller *The Prestige* (2006), as well as *X-Men: The Last Stand* (2006). In 2008 he starred opposite Nicole Kidman in Baz Luhrmann's lush historical epic *Australia*. While the film itself met with mixed reviews, Jackman's performance was widely praised. (MICHAEL RAY)

James, LeBron Raymone

(b. Dec. 30, 1984, Akron, Ohio)

During the 2008–09 basketball season, LeBron James of the National Basketball Association (NBA) Cleveland Cavaliers piloted his team to a franchise record 66 wins and a place in the play-offs, which helped to earn him the league's Most Valuable Player (MVP) award. He also published a memoir in 2009, *Shooting Stars* (co-written with Buzz Bissinger), that chronicles his years as a high-school standout.

A locally known basketball prodigy in Akron since elementary school, James was named Ohio's high-school player of the year three times while leading his school to three Ohio state championships in four years. He became a national media sensation in his junior year after appearing on the cover of *Sports Illustrated* magazine, which dubbed him "The Chosen One." James was the consensus national high-school Player of the Year in his senior season, and he was selected directly out of high school by the Cavaliers with the first overall selection of the 2003 NBA draft. Additionally, he signed an unprecedented \$90 million endorsement contract with the Nike shoe company before he ever played a professional game.

Despite the pressures brought on by these singular circumstances, James led the Cavaliers in scoring, steals, and minutes played over the course of the 2003–04 season, in the process becoming the youngest player ever to be named the league's Rookie of the Year. A 2.03-m (6-ft 8-in) "point forward" who was as adept at taking the ball down the court as at playing near the basket, James had an unmatched athleticism and well-muscled body that presented a strong challenge to opposing teams. After the season ended, he was a member of the U.S. men's Olympic basketball team that won the bronze medal at the 2004 Athens Games.

James's game progressed over the following years. He was voted one of the starting forwards on the Eastern Conference All-Star team during his second season, and in his third season he led

Basketball star LeBron James in action

Gregory Shamus/Getty Images

the Cavaliers to their first play-off berth in nine years. These accomplishments were exceeded during the 2006–07 season, when he guided Cleveland to the franchise's first berth in the NBA finals; the Cavaliers were swept by the San Antonio Spurs, but James's impressive postseason play led many observers to place him among the very best players in the league.

He led the NBA in scoring during the 2007–08 season and in February 2008 became the youngest player to have scored 10,000 career points. He also earned first team All-NBA honours, but the Cavaliers lost to the eventual-champion Boston Celtics in a dramatic seven-game series in the Eastern Conference semifinals. Before the start of the 2008–09 season, James again joined the U.S. men's Olympic basketball team, which this time won the gold medal at the 2008 Beijing Games.

(ADAM AUGUSTYN)

Johnson, Randy

(b. Sept. 10, 1963, Walnut Creek, Calif.) On June 4, 2009, Randy Johnson recorded the 300th victory in his career as a Major League Baseball (MLB) pitcher. This landmark had been reached by only 23 other big-league pitchers in the more than 120 years of American professional baseball. Johnson's achievement was surrounded by talk that he might be the last pitcher to reach the 300-win plateau, given the modern constraints on pitch counts and the financial in-

centives to lessen the number of a pitcher's annual starts in the era of multimillion-dollar contracts.

Randall David Johnson excelled in basketball as a youth, but he soon began to focus on his first love, baseball. He earned a scholarship to the University of Southern California, where he played from 1983 to 1985. The MLB National League (NL) Montreal Expos drafted him after his junior season, and he made his major league debut on Sept. 15, 1988.

The physically imposing 2.08-m (6-ft 10-in) Johnson quickly built a reputation as the pitcher major leaguers most feared facing. His exceptional height (he was for a time the tallest player in major league history) and low delivery angle only increased the difficulty of hitting his 164-km/hr (102-mph) fastballs and hard-breaking sliders (a pitch that appears to be heading toward a left-handed batter before suddenly veering toward the plate). The novelty of his height at first overshadowed Johnson's work on the mound, but as his pitching improved, the accolades increased. He was named to the first of his 10 All-Star games in 1990 as a member of the American League (AL) Seattle Mariners, who had acquired him from the Expos the previous season. Johnson led the AL in strikeouts for four consecutive years (1992–95), and in 1995 he won the AL Cy Young Award as the league's best pitcher. Johnson and the Mariners management began to have contract disagreements on a regular basis, and he was traded to the Houston Astros at the 1998 trading deadline.

A free agent at the end of the 1998 season, Johnson signed with the NL Arizona Diamondbacks, where he led the NL in earned run average, innings pitched, and strikeouts on his way to the 1999 NL Cy Young. Johnson won Cy Youngs in each of the following three seasons, but his most impressive feat took place at the 2001 World Series, where he tied a record with three wins in a single World Series and earned co-Most Valuable Player honours while guiding the Diamondbacks to their first championship. In 2004 he became the oldest player ever to pitch a perfect game. After pitching for two seasons with the New York Yankees and a second stint with the Diamondbacks, he signed with the San Francisco Giants, where, at 45 years old and with a chronically bad back, he cemented his legacy as one of the greatest pitchers of all time. (ADAM AUGUSTYN)

Kadeer, Rebiya

(b. Nov. 15, 1946, Xinjiang, China)

When ethnic conflict broke out on July 5, 2009, in Urumqi, the capital of the Uygur Autonomous Region of Xinjiang in western China, Chinese authorities blamed exiled Uighur entrepreneur and activist Rebiya Kadeer, a longtime advocate of greater autonomy for Uighurs (a Turkic Muslim population that accounted for a slim majority of the population of Xinjiang), for fomenting the unrest.

Junko Kimura/Getty Images

*Uighur activist Rebiya Kadeer*

Kadeer was born near the Altai Mountains of far northwestern China, where her father worked as a gold miner. She married at the age of 15 and subsequently helped support her growing family by sewing undergarments and shoes and selling them on the black market. When she was 28, her marriage ended in divorce, and, motivated by her separation from her children, Kadeer founded a laundry business out of her home. After several months she closed that thriving business and invested some of her earnings in trading commodities, modestly at first and eventually on a larger and larger scale. In July 1978 she married Sidik Rouzi, an intellectual and activist who had been jailed for leading a Uighur resistance movement against the Chinese authorities in the late 1960s.

Kadeer continued to develop her trading enterprise, and in the 1980s she expanded into real estate. In March 1987 she opened a women's bazaar in Urumqi, and in the 1990s she followed with a department store and an accompanying apartment complex. Soon she had enlarged her operations to in-

clude subsidiaries throughout Central Asia, and by 1993 she had become the wealthiest woman in China. Long concerned with aiding and advancing her people, Kadeer capitalized on her business by employing and mentoring Uighur individuals. She was lauded by the Chinese government as an example of Uighur success and was appointed to influential organizations and committees, including the Chinese People's Political Consultative Conference (CPPCC) and the National People's Congress. In 1995 she served as a delegate to the UN Fourth World Conference on Women, held in Beijing.

Kadeer utilized her increased financial means and social stature to continue campaigning on behalf of the Uighur population. Her actions soon garnered negative attention, however; her passport was confiscated, and in 1998 she was barred from reappointment to the CPPCC. She was detained in August 1999 en route to meeting a congressional delegation from the U.S. and was imprisoned. In March 2000 Kadeer was convicted of endangering national security by furnishing state intelligence abroad (she had sought to forward newspaper clippings to her husband, who had fled to the U.S. in 1996). Although she was sentenced to eight years in prison, pressure from the international community helped to achieve a reduced sentence, and she was freed in March 2005. After her release Kadeer left China for the U.S., where she continued her vocal campaign for human rights and Uighur self-determination at the head of both the World Uyghur Congress and the Uyghur American Association. While imprisoned, Kadeer was awarded the 2004 Rafto Prize by Norway's Rafto Foundation for Human Rights, and she was nominated (2005) for the 2006 Nobel Prize for Peace.

(LAURA ETHEREDGE)

Kim Yu-Na

(b. Sept. 5, 1990, Bucheon, S.Kor.)

In March 2009 at the world figure skating championships in Los Angeles, South Korean figure skater Kim Yu-Na was in a class by herself with a record-setting performance to give her homeland its first senior-level world figure skating title. Kim—known as “Queen Yu-Na” to her fans and already one of the most recognized athletes in her native country—took a big lead in the short program and went on to finish with a record 207.71 points (8.19 better than the previous mark, set in 2006 by her longtime rival Mao Asada of

Japan). Kim was a stunning 16.4 points ahead of silver medalist Joannie Rochette of Canada and nearly 20 points ahead of Asada, the defending champion, who finished fourth behind the 2007 winner, Miki Ando of Japan.

Kim began skating at age six and gained her first international experience six years later, when she won the novice competition at the Triglav Trophy in Jesenice, Slvn. In 2003 she captured her first South Korean national title and won the novice competition at the Golden Bear of Zagreb in Croatia before reaching the age requirement for skating internationally at the junior level the following season.

In the 2004–05 season, Kim won the gold medal at the Junior Grand Prix in Hungary and silvers at the Junior Grand Prix in China and Junior Grand Prix Final, which was won by Asada. At the 2005 junior world championships, Kim completed her first triple-triple combination jump in competition but again finished second to Asada. Kim remained on the Junior Grand Prix circuit in 2005–06 and won events in Slovakia and Bulgaria before taking her second Junior Grand Prix Final. Competing against defending champion Asada in the 2006 world junior championships, Kim won the gold medal.

Kim moved up to the senior level in 2006–07, taking the bronze medal at Skate Canada and winning gold at the Trophée Eric Bompard to qualify for the Grand Prix Final, where she won the overall title and Asada took the silver. At the 2007 world championships, Kim placed third overall. Soon thereafter she began training in Canada under two-time Olympic silver medalist Brian Orser. The following season saw Kim capture both the Cup of China and the Cup of Russia, which gave her a chance to defend her Grand Prix title. She did just that, edging second-place finisher Asada, before securing another bronze medal at the 2008 world championships.

In the 2008–09 season, Kim dominated with victories at Skate America and the Cup of China but failed to win her third straight Grand Prix title, finishing second to Asada. Kim, though, went on to win the Four Continents event in February 2009 before her amazing performance at the world championships. (PAUL DIGIACOMO)

King, Mervyn

(b. March 30, 1948, Chesham, Buckinghamshire, Eng.) By the summer of 2009, the economic strategy pursued by Mervyn King, governor of the Bank of

Oli Scarff/Getty Images

Bank of England governor Mervyn King

England (BOE), seemed to have been vindicated, as evidence was mounting that the U.K. might be the first of the world's major economies to start emerging from the global recession. After he became governor in 2003, King had insisted that his ambition was to make monetary policy boring. In 2007 and 2008, however, as banks collapsed and the world recession started to affect the U.K., this low-profile approach was thwarted, and King, with his wry humour and perfectly formed sentences, became a familiar fixture on British television.

King grew up in modest circumstances, the son of a railway clerk. His intelligence and drive took him via Wolverhampton Grammar School to King's College, Cambridge, where he emerged as one of the brightest economists of his generation. Through the 1970s and '80s, his academic career blossomed on both sides of the Atlantic. King's special area of interest was taxation; he coauthored a lucid and trenchant book on the British tax system, and as professor of economics at the London School of Economics from 1984, he wrote a series of papers that analyzed the system's weaknesses.

His work brought him attention at a time when Prime Minister Margaret Thatcher's Conservative Party government was seeking to simplify the tax system and reduce taxes. In 1990 King was appointed one of the BOE's nonexecutive directors; the following year he became the bank's chief economist. This gave him a platform for preaching in favour of placing the fight against inflation at the heart of economic policy. King's careful avoidance of party politi-

cal controversies meant that the incoming Labour Party government in 1997 embraced him as warmly as the outgoing Conservative administration had done; one of Labour's first policies—to give the BOE the freedom to set interest rates with the aim of controlling inflation—accorded precisely with King's views. Thus, no one was surprised when he became the BOE's deputy governor in 1998 and governor in 2003.

At first the U.K.'s economy grew steadily, and inflation remained under control. In September 2007, however, one of Britain's main mortgage lenders, the Northern Rock Bank, collapsed. Initially, King (and Chancellor of the Exchequer Alistair Darling) seemed to hesitate, and for the first time in more than a century, there was a run on a major British bank as anxious savers formed long lines to withdraw their money. Eventually, the government nationalized the bank. A year later King faced criticism for keeping interest rates too high for too long as the economy started to contract. In response, King and his colleagues on the BOE's Monetary Policy Committee acted boldly, expanding the money supply sharply and cutting interest rates in successive months from 5% in October 2008 to 0.5% by March 2009, by far the lowest in the BOE's 300-year history.

(PETER KELLNER)

Kirill I

(b. Nov. 20, 1946, Leningrad [now St. Petersburg], Russia) Following his election in January 2009, Kirill I was enthroned on February 1 as the Russian Orthodox patriarch of Moscow and all Russia; he became the first head of the Russian Orthodox Church to be elected after the fall of the Soviet Union. He inherited from his predecessor, Aleksey II (reigned 1990–2008), a church that had experienced revitalization and tremendous growth following the end in Russia of official state atheism. Kirill shared with Aleksey an outspoken belief that the church should play a dynamic role in Russian life. A popular figure, Kirill for more than a decade hosted his own weekly television show on religious topics; he also enjoyed a reputation as a modernizer.

Gundyaev took the monastic name Kirill in 1969 while a seminarian. He graduated (1970) from Leningrad Theological Academy, where he served for one year as lecturer in dogmatic theology. In 1971 Kirill was appointed representative of the Russian Orthodox Church to the World Council of Churches in Geneva. Returning to Rus-

sia in 1974, he became rector of Leningrad Theological Academy, a post he held until 1984. He was named archbishop of Smolensk and Kaliningrad in 1988 and was elevated to metropolitan of that province in 1991. Upon assuming the patriarchate, he expressed his long-standing desire for increased dialogue to end the church's millennium-old rift with the Roman Catholic Church.

(MATT STEFON)

Klum, Heidi

(b. June 1, 1973, Bergisch Gladbach, North Rhine-Westphalia, W.Ger.) By 2009 German American model and savvy businesswoman Heidi Klum had become a television megastar as the hostess of the reality programs *Germany's Next Topmodel* (launched in 2006), in which players competed for a chance to win a contract with the IMG Models agency, and *Project Runway*, a design competition between contestants vying for the chance to create their own fashion line, with a top prize of \$100,000. The inaugural 2009 episode of *Project Runway*, for which Klum served as a judge and executive producer, reportedly drew 4.2 million viewers, which represented a 45% increase over the initial show of the 2005 season. In addition, for the 2009 season (the program's sixth), a spin-off premiered: *Models of the Runway*, also

Fashion diva Heidi Klum

Alexander Tamargo/Getty Images

hosted by Klum, profiled the women who donned the designers' creations and offered their behind-the-scenes impressions of the competition.

In 1992, when 18-year-old Klum entered the "Model 92" German beauty contest, she was living near Cologne with her parents Gunther, a cosmetics company executive, and Erna, a hairdresser. She trumped 25,000 contestants to capture the top prize—a \$300,000 contract with New York City's Metropolitan Models. In 1993 Klum moved to South Beach, Fla., but after a brief stay she launched a modeling career in New York City. Her breakthrough came when in 1994 she appeared on the cover of *Mirabella* magazine. In the mid-1990s Klum achieved increased visibility as a cover model for *Vogue*, *ELLE*, and *Marie Claire* magazines, but her star shone even brighter when she graced the Feb. 20, 1998, swimsuit cover of *Sports Illustrated*. She eclipsed that feat in 1999 by achieving global recognition as one of the original "Angels," the troupe of Victoria's Secret lingerie models who appeared in annual televised runway shows and at other promotional activities. Klum continued to work as an Angel and also designed an eponymous lingerie and cosmetics collection for the retailer. According to *Forbes* magazine, she reigned as one of the world's highest-paid models, and Klum increased her wealth by pursuing a host of other lucrative business ventures. She launched her own swimsuit calendars and a signature scent in Europe, which achieved sales totaling €1 million (about \$92,000) in July 2002, its first month of sales. The following month the Caribbean island of Grenada issued a set of six \$1.50 stamps emblazoned with an image of Klum. By the spring of 2003, Klum had simultaneously launched a diamond and coloured gemstone collection with the fine jeweler Mouawad for the TV home shopping network QVC as well as three exotic styles of casual Birkenstock shoes. Klum went on to host an adventure program for the Discovery channel and landed some small film roles as well as spots in video games. The 1.77-m (5-ft 9½-in) blonde, renowned for her sunny disposition, also continued to work as a model.

On May 10, 2005, Klum married British soul singer Seal, with whom she had several children, including one born in October 2009, shortly before Klum legally took Seal's surname, Samuel. Though a daughter resulted from an earlier liaison with an Italian

businessman, Klum considered Seal her father. Klum also took a turn as a singer; in 2007 she recorded with her husband the romantic duet *Wedding Day*. In 2008 she became a U.S. citizen.

(BRONWYN COSGRAVE)

Kumar, Akshay

(b. Sept. 9, 1967, Amritsar, Punjab, India) Akshay Kumar's star in the Bollywood pantheon showed no sign of dimming in 2009, as he was slated to appear in seven films, a feat for even this wildly prolific actor. The year also marked his receipt of one of the Indian government's highest civilian honours, the Padma Shri, in recognition of his contribution to India's cultural life.

Alberto E. Rodriguez/Getty Images

Bollywood actor Akshay Kumar

In a country in which acting often runs in the family, Kumar (born Rajiv Hari Om Bhatia) was the son of a government worker. As a young man he trained extensively in dance and martial arts, and his first movie role, non-speaking and uncredited, was as a martial arts instructor in *Aaj* (1987). Kumar worked at a Bangkok food stall, tried his hand at modeling, and appeared in several films before being offered a starring role in *Deedar* (1992) by director Pramod Chakravarthy. It was in these early stages of his career that he took the professional name Akshay Kumar.

Kumar played in a steady stream of thrillers and fast-paced dramas, including *Khiladi* (1992), which attracted considerable attention to the handsome young newcomer. His athleticism and daredevil nature were well displayed in action films such as *Main khiladi tu anari* (1994), in which Kumar played a

police inspector protecting a star witness. He again portrayed a conflicted policeman in *Mohra*, one of the most popular Indian films of 1994. Despite his success in these high-intensity roles, Kumar's good looks also led him to star in romantic comedies such as *Yeh dilagi* (1994), a loose adaptation of the American film *Sabrina*, and *Dhadkan* (2000), a story of arranged marriage in which Kumar's character must win over his reluctant bride. *Ajnabee* (2001) was a change of pace for the usually charming actor, and his turn as a philandering husband and murderer won him his first Filmfare award, for best villain.

With *Hera pheri* (2000) the versatile actor again took on a new kind of role: that of the comedic lead. *Hera pheri* was a remake of the Indian film *Ramji Rao Speaking* (1989), a kidnapping caper, and it was popular enough to lead to a sequel (2006). This genre gamble paid off. Kumar continued to appear in comedies, and *Garam masala* (2005) garnered him a second Filmfare award, for best actor in a comedic role.

(MELISSA ALBERT)

Lasseter, John

(b. Jan. 12, 1957, Hollywood, Calif.)

With the release of *Up*, a 2009 smash hit at the box office, the Walt Disney Co.'s Pixar Animation Studios, led by executive producer John Lasseter, continued its transformation of the art and business of making animated films. Pixar's pioneering use of computer animation created memorable images for films such as *Toy Story* (1995), *Monsters, Inc.* (2001), and *Finding Nemo* (2003), but perhaps even more remarkable—and indicative of Pixar's success—was a film such as *Up*, which was marketed to a youth-obsessed culture yet featured a septuagenarian as its hero. Lasseter was the driving force behind Pixar's lucrative formula, a combination of cutting-edge computer animation and classic Disney-style storytelling that appealed to children and adults. In October 2009 the Producers Guild of America announced that in recognition of his body of work, Lasseter would receive the 2010 David O. Selznick Achievement Award in Motion Pictures, the first time a producer of animated films had been so honoured.

Lasseter—who was encouraged by his mother, an art teacher—won a drawing contest at the age of five. In high school he read a book about the making of Disney's animated film *Sleeping Beauty* (1938) and was inspired to pursue a career as an animator. He attended col-

Fred Prouser—Reuters/Landov

Up executive producer John Lasseter poses with characters from the film.

lege at the California Institute of the Arts, which had just begun offering animation courses taught by veteran Disney artists. After graduation (1979), he took a job at Disney's animation studio, where he worked on *The Fox and the Hound* (1981) and *Mickey's Christmas Carol* (1983). His growing enthusiasm for nascent computer animation technology put Lasseter at odds with some of his superiors, however, and he was fired in 1983. Later that year Lasseter was hired to work in the computer graphics division at Lucasfilm. His first assignment was to direct an animated short film, *The Adventures of André and Wally B.* (1984), which was the first movie to feature computer-generated characters. In 1986 the division was sold to Apple Computer Inc. cofounder Steve Jobs and became an independent company called Pixar that focused primarily on developing and selling animation software. Disney became its biggest client. Pixar also produced television commercials and short films, with Lasseter serving as director. *Tin Toy* (1988) earned him an Academy Award for best short animated film.

In 1991 Lasseter got a second chance to show Disney executives the value of computerized animation when Pixar struck a deal with the entertainment giant to produce movies. The initial effort, *Toy Story*, was directed by Lasseter and was the first fully computer-animated feature film in history. *Toy Story* was the highest-grossing film of 1995, selling \$362 million in tickets worldwide, and it resulted in a second Academy Award for Lasseter, this time for special achievement. Pixar continued to generate hits for Disney, including *A Bug's Life* (1998)

and *Toy Story 2* (1999), both directed by Lasseter. When Disney purchased Pixar in 2006, Lasseter made a triumphant return to the company that had fired him more than 20 years earlier, becoming chief creative officer of both Pixar's and Disney's animation operations.

(ANTHONY G. CRAINE)

Lieberman, Avigdor

(b. June 5, 1958, Kishinyov, Moldavia, U.S.S.R. [now Chisinau, Moldova]) When the dust settled after the Israeli general election held on Feb. 10, 2009, Avigdor Lieberman's right-wing party, Yisrael Beiteinu, was in third place with 15 seats in the 120-seat Knesset (parliament), and on March 31 Lieberman was sworn in as Israel's deputy prime minister and foreign minister. The next day he renounced the peace process adopted at the Annapolis (Md.) conference in 2007. His prominence in the new government, as well as his often provocative pronouncements, earned Lieberman international attention and a place on *Time* magazine's list of the year's most influential people.

Evet Lvovich Lieberman (or Lieberman) immigrated to Israel with his parents when he was 20, taking the new name Avigdor. He received a degree in international relations and political science at Jerusalem's Hebrew University, where he exhibited the combativeness that would characterize his later career, demanding that Arab students participate in civil guard patrols or forfeit their places in the campus dorms.

In 1988 he moved with his wife to the Jewish West Bank settlement of Nokdim. That same year he allied himself with Benjamin Netanyahu, and in

1993 he masterminded Netanyahu's successful campaign for the Likud party leadership. When Netanyahu first became prime minister three years later, he appointed Lieberman director general of the prime minister's office. After a falling out with Netanyahu, Lieberman left Likud to found (1999) the nationalist party Yisrael Beiteinu. The party, which drew its membership mainly from Russian immigrants, won four Knesset seats in the 1999 national election.

Lieberman served as minister of national infrastructure (2001–02) in Prime Minister Ariel Sharon's first government, and when Sharon was reelected in 2003, he appointed Lieberman minister of transportation (2003–04). In late May 2004 Lieberman outlined his "Populated Area Exchange Plan," under which Israeli Arab towns bordering the West Bank would be ceded to Palestine and West Bank Jewish settlements bordering the 1967 Green Line would be part of Israel. Everyone remaining in Israel, including Arabs, would be required to take a loyalty oath or lose the right to vote.

In October 2006 Prime Minister Ehud Olmert brought Lieberman, whose party had won 11 seats in the March election, into his new coalition as minister for strategic threats, focusing on the Iranian nuclear program. Although Lieberman resigned in January 2008 over the Annapolis process with the Palestinians, his service in a top security portfolio gave him national leadership credibility.

Israeli politician Avigdor Lieberman

Filippo Monteforte—AFP/Getty Images

In the run-up to the 2009 election, Lieberman sharpened his questions about Israel's Arab minority, expressing doubts about their loyalty to the Jewish state and threatening to make their right to citizenship dependent on an oath of allegiance. In May 2009 Yisrael Beiteinu introduced such a citizenship law and other legislation perceived as anti-Arab. Soon after taking over as foreign minister, Lieberman also was interrogated by police on suspicion of money laundering, bribery, and obstructing justice in a scandal that threatened to end his controversial political career. (LESLIE D. SUSSER)

Loeb, Sébastien

(b. Feb. 26, 1974, Haguenau, Bas Rhin, France) French automobile road rally driver Sébastien Loeb continued his remarkable run at the top of his sport in 2009. After finishing 2008 with a record fifth consecutive World Rally Championship (WRC) driver's title, he did not miss a beat in early 2009, winning the first five WRC races to start his push for a sixth world championship. Loeb accomplished his goal in dramatic fashion on October 25, taking first place in the final race of the season, the Wales Rally of Great Britain, to narrowly edge Mikko Hirvonen of Finland for yet another WRC title.

After having won five gold medals at the French national gymnastics championships by the time he was 15, Loeb discovered a new love—auto racing. In 1995 he took up rally driving, and in 1998, with co-driver Daniel Elena of Monaco, he started racing in the French Citroën Saxo Trophy Series, winning twice that season before taking the title the following year. In 2000 Loeb won the two-wheel drive-class French gravel championship and in 2001 the Junior Super 1600 class of the WRC.

The 2002 season was Loeb's first as a WRC driver with the Citroën Total World Rally Team, and he was runner-up in his first race and won his second, the Rally of Germany. During his first full season in 2003, he captured three events to finish just one point behind Subaru's Petter Solberg of Norway. That served as the springboard to Loeb's pre-eminence in the sport. He won the first of his five straight world driver's championships in 2004 by tying the WRC season record with six victories, which enabled him to easily beat Solberg for the title. The next season proved to be even more dominant, as Loeb had a record-setting run to the title. He posted 10 victories—becoming the first driver

to win 6 in a row—and took the title by 56 points to break a 25-year-old record.

In 2006 Loeb raced for the private team Citroën Xsara WRC and beat the record of 26 career victories set by Carlos Sainz of Spain, scoring 8 more wins to register 28 in his career. He took a third consecutive drivers' title, despite missing the last four rounds of the championship owing to a broken shoulder that he suffered in a biking accident. Loeb returned to Citroën Sport and drove the new C4 WRC in 2007, but learning to handle a new car did not prevent him from winning eight events and his fourth consecutive crown.

Loeb—with Elena still at his side after a decade's partnership—took his dominance to another level in 2008, setting a record with 11 wins in one season to give him 47 career victories and his fifth consecutive WRC title. In May 2009 Loeb suffered a disappointing loss in the sixth race of the season, but he had some consolation a few days later when he was awarded the Legion of Honour by French Pres. Nicolas Sarkozy. (PAUL DIGIACOMO)

Lumley, Joanna

(b. May 1, 1946, Srinagar, Kashmir, British India) In early 2009 Joanna Lumley, a tall, blonde British comedic actress, accomplished something that is achieved by very few people—including individual MPs. She pressured the U.K. government to abandon a specific policy and change course. Her cause was that of supporting the Gurkha soldiers from Nepal who had fought for the British army and were seeking to settle in Britain, and with a tenacity that impressed many, she got her way.

Joanna Lamond Lumley was born in India, where her father had fought with the British army's 6th Gurkha Rifles in World War II. During fierce fighting in Burma (now Myanmar) in June 1944, his life was saved by a Gurkha during a battle that saw a number of Gurkhas earn awards for bravery.

Lumley's family returned to Britain, where she was educated at private schools, culminating in the Lucie Clayton finishing school, from which she emerged with a posh accent and upper-class bearing. Nevertheless, she escaped the social restrictions of her upbringing, becoming an unmarried mother at 21. Lumley said later in life, "I have never felt the constraints of social acceptability."

She took up modeling, but her lifelong ambition was to be an actress. Though she failed an exam at 16 to en-

ter the Royal Academy of Dramatic Art, she appeared in a series of small roles, including one in the James Bond film *On Her Majesty's Secret Service* (1969), and enjoyed a stint (1973) on the television drama *Coronation Street*. She achieved stardom in 1976 when she was cast as the female lead, Purdey, in the popular British TV show *The New Avengers* (1976–77). Other substantial roles followed, notably the female lead in the science-fiction series *Sapphire and Steel* (1979–82), but her career did not reach its peak until she starred in the TV situation comedy *Absolutely Fabulous* (1992–96, 2001–05). In *Ab Fab*, as it came to be known, she played Patsy, an aging, sexually aggressive, chain-smoking, heavy-drinking, drug-taking fashionista with a distinctive beehive hairdo. For Lumley, it was a gloriously outrageous, show-stealing, award-winning performance.

Lumley's celebrity status helped power the campaign to persuade the British government to give all Gurkhas who had fought for the British army the right to settle in Britain. Prior to 1997, none had that right, but the Labour government that won power that year granted permission to all future Gurkha soldiers. The goal of the new campaign, which gained momentum with Lumley's involvement from 2007, was to extend that right to Gurkhas who served prior to 1997, including some who had fought in World War II. Lumley's trenchant support for the lifting of all restrictions led to a rare government defeat in the House of Commons on April 29, 2009, and on May 21 the government announced that the right of settlement would be extended to all Gurkhas with more than four years' military service. (PETER KELLNER)

Madoff, Bernie

(b. April 29, 1938, Queens, N.Y.)

In March 2009 Bernie Madoff—an American hedge-fund investment manager and former chairman of the National Association of Securities Dealers Automated Quotations (Nasdaq) stock market—pleaded guilty to fraud, money laundering, and other crimes associated with running what appeared to be history's largest Ponzi scheme (a financial swindle in which early investors are repaid with money acquired from later investors rather than from actual investment income). The thousands of people and numerous charitable foundations who invested with Madoff, directly or indirectly through "feeder funds," thus spent the early months of

2009 assessing their often-huge financial losses. U.S. federal investigators continued to pursue other suspects, including Madoff's accountant and some other members of the Madoff family. Estimates of losses ranged from \$50 billion to \$65 billion, but investigators acknowledged that locating the missing funds might prove to be impossible. On June 26 a federal court ordered that Madoff forfeit more than \$170 billion in assets. Three days later the same court sentenced him to a 150-year prison term, the maximum allowed.

Bernard Lawrence Madoff grew up in the predominantly Jewish neighbourhood of Laurelton in Queens, N.Y. After spending his freshman year at the University of Alabama, he earned a degree (1960) in political science from Hofstra University, Hempstead, N.Y. He studied law briefly at Brooklyn Law School before founding (1960) Bernard L. Madoff Investment Securities with his wife.

Madoff cultivated close friendships with wealthy, influential businessmen in New York City and Palm Beach, Fla., signed them as investors, paid them handsome returns, and used their positive recommendations to attract more investors. He also burnished his reputation by developing relationships with financial regulators. He exploited an air of exclusivity to attract serious, moneyed investors; not everyone was accepted into his funds, and it became a mark of prestige to be admitted as a Madoff investor. Investigators later posited that Madoff's pyramid, or Ponzi, scheme, originated in the early 1980s. As more investors joined, their money was used to fund payouts to existing investors—as well as fee payments to Madoff's firm and, allegedly, to his family and friends.

Some skeptical individuals concluded that his promised investment returns (10% annually, in both up and down markets) were not credible and questioned why the firm's auditor was a small storefront operation with few employees. In 2001 *Barron's* financial magazine published an article that cast doubt on Madoff's integrity, and financial analyst Harry Markopolos repeatedly presented the Securities and Exchange Commission (SEC) with evidence, notably a detailed investigation, "The World's Largest Hedge Fund Is a Fraud," in 2005. Still, the SEC took no actions against Madoff; large accounting firms such as PricewaterhouseCoopers, KPMG, and BDO Seidman reported no red flags in their

financial reviews; and JPMorgan Chase bank ignored possible signs of money-laundering activities in Madoff's multi-million-dollar Chase bank account. When Madoff's operations collapsed in December 2008 amid the global economic crisis, he reportedly admitted the dimensions of the scam to members of his family. Later he acknowledged his guilt in court and issued a public apology to the many victims of his massive swindle. (SARAH FORBES ORWIG)

Marchionne, Sergio

(b. June 17, 1952, Chieti, Italy)

On June 10, 2009, Canadian-Italian businessman Sergio Marchionne, CEO of the Italian automobile manufacturer Fiat SpA, replaced Robert Nardelli as CEO of Chrysler Group LLC. Fiat had gained control of the American car company following its emergence from Chapter 11 bankruptcy, and Marchionne, owing to his tremendous success in turning around the formerly troubled Fiat, was placed at the helm in hopes that he could produce a similar transformation at Chrysler.

Marchionne was born into a Italian military family, but when he was 14, his family immigrated to Toronto. He later earned a bachelor's degree in philosophy (1978) from the University of Toronto, a bachelor's degree in com-

merce (1979) and a master's degree in business (1985) from the University of Windsor, Ont., and a law degree (1983) from Osgoode Hall Law School of York University in Toronto.

After completing his law degree, Marchionne immediately began working as a tax specialist and chartered accountant for the professional-services firm Deloitte & Touche LLP in Toronto. From 1985 to 1988 he served as group controller and then director of corporate development for the global packaging company Lawson Mardon Group Ltd. in Toronto. The following year Marchionne became the executive vice president of the conglomerate Glenex Industries Inc. He served as vice president of finance and chief financial officer (CFO) for the accounting firm Acklands Ltd. from 1990 to 1992. He then returned to Lawson Mardon, where he was vice president of legal and corporate development and CFO until it was acquired (1994) by the Swiss international packaging and aluminum company Alusuisse Lonza Group Ltd. (Algroup). Marchionne quickly moved up through the ranks at the new company, and in 1997 he became the CEO and managing director of Algroup. Following the firm's merger with the Montreal-based production company Alcan Inc. in 2000, he was appointed CEO and then chairman of the spin-off company Lonza Group Ltd. In 2002 Marchionne was named CEO of the Swiss testing, verification, and certification company Société Générale de Surveillance (SGS) Group.

He joined the board of Fiat SpA in 2003 and the following year became CEO. Though lacking in engineering experience, Marchionne was unexpectedly selected two years later as CEO of the automotive division Fiat Group Automobiles SpA. He quickly returned the troubled car company to profitability, however, by downsizing and restructuring management as well as by speeding the introduction of new models, notably the retro-styled minicar sensation Fiat 500.

Marchionne was appointed chairman of SGS in 2006, the same year that he was named a Knight of the Order of Merit for Labour, an Italian honour bestowed upon entrepreneurs who had excelled in their given fields. In 2008 he was among the winners of the CNBC Europe European Business Leaders Awards. (JEANNETTE NOLEN)

Martinelli, Ricardo

(b. March 11, 1952, Panama City, Pan.) Boosted by a campaign that promised

Auto executive Sergio Marchionne with the retro-styled minicar Fiat 500

AFP/Getty Images

“real change,” conservative business tycoon Ricardo Martinelli of the opposition Democratic Change (CD) party prevailed in the May 3, 2009, Panamanian presidential election. Martinelli’s triumph went against the recent trend gaining momentum across Latin America that saw voters showing a preference for leftist anti-U.S. candidates. Martinelli’s win was credited to his having recognized and seized upon growing disenchantment among Panamanian voters, whose confidence in the ruling centre-left Democratic Revolutionary Party (PRD) waned because the country’s once-booming economy showed signs of decline while crime and corruption increased.

Ricardo Alberto Martinelli Berrocal was educated primarily in the United States; he attended Staunton (Va.) Military Academy and the University of Arkansas, where he earned (1973) a degree in business. He went on to study finance at the Central American Institute of Business Administration in San Jose, Costa Rica. Martinelli owned Super 99, Panama’s largest chain of supermarkets, which he joined in 1981 following a stint at Citibank. He was director (1985–87) of the Chamber of Commerce of Panama before serving (1994–96) as the country’s director of social security. In 1998 he formed the CD. He then took office as chairman of the board of directors of the Panama Canal Authority and minister of canal affairs (1999–2003).

Martinelli made his first bid for the five-year, one-term presidency in 2004 and finished last among four candidates, receiving only 5.3% of the vote. For his 2009 run, he led a coalition of right-wing parties and contributed significant funding to his own cause, financing a media campaign in which he presented himself as an outsider vying for an office that had been held by traditional political powers since 1989, when dictator Manuel Noriega was deposed in a U.S. invasion. Early in the campaign, PRDP candidate Balbina Herrera was considered the favourite, but Martinelli already had the support of many of Panama’s business leaders, and his message of change resonated among poor voters in a country in which 40% of the population lived in poverty. He won by a wide margin, garnering some 60% of the vote.

The early challenges of Martinelli’s presidency included fighting an escalating crime rate and stabilizing an economy that in 2008 had grown at a 9.2% annual rate but was forecast to

rise only 3.2% in 2009. He aimed to influence the initiation of a free-trade agreement that had already been signed with the United States but had stalled in the U.S. Congress. Martinelli was also relying on a \$5.25 billion project to expand the Panama Canal to provide some short-term benefits to the economy through the thousands of jobs the enterprise was expected to create.

(ANTHONY G. CRAINE)

McGuinness, Martin

(b. May 23, 1950, Londonderry, N.Ire.) For anyone with memories of the campaign conducted in the latter decades of the 20th century by the paramilitary Provisional Irish Republican Army (IRA), few sights in 2009 could be more startling—or encouraging—than that of Northern Ireland Deputy First Minister Martin McGuinness of Sinn Féin (the IRA’s political wing), a former IRA commander, working harmoniously with his former enemies to run the province. In March 2009, when dissident IRA members killed two off-duty British soldiers in Antrim, N.Ire., McGuinness was forthright in condemning precisely the kind of violent action with which he previously had been associated and described the dissidents as “traitors to the island of Ireland.” Though McGuinness himself was now considered a possible assassination target, he turned down offers of special police protection.

James Martin Pacelli McGuinness joined the Provisional IRA in about 1970, and by 1971 he was one of its leading organizers in Derry (the name used by Republicans for Londonderry). In 1973 a Special Criminal Court in the Irish Republic sentenced him to six months in prison after he had been caught in a car containing large quantities of explosives and ammunition. Although the IRA kept secret the membership of its seven-man Army Council, few doubted that McGuinness was one of its most important members during the 1970s, ’80s, and ’90s. Indeed, even while reportedly planning attacks on civilians in Northern Ireland and the British mainland, McGuinness was involved in spasmodic secret talks with British government ministers and officials to end the conflict. In 1972 McGuinness, with fellow IRA leader Gerry Adams, privately negotiated with British Secretary of State for Northern Ireland William Whitelaw, but these and other talks over the next two decades came to nothing.

McGuinness was the IRA’s chief negotiator in the deliberations, also secret at

first, that culminated in 1998 in the Good Friday Agreement. This pact finally ended the conflict and brought Sinn Féin into a coalition government to rule Northern Ireland. McGuinness was elected to the new Assembly and was appointed minister of education. In this post he eliminated the 11-plus examination—more than a quarter century after the test had been abolished in most of the rest of the U.K.

Disagreements over such issues as policing and the decommissioning of arms caused Northern Ireland’s Executive and Assembly to be suspended for some years, but a fresh agreement in 2006 paved the way for them to be revived. In elections in March 2007, both Sinn Féin and the anti-Republican Democratic Unionist Party (DUP) gained seats. McGuinness became deputy first minister, working with First Minister Ian Paisley, leader of the DUP. The two men, previously bitter enemies, performed so well together that they were dubbed the “Chuckle brothers.” When Paisley retired in 2008, he was succeeded by the DUP’s Peter Robinson, who was considered to be even more militantly anti-Republican. Once again, however, a shared need to rebuild the province’s economy and attract international investment led to cooperation between former opponents.

(PETER KELLNER)

McKellar, Danica

(b. Jan. 3, 1975, La Jolla, Calif.)

In 2009 American actress and nonfiction writer Danica McKellar made appearances on radio and television programs to champion math education and promote her second math book aimed at middle-school girls, *Kiss My Math: Showing Pre-Algebra Who’s Boss* (2008), which was issued in a paperback edition in June 2009. Such a role might seem unusual for a career actress who had gained national recognition portraying the teenager Winnie Cooper in more than 80 episodes of the television program *The Wonder Years* (1988–93). After the series ended, however, McKellar attended the University of California, Los Angeles (UCLA), from which she graduated summa cum laude (1998) with a major in mathematics. In her senior year she took advanced course work in mathematical analysis, and with the encouragement and supervision of Lincoln Chayes, McKellar and fellow undergraduate math student Brandy Winn conducted research into the statistical mechanics of magnetic fields. Their results were published as a paper titled

“Percolation and Gibbs States Multiplicity for Ferromagnetic Ashkin-Teller Models on \mathbb{Z} ” in the *Journal of Physics A: Mathematics and General*, a British periodical on mathematical physics.

Although McKellar chose not to pursue postgraduate studies, she found a voice in advocating math education and testified in 2000 before a U.S. congressional subcommittee on ways of increasing the number of women in mathematics-related fields. She focused on promoting an interest in math among girls in middle school and wrote *Math Doesn't Suck: How to Survive Middle-School Math Without Losing Your Mind or Breaking a Nail* (2007) to help girls grasp such topics as fractions, decimals, and percentages. She soon followed with *Kiss My Math*, providing insight into more advanced middle-school math topics, such as exponents, inequalities, and solving for a variable. Both books—which were written in the style of a teen magazine and contained examples that were chosen to be accessible and appealing to many girls of that age group—became *New York Times* best sellers. McKellar attributed some of the motivation for writing the books to her own early difficulties with math, and she argued that it could be sexy as well as empowering for women to be smart and good at math.

From about age seven McKellar lived in Los Angeles, where she studied at the Diane Hill Hardin Young Actors Space, a performing-arts academy. Before landing her role in *The Wonder Years*, McKellar appeared in commercials and in two episodes (1985, 1987) of *The Twilight Zone*. After attending UCLA, she continued acting. By 2009 she had starred or guest starred in dozens of TV movies and series, including the roles of White House communications assistant Elsie Snuffin (2002–03) on the *The West Wing* and crime-solving Maddie Monroe, the title character in *Inspector Mom* (2006–07). Of special interest to McKellar was the lead role she played in the 2003 San Diego Repertory Theater production of *Proof*, David Auburn's Pulitzer Prize-winning play about a mathematically gifted but troubled young woman. (DAVID C. HAYES)

Messi, Lionel Andrés

(b. June 24, 1987, Rosario, Arg.)

In early 2009 Argentine association football (soccer) star Lionel (“Leo”) Messi capped off a spectacular 2008–09 season with FC Barcelona, helping his team to a treble of trophies by scoring 38 goals in 51 appearances in winning the Span-

ish La Liga championship, the Copa del Rey, and, finally, on May 27 the 2009 Union des Associations Européennes de Football (UEFA) Champions League final in Rome, where he scored with an athletically judged header to clinch Barcelona's 2–0 victory over Manchester United. Going into that game, he was already runner-up to Manchester's Cristiano Ronaldo (q.v.) in the balloting for both the Fédération Internationale de Football Association (FIFA) World Player of the Year and *France Football* magazine's Golden Ball as best European player of the year for 2008. For the third year in succession, Messi was also voted Fédération Internationale des Associations de Footballeurs Professionnels (FIFPro) Young Player of the Year, an outstanding accolade from his fellow professionals. In December 2009 Messi wrapped up a near-perfect year by winning the Golden Ball and FIFA Player of the Year honours.

By age 21 Messi had achieved fame on two continents that had seemed impossible 10 years earlier. He started playing soccer as a boy and in 1995 joined Newell's Old Boys. Messi attracted the attention of the club River Plate, but he was diagnosed with growth hormone deficiency, and for his working-class family it was impossible to find the money for his expensive

High-flying Argentine soccer star Lionel Messi

Lluís Gene—AFP/Getty Images

medical treatment. On a scouting mission in South America, Carles Rexach, then the sporting director of FC Barcelona, recognized Messi's potential and arranged for him to receive treatment if the family was prepared to move him to Europe. At the age of 13, Messi arrived in Barcelona and began playing for the club's Under-14 team. He scored 21 goals in 14 games for the junior team, and he quickly graduated through the C and B teams until given his informal debut with FC Barcelona at age 16 in a friendly match against Porto.

In the 2004–05 season, Messi, then 17, became the youngest official player and goal scorer in the Spanish La Liga. Though only 1.69 m (5 ft 7 in) tall and weighing 67 kg (148 lb), he was strong, well balanced, and versatile on the field. Naturally left-footed, quick, and precise in control of the ball, Messi displayed distribution and could thread his way through packed defenses. In 2005 he was granted Spanish citizenship, an honour greeted with mixed feelings by the fiercely Catalan supporters of Barcelona. The next year he earned his first Champions League winner's medal.

Messi's ties with his homeland remained strong, however, and he established himself as a full Argentine international with 36 appearances, beginning in 2005. He distinguished himself as a member of Argentina's victorious 2005 FIFA World Youth Championship squad, represented his country in the 2006 FIFA World Cup finals, and scored two goals in five matches as Argentina swept to the gold medal at the 2008 Beijing Olympic Games. (JACK ROLLIN)

M.I.A.

(b. July 18, 1975, London, Eng.)

As the Tamil insurgency ground to a bloody halt in Sri Lanka in 2009, singer Maya Arulpragasam—better known by her stage name M.I.A.—brought awareness of the conflict to dance floors around the world. Her efforts to support humanitarian aid for civilians in the Tamil region of Sri Lanka were opposed by the Sri Lankan army, to the extent that she was specifically named on the army's Web site, and critics claimed that her lyrics and music videos betrayed a veiled sympathy for the Tamil separatist movement. Apart from her homeland activities, she earned an Academy Award nomination for the song “O, Saya,” a collaboration with Indian composer A.R. Rahman for the *Slumdog Millionaire* sound track,

Kevin Winter/Getty Images

Singer M.I.A.

and her single “Paper Planes” garnered a surprise Grammy Award nomination for record of the year. Arulpragasam, who was nine-months pregnant and due to deliver on the day of the Grammy Awards in February, performed with rappers T.I., Jay-Z, and Kanye West and provided one of the more memorable images of the ceremony (three days later she gave birth to a boy). It was perhaps unsurprising that this combination of political reach and musical achievement led to M.I.A.’s being named in April as one of *Time* magazine’s 100 Most Influential People.

Although Arulpragasam was born in London, she spent much of her childhood in northern Sri Lanka. When the civil war between the Tamil minority in the north and the Sinhalese government in the south intensified in the 1980s, her father joined the militant Tamil Tigers and the rest of her family fled the country, eventually returning to London. There Arulpragasam studied visual art, often creating works that were influenced by the conflict she had witnessed as a child. She received her first exposure to the music industry as the graphic designer for British pop punk group Elastica, and she familiarized herself with the recording equipment used by dance music producers. Dubbing herself M.I.A., she recorded the single “Galang” in 2003. Although only 500 copies of the song were pressed, it became an instant hit in the European club scene, and word spread quickly on the Internet about its unique fusion of politically aware world music, bass-infused hip-hop, and South London dance-hall patois. Anticipation of a full-length album intensified among

her fans with the release of *Piracy Funds Terrorism*, a 2004 mix tape produced with American songwriter DJ Diplo. Although segments of M.I.A.’s 2005 debut album had been circulating on the Internet for almost a year, its release was still greeted with much critical interest. The album title, *Arular*, was the name her father adopted while a Tamil Tiger, and the album cover featured Arulpragasam’s face surrounded by a collage of cartoon tanks and AK-47s. The compilation was a huge success on the club circuit, based on the strength of singles such as “Galang” and “Bucky Done Gun,” and M.I.A.’s politics lent a new gravity to the dance music genre. M.I.A.’s second album, *Kala*, was released in 2007, and it featured guest production appearances by Diplo and American hip-hop icon Timbaland. More aggressive and sample-heavy than its predecessor, *Kala* spawned the hit “Paper Planes,” which catapulted to mainstream success when it was used in the theatrical trailer for the 2008 Judd Apatow film *Pineapple Express*. (MICHAEL RAY)

Mills, John Evans Atta

(b. July 21, 1944, Tarkwa, Ghana)

On Jan. 7, 2009, John Evans Atta Mills was officially sworn in to succeed John Agyekum Kufuor as president of Ghana. Persistence and determination had finally paid off for Mills when, after having failed in his bid for the presidency in two general elections (against Kufuor in 2000 and 2004), he won the 2008 presidential poll, defeating the ruling party candidate, Nana Akufo-Addo, by a narrow margin (50.23–49.77%). The election marked the second time in Ghana’s history that one legitimately elected leader had handed over power to another. It demonstrated that after an era of coups and dictatorship (1966–92), democracy had been established and reinforced in the West African country, despite occasional eruptions of ethnic conflict and political tension.

After secondary school, Mills studied law at the University of Ghana (LL.B., 1967), the London School of Economics and Political Science (LL.M., 1968), and the University of London’s School of Oriental and African Studies, completing (1971) his Ph.D. dissertation on taxation and economic development. On his return to Ghana, he taught law at his alma mater, where he remained for some 25 years. He also served on numerous boards and committees, occasionally acted as a visiting professor in the U.S. and The Netherlands, and

published extensively on taxation, including the *Report of the Tax Review Commission, Ghana* (1977).

Mills eventually left academia to establish a distinguished career in public service. Appointed in 1988 as acting commissioner of the Internal Revenue Service, he eventually became (1993) substantive commissioner. He stood as Pres. Jerry Rawlings’s running mate in the 1996 elections and took office on Jan. 7, 1997, as vice president, a post he held until 2001. During subsequent presidential campaigns, Mills was roundly criticized for statements that if elected he would consult with Rawlings, but in 2008 Mills distanced himself from his former mentor.

Self-described as a social democrat who believed in the concept of social welfare espoused by Kwame Nkrumah (independent Ghana’s first leader), Mills embraced a political platform that was more comprehensive and less divisive than that of either Nkrumah or Rawlings. As the standard-bearer of the National Democratic Congress in 2008, Mills campaigned on the slogan “I believe in Ghana.” After his inauguration, he set about to improve the socioeconomic situation of ordinary Ghanaians, who ranked among the world’s poorest people, with an average daily income of \$2.32, a 60% literacy rate, and 10% unemployment despite the country’s potentially valuable natural resources. In his first state of the nation address on February 19, Mills announced an austerity program, promising steep cuts in government spending, beginning with cutbacks in wages and the use of two presidential jets. He also instituted policies to eliminate four cabinet ministries and reduced the size of the presidential convoy. The public expressed skepticism, however, about the results of his first 100 days in office.

(LARAY DENZER)

Mogae, Festus

(b. Aug. 21, 1939, Serowe, Bechuanaland Protectorate [now Botswana]) In 2009 former Botswanan president Festus Mogae continued to have an impact on politics but on a global scale as he took centre stage as a speaker or panelist at various international conferences, lending his expertise to a range of topics, notably discussions about achieving growth in Africa and halting the AIDS scourge affecting that continent. In 2008, after having served a decade (1998–2008) as president, Mogae was the recipient of the annual Mo Ibrahim Prize for Achievement in

African Leadership, which carried a \$5 million award over 10 years, a \$200,000 annual lifetime stipend thereafter, and a discretionary \$200,000 sum to be awarded (per year for a decade) to Mogae-designated "good causes."

Festus Gontebanye Mogae was a member of the Ngwato, the largest Tswana group in colonial Botswana (Bechuanaland Protectorate). His father was a headman of the Talaote, a Kalanga (Shona) clan among the Ngwato. After completing secondary education at nearby Moeng College and in London, Mogae took a first degree at University College, Oxford, and a master's in development economics from the University of Sussex, Brighton, Eng. He then joined (1968) the Development Planning (later the Finance and Development Planning) Ministry of newly independent Botswana, under Vice Pres. Ketumile Masire, and became a key figure in Botswana's remarkable rise to economic prosperity, heading (1975–76) the ministry's permanent staff.

In 1976 Mogae was recruited by the International Monetary Fund in Washington, D.C., as alternate executive and then executive director for Anglophone Africa. He returned home to serve as governor of the central bank of Botswana (1980–81) and as permanent secretary (1982–89) to Masire, who had become president in 1980. Their close relationship led to Mogae's leaving government and becoming (1989) a politician in the ruling Botswana Democratic Party (BDP); the move enabled Mogae to be named minister of finance and development planning. He subsequently stood as an MP for Palapye, where his father had been headman, and was appointed Masire's vice president in 1992 after the resignation of Peter Mmusi.

After succeeding Masire as president in April 1998, Mogae made the controversial move of recruiting as his vice president Ian Khama, substantive chief of the Ngwato, and appointing BDP faction leader Ponatshego Kedikilwe as minister of finance and development planning. In other respects Mogae continued the policies of his predecessor and successfully steered the BDP through the 1999 elections. He made himself internationally distinctive among the African leaders by acknowledging the international scientific consensus surrounding the HIV/AIDS epidemic. President Mogae invited international assistance and, in a June 2001 speech before the UN General Assembly, described the epidemic as a national crisis that threatened the very sur-

vival of his people. Mogae was viewed as a shy but principled technocrat who did not shrink from the highest responsibilities. His background at the IMF and his criticism of the repressive regime of Robert Mugabe in Zimbabwe, however, left him open to being seen as too pro-Western. After relinquishing the presidency to Khama in April 2008, Mogae was elevated to the status of elder statesman. (NEIL PARSONS)

Moore, Alan

(b. Nov. 18, 1953, Northampton, Eng.) When the highly anticipated film *Watchmen* debuted in theatres in March 2009, conspicuously absent from its credits was the name Alan Moore. Moore, who collaborated with artist Dave Gibbons to create what was widely regarded to be the most influential graphic novel of all time, took legal steps to ensure that his name would not appear in any press materials related to the project. Moore was committed to the idea that his creations could best be served by remaining on the printed page. This opinion was reinforced by his previous ill-fated dealings with Hollywood. Moore's *From Hell* (originally published 1991–96), an atmospheric commentary on the decline of the British Empire as seen through the Jack the Ripper killings, was turned into a straightforward action film (2001) with an unlikely happy ending, and his *The League of Extraordinary Gentlemen* (first published in 1999) was stripped of its literary sensibility, and new characters—including a crime-fighting Tom Sawyer—were added to the film (2003) to appeal to an American audience. While disinterested in *Watchmen*, Moore celebrated the July settlement of one of the longest-running legal disputes in the comics world. Marvelman, a character revived by Moore in the early 1980s, had languished in intellectual property limbo for more than a decade as various parties fought over who owned the rights to the original stories, as well as the later tales by Moore and fellow writer Neil Gaiman. Marvel Comics inked an agreement with Marvelman's 93-year-old original creator, Mick Anglo, and it appeared that Britain's greatest superhero was set to return to the page.

Moore entered the publishing industry in the early 1970s, working as a writer and artist for a number of independent magazines. He broke into the mainstream with stories for *Doctor Who Weekly* and the science-fiction anthology series *2000 AD*, but his gift for deconstructing the superhero genre

first appeared in 1982, when he resurrected Marvelman for the magazine *Warrior*. Moore imagined Marvelman as a middle-aged reporter who had forgotten his role as the world's preeminent superhero, and later stories examined how an individual with godlike powers would interact with human society. Moore's next project, *V for Vendetta* (1982–86), turned the Marvelman narrative on its head, placing near-infinite power in the hands of a ruling political party (modeled on Britain's National Front) and casting an erudite terrorist in a Guy Fawkes mask as the protagonist. In 1983 DC Comics hired Moore to write *Swamp Thing*, a straightforward monster comic that Moore transformed into a monthly meditation on life and death. It pushed the boundaries of what could be done in a mainstream book, and his success with it led to *Watchmen*. Published serially from 1986 to 1987, *Watchmen* helped define the term *graphic novel* to many readers, and its mature storyline, which sampled from the dystopian visions of both Marvelman and *V for Vendetta*, was unlike anything that had previously been seen in the superhero genre. Moore's later work continued to examine the psychology of the superhero, most notably in the Image Comics title *Supreme*. He launched his own publishing imprint, America's Best Comics, in 1999. (MICHAEL RAY)

Moss, Randy

(b. Feb. 13, 1977, Rand, W.Va.) On Nov. 15, 2009, Randy Moss, who was considered one of the greatest wide receivers in National Football League (NFL) history, caught his 141st career touchdown pass (and his 142nd), surpassing Terrell Owens's 140 to reach the second highest total in NFL history, behind Jerry Rice, who retired with 197 in 2004 after 20 seasons. At the end of the regular 2009–10 season, his 12th in the NFL, Moss had 148 touchdowns and had surpassed 14,000 yd and 900 career receptions.

Moss was a standout high-school football and basketball player, but an arrest for battery during his senior year led the University of Notre Dame to withdraw its scholarship offer. After he enrolled at Florida State University, he violated his parole by failing a drug test, which led to his being kicked off the school's football team. With no more options to play for an upper-division college football program, he accepted a scholarship to Division I-AA (later the Football Championship Subdivision) Marshall Univer-

Hadi Tabrizi/Getty Images

Iranian presidential candidate Mir Hossein Mousavi appears during a campaign rally in Tehran on May 24.

sity in Huntington, W.Va. There Moss set a number of I-AA receiving records in his freshman season and helped lead Marshall to a national championship. During his sophomore year, Marshall moved up to Division I-A (later the Football Bowl Subdivision), and Moss set a I-A record by catching 25 touchdown passes. Although Moss was widely considered to be one of the most talented players available in the 1998 NFL draft, he was not selected until the 21st pick of the first round (by the Minnesota Vikings), because of concerns about his character.

Moss's mix of incredible speed and outstanding leaping ability in a 1.93-m (6-ft 4-in) frame made him a sensation in his first year with the Vikings. He set an NFL rookie record with 17 receiving touchdowns, was named NFL Offensive Rookie of the Year, and earned first-team All-Pro honours. Minnesota scored the most points in NFL history that season and posted a 15–1 regular-season record before losing in the National Football Conference championship game.

In 2005 the Vikings traded Moss to the Oakland Raiders, but he scored only 11 total touchdowns in his two seasons with the Raiders, and he was traded to the New England Patriots in 2007. Moss quickly turned his career around in New England. In 2007–08 he teamed with quarterback Tom Brady to form the core of a high-powered offense that broke the Vikings' single-season scoring mark while posting the first 16–0 regular-season record in NFL history. In addition, Moss broke Rice's 20-year-old NFL single-season record by catching 23 touchdown passes. He then added another 11 touchdowns in 2008–09. (ADAM AUGUSTYN)

Mousavi, Mir Hossein

(b. Sept. 29, 1941, Khameneh, Iran) After a hiatus of some 20 years, former Iranian prime minister Mir Hossein Mousavi returned to the political fore in 2009 with his entry into Iran's presidential election. His campaign featured vocal criticism of Pres. Mahmoud Ahmadinejad and his policies, and he argued that the president's controversial behaviour and rhetoric had damaged Iran's image abroad. Economic concerns, increased personal freedoms, and the confrontation of corruption were also focal points of Mousavi's campaign.

Voter turnout for the election in mid-June was at a record high. Soon after the polls closed, Mousavi announced that he had won the election outright by a large margin; shortly thereafter,

however, officials made a similar announcement in favour of Ahmadinejad. Although Ahmadinejad insisted that the election had been fair, his opponents alleged electoral fraud. Mousavi urged his supporters to protest the results, and in the days following the election, demonstrations unfolded in the capital and elsewhere. On June 19 Iran's supreme leader, Ayatollah Ali Khamenei, publicly backed Ahmadinejad's victory. Mousavi continued to urge supporters to demonstrate peacefully, but subsequent protests were greeted with increasing brutality as well as threats of further confrontation. Following the completion of a partial vote recount, the election results were confirmed, and Ahmadinejad was sworn in for his second term on August 5.

Mousavi received an M.A. in architecture from the National University of Iran (later Shahid Beheshti University) in 1969, and he returned to that institution several years later as an instructor. During his tenure there, Mousavi participated in the underground resistance movement that challenged the regime of Mohammad Reza Shah Pahlavi. Following the Iranian Revolution (1978–79), Mousavi served as the first political director of the Islamic Republican Party (IRP) and as editor in chief of the IRP's official newspaper, *Jomhuri-ye Eslami*. He briefly served as foreign minister during the hostage crisis with the U.S. (1979–81), in which militants seized 66 American citizens at the U.S. embassy in Tehran, holding 52 of them hostage for more than a year. He was subsequently appointed prime minister. Although

Mousavi was favoured for the position by Ayatollah Ruhollah Khomeini, his tenure as prime minister (1981–89) was coloured by competition with Ali Khamenei, then president of Iran, who had strongly opposed his appointment. As prime minister, Mousavi skillfully managed the country's economy during the Iran-Iraq War (1980–88).

Following the abolition of the premiership in the late 1980s, Mousavi largely receded from the political spotlight. He dedicated himself to the arts and held several lower-profile positions within the government, including that of presidential adviser (1989–2005) to both Hashemi Rafsanjani and Mohammed Khatami. In 1998 he cofounded the Iranian Academy of the Arts in Tehran, and he subsequently served as its president and the editorial director of *Khiyal* ("Imagination"), the organization's quarterly publication. In 1997 and again in 2005, reformist groups urged Mousavi to run for the presidency, but on both occasions he refused to do so. (LAURA ETHEREDGE)

Mukwege, Denis

(b. March 1, 1955, Bukavu, South Kivu province, Belgian Congo [now Democratic Republic of the Congo]) In December 2008 and January 2009, Congolese physician Denis Mukwege was honoured with a series of international awards in recognition of his work in treating thousands of victims of sexual violence in the Democratic Republic of the Congo (DRC). These included the 2008 United Nations Human Rights Prize, the 2008 Olof Palme Prize for outstanding achievement in promoting peace, and selection by the Nigerian newspaper *Daily Trust* as its 2008 African of the Year. The awards helped to bring global attention to what Mukwege and others had described as an "epidemic" of sexual violence in the eastern DRC, where combatants in the war-torn region were using the systematic rape of women and girls as a means of terrorizing and displacing the civilian population. The scale of the violence was staggering. As many as 27,000 sexual assaults were reported in just one of the eastern provinces, South Kivu, in 2006, and experts noted that the vast majority of attacks were likely to go unreported. The Panzi Hospital of Bukavu, which Mukwege founded and where he served as director and chief surgeon, represented the "front line" in the treatment of rape victims in the region. The 334-bed hospital admitted an average of 10 victims of sexual assault daily, and since 1998 Mukwege and his staff had

Paula Allen for V-Day

*Congolese physician Denis Mukwege*

performed reconstructive surgery on more than 20,000 women and children.

Mukwege grew up in Bukavu, where he first became aware of the need for better medical care in the region while visiting sick parishioners with his father, a Pentecostal minister. After studying medicine in Burundi, Mukwege returned to the Congo and worked at a hospital in the village of Lemera. Though initially interested in pediatric care, he switched his focus to obstetrics and gynecology after observing the harsh circumstances that many rural women faced while giving birth. He pursued further study in Angers, France, and in 1989 established an obstetrics and gynecology service in Lemera.

After the hospital in Lemera was destroyed during the civil war that erupted in the country in late 1996, Mukwege resettled in Bukavu. His original goal in founding the Panzi Hospital was to provide maternity care that was lacking in the area, but soon the hospital began to receive large numbers of sexual-assault victims, some as young as three years old and many with extreme injuries and mutilations. Mukwege created a staff to specialize in the care of such patients.

Among the perpetrators of the violence were Rwandan Hutu rebels based in the eastern DRC, Congolese government soldiers, and various armed gangs. All of the region's combatants, said Mukwege, had "declared women their common enemy." He urged greater involvement on the part of the international community, including a stronger UN mandate in the DRC, as a means of ending the violence. Mukwege hoped to use prize money that he had received to establish services aimed at

helping survivors of sexual violence re-join society. (SHERMAN HOLLAR)

Obama, Michelle

(b. Jan. 17, 1964, Chicago, Ill.)

On Jan. 20, 2009, Michelle Obama became the first African American first lady of the U.S. as her husband, Barack Obama, formally took office as the country's 44th president. The new first lady generated headlines seemingly with her every move, sharing an extraordinary embrace with Queen Elizabeth II in April (the two reportedly struck up a warm friendship) and making a highly publicized speech in Copenhagen in October as part of the final—though ultimately unsuccessful—pitch to bring the 2016 Olympics to Chicago. The first lady also earned high praise for her fashion sense and appeared during the year on the covers of such magazines as *Vogue* and *Glamour*. She used her public visibility to attract attention to a number of causes that were important to her; notable among these was her wish to improve the lives of the families of U.S. military personnel. On several occasions she visited with the spouses of soldiers who were serving overseas, and in November she helped launch Mission Serve, a military-oriented community service organization.

Michelle Robinson grew up on Chicago's South Side. She studied sociology and African American studies at Princeton University (B.A., 1985) before attending Harvard Law School (J.D., 1988). Returning to Chicago, she took a job as a junior associate at Sidley & Austin (now Sidley Austin LLP), where she specialized in intellectual property law. In 1989, while at the firm, she met Barack Obama, who had been hired as a summer associate. Seeking a more public-service-oriented career path, in 1991 she became an assistant to Chicago Mayor Richard M. Daley. The following year she and Barack were married. In 1993 she founded the Chicago branch of Public Allies, a leadership-training program for young adults. She later held administrative posts at the University of Chicago.

Shortly after her husband announced his candidacy for the 2008 Democratic presidential nomination, Michelle scaled back her professional career to devote herself to the campaign. At the same time, she won many admirers for her dedication to her and Barack's two young daughters, Malia and Sasha. An adept speaker, she stumped extensively for her husband, and in August 2008 Barack became the Democratic Party's

nominee. Michelle's openness on the campaign trail and in interviews endeared her to many. Critics of her husband's campaign, however, took issue with some of her comments—such as when she remarked, while campaigning in Wisconsin, that "for the first time in my adult lifetime, I'm really proud of my country." Michelle later clarified her statement—saying that she meant to say that she was proud that Americans were eagerly engaging in the political process during the 2008 election—and she continued to have an active role in her husband's campaign. Indeed, aides referred to her as "the closer," for her persuasiveness on the stump among uncommitted voters who attended rallies. Her personal popularity remained high in 2009, with one poll conducted in April finding that 76% of Americans had a favorable opinion of the first lady. (AMY TIKKANEN)

Osborne, George

(b. May 23, 1971, London, Eng.)

In the midst of a worldwide recession in 2009, George Osborne, shadow chancellor (finance spokesman) for the U.K.'s opposition Conservative Party, was preparing for his chance to take control of the British economy. The prospect of a Conservative government in power following the U.K. general election expected in the spring of 2010 carried the likelihood that Osborne would become the country's youngest chancellor of the Exchequer in more than 120 years.

Britain's shadow chancellor, George Osborne

Peter Macdiarmid/Getty Images

George Gideon Oliver Osborne was the son of Sir Peter Osborne, 17th baronet of Ballintaylor, a cofounder of the upmarket fabric and wallpaper designers Osborne & Little. At age 13 he dropped his given name, Gideon, in favour of George (and added it officially to his name by deed poll), in what he subsequently described as a rare act of rebellion. Osborne was educated at St. Paul's School, London, and Magdalen College, Oxford. In 1994 he joined the Conservative Research Department, which had served for many years as a kind of "nursery" for leading politicians. The following year he was appointed special adviser to Douglas Hogg, agriculture secretary in the then Conservative government.

In 1997 the Conservatives lost power and chose a new leader, William Hague, who hired Osborne as his political secretary. Osborne entered Parliament in 2001, and he was quickly seen as a rising star. Michael Howard, the party's leader from 2003 to 2005, appointed Osborne to the shadow cabinet in 2004 and to the senior post of shadow chancellor in 2005. When Osborne's friend David Cameron was elected Conservative leader later that year, one of Cameron's first acts was to confirm Osborne as shadow chancellor.

Together, Cameron and Osborne set about modernizing the Conservative Party, which had just lost its third consecutive general election. They wanted to rid the party of its right-wing image and its reputation for not caring about public services or people with average and below-average incomes. This meant modifying the party's long-standing ambitions to cut taxes. Osborne promised to stick to the Labour government's spending plans on health and education and to delay tax cuts until they could be afforded. In 2007 he did commit the party to reducing the inheritance taxes, but this was to be offset by a levy on wealthy foreigners living in Britain.

When the global financial crisis erupted in 2008, Osborne led the Conservative attack on the Labour Party for having mismanaged Britain's finances. Many people warmed to his message, while others disliked what they felt was his strident, youthful arrogance. For a while, Labour Prime Minister Gordon Brown and his chancellor of the Exchequer, Alistair Darling, regained their lead in the opinion polls as the team best able to run the U.K. economy, but by the spring of 2009, Osborne and Cameron were once again ahead, despite being deliberately vague (because of the un-

certain outlook for the economy) about what they would do if they came to power.

(PETER KELLNER)

Pacquiao, Manny

(b. Dec. 17, 1978, Kibawe, Bukidnon province, Mindanao, Phil.) From abject poverty to one of *Time* magazine's 100 most influential people of 2009, Filipino boxer Manny Pacquiao's unlikely rise to the pinnacle of his sport was made even more remarkable by his life outside the ring. The charismatic "Pac-Man" was the idol of his people and a unifying force in the Philippines, where his unprecedented popularity led to commercial endorsements, movies, TV shows, CDs, a postage stamp, and a failed bid for a congressional seat in 2007. In 2003 he was voted the country's Person of the Year over Pres. Gloria Macapagal Arroyo.

Al Bello/Getty Images

Boxer Manny Pacquiao

Although Pacquiao had been a growing pay-per-view (PPV) boxing attraction since 2002, his breakthrough as a global phenomenon came on Dec. 6, 2008, when he thrashed longtime box-office star Oscar De La Hoya of the U.S. in a nontitle welterweight bout. The fight sold approximately 1.25 million buys, generating roughly \$70 million in PPV revenue, the third largest PPV gross in nonheavyweight history.

Emmanuel Pacquiao left home as a teenager and stowed away on a ship bound for Manila, where he became a boxer, making his professional debut as a junior flyweight on Jan. 22, 1995, at the age of 16. Many of his early bouts were televised on a program called *Blow by Blow*, where his all-action style and boyish smile quickly made him a fa-

vourite with Filipino boxing fans. He won his first major title on Dec. 4, 1998, knocking out Thailand's Chatchai Sasakul to capture the World Boxing Council (WBC) flyweight title. After failing to make weight, however, he lost the title to Medgoen Singsurat (or Lukchao-pormasak) of Thailand in September 1999. Pacquiao moved up in weight class, and on June 23, 2001, in his first fight in the U.S., he scored a sixth-round knockout of Lehlo Ledwaba to win the International Boxing Federation (IBF) junior featherweight title. Following four successful defenses, he knocked out Mexico's Marco Antonio Barrera on Nov. 15, 2003, to win *The Ring* magazine featherweight championship.

Over the next several years, Pacquiao engaged in a series of high-profile fights, winning the World Boxing Association (WBA) and IBF featherweight titles, the WBC and *The Ring* junior lightweight titles, and the WBC lightweight title. He was the Boxing Writers Association of America and *The Ring's* Fighter of the Year in 2006 and 2008. By the time he faced De La Hoya, Pacquiao was a complete fighter, combining excellent footwork, blazing speed, and a vastly improved defense, and he was widely considered, pound-for-pound, the world's finest boxer.

On May 2, 2009, Pacquiao won *The Ring* junior welterweight championship (his sixth weight class as a champion and his ninth as a professional boxer) with a spectacular one-punch second-round knockout of England's Ricky Hatton in Las Vegas. A few days later he formed a new "local" political party, the Peoples' Champ Movement, back in the Philippines. This action did not signal the end of Pacquiao's career in the ring, however: on November 14 he added another championship belt—in a record seventh weight class—when he defeated Miguel Cotto of Puerto Rico in 12 rounds to take the World Boxing Organization welterweight title. The victory brought Pacquiao's record to 50 wins (37 by knockout), 3 losses, and 2 draws.

(NIGEL COLLINS)

Persson, Stefan

(b. Oct. 4, 1947, Stockholm, Swed.)

At a time of falling stock prices and global economic recession, Swedish retailing executive Stefan Persson held his position in 2009 as one of the wealthiest individuals in the world. Persson came in at number 18 on *Forbes* magazine's list of billionaires (up from number 35 on the 2008 list), largely because the share value of his

company, H&M (Hennes & Mauritz AB), increased by 20% (in local currencies) in the first half of 2009. In late May, Persson used some of his wealth to purchase the village of Linkenholt in Hampshire, Eng., for some £25 million (about \$39.8 million).

Persson learned fashion retailing from his father, Erling Persson, who founded a women's clothing store, Hennes ("Hers") in Västerås, Swed., in 1947. The company added a store in Stockholm and soon became a fixture of fashion in the Swedish market, eventually extending its reach to other European countries. Men's clothing was added through the 1968 acquisition of Swedish hunting-gear retailer Mauritz Widforss, after which time the firm was commonly known as H&M. Persson, who joined the family firm in 1972, helped lead its European expansion and was present when the first British store opened in London in 1976. He assumed leadership as H&M's managing director and CEO in 1982 when his father became chairman of the board.

By the late 1990s, H&M had become Europe's largest retail clothing chain. As it grew, H&M built its reputation on "fast fashion"—inexpensive trendy designs with wide appeal, all of which were initially created by in-house designers, whose concepts were rapidly transformed into mass-market garments through a network of manufacturers in such low-cost countries as Turkey, Bangladesh, and China. Persson recognized the business potential of—as well as the cultural interest in—global fashion; consequently, H&M did not alter garment designs for specific national or regional markets. This strategy allowed H&M to exploit economies of scale as the firm expanded to the U.S. (in 2000), Canada (2004), the Middle East (2006), and East Asia (2007). By 2009 H&M operated more than 1,800 stores in 34 countries, with some 73,000 employees. Most of the brands sold through H&M were in-house labels, but Persson tapped star appeal by soliciting design lines from fashion designers Karl Lagerfeld, Stella McCartney, Matthew Williamson, and Jimmy Choo, as well as pop singers Kylie Minogue and Madonna.

Only a few missteps occurred under Persson's leadership, notably the appointment in 1998 of Fabian Månsson, a former skateboard champion, to fill his shoes as managing director while he succeeded his father as chairman: Månsson resigned two years later. In

July 2009 Persson's son Karl-Johan was named H&M's CEO, but Persson remained chairman.

(SARAH FORBES ORWIG)

Ramos, Maria

(b. Feb. 22, 1959, Lisbon, Port.)

On March 1, 2009, economist and businesswoman Maria Ramos took charge as the new CEO of the South African financial group Absa. In taking the post, she stepped down from the chief executive position with South Africa's Transnet Ltd., where she had served since 2004. Her move to Absa Group, one of South Africa's "big four" banks, occurred at a challenging time when Absa's majority owner, Barclays, was said to be considering a reduction of its 57% stake in the South African retail bank. In July Ramos was named outstanding businesswoman of the year in the African Business Awards granted by the Commonwealth Business Council and *African Business* magazine.

Maria Da Conceicao Das N C Ramos moved to South Africa with her parents when she was a child and later became a citizen. She studied economics at the University of the Witwatersrand (B.Com., 1987) in Johannesburg and at the University of London (M.Sc., 1992). As a student she heard about a men-only scholarship offered by Barclays Bank, where she worked as a clerk to pay for her education; she lobbied for the prize and in 1983 won the Barclays Bank Graduate Scholarship. In her early career Ramos worked in banking and finance (in both private- and public-sector jobs), taught economics (1989–94), and served (1990–94) as an economist for the African National Congress's Department of Economic Planning. In 1996 she was appointed as the country's director general of finance. In that position she worked closely with Finance Minister Trevor Manuel (whom she married in 2008) to strengthen the country's economy by increasing exports and cutting debt; the two effectively guided South Africa toward a free-market economic model. Ramos held the finance post into 2003.

Since she had devoted most of her career to fiscal policy and economic planning, her move in 2004 to Transnet—an operator of ports and shipping operations, bus and other passenger transit systems, rail systems, and fuel-transport lines—appeared to be an unlikely choice. Given the size of the state-controlled firm, however, with more than 75,000 employees and a near monopoly on transportation within South Africa,

the CEO position offered Ramos an opportunity to transform the country's economy by reorganizing one of its most inefficient and debt-ridden companies. She embarked on a campaign of privatization, with the goal of selling all but Transnet's core businesses (pipelines, ports, and freight railways). Unions resisted by demanding job guarantees, and strikes in 2006 forced changes in some of Transnet's restructuring plans. Although Ramos was unable to restructure South Africa Airways (SAA), she strengthened Transnet's balance sheet by transferring the money-losing SAA division to a different government entity. Ramos gained international notice as Transnet became profitable under her leadership, and *Fortune* magazine ranked her as one of the most powerful women in international business for four straight years (2004–07). (SARAH FORBES ORWIG)

Roberts, Nora

(b. Oct. 10, 1950, Silver Spring, Md.)

In 2009 best-selling American romance novelist Nora Roberts demonstrated her penchant for creating charming settings not only for the characters in her stories but also for real-life couples; just in time for Valentine's Day, she opened the Inn Boonsboro, a cozy boutique hotel-bed and breakfast, in her home state of Maryland. Roberts purchased the decrepit 18th-century stone building in 2007. During renovations in 2008 to restore the structure to its former grandeur, a fire broke out in the hotel, which forced Roberts and her contractors to start from scratch. Hoping to attract literary fans to her inn, Roberts outfitted each room with furnishings theme-related to characters in great love stories with happy endings, including the Shakespeare room based on the lovers Oberon and Titania from *A Midsummer Night's Dream* and the *Pride and Prejudice* suite, based on the characters Elizabeth and Darcy in the Jane Austen novel.

As a child, Roberts was an avid reader and frequently formulated her own stories. Her passion for creating fiction resulted in her extremely disciplined practice of writing up to eight hours, five days per week. Confined to her home with her two young sons during a blizzard in 1979, she penned her first novel, *Irish Thoroughbred*, published in 1981 by Silhouette. Following that debut, Roberts enjoyed phenomenal success as she continued to whet her audience's appetite with dozens of enthralling romance novels. Considered

Laura Cavanaugh—UPI/Landov

American romance novelist Nora Roberts

to be among the world's most prolific writers, Roberts sometimes finished a dozen publications annually, and by 2009 she had completed some 175 volumes. When she delved into double duty as a romance-crime writer in 1995, her publisher released these new works under the pseudonym J.D. Robb to differentiate her romance books from these new suspense titles. Roberts's novels were translated into dozens of languages (some 300 million copies were sold worldwide) and consistently topped the best-seller lists. Her titles appeared on the *New York Times* best-seller lists an astounding 91 times in 2002, some occupying the number one spot for up to 23 weeks. Many, such as *Sanctuary* (1997), *The Reef* (1998), and *Midnight Bayou* (2001), were adapted as made-for-television movies.

Roberts showed no sign of slowing down in 2009, releasing several new titles, including *Bed of Roses*, *Black Hills*, *Kindred in Death*, *Promises in Death*, and *Vision in White*. She was the first inductee (1986) into the Romance Writers of America Hall of Fame and, for her 100th novel, *Montana Sky* (1996), the first recipient of its Centennial Award. Roberts also received lifetime achievement awards from Waldenbooks and the Romance Writers of America. (BARBARA A. SCHREIBER)

Rogen, Seth

(b. April 15, 1982, Vancouver, B.C.) Canadian comic actor and screenwriter Seth Rogen, who had won over audiences as a charismatic schlub in several

box-office hits, continued to light up movie screens in 2009. He began the year with a starring role as a mall cop in the dark comedy *Observe and Report* and followed it with *Funny People*, his latest in a string of collaborations with writer-director-producer Judd Apatow, about a friendship that blossoms between two comedians.

Rogen was born to liberal Jewish parents. At age 13 he began doing stand-up on the local comedy-club circuit alongside performers more than twice his age, and three years later he auditioned for the American high-school television dramedy *Freaks and Geeks*, winning the role of the sardonic Ken. The series proved to be short-lived, but producer Apatow was impressed by Rogen's ease in front of the camera and talent for improvisation and in 2001 hired him as both an actor and a writer on a new college-themed sitcom, *Undeclared*. When that show met a similar fate, Rogen, along with childhood friend Evan Goldberg, landed jobs writing for the Sacha Baron Cohen showcase *Da Ali G Show*. Rogen also surfaced in an episode of the teen-centred drama *Dawson's Creek*.

Meanwhile, Rogen's association with Apatow remained fruitful, as he received bit parts in two of Apatow's early film productions, *Anchorman: The Legend of Ron Burgundy* (2004) and *The 40-Year-Old Virgin* (2005), stealing scenes in the latter from lead Steve Carell. Rogen put in another supporting performance in *You, Me, and Dupree* (2006), but it was his next film that made him a household name. In *Knocked Up* (2007), which Apatow wrote and directed, Rogen starred as an oafish pot-smoking slacker whose one-night stand with an attractive career woman (Katherine Heigl) inadvertently results in her pregnancy. The crude yet heartwarming movie grossed more than \$200 million worldwide, and Rogen's appealing performance established his A-list credentials.

Rogen had long desired to make his own movies, however, and finally got the chance with *Superbad* (2007), a raunchy comedy of teenage misadventures that he and Goldberg had originally scripted when they were teenagers themselves. (Rogen served as executive producer and appeared briefly as a bumbling police officer.) The writing duo returned the following year with *Pineapple Express* (2008), an action-oriented farce starring Rogen opposite his *Freaks and Geeks* costar James Franco. At the same time, Rogen

kept busy with a lead role in *Zack and Miri Make a Porno* (2008) and a handful of animated features, which utilized his distinctive voice.

Though Rogen was beginning to flirt with overexposure, fans anticipated his turn as the Green Hornet in a Rogen-and-Goldberg-penned adaptation of the comic-book franchise scheduled for release in 2010. By year's end it was apparent that Rogen had become not only one of Hollywood's premier goofballs but a major creative force as well.

(JOHN M. CUNNINGHAM)

Ronaldo, Cristiano

(b. Feb. 5, 1985, Funchal, Madeira, Port.) In January 2009 Portuguese association football (soccer) player Cristiano Ronaldo was voted the Fédération Internationale de Football Association (FIFA) Player of the Year for 2008. Then in June, Ronaldo—considered by many to be the most gifted footballer of his generation—was sold by Manchester United to Real Madrid for a record £80 million (about \$131 million). (The six-year contract would eventually cost the Spanish club some £187 million [about \$306 million].) The deal represented a substantial profit for United, which had paid £12.24 million (\$19.81 million) when in 2003 it signed him from the Lisbon-based team Sporting Club. Rumours had persisted since 2006 that Ronaldo wanted to play for Real Madrid, and he adjusted to his new team immediately, scoring a penalty goal on his La Liga debut against Deportivo de La Coruña in August.

Ronaldo's father, José Dinis Aveiro, was the equipment manager for the local club Andorinha. (The name Ronaldo was added to Cristiano's name in honour of his father's favourite movie actor, Ronald Reagan, later the U.S. president.) At age 15 Ronaldo had a heart condition that necessitated surgery, but he was sidelined only briefly and made a full recovery. He played for Clube Desportivo Nacional of Madeira and then transferred to Lisbon, where he debuted for Sporting in 2002.

Although Ronaldo was an unusually tall player—at 1.85 m (6 ft 1 in) and 84.5 kg (185 lb), given a football he became transformed into a formidable athlete. Originally a right-winger, he developed into a foraging forward with a free-reined attack. He became famous for his triple step-over technique and drag-backs, and he was able to mesmerize opponents with a "sleight of foot" that made sufficient space to provide openings in opposing defenses. His switch

from wing to forward also seemed to inject a selfish streak into his game, however, and his lethal finish from free-kicks was often overrated—though occasionally spectacular, only 10% of such shots on goal were successful.

During Ronaldo's first season with Manchester United, he made 39 appearances and scored eight goals, including one in the team's triumphant FA Cup final. Without doubt, however, his finest season with United came in 2007–08 when he scored 42 League and Cup goals and earned the Golden Boot as Europe's leading marksman, with 31 League goals. United went on to win the Champions League, but the team lost in the 2009 final to Barcelona.

After moving through the youth and under-21 ranks, Ronaldo made his first appearance for Portugal's full national team against Kazakhstan in August 2003 (four days after his debut for United). He subsequently became the captain, and by late 2009 he had made 65 appearances and scored 22 goals for Portugal.

(JACK ROLLIN)

Roubini, Nouriel

(b. March 29, 1958, Istanbul, Tur.)

In early 2009 the business periodical *Institutional Investor* named Turkish-born American economist Nouriel Roubini to its "Power 50" list of influential people in finance. In April, *Time* magazine designated him one of the world's 100 most influential people. By then, Roubini's subscription Web site, RGE Monitor (which began in 1997 as a single page of Web links), had become known as a central source for economic analysis of the ongoing global credit crisis, and Roubini, who had earned the nickname "Dr. Doom" in 2006 for his dire economic predictions, convinced even those economists and pundits who had dismissed his pessimistic outlook that he had been right.

Born to Iranian Jewish parents, Roubini moved with his family to Iran and Israel before they settled in Italy in 1962. After a year at Hebrew University of Jerusalem, he studied economics at Bocconi University in Milan (B.A., 1982) and Harvard University (Ph.D., 1988), where he specialized in macroeconomics and international economics. He joined the economics faculty at Yale University in 1988 and taught there until 1995, when he moved to New York University. He also served as a visiting scholar to the International Monetary Fund (IMF), was a research associate with the National Bureau of Economic Research (NBER), and held single-year

terms on the White House Council of Economic Advisers (1998–99) and at the U.S. Department of the Treasury (1999–2000). Roubini spent much of his early career studying countries that experienced extreme economic failures, such as Mexico (in 1994), Thailand and other countries associated with the 1997 Asian financial crisis, Russia (1998), and Argentina (2000). He determined that each shared one common element: a massive current account deficit.

Out of curiosity, Roubini began looking for the next national economy most likely to collapse. The data led him to the United States. He presented his findings in a speech to the IMF in September 2006. Many in the audience laughed when he predicted a deep, painful recession marked by the tumultuous burst of a housing bubble, mortgage defaults, a collapse in real-estate values, and economic repercussions that would shock financial markets around the world. When his predictions came true beginning in 2007, some critics asserted that it was a lucky call; they portrayed Roubini as a chronic pessimist (or "permabear") who used any number of reasons over the years to predict and explain a market collapse.

Meanwhile, Roubini, his successful consulting firm, Roubini Global Economics, and his Web site benefited from the publicity. By mid-2009 he had softened his worst-case scenario—that the recovery would be L-shaped (i.e., not a recovery)—but he still criticized those who were predicting a recovery later in the year. Roubini expected more financial shocks, especially from bank insolvencies, to persist through 2009. More optimistically, he predicted that a somewhat normal, U-shaped economic recovery would begin in 2010.

(SARAH FORBES ORWIG)

Shawn, Wallace

(b. Nov. 12, 1943, New York, N.Y.)

In the spring of 2009, London's Royal Court Theatre staged a three-month festival featuring the works of American playwright Wallace Shawn, which included the premiere of his first new play in more than 10 years, *Grasses of a Thousand Colors*. While arguably best known in his home country for his lengthy career as a character actor in films and television shows, Shawn had long been a critical darling in the British theatre, where his oft-surreal, probing plays led some critics to call him America's leading contemporary dramatist.

Shawn was exposed to New York City's literary culture from a young age, as his father, William Shawn, was the editor of *The New Yorker* from 1952 to 1987. He studied history at Harvard University and then philosophy and economics at Magdalen College, Oxford, before turning to playwriting after returning to New York. His first produced work was *Our Late Night*, which premiered in 1975 and won an Obie Award for playwriting. Shawn's *A Thought in Three Parts*—featuring a prolonged simulated orgy in the second act—was met with parliamentary protests when it debuted in London in 1977 and was subsequently pulled from the theatre, which helped forge his reputation as a risk-taking playwright. In 1979 he made his on-screen acting debut with a small role in director Woody Allen's *Manhattan*, and his "second career" soon led to his first brush with international fame.

Shawn and fellow actor-writer André Gregory starred in the film *My Dinner with André* (1981), which was an art-house sensation upon its release and became a cult classic in later years. The movie recreated a real-life dinner between the two principals, and the plot simply consisted of a long, meandering philosophical conversation, an unusual subject matter for a modest box-office hit. Shawn went on to have memorable roles in four more Allen movies and in such films as *The Princess Bride* (1987), *Vanya on 42nd Street* (1994), and *Clueless* (1995). He also appeared on television (including in a recurring role on the 1996–97 *Clueless* spin-off) and provided voices for a number of animated

Actor-playwright Wallace Shawn

Icelandic Ministry of Social Affairs and Social Security

movies, including *Toy Story* (1995), *Toy Story 2* (1999), and *The Incredibles* (2004).

Meanwhile, Shawn continued to produce highly lauded dramas. *Aunt Dan and Lemon* (1985) won Shawn a second Obie Award, and he took a third in 1991 for *The Fever*, a caustic 90-minute monologue that dissects the power relations between the world's poor and elite classes and finds a pervasive moral deficiency in the latter. *The Designated Mourner* (1996; filmed 1997) touched on similar ground, telling the story—through actionless narrations by the three characters—of educated and privileged people who grapple with their humanity during a chaotic civil war in an unnamed country. Shawn published a nonfiction collection, *Essays*, in September 2009. (ADAM AUGUSTYN)

Icelandic Prime Minister Jóhanna Sigurðardóttir

Sigurðardóttir, Jóhanna

(b. Oct. 4, 1942, Reykjavík, Ice.)

Following the resignation of Icelandic Prime Minister Geir H. Haarde and his coalition government in January 2009 in the wake of the country's economic collapse and weeks of large-scale street demonstrations outside the Althingi (parliament) in Reykjavík, Social Affairs Minister Jóhanna Sigurðardóttir led a coalition of the Social Democrats and the Left-Green Party to form a caretaker minority government. On February 1 she formally took office as Iceland's prime minister. Sigurðardóttir was the country's first female prime minister as well as the world's first openly gay head of government.

After graduating from the Commercial College of Iceland in Reykjavík, Sigurðardóttir worked (1962–71) as a flight attendant for Loftleiðir Icelandic Airlines, becoming active as a labour union organizer. She twice served (1966, 1969) as chairman of the board of the Icelandic Cabin Crew Association. She took an office job with a packaging company in Reykjavík in 1971 and later sat on the board of the Commercial Workers' Union. In 1978 Sigurðardóttir was elected to the Althingi as a member of the Social Democratic Party, representing Reykjavík. She quickly gained a reputation as an advocate for social justice, and she called for the strengthening of Iceland's welfare system.

Sigurðardóttir served (1984–93) as vice-chairman of the Social Democratic Party. She was named minister of social affairs in 1987, a position she held until 1994, when she unsuccessfully campaigned for leadership of the Social Democrats. Sigurðardóttir responded to this setback by forming her own party,

National Movement, which captured four seats in the subsequent parliamentary election. The two parties eventually reconciled in 1999, when they joined with the Women's Alliance and the People's Alliance to contest that year's election; in 2000 the coalition formally became the Social Democratic Alliance. Sigurðardóttir was again appointed minister of social affairs in 2007.

In 2002 Sigurðardóttir established a civil partnership with her companion, Jónína Leósdóttir, a noted playwright and journalist. (Sigurðardóttir had two sons from an earlier marriage to banker Torvaldur Johannesson.) In public opinion surveys, she was consistently rated as Iceland's most popular politician. Even in late 2008, as the country's economic crisis was deepening, a Gallup Poll found that Sigurðardóttir enjoyed an approval rating of 73%. After she was sworn in as prime minister, her interim government called for new parliamentary elections to be held, and on April 25 the Social Democrats and the Left-Greens won 34 seats, capturing a slim majority in the 63-seat legislature. Shortly thereafter Sigurðardóttir announced that one of her top priorities as prime minister would be securing Iceland's membership in the EU, and on July 17 the country submitted its formal bid for EU entry. (EDITOR)

Sotomayor, Sonia

(b. June 25, 1954, Bronx, N.Y.)

In May 2009 U.S. Pres. Barack Obama nominated federal appeals court judge Sonia Sotomayor to the Supreme Court

in order to fill the vacancy left by departing justice David Souter. Sotomayor's confirmation hearings before the Senate Judiciary Committee in July went smoothly, and the following month she was confirmed (68–31) by the Senate. Sotomayor was the first Hispanic and the third woman to serve on the Supreme Court.

Sotomayor's parents moved to New York City from Puerto Rico, and she was raised in a housing project in the Bronx. After the death of her father, her mother worked long hours as a nurse to support the family. Sotomayor credited the episodes of the television crime show *Perry Mason* that she watched as a child with influencing her decision to become a lawyer. She graduated summa cum laude from Princeton University (B.A., 1976) before attending Yale Law School, where she worked as an editor of the *Yale Law Journal*. She graduated in 1979 and worked for five years as an assistant district attorney in New York county before pursuing private practice in a New York firm, where she worked on intellectual property and copyright cases.

In 1992 Pres. George H.W. Bush appointed Sotomayor a federal judge in the U.S. District Court, Southern District of New York. As a federal judge, Sotomayor received national attention in 1995 when she ruled in favour of Major League Baseball players, then on strike, who were suing because of changes to the free agent system and salary arbitration rules. Sotomayor issued an injunction against the team owners, effectively bringing the eight-month strike to an end.

When Pres. Bill Clinton nominated Sotomayor to be a judge of the U.S. Court of Appeals for the Second Circuit in 1997, Republican senators delayed her appointment for more than a year because of their concerns that the position might lead to a Supreme Court nomination. After her appointment to the appeals court in 1998, Sotomayor became known for her candid, direct speaking style and for her carefully reasoned decisions. Some of her decisions provoked controversy. In 2001 she ruled in favour of a woman with dyslexia who wanted more accommodations under the Americans with Disabilities Act in order to take the bar exam. In 2003 in *Ricci v. DeStefano*, a group of white firefighters from New Haven, Conn., sued the city for having discarded a test, the results of which had in effect barred all African American firefighters from promotion.

Sotomayor and two other judges in 2008 accepted the lower court's decision against the white firefighters with little further comment, but in June 2009 the Supreme Court reversed their decision. (CHELSEY PARROTT-SHEFFER)

Svindal, Aksel Lund

(b. Dec. 26, 1982, Løerensskog, Nor.) Norwegian skier Aksel Lund Svindal won his second overall Fédération Internationale de Ski (FIS) Alpine World Cup title in March 2009, narrowly defeating his closest rival, Benjamin Raich of Austria, in the final event of the season at Åre, Swed. Svindal won the title by a record-low two-point margin, with a record-low winning-point total. The narrow victory completed a triumphant comeback from a devastating crash in 2007 that had left him seriously injured and inactive for nearly a year.

Svindal's parents, both skiers, bought him his first pair of skis for his third birthday, and by age nine he was racing competitively. He attended high school in Oppdal, a ski resort that hosted World Cup slalom skiing events, which enabled him to study and work on his technique on the slopes at the same time. He won the national under-16 slalom title and was chosen to ski for the Norwegian junior national team. At the FIS junior world ski championships in 2002, Svindal collected four medals, including a gold in the combined event, and later that year he posted his first European Cup win, taking the gold in the KO giant slalom at San Vigilio, Italy. In March 2005 he earned his first world Alpine ski championship medal at Bormio, Italy, when he won the silver in the combined.

Svindal's first trip to the Olympic Games, in February 2006, did not result in any medals. He finished fifth in the supergiant slalom (super G) and sixth in the giant slalom (GS). His performance the following month, however, hinted at what was to come as he finished second overall in the World Cup behind Raich. The next season Svindal won two gold medals (the GS and the downhill) in February at the world championships in Åre and then in March claimed his first overall World Cup title with a dominating performance in the season finale at Lenzerheide, Switz., winning the downhill, super G, and GS.

A promising start to the 2007–08 season had Svindal thinking about a World Cup repeat, but his hopes ended in November when he crashed during a downhill training run at Beaver Creek,

Colo. He suffered a severe abdominal injury and fractures to his face and did not ski competitively for 11 months. In December 2008 Svindal returned to Beaver Creek, and in a courageous performance he won the downhill and the super G. At the 2009 world championships in Val d'Isère, France, Svindal took the gold in the super combined and the bronze in the super G; he then completed his remarkable comeback season at Åre the following month, barely winning the overall World Cup title after Raich was disqualified in his final race for straddling a gate. Svindal's 1,009 points for the season beat out Raich's 1,007 to end the tightest World Cup race in history. (ANTHONY G. CRAINE)

Swift, Taylor

(b. Dec. 13, 1989, Wyomissing, Pa.) Teen country music sensation Taylor Swift dominated the industry award circuit in 2009. Her sophomore album *Fearless* (2008) was recognized as album of the year by the Academy of Country Music in April, and she topped the best female video category for "You Belong with Me" at the MTV Video Music Awards (VMAs) in September. During her VMA acceptance speech, Swift was interrupted by rapper Kanye West, who protested that the award should have been given to nominee Beyoncé for what he called "one of the best videos of all time." At the Country Music Association's CMA Awards that November, Swift won all four categories in which she was nominated. Her recognition as CMA entertainer of the year made her the youngest-ever winner of that award, as well as the first female solo artist to triumph since 1999.

Swift showed an interest in music at an early age, and she progressed quickly from roles in children's theatre to her first appearance before a crowd of thousands. She was just 11 years old when she sang "The Star-Spangled Banner" before a Philadelphia 76ers National Basketball Association game; the following year she picked up the guitar and began to write songs. Taking her inspiration from artists such as Shania Twain and the Dixie Chicks, Swift crafted original material that reflected her experiences of "tween" (pre-teen) alienation. When she was 13, Swift's parents sold their farm in Pennsylvania to move to Hendersonville, Tenn., so that Taylor could devote more of her time to courting country labels in nearby Nashville.

A development deal with RCA Records allowed Swift to make the ac-

quaintance of recording industry veterans, and in 2004 the 14-year-old was signed to Sony/ATV as a songwriter. She performed many of the songs that she wrote at venues in the Nashville area. It was at one such performance that she was noticed by record executive Scott Borchetta, who signed Swift to his fledgling Big Machine label. Her first single, "Tim McGraw," was released in the summer of 2006, and the song was an immediate success; it spent eight months on the *Billboard* country singles chart. The 16-year-old Swift followed with a self-titled debut album, and she went on tour, opening for Rascal Flatts. *Taylor Swift* was certified platinum in 2007, having sold more than one million copies, and Swift continued a rigorous touring schedule, opening for artists such as George Strait, Kenny Chesney, Tim McGraw, and Faith Hill.

On *Fearless* she demonstrated a refined pop sensibility, managing to court the mainstream pop audience without losing sight of her country roots. *Fearless* opened at number one on the *Billboard* 200 chart and sold 592,000 copies in its first week; it ultimately spent more time atop the *Billboard* chart than any album released in the previous 10 years. (MICHAEL RAY)

Van Rompuy, Herman

(b. Oct. 31, 1947, Brussels, Belg.)

In November 2009 Belgian Prime Minister Herman Van Rompuy was appointed the first permanent president of the European Council, the EU's chief decision-making body. Van Rompuy was widely viewed as a contemplative coalition builder who would work to reconcile the frequently disparate interests of the 27-member EU. His two-and-a-half-year term of office (which could be renewed once) would officially begin on Jan. 1, 2010.

Van Rompuy earned a bachelor's degree in philosophy (1968) and a master's degree in economics (1971) from the Catholic University of Leuven. In 1972 he began his career as an economist at the National Bank of Belgium. The following year he entered politics, serving as the vice president of the youth section of the centre-right Flemish Christian Democrat party. Van Rompuy left banking in 1975, and within three years he was working in the Christian Democrats' national office. From 1988 to 1993 he served as president of that party.

Van Rompuy's background in economics was put to use in 1993 when he

was elevated to the dual posts of deputy prime minister and budget minister. In the latter role he significantly trimmed the country's public debt. He left office after the Christian Democrats' defeat in the 1999 general election. That year he entered the legislature as a member of the Chamber of Representatives, and in 2004 he was named minister of state. With the return of the Christian Democrats to the majority in July 2007, Van Rompuy was named leader of the Chamber of Representatives.

When Prime Minister Yves Leterme, a Christian Democrat, resigned in December 2008 amid allegations of improper conduct in the disposition of Belgian-owned shares in the failed Fortis bank, King Albert II designated a reluctant Van Rompuy to replace him. Albert had previously entrusted Van Rompuy with brokering deals between Belgium's estranged Walloon (French-speaking) and Flemish communities, and Van Rompuy's term as prime minister saw a lessening of tension between the regions.

Van Rompuy's light diplomatic touch was noticed by other European leaders. After the ratification of the Lisbon Treaty in November 2009, he became the compromise choice for the European Council presidency, earning the appointment despite bids for the post by several higher-profile candidates, including former British prime minister Tony Blair, former Spanish prime minister Felipe González, and Dutch Prime Minister Jan Peter Balkenende. Nevertheless, Van Rompuy's selection was not without controversy. In 2004 he had openly declared his opposition to the possible EU membership of Turkey, a country that gained EU candidate status in 1999, on the basis of what he perceived to be religious differences.

(MICHAEL RAY)

Waters, Alice

(b. April 28, 1944, Chatham, N.J.)

In 2009 chef, restaurateur, and food activist Alice Waters intensified her efforts to bring seasonal, organically grown food to the American mainstream; in particular she championed an overhaul of the public-school lunch system. As co-owner and chef of the famed Berkeley, Calif., restaurant Chez Panisse, Waters had long fought to overturn the elitist stereotypes surrounding the "slow food" movement, which billed itself as the healthy antithesis to fast food.

Waters studied French culture at the University of California, Berkeley, re-

George Rose/Getty Images

Chef and "slow food" advocate Alice Waters

ceiving her bachelor's degree in 1967. She participated in the 1960s Free Speech Movement, and the idealism that was then prevalent at Berkeley was reflected in her ideology throughout her career. She studied abroad for a time in France, and it was there that her love of farm-to-plate dining took hold. Following graduation, she spent a year at the International Montessori School in London before returning to California to teach.

In the 1970s the U.S. was still years away from the "foodie revolution," which by 2009 had brought farmers' markets and organic foods to a larger audience. Waters's prescient passion for whole foods, however, inspired her and her friend Lindsey Shere to found a market-inspired restaurant, despite having little capital and no experience as restaurateurs. When Chez Panisse opened in 1971, it was with a relatively untrained staff, a set fixed-price menu that changed daily, and an uncompromising dedication to a vision that seemed to many untenable: Waters wanted to create meals by using only locally grown seasonal ingredients, and she wanted to forge relationships with the producers and suppliers.

These exacting tenets kept the restaurant in debt for its first eight years of business; it was frequently saved from bankruptcy by loans from Waters's friends. When Chez Panisse finally starting turning a profit, Waters had time to devote herself to other facets of food activism, such as the Garden Proj-

ect, which provided produce to the San Francisco county jail and work opportunities to its former inmates. In 1996, to celebrate the restaurant's 25th anniversary, Waters founded the Chez Panisse Foundation, which funded programs that educated young people on responsible agriculture.

The advocacy venture for which she became best known was the Edible Schoolyard, originally established in 1995. Waters began the program by planting a garden in the yard of Berkeley's Martin Luther King Jr. Middle School. A cooking classroom was installed a few years later, and by 2009 the Edible Schoolyard was a thriving educational tool, though not a source of lunchroom produce. From these small beginnings grew Waters's new cause, that of persuading the government to increase funding to improve school lunch programs. Her indomitable dedication to providing schoolchildren with more healthful-eating options earned Waters a fair share of detractors, who argued that seasonal food was a dispensable luxury for already underfunded schools. As with her restaurant, however, her philosophy regarding the project was "If we do it right, the money will come."

(MELISSA ALBERT)

Watson, Paul

(b. Dec. 2, 1950, Toronto, Ont.)

In 2009 Canadian environmental warrior Paul Watson and his crew sailed into the second season of their popular program *Whale Wars* on the Animal Planet cable television network. The

Canadian environmental warrior Paul Watson

Chantal Henderson/Sea Shepherd Conservation Society

show featured the dangerous exploits of the Sea Shepherd Conservation Society's expeditions to protect and defend marine wildlife from illegal poaching. Patrolling the seas under a modified Jolly Roger pirate flag, Watson and his crew of volunteers endured aggressive attempts by whalers to thwart their interference with the whaling operations; these included being assaulted with water cannons, flash grenades, and LRADS (long-range acoustic devices). Watson's direct-action approach to saving the whales, which caused some whalers to label him as an ecoterrorist, included positioning his ship, the *Steve Irwin*, between the whalers and a targeted pod of whales, entangling ropes in their propellers, throwing stink bombs onto the offending vessel, and even ramming up against the whaling ship. In 2008 Watson estimated that his interventions had saved the lives of more than 500 whales.

Watson exhibited an early affinity for protecting wildlife. At the age of nine he would seek out and destroy leghold traps that were set by beaver hunters, interfere with deer and duck hunters, and foil the attempts of other young boys to shoot birds. During the late 1960s he joined the Canadian Coast Guard and gained sailing experience with the British, Canadian, Norwegian, and Swedish merchant marines. He was an early member of Greenpeace International (founded in 1971). During his years with the organization, Watson often employed daring and innovative tactics to defend wildlife from hunters, such as positioning his inflatable Zodiac boat in between a pod of sperm whales and the harpoon of a large Soviet whaling vessel or forcing sealing ships to a halt by standing on the ice in their path. He was also known to handcuff himself to a pile of seal pelts being hoisted up onto a sealing vessel. Owing to conflicts concerning such unconventional protest methods, Watson left Greenpeace and established (1977) the Sea Shepherd Conservation Society.

Watson shared his passion for animals and the environment through his involvement with numerous other organizations, including Defenders of Wildlife, Friends of the Wolf, Fund for Animals, the Royal Society for the Protection of Animals, and the Sierra Club, of which he was director (2003–06). For his valiant efforts on behalf of wildlife, Watson was granted the Genesis Award (1998), the George H.W. Bush Daily Point of Light Award (1999), and enrollment (2002) in the

U.S. Animal Rights Hall of Fame, and in 2000 *Time* magazine named him one of the environmental heroes of the 20th century. Watson's many books include *Shepherds of the Sea* (1980), *Ocean Warrior* (1994), and *Seal Wars* (2002). The Sea Shepherd Conservation Society's battle with a Japanese whaling fleet in 2006–07 was recorded in the documentary film *At the Edge of the World* (2008). (BARBARA A. SCHREIBER)

Wu, Jason

(b. Sept. 27, 1982, Taipei, Taiwan)

New York City-based fashion designer Jason Wu became an overnight sensation when on Jan. 20, 2009, U.S. First Lady Michelle Obama (*q.v.*) appeared at the balls feting the inauguration of her husband, U.S. Pres. Barack Obama, in an opulent gown that Wu had created. By the next morning Wu had been interviewed on television by CNN, the *Today* show, and *Good Morning America*, and one of Taiwan's largest circulation newspapers, *The Liberty Times*, ran a banner headline declaring "Michelle's Evening Gown Designed by Taiwanese."

Wu claimed that his upbringing in Vancouver, B.C.—where his family settled in the early 1990s after leaving Taipei—was instrumental to his success. His mother hired a fashion student there to teach her young son, who was "always sketching and drawing," the art of pattern cutting and sewing. Wu's parents knew that boys in Taiwan were expected to study business, and they believed that Canada would offer a more relaxed environment for him to explore his interests.

Following three years of study at the Parsons School of Design, New York City, Wu worked (2005) as an intern for Narciso Rodriguez, whom he classified as his role model. Once he established his own eponymous label in 2006, Wu operated his business in a Seventh Avenue studio near one run by Rodriguez. Manhattan socialites, including *Vogue* contributing editor Marina Rust and business tycoon Ivanka Trump, were early fans of the polished feminine ready-to-wear line Wu had produced even before he designed Obama's gown.

Wu was commissioned to create the inauguration gown by Ikram Goldman, a Chicago high-fashion retailer from whom Obama purchased most of her clothing and who sold Wu's designs. Wu recollected that he was asked to sketch three formal looks and that even though he was unaware that the designs were intended for inauguration day, he presumed that he was being

Bebeto Matthews/AP

Fashion designer Jason Wu

commissioned for a major occasion. He wanted the dress to reflect "hope, fantasy, a dream." According to Wu, 100 hours of workmanship went into his intricate confection. Handmade organza flowers enhanced by sparkling Swarovski crystals embellished the floor-length white silk chiffon column.

Following the inauguration festivities, Michelle Obama further raised Wu's profile by appearing in his designs at a series of historic occasions. On March 31, the first day of President Obama's visit to the U.K. for the Group of 20 economic summit, she decamped from Air Force One in Wu's chartreuse sheath dress, and a few days later she flaunted a Wu black duchess satin opera coat when she appeared at Buckingham Palace to meet Queen Elizabeth II. The March 2009 cover of *Vogue* magazine featured Obama clad in another sleeveless Wu dress. Her patronage worked wonders for the designer—catapulting his brand into the "big league." At Wu's spring-summer 2010 show, his line attracted a fashion "executive elite," including top buyers from Saks Fifth Avenue and Bergdorf Goodman, where Wu sold his work. His collection ran the gamut from sharp-tailored separates in lush materials, such as tweed and satin, to flirty cocktail frocks and languorous long chiffon evening gowns.

(BRONWYN COSGRAVE)

Obituaries

In 2009 the world **LOST** many leaders, **PATHFINDERS**, newsmakers, **HEROES**, **CULTURAL ICONS**, and **ROGUES**. The pages below **RECAPTURE** the lives and **ACCOMPLISHMENTS** of those we remember best.

Agnelli, Susanna, Italian politician and philanthropist (b. April 24, 1922, Turin, Italy—d. May 15, 2009, Rome, Italy), served (1995–96) as the first female foreign minister of Italy. The granddaughter of Giovanni Agnelli, the founder of the carmaker Fiat, she combined her elegant upbringing—detailed in her 1975 memoir *Vestivamo alla marinara* (*We Always Wore Sailor Suits*)—and a forceful personality to become a vibrant force in Italian politics. Her philanthropy centred on education and the environment, and she was responsible in 1990 for establishing Italy's annual research-funding charity telethon. Agnelli was also known for her years as an advice columnist for *Oggi*, a weekly magazine.

Aksyonov, Vasily Pavlovich (VASILY PAVLOVICH AKSENOV), Russian novelist and short-story writer (b. Aug. 20, 1932, Kazan, Russia, U.S.S.R.—d. July 6, 2009, Moscow, Russia), was one of the leading literary spokesmen for the generation of Soviets who reached maturity after World War II. The son of parents who spent many years in Soviet prisons, Aksyonov was raised in a state home. He graduated from medical school in 1956 and worked as a doctor for a few years. He also turned to writing, and in the cultural thaw of the late 1950s and early '60s, he published a number of short stories and novels. Aksyonov excelled in fast-moving narratives dealing with youthful rebels who are attracted to Western culture even though they share the collectivist ideals of the previous generation. He incorporated elements of fantasy, satire, and parody in such novels as *Ostrov Krym* (1981; *The Island of Crimea*, 1983), *Ozhog* (1980; *The Burn*, 1984), and *Skazhi izyum* (1985; *Say Cheese!*, 1989). Because of his reputation and his involvement in the attempted publication of *Metropol*, an uncensored literary journal, in 1980 he was forced

into exile in the West. Aksyonov's citizenship was restored by decree in 1990, and he later lived in Moscow.

al-Hafez, Amin, Syrian military leader and head of state (b. 1921?, Aleppo, Syria—d. Dec. 17, 2009, Aleppo), helped bring the Ba'ath Party to power in Syria and, as de facto ruler of the country (1963–66), embarked on a widespread nationalization program and set in place a military tribunal. Hafez graduated (1946) from military school and fought in the Arab-Israeli war of 1948–49. In the late 1950s, inspired by the fervent pan-Arab nationalism of Egyptian Pres. Gamal Abdel Nasser, he and others in Syria's Ba'ath Party endorsed the formation (1958) of the United Arab Republic (U.A.R.). After Nasser outlawed Syrian political parties from the union, however, the Ba'athists grew disillusioned with the arrangement, and in 1961 the U.A.R. collapsed. Within months of a Ba'athist junta's seizure of power in Syria in 1963, Hafez took over as chairman of the National Council of the Revolutionary Command (head of state). Overthrown in a coup three years later, he eventually took refuge in Iraq, where he remained until Saddam Hussein's Ba'athist regime was toppled in 2003.

Alfonsín, Raúl (RAÚL RICARDO ALFONSÍN FOULKES), Argentine politician (b. March 12, 1927, Chascomús, Arg.—d. March 31, 2009, Buenos Aires, Arg.), emerged victorious in the 1983 Argentine presidential elections as leader of the moderate Radical Civic Union (UCR); his victory marked the first time that the Peronist party had been beaten in a free election, and his term as president followed eight years of military rule in which at least 9,000 persons "disappeared." He attended the Liceo Militar General San Martín, obtained a law degree (1950) from the National University of La Plata, and founded the

newspaper *El Imparcial* in his native Chascomús. After serving for a decade in provincial politics, he was elected to the National Congress (1963) under a UCR president, who later fell victim to a military takeover (1966). Alfonsín ran unsuccessfully for the UCR nomination in the 1973 presidential election, which was won by a candidate from the rival

Daniel Luna—AFP/Getty Images

Argentine politician Raúl Alfonsín

Peronist party, which was later overthrown (1976) by the military. In response to human rights abuses perpetrated by state security forces during the ensuing regime, Alfonsín wrote *La cuestión Argentina* (1980) and co-founded the Permanent Assembly for Human Rights. After the U.K. defeated Argentina in the Falkland Islands War (1982), the discredited military allowed a freely contested presidential election.

Ali, Rashied (ROBERT PATTERSON, JR.), American musician (b. July 1, 1935, Philadelphia, Pa.—d. Aug. 12, 2009, New York, N.Y.), was among the first to depart from the drummer's traditional role in jazz by playing pure in-

terplay with soloists rather than “keeping time”—indicating tempo and metre. His 1965–67 work in tenor saxophonist John Coltrane’s groups climaxed in the classic album of Coltrane-Ali duets *Interstellar Space* (1967).

Allen, Betty (ELIZABETH LOUISE ALLEN), American opera singer (b. March 17, 1927, Campbell, Ohio—d. June 22, 2009, Valhalla, N.Y.), was part of the post-World War II wave of African American singers on the international stage. She completed her vocal training at Hartford (Conn.) School of Music (1953) and made her City Opera debut in 1954 as Queenie in Jerome Kern’s *Show Boat*. As a lower-range mezzo-soprano, Allen was more often cast as the brooding or matronly character than the dainty heroine; she was Jocasta in Igor Stravinsky’s *Oedipus Rex*, Mistress Quickly in Giuseppe Verdi’s *Falstaff*, and the raving gypsy Azucena in Verdi’s *Il trovatore*, one of her favourite roles. Allen sang with many companies, notably the New York City Opera, the Metropolitan Opera, and the New York Philharmonic conducted by Leonard Bernstein, and she toured internationally as a recitalist.

Amacher, Maryanne, American composer (b. Feb. 25, 1938, Kane, Pa.—d. Oct. 22, 2009, Rhinebeck, N.Y.), produced experimental electronic musical works that incorporated multiple aspects of acoustics and hearing on a large scale. Amacher studied composition privately with Karlheinz Stockhausen and earned a B.F.A. degree (1964) from the University of Pennsylvania. Amacher collaborated (1974–80) with choreographer Merce Cunningham (*q.v.*), composing (1976) the music for the dance *Torse*, and with composer John Cage (1975–84), for whom she created a storm sound track for his multimedia *Lecture on the Weather* (1975). She was perhaps best known for her installation series *City-Links #1–22* (launched in 1967), *Music for Sound-Joined Rooms* (begun in 1980), and *Mini-Sound* series (started in 1985). In her final faculty position, Amacher taught electronic music (2000–09) at Bard College, Annandale-on-Hudson, N.Y.

Amit, Meir (MEIR SLUTZKY), Israeli military leader, intelligence chief, and politician (b. March 17, 1921, Tiberias, British Palestine—d. July 17, 2009, Israel), was the only person in Israel’s history to lead the foreign intelligence

agency Mossad and military intelligence simultaneously; he was credited with modernizing Mossad’s intelligence gathering. Amit fought during Israel’s 1947–49 war of independence and was wounded while leading an attack; he eventually rose to the military rank of major general. After studying business at Columbia University, New York City, he was named head of Israeli military intelligence (1961) and then director of Mossad (1963), a position he held until he was fired in 1968.

Andersson, Arne, Swedish athlete (b. Oct. 27, 1917, Trollhättan, Swed.—d. April 1, 2009, Vänersborg, Swed.), set world records in both the 1,500-m and mile distances, especially in races against his rival and countryman Gunder Hägg; between 1941 and 1945, in the run-up to the famed one-mile time of 3 min 59.4 sec run by Britain’s Roger Bannister on May 6, 1954, Andersson and Hägg were considered the world’s best middle-distance runners, with 19 world records between them. Andersson’s world-record 1,500-m time, 3 min 44.9 sec, was set on Aug. 17, 1943, and held for 11 months until broken by Hägg. Andersson set the one-mile record three times: July 10, 1942 (4 min 6.2 sec, tied with Hägg), July 1, 1943 (4 min 2.6 sec), and July 18, 1944 (4 min 1.6 sec). In 1946 both men were stripped of their amateur status for having accepted payments from race promoters. Decades later Andersson’s amateur status was officially reinstated.

Aquino, Corazon (MARIA CORAZON COJUANGCO AQUINO), Philippine political leader (b. Jan. 25, 1933, Tarlac

Philippine political leader Corazon Aquino

Val Rodriguez/AP

province, Phil.—d. Aug. 1, 2009, Makati, Phil.), as president (1986–92) of the Philippines, restored democratic rule in that country after the long dictatorship of Ferdinand Marcos. She was born into a wealthy, politically prominent family and graduated (1953) from the College of Mount St. Vincent in New York City before marrying (1954) Benigno Simeon Aquino, Jr., a promising young politician. She remained in the background during her husband’s subsequent career, rearing their five children at home. Her husband, who had become a prominent opposition leader, was jailed by Marcos for eight years (1972–80), and in 1980 Aquino accompanied him into exile in the U.S. Her husband’s assassination upon his return to the Philippines in 1983 galvanized opposition to the Marcos government. When Marcos called for presidential elections in February 1986, Aquino became the unified opposition’s candidate. Though she was officially reported to have lost to Marcos, Aquino and her supporters challenged the results, charging widespread voting fraud. High officials in the military publicly renounced Marcos and proclaimed Aquino the rightful president. On Feb. 25, 1986, both Aquino and Marcos were inaugurated as president, but that same day Marcos fled the country. Aquino appointed a commission to write a new constitution, which restored the bicameral Congress. She then held elections to the new Congress and broke up the monopolies held by Marcos’s allies over the economy, which experienced steady growth for several years. Aquino failed to undertake fundamental economic or social reforms, however, and her popularity steadily declined as she faced continual outcries over economic injustice and political corruption.

Arcan, Nelly (ISABELLE FORTIER), Canadian writer (b. March 5, 1973, Lac-Mégantic, Que.—found dead Sept. 24, 2009, Montreal, Que.), created a sensation with her first novel, *Putain* (2001; *Whore*, 2005), which was a finalist for the French literary prizes the Prix Médicis and the Prix Femina. She followed it with three more novels that established her as a literary star in Quebec and in France. Like her first book, her second, *Folle* (2004), was semiautobiographical and scandalous, and her own fragile beauty contributed to the public fascination with her. She had recently completed

Ulf Andersen/Getty Images

Canadian author Nelly Arcan

work on a fifth novel, entitled *Paradis, clef en main* (2009), when she committed suicide.

Argüello, Alexis (“EL FLACO EXPLO-SIVO”), Nicaraguan boxer (b. April 19, 1952, Managua, Nic.—found dead July 1, 2009, Managua), held world titles in three different divisions—featherweight, junior lightweight (now super featherweight), and lightweight—between 1974 and 1982, though he failed in his attempt to move up to junior welterweight; in 90 bouts as a professional, he compiled an impressive record of 82 victories (64 by knockout) and 8 losses. He was inducted into the International Boxing Hall of Fame in 1992.

Arthur, Bea (BERNICE FRANKEL), American actress (b. May 13, 1922, New York, N.Y.—d. April 25, 2009, Los Angeles, Calif.), portrayed an outspoken, acerbic-tongued feminist in the television sitcom *Maude* (1972–78) and a sharp-witted divorcée who shares a home with her mother (played by Estelle Getty) and two other middle-aged women (Betty White and Rue McClanahan) in *The Golden Girls* (1985–92), which, like *Maude*, often explored such hot-button issues as abortion, homosexuality, infidelity, gun control, and aging. Arthur, who garnered 11 Emmy Award nominations, won an Emmy in 1977 for her role as Maude Findley, and in 1988 she was awarded the statuette for her portrayal

of Dorothy Zbornak in *The Golden Girls*.

Asheton, Ron (RONALD FRANKLIN ASHETON), American guitarist (b. July 17, 1948, Washington, D.C.—found dead Jan. 6, 2009, Ann Arbor, Mich.), was the guitarist for the Stooges, an American rock band of the late 1960s and early '70s that helped define punk music; described by one critic as the “godfather of punk guitar,” Asheton was admired for his raw and energetic style of playing, particularly on such recordings as “I Wanna Be Your Dog” (1969), “TV Eye” (1970), and “Down on the Street” (1970). In 2003 *Rolling Stone* magazine included Asheton on its list of the 100 greatest guitarists of all time.

Ayala, Francisco, Spanish novelist and sociologist (b. March 16, 1906, Granada, Spain—d. Nov. 3, 2009, Madrid, Spain), explored the collapse of moral order and the hopelessness of human relations in society, notably in his two long satiric novels, *Muertes de perro* (1958; *Death as a Way of Life*, 1964) and *El fondo del vaso* (1962). Ayala received a law degree from the University of Madrid in 1929, having already published the novel *Tragicomedia de un hombre sin espíritu* (1925) and several stories. He studied in Berlin (1929–30) and received a doctoral degree in law (1932) from the University of Madrid, where in 1933 he joined the faculty. Ayala went into exile during the Spanish Civil War (1936–39) and then moved to Argentina, where he taught and published a sociology textbook. In 1949 he published two collections of short stories, *Los usurpadores* (*The Usurpers*, 1987) and *La cabeza del cordero*. The next year he joined the faculty of the University of Puerto Rico, and in 1958 he began a professorial career in the U.S. He retired in 1997 and three years later finally returned to Madrid to live. His later works include the short-story collections *El jardín de las delicias* (1971) and *El jardín de las malicias* (1988) and the final revision of his memoir, *Recuerdos y olvidos* (2006). Ayala received the Cervantes Prize in 1991. The Francisco Ayala Foundation was established in 2006 in honour of his 100th birthday.

Ballard, J(ames) G(raham), British author (b. Nov. 15, 1930, Shanghai, China—d. April 19, 2009, London, Eng.), was much admired for his science fiction set in ecologically unbalanced landscapes caused by decadent

technological excess, but to the wider public he was best known for his largely autobiographical novel *Empire of the Sun* (1984; film 1987) and for the novel *Crash* (1973; film 1996), in which he explored “the perverse eroticism of the car crash.” His first short stories appeared in the 1950s. With the gory images of his surreal stories in *The Atrocity Exhibition* (1970; also published as *Love and Napalm: Export U.S.A.*; film 2000), Ballard began writing of dehumanized sex and technology at their most extreme. Beginning in the 1960s, he also wrote novels, including

David Montgomery—Hulton Archive/Getty Images

British writer J.G. Ballard

The Wind from Nowhere (1962), *Concrete Island* (1974), *High Rise* (1975), *Rushing to Paradise* (1994), *Cocaine Nights* (1996), *Super-Cannes* (2000), *Millennium People* (2003), and *Kingdom Come* (2006). *The Kindness of Women* (1991) follows the alternately dissipated and transcendent later life of the protagonist of *Empire of the Sun*.

Bano, Iqbal, Pakistani singer (b. 1935, Delhi, British India—d. April 21, 2009, Lahore, Pak.), excelled at performing classical and semiclassical South Asian vocal music, especially ghazals, thumris, and dadras. Although Bano sang in both Urdu and Persian, she was especially admired for her renditions of Urdu poet Faiz Ahmed Faiz's verse. In 1974 Prime Minister Zulfikar Ali Bhutto's government granted Bano the national Pride of Performance award.

Barker, Bernard Leon, Cuban-born American CIA agent and Watergate burglar (b. March 17, 1917, Havana, Cuba—d. June 5, 2009, Miami, Fla.), was one of five men arrested for breaking into the Democratic National Committee headquarters in the Watergate complex, Washington, D.C.; the ensuing scandal prompted the investigation of U.S. Pres. Richard M. Nixon's administration. Barker was found crouching under a desk in the Watergate complex the night of June 17, 1972, and in January 1973 he pleaded guilty to seven charges of conspiracy, burglary, and wire-tapping. He was sentenced to up to six years in prison by Judge John Sirica, but he was allowed to appeal in 1974 and was released less than a year later. Barker was also involved in the 1971 burglary of a psychiatrist's office to obtain the records of former Department of Defense employee Daniel Ellsberg, who had leaked the classified Pentagon Papers on the Vietnam War.

Barry, Gene (EUGENE KLASS), American actor (b. June 14, 1919, New York, N.Y.—d. Dec. 9, 2009, Woodland Hills, Calif.), glamorized the role of the lawman as the debonair star of the television series *Bat Masterson* (1958–61), in which he sported a derby hat and clobbered villains in the old West with his gold-handled cane, and as a millionaire who luxuriated in chauffeur-driven rides in his Rolls-Royce as he solved crimes in Los Angeles as a police captain (1963–65) and chief of detectives (1994–95) in *Burke's Law*. For his role as Amos Burke, he won the 1965 Golden Globe best actor award. In the TV series *The Name of the Game* (1968–71), he donned another suave persona, publishing tycoon Glenn Howard. Barry began his show business career on Broadway (*Pins and Needles*) and appeared in a string of musical hits, notably a series of operettas at Carnegie Hall, New York City, before moving to Hollywood in 1951. His most memorable role on the big screen was as a scientist in the cult classic *The War of the Worlds* (1953).

Bashung, Alain (ALAIN CLAUDE BASCHUNG), French singer, songwriter, and actor (b. Dec. 1, 1947, Paris, France—d. March 14, 2009, Paris), was known as “the gentleman rocker of

French chanson” for his distinctive French-language take on rock music. Bashung formed his first band in 1962, dropped out of school to pursue a career in music, and performed widely, releasing several extended-play recordings and albums, including *Roman photos* (1977) and *Pizza* (1981). He finally achieved stardom with the 1980 single “Gaby oh! Gaby” and the album *Play blessures* (1982), co-written and recorded with Serge Gainsbourg. He also acted in the 1973 stage musical *La Révolution française* and in a score of

French singer Alain Bashung

movies and television shows. He continued to perform after being diagnosed with lung cancer in 2007 and released his last album, *Bleu pétrole*, in 2008. Bashung received the Legion of Honour in January 2009, and on February 28, just two weeks before his death, he performed live at the Victoires de la Musique ceremony, where he won 3 awards, bringing his career total to a record 11.

Bausch, Pina (PHILLIPPINE BAUSCH), German ballet dancer and choreographer (b. July 27, 1940, Solingen, Ger.—d. June 30, 2009, Wuppertal, Ger.),

broke down the boundaries between ballet and theatre with her dramatic choreographed works incorporating dance, speech, music, and fantastical sets. Her best-known works include *Café Müller* (1978), inspired by her childhood at her parents' hotel and restaurant; a version of Igor Stravinsky's ballet *Le Sacre du printemps* (1975), performed on an earth-covered stage; and *Nelken* (1982; “Carnations”), which included a field of flowers and four large dogs. Bausch graduated (1958) in dance from the Folkwang School in Essen and then studied ballet on scholarship at the Juilliard School in New York City. She danced with the Metropolitan Opera and worked with choreographer Paul Taylor in New York before returning to Germany in 1962 as a soloist with the Folkwang Ballet. There she began to choreograph and in 1969 became the company director. In 1973 she took charge of the Wuppertal Dance Theatre, where her first choreographed piece there, *Fritz*, was poorly received by those who disliked its intensely bleak subject matter. Bausch's avant-garde dance theatre later earned acclaim, however, and the company toured to India, Japan, and Britain. Bausch appeared in Federico Fellini's film *E la nave va* (1983; *And the Ship Sails On*) and in Pedro Almodóvar's *Hable con ella* (2002; *Talk to Her*).

Begg, Dame Heather (ISOLEEN HEATHER BEGG), New Zealand opera singer (b. Dec. 1, 1932, Nelson, N.Z.—d. May 12, 2009, Sydney, Australia), delighted international audiences with her rich mezzo-soprano voice and dramatic talent for playing matrons, confidants, and spinsters. She made her singing debut in 1954 as Azucena in Verdi's *Il trovatore* with the National Opera of Australia, where she was a principal mezzo-soprano. She sang across the globe in more than 100 roles and was a member (1969–76) of the Royal Opera in London. Begg was especially known for her humour and often appeared in Gilbert and Sullivan's works, notably as Lady Jane in *Patience*, Katisha in *The Mikado*, and the Duchess of Plaza Toro in *The Gondoliers*, all which she reprised on television. She also repeated her role as the jealous housekeeper Marcellina in Mozart's *Le*

nozze di Figaro for the 1975 film by French opera director Jean-Pierre Ponnelle. Begg became a principal at the Opera Australia in 1976, and her 53-year career ended in 2006. She was made OBE (1978) and became a Distinguished Companion of the New Zealand Order of Merit (2000), which in 2009 was redesignated Dame Companion.

Behrens, Hildegard, German opera singer (b. Feb. 9, 1937, Varel, Ger.—d. Aug. 18, 2009, Tokyo, Japan), performed

Johan Elbers—Time Life Pictures/Getty Images

German opera singer Hildegard Behrens

powerfully in dark soprano roles, most notably as Brünnhilde in Richard Wagner's *The Ring of the Nibelung*. Behrens began her operatic career unusually late, studying voice at age 26 at the Freiburg (Ger.) Academy of Music after having earned a law degree from the University of Freiburg. She made her debut (1971) as the Countess Almaviva in Mozart's *Le nozze di Figaro* and in 1972 joined the Deutsche Oper am Rhein in Düsseldorf. She made her debut (1976) at London's Covent Garden as Leonore in Beethoven's *Fidelio*. Behrens sang (1976–99) with the New York Metropolitan Opera, where she gave 171 performances, notably as the title character in Giacomo Puccini's *Tosca*, as staged by director Franco Zeffirelli. She received international recognition at the 1977 Salzburg (Austria) Festival in the title role of Richard Strauss's tragic opera *Salome*. Her performances in passionate lead roles in Wagner's *Tristan und Isolde*

and Strauss's *Elektra* were similarly distinguished by the dramatic fervour of her acting and stage presence as well as her voice.

Bellson, Louie (LUIGI PAULINO ALFREDO FRANCESCO ANTONIO BALASSONI), American musician (b. July 6, 1924, Rock Falls, Ill.—d. Feb. 14, 2009, Los Angeles, Calif.), was an extraordinary drummer who electrified audiences with his solos and, while still a teenager, was the inventor of the double-bass drum kit that became his trademark. Bellson's playing was characterized more by restraint than flamboyance and rendered him a tasteful accompanist for popular singers such as Tony Bennett and Ella Fitzgerald and for musicians such as Count Basie, Art Tatum, and Oscar Peterson. Bellson released more than 60 albums under his own name.

Benedetti, Mario (MARIO ORLANDO HAMLET HARDY BRENNIO BENEDITTI FARUGIA), Uruguayan novelist and poet (b. Sept. 14, 1920, Paso de los Toros, Uruguay—d. May 17, 2009, Montevideo, Uruguay), explored themes of love, daily life, and political unrest in more than 40 years of literary work. Benedetti was best known for his poetry and novels, including *La treuga* (1960; *The Truce*, 1969) and *Gracias por el fuego* (1965), but he also wrote short stories (his most accomplished tales appeared in the collection *Montevideanos* [1959]), essays, and plays and edited several literary journals, including the political *Marcha*. Many of Benedetti's

Uruguayan novelist and poet Mario Benedetti

Pablo Bielli—AFP/Getty Images

poems were set to music, notably *El sur tambein existe* (1985), which was featured on an album by Catalan singer-songwriter Joan Manuel Serrat. On the political front, Benedetti was active in leftist politics; he staunchly supported the Cuban Revolution and Cuban Pres. Fidel Castro, advocated independence for Puerto Rico, and criticized the United States for its foreign policy and consumer-driven society. In Uruguay he helped to organize the Broad Front, a coalition of leftist groups, and was exiled for his politics following the military coup in 1973. He returned home in 1985. His exile influenced his later works, notably *El desexilio y otras conjeturas* (1984). A collection of his short stories was translated into English as *Blood Pact and Other Stories* (1997).

Bennett, Estelle, American pop singer (b. July 22, 1941, New York, N.Y.—found dead Feb. 11, 2009, Englewood, N.J.), with her sister, Veronica (Ronnie) Bennett, and their cousin, Nedra Talley, formed the Ronettes, one of the premier pop girl singing groups of the early 1960s. After first gaining attention as performers at the Peppermint Lounge in New York City, the Ronettes signed (1963) with Phil Spector's Philles record label and soon released a string of hit singles, including “Be My Baby” (1963), which reached the top five on both the American and British pop music charts, “Baby I Love You” (1963), and “Walking in the Rain” (1964). The group's biggest hits were characterized by Spector's reverberant “wall of sound” technique, which relied on layered vocals and elaborate orchestral arrangements. The group ultimately split up in 1966. The Ronettes were inducted into the Rock and Roll Hall of Fame in 2007.

Bennett, Jay, American musician and songwriter (b. Nov. 15, 1963, Rolling Meadows, Ill.—found dead May 24, 2009, Urbana, Ill.), was best known for his role in shaping the sound of the alternative rock band Wilco. After recording with a number of bands, most notably the alternative rock quartet Titanic Love Affair, Bennett was recruited in 1994 by Jeff Tweedy to join Wilco. With the addition of Bennett, a multi-instrumentalist and gifted producer, Wilco's sound expanded. Bennett contributed to the albums *Being There* (1996) and *Summerteeth* (1999), and he assisted with the arrangement of the Wilco/Billy Bragg collaboration *Mermaid Avenue*, a collection of unfinished Woody Guthrie

songs. The apex of Bennett's influence on the band's sound was the 2002 release *Yankee Hotel Foxtrot*, but the relationship between Bennett and Tweedy was strained, and Bennett was asked to leave the group just prior to the album's release. Bennett released a string of solo albums that showcased his skills as a producer, but he rarely toured.

Berri, Claude (CLAUDE BEREL LANGMANN), French filmmaker (b. July 1, 1934, Paris, France—d. Jan. 12, 2009, Paris), was involved—as an actor, writer, director, or producer—in more than 125 motion pictures over a 55-year career, but he was best known as the director of *Jean de Florette* (1986) and its sequel, *Manon des sources* (1986; *Manon of the Springs*), both of which he adapted from Marcel Pagnol's 1962 novel *L'Eau des collines*. Berri made his debut as an actor in *Le Bon Dieu sans confession* (1953). His first directing job was *Le Poulet* (1962; *The Chicken*), which won the Academy Award for best live-action short film. His other significant films include *Tchao pantin* (1983), *Le Vieil Homme et l'enfant* (1967; *The Two of Us*), *Uranus* (1990), *Germinal* (1993), and *Lucie Aubrac* (1997). Berri also produced dozens of films that he did not direct, notably Roman Polanski's *Tess* (1979), *L'Ours* (1988; *The Bear*), *La Reine Margot* (1994), two films based on the characters Asterix and Obelix, and the hit comedy *Bienvenue chez les Ch'tis* (2008).

Boal, Augusto, Brazilian dramatist (b. March 16, 1931, Rio de Janeiro, Braz.—d. May 2, 2009, Rio de Janeiro), created the Theatre of the Oppressed, a form of interactive theatre intended to transform lives as spectators become performers, acting out solutions to social problems. Boal began his career with the Arena Theatre in São Paulo in 1956; he was its director until 1971, during which time he developed his theories. He was arrested in 1971 by the military junta then ruling Brazil and spent the next 15 years in exile. During this period he published *Teatro del oprimido y otras poéticas políticas* (1974; *Theatre of the Oppressed*), set up a centre for the practice of his theory in Paris, and organized international Theatre of the Oppressed festivals in the early to mid-1980s. Boal returned to Brazil in 1986 and established a Centre for the Theatre of the Oppressed in Rio de Janeiro as well as several community theatres. In 1992 he published

Jeux pour acteurs et non-acteurs (*Games for Actors and Non-Actors*), which describes techniques for putting his method into practice.

Bogle, Bob (ROBERT LENARD BOGLE), American musician (b. Jan. 16, 1934, Wagoner, Okla.—d. June 14, 2009, Vancouver, Wash.), cofounded (with fellow guitarist Don Wilson) the Ventures, the most successful instrumental band in rock history. The group was founded (1958) in the Seattle area and toured throughout the Pacific Northwest. Unsuccessful in their efforts to secure a record contract, Bogle and Wilson created their own label. In 1960 the Ventures' single "Walk—Don't Run" reached number two on the pop charts, and the band went on to record some of the most recognizable songs of the surf rock genre. "Perfidia" and "Diamond Head" were minor hits, and the theme to the television show *Hawaii Five-O* reached the top five in 1969. Although the band's popularity in the U.S. faded in the 1970s, the Ventures remained hugely popular in Japan, and they sold some 40 million albums in that country alone. Bogle and the Ventures were inducted into the Rock and Roll Hall of Fame in 2008.

Bohr, Aage Niels, Danish physicist (b. June 19, 1922, Copenhagen, Den.—d. Sept. 8, 2009, Copenhagen), shared the 1975 Nobel Prize for Physics with American James Rainwater and American-born Ben R. Mottelson for their work in determining the asymmetrical shapes of certain atomic nuclei. Bohr, the son of Niels Bohr (1922 Nobel physics laureate), enrolled at the University of Copenhagen in 1940, but his education was cut short in 1943 when his Jewish family escaped from Nazi-occupied Denmark to Sweden. (He eventually returned to school and received a doctorate in 1954.) During 1943–45 he worked as assistant to his father on the development of the atomic bomb at Los Alamos, N.M. From 1946 he was associated with the Institute for Theoretical Physics (later named the Niels Bohr Institute), founded in Copenhagen by his father, whom he succeeded as director (1963–70). Bohr's writings include *Rotational States of Atomic Nuclei* (1954) and *Nuclear Structure* (2 vol.; 1969, 1975).

Bond, J(ames) Max, Jr., American architect and educator (b. July 17, 1935, Louisville, Ky.—d. Feb. 18, 2009, New

American architect J. Max Bond, Jr.

York, N.Y.), designed a number of significant buildings, and he played an instrumental role in the design of the museum section of the National September 11 Memorial and Museum at the site of the World Trade Center in New York City. He gained international recognition while working (1964–67) in Ghana, where he designed the Bolgatanga Regional Library. Other important commissions included the Audubon Biomedical Science and Technology Park for Columbia University, New York City; the Martin Luther King, Jr., Center for Nonviolent Social Change in Atlanta; the Schomburg Center for Research in Black Culture in Harlem, New York City; and the Birmingham (Ala.) Civil Rights Institute. Aside from his role as lead partner in the firm Davis Brody Bond, Bond was a member (1980–86) of the New York City Planning Commission and presided (1980–84) as chairman of the architecture division at the Columbia University Graduate School of Architecture and Planning. He also served (1985–92) as dean of the School of Architecture and Environmental Studies at the City College of New York.

Bongo, Omar (EL HADJ OMAR BONGO ONDIMBA; ALBERT-BERNARD BONGO), Gabonese political leader (b. Dec. 30, 1935, Lewai, French Equatorial Africa [now Bongoville, Gabon]—d. June 8, 2009, Barcelona, Spain), was president of Gabon for nearly 42 years, having

risen to power in 1967; at the time of his death, Bongo was the longest-serving head of state in Africa and the longest-serving head of government in the world. Bongo was educated in Brazzaville (now in the Republic of the Congo). After a stint (1958–61) in the French air force, he returned to newly independent Gabon, where he served in the cabinet (1962–67) and as vice president (1967). He was granted presidential powers in place of the ailing Pres. Léon M'ba in February 1967, and when M'ba died on November 28, the presidency passed uneventfully to Bongo. He took the name El Hadj Omar Bongo when he converted to Islam in 1973 and added Ondimba in 2003. During his four decades in office, Bongo preserved economic and political ties with France, the former colonial power, and offered privileged oil-drilling rights to the French state-owned petroleum company Elf-Aquitaine (later Total S.A.). He also maintained relative sta-

Desirey Minkoh—AFP/Getty Images

Long-serving Gabonese head of state Omar Bongo

bility in Gabon despite periodic accusations of corruption, money laundering, election rigging, and intimidation of political opponents.

Borlaug, Norman Ernest, American agricultural scientist and plant pathologist (b. March 25, 1914, Cresco, Iowa—d. Sept. 12, 2009, Dallas, Texas), won the Nobel Prize for Peace in 1970 for his contributions in laying the groundwork of the so-called Green Rev-

olution, the agricultural technological advance that promised to alleviate world hunger. After earning a Ph.D. (1942) in plant pathology from the University of Minnesota, Borlaug served (1944–60) in Mexico as a research scientist at the Rockefeller Foundation's Cooperative Mexican Agricultural Program. His work was founded on earlier discoveries of ways to induce genetic mutations in plants. These methods led to modern plant breeding, with momentous results that included the tailoring of crop varieties for regions prone to climatic extremes. At a research station at Campo Atizapan, he developed strains of grain that dramatically increased crop yields. Borlaug ultimately developed short-stemmed ("dwarf") wheat, a key element in the Green Revolution in less-developed countries. Borlaug also created a wheat-rye hybrid known as triticale. He then served as director (1960–63) of the Inter-American Food Crop Program and as director (1964–79) of the International Maize and Wheat Improvement Center, Mexico City. In 1986 Borlaug created the World Food Prize as a way to honour individuals who had contributed to improving the availability and quality of food worldwide.

Brown, Anne Wiggins, American-born actress and singer (b. Aug. 9, 1912, Baltimore, Md.—d. March 13, 2009, Oslo, Nor.), collaborated with composer George Gershwin on the creation of the role of Bess for the 1935 world premiere of his folk opera *Porgy and Bess* and played the character in more than 600 performances thereafter, including the 1942 Broadway revival.

Brown, Ernest ("BROWNIE"), American tap dancer (b. April 25, 1916, Chicago, Ill.—d. Aug. 21, 2009, Burbank, Ill.), enjoyed a career in tap that spanned more than 80 years; he performed in early vaudeville circuits with Charles ("Cookie") Cook in the dance duo Cook and Brown and as a member of the Original Copasetics. By age 12 Brown was appearing with the traveling vaudeville group Mammy and Her Picks, and he soon teamed up with Cook. Their comedic routine featured acrobatic choreography, with the impish Brown (standing at about 1.4 m [4 ft 9 in] tall) often being tossed around the stage by Cook. In 1949 Brown became one of the founding members of the Original Copasetics dance group, which formed upon the death of Bill ("Bojangles") Robinson. The troupe

John Sundlof/Alamy

American tap dancer Ernest "Brownie" Brown

brought the raw energy of improvisation to its engagements, often in small theatres, and showcased the individual styles of its star ensemble. Over the course of his career, Brown performed on Broadway in *Kiss Me, Kate* and at the Newport (R.I.) Jazz Festival, New York City's Radio City Music Hall, Harlem's Cotton Club, the Palladium in London, and the Latin Casino in Paris. Brown and Cook were inducted (2008) into the American Tap Dance Foundation's International Tap Dance Hall of Fame.

Brutus, Dennis Vincent, South African poet and political activist (b. Nov. 28, 1924, Salisbury, Southern Rhodesia [now Harare, Zimb.]—d. Dec. 26, 2009, Cape Town, S.Af.), penned works that centred on his sufferings and those of his fellow blacks in South Africa. He also became involved in a series of antiapartheid-related activities, notably efforts to end discrimination in

sports. Owing in part to Brutus's continued pressure on the International Olympic Committee, South Africa was suspended from the 1964 Olympic Games and later was officially expelled from the Olympics; the country did not compete again until 1992. After teaching English and Afrikaans in South Africa for 14 years, Brutus became politically involved and was banned by the government from teaching, writing, publishing, attending social or political meetings, and pursuing his studies in law at the University of the Witwatersrand. In 1963 his refusal to abide by the ban resulted in an 18-month prison term. After leaving South Africa (1966) with a Rhodesian passport, Brutus went to England and then to the U.S., where he taught African literature at the University of Denver; Northwestern University, Evanston, Ill.; and the University of Pittsburgh. In 1983, after a protracted legal struggle, he won the right to remain in the U.S. as a political refugee. Brutus's first collection of poetry, *Sirens, Knuckles, Boots* (1963), was published in Nigeria while he was in prison. Later volumes include *Salutes and Censures* (1982), *Airs and Tributes* (1989), *Still the Sirens* (1993), and *Leafdrift* (2005).

Cabral, Luís de Almeida, Guinea-Bissauan politician (b. April 11, 1931, Bissau, Portuguese Guinea [now Guinea-Bissau]—d. May 30, 2009, Lisbon, Port.), was the first president of independent Guinea-Bissau (1974–80). Cabral, a younger half brother of the charismatic revolutionary leader Amílcar Cabral, participated in the guerrilla war launched in 1960 by the African Party for the Independence of Guinea and Cape Verde (PAIGC) against the Portuguese colonial government. He assumed leadership of the Bissau branch of the PAIGC after his brother's assassination in 1973 and became president when Guinea-Bissau gained independence a year later. Deposed in 1980 in a coup d'état led by Prime Minister João Bernardo Vieira (*q.v.*), Cabral was briefly imprisoned before going into exile, first in Cuba and then in Portugal.

Caldera Rodríguez, Rafael Antonio, Venezuelan politician (b. Jan. 24, 1916, San Felipe, Venez.—d. Dec. 24, 2009, Caracas, Venez.), served as president of Venezuela (1969–74; 1994–99) and helped to establish democratic stability. A pioneer of the Christian Democratic movement in Latin America, he co-founded (1946) Venezuela's centre-right

Social Christian Party (COPEI). Caldera entered politics in the mid-1930s before earning a doctorate (1939) in political science from the Central University of Venezuela. He was first elected to Congress in 1941. As COPEI's candidate for the presidency in 1947, Caldera made the first of four unsuccessful bids for the office. Following the fall of a military dictatorship in 1958, he was one of the signatories to an agreement between the three largest political parties intended to ensure the soundness of the country's democracy, in part by having the electoral victor share government positions with the other two parties. During Caldera's first term as president, he restored ties with the Soviet Union, Cuba, and Latin American military dictatorships (Argentina, Panama, and Peru) and granted amnesty to leftist revolutionaries, encouraging them to enter politics peacefully. He also restored the legal status of the Communist Party (outlawed since 1962) and attempted to diversify the country's oil-dependent economy. Caldera returned to power some 20 years later as an independent, having fallen out with COPEI.

Calisher, Hortense, American writer (b. Dec. 20, 1911, New York, N.Y.—d. Jan. 13, 2009, New York City), penned novels, novellas, and short stories that were known for elegant style and insightful rendering of characters; much of her often semiautobiographical short fiction was published originally in *The New Yorker* magazine. Calisher graduated (1932) from Barnard College, New York City, and later taught there as an adjunct professor of English. Her short-story collections *In the Absence of Angels* (1951) and *The Collected Stories of Hortense Calisher* (1975), a compilation of previous collections, contain stories featuring Calisher's alter ego, Hester Elkins, a Jewish child living in New York City with her extended family. Calisher, the recipient of numerous O. Henry short-story awards, excelled in producing well-plotted, psychologically perceptive short fiction. Her collected fiction includes *Tale for the Mirror: A Novella and Other Stories* (1962), *Extreme Magic: A Novella and Other Stories* (1964), and *Saratoga, Hot* (1985). Her first novel, *False Entry* (1961), contains characters who are reintroduced in a radically different setting in *The New Yorkers* (1969), in which a 12-year-old girl kills her father's unfaithful wife. Calisher's other novels include *Queenie* (1971),

Age (1987), *In the Palace of the Movie King* (1993), and *Sunday Jews* (2002). In 2004 Calisher published the memoir *Tattoo for a Slave*.

Carazo Odio, Rodrigo, Costa Rican politician (b. Dec. 27, 1926, Cartago, Costa Rica—d. Dec. 9, 2009, San José, Costa Rica), served (1978–82) as president of Costa Rica during a time in which he faced both domestic and foreign crises; during his term he also helped to create the University for Peace and took significant steps to preserve environmental resources. After earning a degree in economics from the University of Costa Rica, Carazo entered politics as a member of the National Liberation Party (PLN) and as a follower of then president José Figueres. Carazo later distanced himself from Figueres and won the presidency as the candidate of the Social Christian Unity Party (PUSC).

Cardiff, Jack British cinematographer and director (b. Sept. 18, 1914, Great Yarmouth, Norfolk, Eng.—d. April 22, 2009, Ely, Cambridgeshire, Eng.), won international acclaim for his dazzling camera work, intense light-and-shadow effects, and extraordinary use of colour in such films as *Black Narcissus* (1947), for which he won an Academy Award, and *The Red Shoes* (1948); he also earned Oscar nominations for *War and Peace* (1956) and *Fanny* (1961). Cardiff began his career working as a cameraman and cinematographer on early Technicolor films, notably *Wings of the Morning* (1937) and *A Matter of Life and Death* (1946; U.S. title *Stairway to Heaven*). He shot more than 50 other movies, including *The African Queen* (1951), *The Barefoot Contessa* (1954), *The Prince and the Showgirl* (1957), *The Vikings* (1958), *Death on the Nile* (1978), and *Conan the Destroyer* (1984), as well as the television miniseries *The Far Pavilions* (1984). He had less success as a director, though he earned an Oscar nomination for *Sons and Lovers* (1960). In 1993 Cardiff received the International Award from the American Society of Cinematographers, and two years later he was given a lifetime achievement award from the British Society of Cinematographers. In 2001 he was granted an honorary Oscar for his artistic achievements in cinematography. Cardiff was made OBE in 2000.

Carradine, David (JOHN ARTHUR CARRADINE), American actor (b. Dec. 8,

1936, Hollywood, Calif.—found dead June 4, 2009, Bangkok, Thai.), was best known for his iconic portrayal of a Shaolin monk in the television series *Kung Fu* (1972–75). Carradine studied music and earned a living as a painter before following his father, John Carradine, into an acting career. Following a stint (1960–62) in the army, he performed on Broadway and television before landing the role of Kwai Chang Caine in the surprise hit *Kung Fu*. After the show ended, Carradine continued to work in television and in feature films, but he did not have another smash success until 2003, when he played the title character in Quentin Tarantino's film *Kill Bill: Vol. 1*, a role he reprised a year later in *Kill Bill: Vol. 2*. Carradine was found dead in his hotel room in Bangkok.

Carroll, Jim (JAMES DENNIS CARROLL), American author and rock musician (b. Aug. 1, 1949, New York, N.Y.—d. Sept. 11, 2009, New York City), wrote several acclaimed collections of poems but was best known for *The Basketball Diaries* (1978; filmed 1995), an unvarnished account of his

American author and rock musician
Jim Carroll

Andrew Serban/Getty Images

drug-addled adolescence in 1960s New York City.

Carter, W(alter) Horace, American journalist (b. Jan. 20, 1921, Albemarle, N.C.—d. Sept. 16, 2009, Wilmington, N.C.), helped to curb the presence of the white supremacist Ku Klux Klan in the Carolinas through a series of truculent articles and editorials in the newspaper he published, the *Tabor City* (N.C.) *Tribune*. In 1946 he founded the weekly *Tabor City Tribune*. After the Ku Klux Klan held a parade through the town in 1950, Carter used his pulpit to voice strong opposition to the group, and over the next three years, despite threats to his life, he ran dozens of stories on violent Klan activities in the area, which culminated in a federal investigation and the arrest of more than 100 Klansmen. For its efforts the *Tabor City Tribune* in 1953 earned a Pulitzer Prize for public service. After leaving the newspaper in the 1970s, Carter wrote 22 books and scores of articles about the outdoors.

Cavero, Arturo (“ZAMBO”), Peruvian folk singer and percussionist (b. Nov. 29, 1940, Lima, Peru—d. Oct. 9, 2009, Lima), was beloved in Peru for his rich, expressive voice and his captivating interpretations of traditional Creole, or Afro-Peruvian, songs; he made numerous recordings but was best known for the Creole waltz “Contigo Peru.” In 1987 Cavero was among several notable Peruvian musicians honoured by the Organization of American States at a ceremony that was held in Washington, D.C. He was posthumously awarded the Orden del Sol, Peru’s highest honour for achievement.

Chambers, Marilyn (MARILYN ANN BRIGGS), American adult-film actress (b. April 22, 1952, Providence, R.I.—found dead April 12, 2009, near Santa Clarita, Calif.), cultivated an image as a fresh-faced blonde and adorned (with a sweet-faced baby) the boxes of Ivory Snow laundry soap, the slogan of which was “99% pure,” but her persona underwent a sensational transformation when she starred in the X-rated film *Behind the Green Door* (1972). The hard-core film, for which she negotiated a payment of \$25,000 and a percentage of the profits, was credited (along with *Deep Throat* [1972]) with establishing a mainstream market for pornography. Ivory Snow initially extended her contract when a boost in sales occurred, but Chambers’s visage

UPI Photo/Landov

American adult-film actress Marilyn Chambers

was ultimately replaced on its boxes. She went on to become a soft- and hard-core pornography star on film and video.

Cheng, Nien (YAO NIEN YUAN), Chinese dissident and memoirist (b. Jan. 28, 1915, Beijing, China—d. Nov. 2, 2009, Washington, D.C.), was imprisoned for more than six years (1966–73) during China’s Cultural Revolution. In *Life and Death in Shanghai* (1986), she bore eloquent witness to both her continued defiance and the severe hardships she had endured. She was a widow when she was arrested, and upon her release she discovered that her only child had been killed by the Red Guards. Cheng was allowed to leave the country in 1980.

Chessex, Jacques, Swiss novelist (b. March 1, 1934, Payerne, Switz.—d. Oct. 9, 2009, Yverdon-les-Bains, Switz.), was honoured as the first non-French winner of the Prix Goncourt for his novel *L'Ogre* (1973; *A Father's Love*, 1975), a semiautobiographical account of the troubled relationship between a son and his (recently deceased) father. Chessex gained early recognition for his work, publishing a poetry collection at the age of 18, but he came to be known primarily for his prose, which he wrote in French. He was also a painter, and his works were prominently exhibited in Switzerland. Chessex often explored

controversial subjects about his homeland, notably in *Un Juif pour l'exemple* (2008; *A Jew Must Die*, 2010), which recounted the fact-based story of a Jewish cattle trader's brutal death at the hands of Swiss Nazis during World War II, when Switzerland maintained official neutrality.

Christensen, Inger, Danish poet (b. Jan. 16, 1935, Vejle, Den.—d. Jan. 2, 2009, Copenhagen, Den.), crafted linguistically sophisticated work that explores the interconnections of language, fiction, and reality. Christensen was the daughter of a tailor on Denmark's Jutland coast. She graduated from Vejle Gymnasium in 1954 and studied at Teachers' College in Århus. While a student she began publishing poems and met the poet and critic Poul Borum, who was her mentor and (1959–76) husband. She taught briefly (1963–64) at the College for Arts in Holbæk before devoting herself exclusively to writing. Christensen's early collections include *Lys* (1962; "Light") and *Græs* (1963; "Grass")—translated within the same volume as *Light and Grass*—both of which explore the relationship of language to the natural world. The publication of her long poem *Det* (1969; *It*) brought Christensen international acclaim. *Alfabet* (1981; *Alphabet*) builds on her earlier analogies between language and physical reality by applying alphabetic and numeric structures, such as the Fibonacci numbers, as principles of creative order. Her last collection, *Sommerfugledalen* (1991, *The Butterfly Valley: A Requiem*), is a sonnet cycle about death and transformation. Christensen also wrote novels, short stories, essays, children's stories, radio and stage plays, and opera librettos.

Clancy, Liam (WILLIAM CLANCY), Irish folk musician (b. Sept. 2, 1935, Carrick-on-Suir, County Tipperary, Ire.—d. Dec. 4, 2009, Cork, Ire.), was the youngest member of the singing Clancy Brothers, who, along with Tommy Makem, helped to popularize traditional Celtic folk music in the U.S. and elsewhere in the 1960s. Clancy originally immigrated to the U.S. to become an actor, but instead he began performing in folk clubs with two of his brothers—Tom and Paddy—along with Makem. Under the name the Clancy Brothers and Tommy Makem, the quartet released their first two albums in 1959, *The Rising of the Moon: Irish Songs of Rebellion* and *Come Fill Your Glass with Us*,

before reaching a wider audience with a television appearance in 1961 on *The Ed Sullivan Show*. From 1973 Clancy pursued a solo career, starred in a Canadian TV program, and reunited (1975–88) as a duo with Makem. Clancy made a comeback in 2005 and released his last album, *The Wheels of Life*, in 2008.

Coburn, the Rev. John Bowen, American clergyman (b. Sept. 27, 1914, Danbury, Conn.—d. Aug. 8, 2009, Bedford, Mass.), led the Episcopal Church during a period of change, in which a new Book of Common Prayer was adopted and women were officially ordained. Coburn attended an Episcopal school founded by his father before studying politics at Princeton University (B.A., 1936). After spending several years teaching biology in Istanbul, Coburn returned to the U.S. and earned (1942) a master's degree in divinity at Union Theological Seminary, New York City. He served as a chaplain in the U.S. Navy, as dean of the Episcopal Theological School (now the Episcopal Divinity School) in Cambridge, Mass., and taught high-school dropouts in Harlem before taking the high-profile position of rector (1969–76) of St. James' Church on Madison Avenue, New York City. As the president (1967–76) of the Episcopal House of Deputies, part of the Episcopal Church's governing legislative body, he oversaw the church through passionate debates about ordaining women, electing an openly gay man as a bishop, and reconciling the relationship with the Union of Black Clergy and Laity (later known as the Union of Black Episcopalians). Coburn subsequently served (1976–86) as the 13th bishop of the Episcopal Diocese of Massachusetts until his retirement.

Crawford, Hank (BENNIE ROSS CRAWFORD, JR.), American jazz and blues musician (b. Dec. 21, 1934, Memphis, Tenn.—d. Jan. 29, 2009, Memphis), played alto saxophone with a fervently emotional sound and phrasing that fused gospel music with blues and also improvised fluently on standard material in a Charlie Parker-influenced style. He was noted as the arranger, pianist, baritone and alto saxophonist, and musical director of Ray Charles's band (1958–63). Crawford became widely influential while leading his own combos and recording soul-jazz albums, and he continued to arrange for himself and others, including bluesman B.B. King

and singer Etta James. Crawford often worked with tenor saxophonist David ("Fathead") Newman (*q.v.*) and coled combos with organist Jimmy McGriff.

Crofton, Sir John Wenman, British clinician (b. March 27, 1912, Dublin, Ire.—d. Nov. 3, 2009, Edinburgh, Scot.), became the first tuberculosis researcher to use a three-drug approach to the disease, which initially had proved resistant to drug treatment. His method remained the template not only for tuberculosis treatment but also for the treatment or alleviation of diseases such as cancer and AIDS. Crofton earned a bachelor's degree and a doctorate in medicine from Sidney Sussex College, Cambridge, before receiving further training at London's St. Thomas's Hospital. His tuberculosis studies began in 1946, when he joined a team conducting trials on the use of an antibiotic against the then often-fatal disease. Although the drug ultimately did not work, Crofton was set on a course that would lead in the late 1950s to his successful use of a three-drug regimen, which he tested in a widespread clinical trial while serving as chairman of the department of respiratory diseases and tuberculosis at the University of Edinburgh (1952–77). Crofton was honoured with a knighthood in 1977.

Cronkite, Walter (WALTER LELAND CRONKITE, JR.), American journalist (b. Nov. 4, 1916, St. Joseph, Mo.—d. July 17, 2009, New York, N.Y.), was a pio-

Journalist Walter Cronkite

Carl Mydans—Time Life Pictures/Getty Images

neer of television news programming and became known as “the most trusted man in America” as the long-time anchor of the *CBS Evening News with Walter Cronkite* (1962–81). He studied political science (1933–35) at the University of Texas at Austin before leaving to take a full-time position with the Houston paper for which he had been working. In 1939 Cronkite became a news editor for United Press (UP). When the U.S. entered World War II in 1941, UP elevated Cronkite to overseas war correspondent, assigning him to cover fighting in the North Atlantic. He was soon reassigned to London, where he reported on German bombing raids on the city. Cronkite also covered the invasion of North Africa. He flew in bombing raids over Germany and in 1944 reported on the Allied landing on the beaches of Normandy, France, on D-Day. After the war’s conclusion, he remained in Europe, covering the Nürnberg trials and helping to set up numerous UP bureaus. Before returning to the U.S., he served (1946–48) as UP bureau chief in Moscow. Cronkite attracted the attention of CBS vice president Edward R. Murrow, who in 1950 hired him as a correspondent for the CBS television affiliate in Washington, D.C. Throughout the 1950s Cronkite hosted the CBS shows *You Are There*, an imaginary broadcast of historical events; *The Morning Show*, which he cohosted with a puppet named Charlemagne; and a documentary series, *The Twentieth Century*. Cronkite had an unflappable calmness and an uncanny ability to extemporize verbally, which made him ideal for hosting the political news show *Man of the Week* (1952–53). Shortly after Cronkite took over the *CBS Evening News* from his predecessor, Douglas Edwards, the 15-minute broadcast was expanded to 30 minutes and became the first half-hour nightly news show on American network television. From the CBS anchor chair, he reported on the assassination (1963) of U.S. Pres. John F. Kennedy, the Apollo 11 Moon landing (1969), the Watergate Scandal (1972–75), the resignation (1974) of U.S. Pres. Richard M. Nixon, the historic peace negotiations (1977–78) between Egyptian Pres. Anwar el-Sadat and Israeli Prime Minister Menachem Begin, and the Vietnam War, which he famously denounced as unwinnable in 1968. Cronkite’s avuncular mien and adherence to journalistic integrity—exemplified by his sign-off line, “And that’s the way it is”—endearred him to

the American public, and a 1972 poll named him “the most trusted man in America.” He hosted numerous TV documentaries, contributed essays to National Public Radio’s *All Things Considered*, and occasionally served as a special correspondent for CBS. He won several Emmy and Peabody awards, and in 1981 U.S. Pres. Jimmy Carter awarded him the Presidential Medal of Freedom.

Cunningham, Merce (MERCIER PHILIP CUNNINGHAM), American dancer and choreographer (b. April 16, 1919, Centralia, Wash.—d. July 26, 2009, New York, N.Y.), made a momentous mark on modern dance in the U.S. and Britain by expanding the potentialities of space, time, and movement in the creation of abstract dance, especially in works for the Merce Cunningham Dance Company, which he founded in 1953. Cunningham, who began instruction in dance at age 12, later studied for two years at the Cornish School in Seattle (there he met composer John Cage, who later became his collaborator and life partner); with Lester Horton at Mills College, Oakland, Calif. (1938); and at the Bennington (Vt.) School of the Dance (1939), where Martha Graham invited him to join her group. Cunningham showcased his incredible jumps in the lead roles in Graham’s *El Penitente* (1940), *Letter to the World* (1940), and *Appalachian Spring* (1944). Encouraged by Graham, Cunningham had begun to choreograph in 1942. Among his early works were *Root of an Unfocus* (1944) and *Mysterious Adventure* (1945). He also had already started collaborating with Cage and in 1944 had presented his first solo concert, with music by Cage. After leaving (1945) Graham’s company, Cunningham and Cage produced such works as *The Seasons* (1947) and *Inlets* (1977). Cunningham developed “choreography by chance,” a technique in which selected isolated movements are assigned sequence by such random methods as tossing a coin. The sequential arrangement of the component dances in *Sixteen Dances for Soloist and Company of Three* (1951) was thus determined, and in *Suite by Chance* (1953) the movement patterns themselves were so constructed. Many of Cunningham’s works were associated with Dadaist, Surrealist, and existentialist motifs. In 1974 he abandoned the repertory that had been built over a 20-year period for what he called “Events,” excerpts from old or new dances, sometimes two or more simultaneously.

American dancer and choreographer
Merce Cunningham

Choreography created expressly for videotape was still another innovation, notably *Blue Studio: Five Segments* (1975–76). He also began working with film and created *Locale* (1979). Later dances included *Duets* (1980), *Fielding Sixes* (1980), *Channels/Inserts* (1981), and *Quartet* (1982). Though he left the performance stage soon after Cage’s death in 1992, Cunningham continued to lead his dance company.

Daly, Cahal Brendan Cardinal, Irish Roman Catholic prelate (b. Oct. 1, 1917, Loughguile, County Antrim, Ire.—d. Dec. 31, 2009, Belfast, N.Ire.), was the archbishop of Armagh and primate of all Ireland from 1990 until he retired as archbishop emeritus in 1996. He publicly denounced as “sinful” the violence advanced by the Irish Republican Army and censured Sinn Féin, the IRA’s political wing, while he advocated peace and ecumenical dialogue with Protestants. Daly, the son of a rural schoolteacher, studied classics and philosophy at St. Malachy’s College, Belfast; Queen’s University, Belfast; and St. Patrick’s College, Maynooth (D.D.; 1944). After his ordination (1941), he studied scholastic philosophy at the Catholic Institute in Paris and in Connecticut before returning to the faculty at St. Malachy’s (1946–63) and then at Queen’s (1963–67). Daly was made bishop of the rural diocese of Ardagh and Clonmacnoise in 1967 and was

moved in 1982 to the see of Down and Connor, which included Belfast. He was appointed archbishop of Armagh in November 1990 and was elevated to cardinal the following June. Although Daly was credited as a strong voice for peace, he was criticized for not being sufficiently proactive when the church faced a series of sex scandals.

Dannenberg, Konrad, German-born engineer and rocket scientist (b. Aug. 5, 1912, Weissenfels, near Leipzig, Ger.—d. Feb. 16, 2009, Hunstville, Ala.), was one of more than 100 German scientists who devised the V-1 and V-2 missiles for Nazi Germany and then, after the end of World War II, accompanied Wernher von Braun to the United States, where they applied their expertise to the Redstone and Jupiter missile programs. In 1960 Dannenberg joined NASA, where he contributed to the development of the Saturn launch vehicle, which proved to be the mainstay (1967–73) of the Apollo and Skylab space programs. Dannenberg retired from NASA in 1973; that same year he was awarded the NASA Exceptional Service Medal.

Das, Kamala (KAMALA SURAIYA), Indian author (b. March 31, 1934, Thrissur, Kerala, British India—d. May 31, 2009, Pune, India), inspired women struggling against domestic and sexual oppression with her honest assessments of sexual desire and marital problems in more than 20 books. Das was part of a generation of English-language Indian writers whose work centred on personal rather than colonial experiences, and her short stories, poetry, memoirs, and essays brought her both respect and notoriety. She grew up primarily in Calcutta (now Kolkata) in a family of artists, where she felt ignored and unloved. As a teenager she married an older relative, and the emotional and sexual problems arising from that unsatisfying relationship and her young motherhood provided material for her first memoir, *My Story* (1976). Das wrote in English and, under the pen name Madhavikutty, in the Malayalam language of southern India. An advocate for human rights, especially for women and children, Das reflected her social concerns in such short stories as “Padmavati the Harlot” (1992) and “A Doll for the Child Prostitute” (1977).

Dausset, Jean (JEAN-BAPTISTE-GABRIEL-JOACHIM DAUSSET), French hematologist and immunologist (b.

French hematologist and immunologist Jean Dausset

Oct. 19, 1916, Toulouse, France—d. June 6, 2009, Palma, Majorca, Spain), earned a share (with George Snell and Baruj Benacerraf) of the 1980 Nobel Prize for Physiology or Medicine for his studies on the genetic basis of the immunological reaction. Dausset took a medical degree (1945) from the University of Paris. He pursued advanced studies in the U.S. at Harvard University and later returned to France, where he served as laboratory director (1946–63) of the National Blood Transfusion Centre. He also conducted research and taught (1958–77) at the University of Paris and was a professor of experimental medicine (1977–87) at the Collège de France. In 1984 Dausset co-founded the Human Polymorphism Study Center (CEPH; renamed the Fondation Jean Dausset-CEPH in 1993), from which he retired as president in 2003.

Davis, Glenn Ashby (“JEEP”), American hurdler (b. Sept. 12, 1934, Wellsburg, W.Va.—d. Jan. 28, 2009, Barberton, Ohio), was a world-record holder (1956–62) in the 400-m hurdles and the first man to win the Olympic gold medal twice in that event. Davis excelled in track for Barberton High School, often scoring more points individually than entire opposing teams. At Ohio State University he ran sprint races and was a long jumper as well as a hurdler. At the 1956 Olympic Games in Melbourne, he pulled away from

teammates Eddie Southern and Josh Culbreath after the seventh hurdle to take the gold medal in the first U.S. sweep of the event since 1920. In 1958 Davis won the James E. Sullivan award as the country's top amateur athlete. At the 1960 Olympic Games in Rome, Davis won the gold medal in the 400-m hurdles and was a member of the winning 4 × 400-m relay team. That same year he ran the 200-m hurdles in a world-record time of 22.5 sec.

de Larrocha, Alicia (ALICIA DE LARROCHA Y DE LA CALLE), Spanish pianist (b. May 23, 1923, Barcelona, Spain—d. Sept. 25, 2009, Barcelona), was known for her elegant, focused, and subtle performances, especially of works by Mozart and by Spanish composers. Her appearance onstage was often remarked upon because the unassuming and unusually petite pianist (well under 1.5 m [5 ft] tall) at times played virtuosic repertory that demanded a large reach; the shape of her hand and her assiduous stretching exercises, however, allowed her to span a 10th (for example, C to the next octave's E) and thus to master virtually any piano music. De Larrocha began taking piano lessons at age three when, at her own insistence, Frank Marshall, director of the Academia Marshall, reluctantly accepted her as a pupil. She performed works by J.S. Bach and Mozart at the International Exhibition in Barcelona in May 1929, made her first recording at age 9, and at age 11 was soloist in a Mozart concerto with the Madrid Symphony Orchestra. Because she could not easily travel during the Spanish Civil War and World War II, de Larrocha did not make her first European tour until 1947. In 1955 she made her American orchestral debut with the Los Angeles Philharmonic and her recital debut in New York City. She returned to Spain in 1959 to succeed her mentor as director of the Academia Marshall. De Larrocha toured annually from 1965 until her retirement in 2003 and maintained a long association (1971–2003) with Lincoln Center's Mostly Mozart Festival in New York City. Her close association with Spanish composers was documented in her recordings of Granados's *Goyescas*, Isaac Albéniz's *Iberia*, and the works of Federico Mompou. De Larrocha won four Grammy Awards (1974, 1975, 1988, and 1991), and in 1995 she was awarded the International Music Council/UNESCO Prize, the only Spanish artist to be so honoured.

Dearie, Blossom Margrete, American singer (b. April 28, 1924, East Durham, N.Y.—d. Feb. 7, 2009, New York, N.Y.), attracted a cult following with her wispy jazz vocals and her stylish piano accompaniment; she was especially noted for her rendition of the songs “I’m Hip” and “Peel Me a Grape” and for a six-album set she recorded for Verve Records. Though Dearie was initially trained as a classical pianist, she gravitated to jazz while performing with a high-school band. After moving to New York City, she appeared with the Blue Flames, a group associated with the Woody Herman band, and in Paris she sang with the Blue Stars, a vocal octet that found fame with its recording in French of “Lullaby of Birdland.” After embarking on a solo career, Dearie insisted that her nightclub audiences refrain from smoking during her performances so that she could preserve her tender voice.

DeCarava, Roy Rudolph American photographer (b. Dec. 9, 1919, New York, N.Y.—d. Oct. 27, 2009, New York City), crafted arresting images of African Americans that chronicled daily life in Harlem, the civil rights movement, and performances of such legendary jazz musicians as Louis Armstrong, John Coltrane, Duke Ellington, and Billie Holiday. DeCarava initially took up photography to record images he would use in his painting, but he came to prefer the camera to the brush. In the late 1940s he began a series of scenes of his native Harlem, aiming for “a creative expression, the kind of pen-

etrating insight and understanding of Negroes which I believe only a Negro photographer can interpret.” Edward Steichen, then curator of photography for the Museum of Modern Art, New York City, attended DeCarava’s first solo show in 1950 and bought several prints for the museum’s collection. In 1952 DeCarava was awarded a Guggenheim fellowship, the first African American photographer to receive the grant. The monetary award allowed him to devote himself to photographing Harlem full time, and many of these images were compiled in the book *The Sweet Flypaper of Life* (1955; reissued 1988), with text written by Hughes. In 1958 DeCarava became a freelance photographer. He also taught at the Cooper Union School of Art (1969–72) and at Hunter College from 1975. Many of his jazz portraits were published in *The Sound I Saw: Improvisation on a Jazz Theme* (2001). DeCarava received a National Medal of Arts in 2006.

DeLuise, Dom (DOMINICK DELUISE), American comic actor (b. Aug. 1, 1933, Brooklyn, N.Y.—d. May 4, 2009, Santa Monica, Calif.), stole the show with broad and funny characterizations in dozens of movies, especially in association with director Mel Brooks and actor Burt Reynolds. DeLuise began his career on the stage and in children’s television shows in the 1950s and became a staple on TV variety shows in the 1960s. His best-known films include (with Brooks) *The Twelve Chairs* (1970), *Blazing Saddles* (1974), and *Silent Movie* (1976), as well as (with Reynolds) *The Cannonball Run* (1981) and *The Best Little Whorehouse in Texas* (1982). DeLuise also wrote two cookbooks as well as several books for children.

Des Forges, Alison (ALISON B. LIEBHAFSKY), American human rights activist and historian (b. Aug. 20, 1942, Schenectady, N.Y.—d. Feb. 12, 2009, near Buffalo, N.Y.), detailed the horrific genocide (1994) in Rwanda, in which more than 500,000 people were slaughtered by the Hutu militia, in her book *Leave None to Tell the Story: Genocide in Rwanda* (1999); she also sharply criticized the failure of leading countries to intervene in the tragedy.

Dia, Mamadou Moustapha, Senegalese politician (b. July 18, 1910, Khombole, Senegal—d. Jan. 25, 2009, Dakar, Senegal), was a protégé of Léopold Sédar Senghor and served (1959–62) as the first prime minister of

Senegal. Dia, a Muslim, studied at the William Ponty School and worked as a teacher and journalist before entering politics in the early 1940s. He represented (1948–56) Senegal in the French Senate and then served as vice president (1957–58) and president (1958–59) of Senegal’s Government Council before becoming prime minister in April 1959. He retained the latter post after Senegal gained independence in 1960, but he was ousted in December 1962 by then president Senghor in a power struggle that Senghor denounced as an attempted constitutional coup. Dia was sentenced to life in prison, but in 1974 he was pardoned. In 1976 Dia, who had obtained an M.B.A. in 1969, took a post with the World Bank.

DiMaggio, Dom (DOMINIC PAUL DIMAGGIO; “THE LITTLE PROFESSOR”), American baseball player (b. Feb. 12,

AP

Boston Red Sox centrefielder Dom DiMaggio

1917, San Francisco, Calif.—d. May 8, 2009, Marion, Mass.), enjoyed a stellar career in Major League Baseball as a centrefielder for the Boston Red Sox, despite being overshadowed by the prowess of his legendary older brother, Joe, a centrefielder for the New York

Martin Cabrera/AP

Mehdi Fedouach—AFP/Getty Images

Yankees; during his 11 seasons (1940–42, 1946–53) with the club, Dom was selected to the All-Star team seven times, recorded 1,680 hits, and amassed a lifetime batting average of .298. In 1948 he set an American League record by making 503 putouts. The following year DiMaggio batted safely in 34 consecutive games, establishing a franchise record; it remained unbroken at the time of his death.

Doi, Takeo, Japanese psychiatrist (b. March 17, 1920, Tokyo, Japan—d. July 5, 2009, Tokyo), broke ground with his best-selling book *Amae no kōzō* (1971; *The Anatomy of Dependence*, 1973), as perhaps the first Japanese expert to analyze the Japanese idea of *amae* (“indulgent dependency”) and the first to exert wide influence on Western psychiatric thought. In 1950 he traveled to the U.S. to study psychiatry, and the culture shock he experienced prompted his investigation of the Japanese psyche. Doi’s groundbreaking theory centered on the concept of *amae*, which he defined as a culturally ingrained dependence on authority figures that retained a pervasive influence on all Japanese social structures.

Downes, Sir Edward, British conductor (b. June 17, 1924, Birmingham, Eng.—d. July 10, 2009, Zürich, Switz.), was a leading figure for decades at opera houses around the world. Downes was most noted for his long associations with the Royal Opera House (ROH) in London—initially as a french horn player (1945–46) and later as a répétiteur (1952–53) and conductor (1953–72) of some 49 different operas in nearly 1,000 performances—and the Manchester-based BBC Philharmonic (originally the BBC Northern Symphony Orchestra) as principal conductor (1980–91) and conductor emeritus (from 1991). He also served (1972–74) as music director of the Australian Opera, where he conducted the first performance at the iconic Sydney Opera House. Downes was made CBE in 1986 and knighted in 1991.

Druon, Maurice-Samuel-Roger-Charles French author, politician, and man of letters (b. April 23, 1918, Paris, France—d. April 14, 2009, Paris), wrote plays, essays, and novels, including *Les Grandes Familles* (1948), which won the 1948 Prix Goncourt. For many years, however, he was best known for co-writing (with his uncle novelist Joseph Kessel) the lyrics to “Chant des

French man of letters Maurice Druon

partisans,” the stirring unofficial anthem of France’s World War II Resistance movement. Druon’s other published works include a series of six related novels known collectively as *Les Rois maudits* (1955–60). In 1966 he was elected to the 40-member French Academy, of which he was perpetual secretary from 1985 to 1999. Druon was awarded the Grand Cross of the Legion of Honour, and the British government made him honorary CBE (1988) and KBE (1999).

Duckworth, Ruth, (RUTH WINDMÜLLER), German-born American artist (b. April 10, 1919, Hamburg, Ger.—d. Oct. 18, 2009, Chicago, Ill.), created abstract works in clay and bronze that ranged from small ceramic pieces to large-scale public installations and murals. Duckworth moved from Germany to England to study (1936–40) at the Liverpool School of Art; she spent her early years as an artist carving decorations on tombstones. After enrolling at London’s Central School of Arts and Crafts in 1956, however, she turned her attention to ceramics and soon won recognition for pieces that abandoned the potter’s traditional utilitarian techniques for a Modernist-inspired sculptural approach. She later taught (1964–77) at the University of Chicago and there produced her most enduring works, notably *Earth, Water, and Sky* (1967–68) and *Clouds over Lake Michigan* (1976), both expansive stoneware murals that fluidly and poetically render the Earth’s natural features.

Dunne, Dominick, American writer (b. Oct. 29, 1925, Hartford, Conn.—d. Aug. 26, 2009, New York, N.Y.), covered high-profile crime trials for the magazine *Vanity Fair* and wrote popular novels based on true crimes in high society; his fame reached its zenith with his reporting of the 1995 murder trial of former football star O.J. Simpson. Dunne entered show business as a stage manager and associate director of television shows in the 1950s. He went on to become a film producer in the 1970s; his credits include *The Boys in the Band* (1970); *The Panic in Needle Park* (1971), the screenplay of which was written by his brother, John Gregory Dunne, and his sister-in-law, Joan Didion; and *Play It as It Lays* (1972), adapted from a novel by Didion. By the mid-1970s, however, excessive drinking had extinguished his career. Dunne reinvented himself as a writer, penning the novel *The Two Mrs. Grenvilles* (1985), based on a 1955 murder, as well as *People like Us* (1988), *An Inconvenient Woman* (1990), and *Another City, Not My Own* (1997), based on the Simpson trial. Dunne’s first piece for *Vanity Fair*, “Justice: A Father’s Account of the Trial of his Daughter’s Killer,” was a highly personal narrative of the trial of the man who had in 1982 murdered Dunne’s daughter, actress Dominique Dunne.

Elon, Amos, Israeli author and essayist (b. July 4, 1926, Vienna, Austria—d. May 25, 2009, Tuscany, Italy), gained international recognition with his book *The Israelis: Founders and Sons* (1971), which broke ground by criticizing Israel’s founders for discounting the wishes of Arab residents; the work was considered the first critique of its kind written by an Israeli. Elon moved to Palestine with his family in 1933 and grew up in Tel Aviv, learning English and Hebrew while speaking German at home. He studied law and history at Hebrew University in Jerusalem and the University of Cambridge. Beginning in 1951, Elon was a reporter for the Israeli liberal newspaper *Haaretz*, to which he contributed sporadically for more than three decades; he also wrote essays that appeared in *The New Yorker* and *The New York Review of Books*. He was well known for his criticism of Israel’s militancy, extremism, and relations with both Palestinians and poorer Middle Eastern Jews. Elon published nine books on both Israeli and German history and social criticism.

Endara, Guillermo (GUILLERMO DAVID ENDARA GALIMANY), Panamanian politician (b. May 12, 1936, Panama City, Pan.—d. Sept. 28, 2009, Panama City), served (1989–94) as Panama's president after the United States deposed the military strongman Manuel Noriega; he was credited with leading the country back to democracy. Endara, as the candidate of a coalition opposed to the rule of Noriega, was elected president in May 1989, but Noriega annulled the election and installed his own candidate. Endara led a protest demonstration during which he and his vice presidential candidates were beaten by Noriega's Dignity Battalions. The U.S. invaded in December 1989, and Endara was sworn in as president. Within two months he dissolved the armed forces and replaced them with a civilian police force. Endara joined the political party of three-time president Arnulfo Arias in 1961 and took the post of minister of planning and economic policy in Arias's third presidency in October 1968; 11 days later, however, Arias was overthrown for the third time by the military. Endara was briefly imprisoned in 1971 before going into exile; he returned to Panama and politics in 1977.

Endo, Yukio, Japanese gymnast (b. Jan. 18, 1937, Akita, Japan—d. March 25, 2009, Tokyo, Japan), attained a legendary reputation in gymnastics during the 1960s by winning seven Olympic medals, including five golds, as well as 10 world championship medals; the element on the high bar known as the "Endo roll" was named after him. Endo led the Japanese teams that claimed the Olympic men's gymnastics team titles in 1960, 1964, and 1968. At the 1964 Games, held in his home country, he also won the individual all-around title and took gold on the parallel bars and silver in the floor exercise. In 1968 he picked up another Olympic silver medal, in the vault. Endo returned to the Olympics in 1972 as coach of the Japanese men's squad, which earned the country's fourth consecutive team gold. He was inducted into the International Gymnastics Hall of Fame in 1999.

Erickson, Arthur Charles, Canadian architect (b. June 16, 1924, Vancouver, B.C.—d. May 20, 2009, Vancouver), was internationally recognized for his original and varied designs, which were characterized by his use of concrete, glass, and neutral colours and by the harmonious blending of buildings with

their surroundings. His plan for Simon Fraser University (1963–65), Burnaby, B.C., designed with Geoffrey Massey, included an enormous skylit indoor plaza that served as a sensitive response to a cool, rainy climate. Erickson's design for Robson Square (1978–79), a large civic centre in Vancouver, incorporated waterfalls, a roof garden, plazas, and stairs with integrated ramps. Among his other notable works were the Canadian embassy (1989) in Washington, D.C., and the Museum of Glass (2002) in Tacoma, Wash. He also designed the prizewinning Canadian pavilion at the Expo '70 fair in Osaka, Japan.

Escalona Martínez, Rafael Calixto, Colombian folk-song composer (b. May 27, 1927, Patillal, Colom.—d. May 13, 2009, Bogotá, Colom.), was celebrated in Colombia as "el maestro" of the *val-lenato*, an accordion-based folk music that originated in the country's Caribbean coastal region and that Escalona helped to make internationally popular; many of his songs were regarded as classics of the genre, including "La casa en el aire" (1952) and "El manantial" (1952), and were recorded by numerous singers and musicians. The Latin Recording Academy honoured Escalona with a lifetime achievement award in 2006.

Estemirova, Natalya Khusainova, Russian human rights activist (b. Feb. 28, 1959, Saratov, Russia, U.S.S.R.—d. July 15, 2009, near Nazaran, In-

Russian human rights activist Natalya Estemirova

Dylan Martinez—Reuters/Landov

gushetiya, Russia), documented illegal torture, kidnappings, and murders to give a voice and publicity to victims of political violence in the Russian republic of Chechnya. Estemirova was born to a Chechen father and Russian mother and moved to Chechnya at age 19. She studied history in the capital at Grozny University and then taught history until 1998, when she began to work recording the stories of victims in the 1994–96 conflict with the Russian government. In 2000 she started officially working with the human rights group Memorial, investigating civilian deaths and kidnappings and presenting documentation to try to hold the Chechen and Russian governments accountable for violence in Chechnya. Estemirova was very critical of the Chechen and Russian authorities and was personally threatened by Chechen Pres. Ramzan Kadyrov for her opinions. She recently had contributed to the 2009 Human Rights Watch report accusing the Chechen government of having burned the homes of more than two dozen families of suspected rebels. Her murder came just hours after she had been kidnapped, and her death prompted Memorial to withdraw its services from Chechnya.

Evdokimova, Eva (EVA EVDOKIMOVA-GREGORI), American ballerina (b. Dec. 1, 1948, Geneva, Switz.—d. April 3, 2009, New York, N.Y.), rose to stardom during her tenure (1969–85) with the West Berlin German Opera, where she performed as prima ballerina from 1973. Evdokimova was the daughter of an American UN employee (through whom she qualified for U.S. citizenship) and her Bulgarian husband. As a child growing up in Munich, Evdokimova studied ballet at the Bavarian State Opera before training at the Royal Ballet School in London under the direction of Maria Fay and in Copenhagen with Vera Volkova while dancing (1966–69) with the Royal Danish Ballet. She was awarded a gold medal at the Varna International Ballet Competition in 1970 and became a principal dancer (1974–75) at the London Festival Ballet (later the English National Ballet). Known for her graceful refinement, Evdokimova excelled in coveted leading roles in such ballets as *Giselle* and *La Sylphide* and often partnered with Rudolf Nureyev. Some of her greatest roles included the Gardener's Daughter in *Scarecrows*, the title role in *Cinderella*, and the lead role in *Verklärte Nacht*.

Fanthorpe, U(rsula) A(skham), British poet (b. July 22, 1929, London, Eng.—d. April 28, 2009, Gloucester, Eng.), created verse based to a large extent on her everyday experiences as assistant instructor (1954–62) and head of English (1962–70) at Cheltenham Ladies' College in Gloucestershire and then as a hospital receptionist (1973–89) in Bristol. Fanthorpe studied at St. Anne's College, Oxford (B.A., 1953; M.A., 1956). She published her first volume of poetry, *Side Effects*, in 1978. Her collections issued by the small publisher Peterloo Poets received widespread recognition. Fanthorpe was the first woman nominee (1995) for the post of Oxford Professor of Poetry and in 1999 was considered a contender for poet laureate. When performing poetry readings she sometimes shared the stage with her partner of 44 years, poet R.V. (Rosie) Bailey. Fanthorpe's later collections include *Homing In* (2006) and *From Me to You* (2007). Her many honours and awards included a Royal Society of Literature fellowship (1988) and the Arts Council Writers' Award (1994). Fanthorpe was made CBE in 2001, and in 2003 she was awarded the Queen's Gold Medal for Poetry.

Fawcett, Farrah (MARY FARRAH LENI FAWCETT; FARRAH FAWCETT-MAJORS), American actress (b. Feb. 2, 1947, Corpus Christi, Texas—d. June 25, 2009, Santa Monica, Calif.), was a glamorous pinup girl whose feathered blond hair inspired the style adopted by legions of fans in the 1970s; her beguiling look vaulted her to superstardom in the hit television series *Charlie's Angels*, in which she appeared (1976–77), together with Kate Jackson and Jaclyn Smith, as a sexy private investigator. Though Fawcett left the show to pursue more challenging roles, she had little success until she appeared in a series of dramatic made-for-TV movies, notably as a victim of domestic abuse (*The Burning Bed* [1984]) and rape (*Extremities* [1986]). Fawcett's career began when she was named one of the 10 most beautiful girls on the campus of the University of Texas at Austin, and a publicist encouraged the photogenic ingénue to travel to Hollywood. There, under the guidance of actor Lee Majors, to whom she was married (1973–82), Fawcett launched her career. A poster of her clad in a wet one-piece red bathing suit and flashing her dazzling smile became iconic and sold some six million copies. Other endorsed items included lunch boxes,

Pinup girl and actress Farrah Fawcett

wigs, pillows, and T-shirts. Following her string of 1980s films for TV, Fawcett gained kudos for her serious role in the big-screen film *The Apostle* (1997), opposite Robert Duvall. That same year the 50-year-old Fawcett delighted admirers when she showcased her lithe figure in a racy video, *Playboy: Farrah Fawcett, All of Me*. Following her diagnosis of anal cancer in 2006, Fawcett chronicled her battle in the film *A Wing & a Prayer: Farrah's Fight for Life* (2008) and in the TV movie *Farrah's Story* (2009).

Fawehinmi, Gani (GANIYU OYESOLA FAWEHINMI), Nigerian human rights lawyer (b. April 22, 1938, Ondo Town, Nigeria—d. Sept. 5, 2009, Lagos, Nigeria), devoted his life to fighting for the rights of the Nigerian people; as a tireless advocate for justice, he made many enemies among Nigeria's military and civilian regimes. He was the son of a prosperous family, but his father's death while Fawehinmi was studying law at the University of London made it necessary for him to work in order to finance the remainder of his education. He began practicing law in Lagos in 1965 and quickly became known as "the people's lawyer," taking on such cases as the mysterious killing in 1986 of a newspaper editor (for which Fawehinmi blamed the military junta in power at that time) and often representing those who could not afford to pay for his services. Despite the risk of

assassination, he cofounded (1994) the National Conscience Party and continued to take on powerful opponents until his death. Fawehinmi's activism extended to philanthropy, including the granting of scholarships to impoverished Nigerian youths. He also published several books and founded (1986) the *Nigerian Weekly Law Reports*. Fawehinmi was awarded the Bruno Kreisky Prize in 1993 in honour of his work in advancing human rights. In 2001 he was made a senior advocate of Nigeria, the country's highest title in the legal profession.

Fehn, Sverre, Norwegian architect (b. Aug. 14, 1924, Kongsberg, Nor.—d. Feb. 23, 2009, Oslo, Nor.), was known for his designs of private houses and museums that integrated modernism with traditional vernacular architecture. Fehn's corpus of completed works reflects the influence of such modernists as Mies van der Rohe, Le Corbusier, Louis I. Kahn, and Frank Lloyd Wright but also particularizes the Scandinavian setting. Fehn graduated (1949) from the Oslo School of Architecture (now the Oslo School of Architecture and Design). One of his first ongoing projects was the Handicraft Museum in Lillehammer, Nor. (1949–56), but he first gained international acclaim in 1958 at the World Exhibition in Brussels, where his Norwegian Pavilion captured first prize in the design competition. Fehn's Nordic Pavilion at the 1962 Venice Biennale won the Golden Lion Award for national pavilions. His other notable museums in Norway include the Norwegian Glacier Museum (completed 1991) in Fjærland, the Hedmark Cathedral Museum

Norwegian architect Sverre Fehn

AP

(1979) in Hamar; (completed 1996) in Alvdal; and the Norwegian Museum of Photography (completed 2001) in Horten. He also adapted a 19th-century Neoclassical bank building in Oslo for the Norwegian Museum of Architecture (completed 2007). Fehn was a professor (1971–95) at the Oslo School of Architecture, lectured widely in Europe and the U.S., and wrote (with Per Olaf Fjeld) *Sverre Fehn: The Thought of Construction* (1983). He won the Pritzker Architecture Prize in 1997.

Feoktistov, Konstantin Petrovich, Russian spacecraft designer and cosmonaut (b. Feb. 7, 1926, Voronezh, Russia, U.S.S.R.—d. Nov. 21, 2009, Moscow, Russia), took part, with Vladimir M. Komarov and Boris B. Yegorov, in the world's first multi-manned spaceflight, Voskhod 1 (1964). When Voronezh was occupied in World War II, Feoktistov, who was then only 16 years old, worked as a scout for the Soviet army. He was captured by the Germans and sentenced to death by firing squad. Shot through the neck, he feigned death and escaped from a burial trench. He later attended Bauman Moscow Higher Technical School and worked as a factory engineer. In 1955 he earned the equivalent of a Ph.D., and from that time he worked in the Soviet space program designing spacecraft and equipment. Feoktistov was awarded the Order of the Red Banner of Labour after the first artificial satellite, Sputnik 1, was launched (Oct. 4, 1957) and again after the first successful manned flight, by Yuri Gagarin (April 12, 1961). During the flight of Voskhod 1 (Oct. 12–13, 1964), Feoktistov carried out extensive scientific experiments and observations beyond the capability of previous cosmonauts. After the flight he returned to engineering and played a major role in designing the Salyut and Mir space stations.

Ferrante, Art(hur), American pianist (b. Sept. 7, 1921, Brooklyn, N.Y.—d. Sept. 19, 2009, Longboat Key, Fla.), performed with Lou Teicher (who died in 2008) in the popular two-piano act Ferrante & Teicher. Ferrante began classical piano studies as a child at the Juilliard School, New York City, where he met and often played with Teicher. After his graduation (1942), Ferrante briefly worked as a dance accompanist and as an orchestrator for Irving Berlin's film scores before reuniting with Teicher (1946; they retired in 1989). Although their concerts included

classical works, the two were best known for lush arrangements of the theme songs from films and Broadway shows (e.g., *The Apartment*, *West Side Story*, and *Exodus*).

Fidrych, Mark Steven ("THE BIRD"), American baseball player (b. Aug. 15, 1954, Worcester, Mass.—d. April 13, 2009, Northborough, Mass.), had a phenomenal rookie year as a pitcher for Major League Baseball's Detroit Tigers in 1976 and a quirky approach to the game that endeared him to fans. His won-lost record that season was 19–9, and he had an earned run average of 2.34 and 97 strikeouts. Fidrych was named the American League Rookie of the Year and was the starting pitcher for the All-Star game. His career was cut short, however, by a knee injury in spring training in 1977, followed by a rotator cuff injury in an early season game that was not diagnosed until 1985.

Flindt, Flemming, Danish ballet dancer, choreographer, and company director (b. June 30, 1936, Copenhagen, Den.—d. March 3, 2009, Sarasota, Fla.), shocked audiences with his audacious stagings, dark themes, and startling choreography; his first and best-known ballet, *The Lesson* (1963; first performed on television as *Enetime*), was an adaptation of a Eugène Ionesco story and depicts a power-crazed ballet teacher as he abuses and murders female students who fail to meet his exacting standards. Several of Flindt's other ballets featured nudity, notably the Ionesco-inspired *The Triumph of Death* (1971) and *Salome* (1978); he later created such character-based ballets as *The Overcoat* (1989) and *Death in Venice* (1991) for the aging Rudolf Nureyev. Flindt studied with the Royal Danish Ballet (RDB) and in 1955 joined the RDB as a soloist. He excelled at demanding virtuoso leading roles with the RDB and other ballet troupes, including the Paris Opéra Ballet (1960–66), before turning to choreography. As RDB artistic director (1966–78), he introduced modern new productions to the repertoire and worked to broaden the company's appeal. Flindt and his ballerina wife (and frequent star), Vivi Flindt (née Gelker), formed their own short-lived ballet company before settling in Texas, where he was artistic director (1981–89) of the Dallas Ballet.

Foote, Horton (ALBERT HORTON FOOTE, JR.), American playwright and screenwriter (b. March 14, 1916, Wharton, Texas—d. March 4, 2009, Hartford,

Michael Rougier—Time Life Pictures/Getty Images

American playwright Horton Foote

Conn.), evoked American life in beautifully observed minimal stories frequently set in the early 20th century in the fictional small town of Harrison, Texas. His first two plays, *Wharton Dance* (1940) and *Texas Town* (1941), were staged by the American Actors' Company in New York City. Foote's best-known work, *The Trip to Bountiful*, was written as a television play and broadcast in 1953; later that year it was staged on Broadway, and in 1985 it was produced as a film, for which Foote also wrote the Oscar-nominated screenplay. His 1954 play *The Travelling Lady*, with his screenplay, became the film *Baby, the Rain Must Fall* in 1965. Foote won Oscars for screenwriting for the movies *To Kill a Mockingbird* (1962), which he adapted from the novel by Harper Lee, and *Tender Mercies* (1983). He wrote an acclaimed nine-play cycle called *The Orphan's Home* (1980s), and he was honoured with a Pulitzer Prize for drama in 1995 for *The Young Man from Atlanta*.

Foss, Lukas (LUKAS FUCHS), German-born American composer, pianist, and conductor (b. Aug. 15, 1922, Berlin, Ger.—d. Feb. 1, 2009, New York, N.Y.), was known for his experiments with improvisation and aleatory music. He studied in Berlin and Paris and, after moving to the U.S. in 1937, with the

composers Randall Thompson and Paul Hindemith and the conductors Serge Koussevitzky and Fritz Reiner. Foss published his first work at age 15, and in 1945 he became the youngest composer to have won a Guggenheim fellowship. In 1957, while a professor of composition and the orchestra director at the University of California, Los Angeles, he founded the Improvisation Chamber Ensemble, which served as the vehicle for many of his experiments in music generally described as aleatory (chance) and stochastic (based on a system of mathematical probability). In 1963 Foss founded and became director of the Center for Creative and Performing Arts at the State University of New York at Buffalo. Orchestras with which he worked as music director and conductor included the Buffalo Philharmonic (1963–70), as well as the Brooklyn Philharmonia (1971–90; later the Brooklyn Philharmonic) and the Milwaukee Symphony Orchestra (1981–86). Foss's early works, which include symphonic music (*Ode*; first performed in 1945), cantatas, and chamber music, as well as a ballet score (*Gift of the Magi*, 1945), were neoclassical—tonal and well-organized in harmony and counterpoint. One of his early concerti, *Piano Concerto No. 2* (1951, revised in 1953), won a Music Critics' Award. An opera, *Griffelkin* (1955), was commissioned by the National Broadcasting Company and first performed on television. His later chamber pieces, including *Echoi* (1963) and *Elytres* (1964), were considered avant-garde, ordering musical events by means of chance operations and leaving many decisions about the performance to the performers.

Franklin, John Hope, American historian and educator (b. Jan. 2, 1915, Rentiesville, Okla.—d. March 25, 2009, Durham, N.C.), was noted for his scholarly reappraisal of the American Civil War era and the importance of the black struggle in shaping modern American identity. He also helped to fashion the legal brief that led to the historic Supreme Court decision outlawing public school segregation, *Brown v. Board of Education of Topeka* (1954), and was instrumental in the development of African American studies programs at colleges and universities. Franklin first gained international attention with the publication of *From Slavery to Freedom: A History of African Americans* (1947; 8th. ed., 2000). His

American historian and educator John Hope Franklin

other works treating aspects of the American Civil War include *The Militant South, 1800–1861* (1956), *Reconstruction: After the Civil War* (1961), and *The Emancipation Proclamation* (1963). He also edited three books from the Civil War period, as well as several other books, including *Color and Race* (1968) and *Black Leaders of the Twentieth Century* (1982). Later works include *George Washington Williams: A Biography* (1985), *Race and History: Selected Essays, 1938–1988* (1989), and *The Color Line: Legacy for the Twenty-First Century* (1993). In 1995 Pres. Bill Clinton honoured Franklin with the Presidential Medal of Freedom; two years later Clinton appointed the scholar to the seven-member Race Initiative Advisory Board.

French, Marilyn (MARILYN EDWARDS), American author (b. Nov. 21, 1929, Brooklyn, N.Y.—d. May 2, 2009, New York, N.Y.), was a staunch feminist whose works explored her radical beliefs about relationships between the sexes, most notably in her debut novel, *The Women's Room* (1977), in which she maintained that “all men are rapists, and that's all they are” and that women's identities were lost when they married. While completing her studies in philosophy and English literature at Hofstra College, Hempstead, Long Island, N.Y., she married (1950) Robert

French, whom she supported while he completed his law degree. The following year French received a B.A. from Hofstra, and she later (1964) went on to earn an M.A. there. As French pursued a writing career, her marriage failed, and the couple divorced in 1967. After the release of *The Women's Room*, which sold more than 20 million copies and was translated into 20 languages, an eponymous television movie based on the novel debuted in 1980. French's other works include the books *The Bleeding Heart* (1980), *Her Mother's Daughter* (1987), *The War Against Women* (1992), *In the Name of Friendship* (2006), and the four-volume *From Eve to Dawn: A History of Women* (2008) and a number of essays and articles written under the pseudonym Mara Solwoska.

Fuller, Millard Dean, American philanthropist (b. Jan. 3, 1935, Lanett, Ala.—d. Feb. 3, 2009, Americus, Ga.), founded (1976) the Christian charity organization Habitat for Humanity International, which went on to build more than 300,000 quality homes to shelter at least 1.5 million needy people in some 100 countries. The principle of the organization was based on sweat equity—involving future homeowners in the construction of their own homes. Manual labour was provided by thousands of support volunteers, including celebrities and U.S. Presidents Jimmy Carter and Bill Clinton; the latter awarded (1996) Fuller the Presidential Medal of Freedom. In 2005 Fuller resigned from Habitat's board of directors to launch a new organization, the Fuller Center for Housing.

Furchgott, Robert Francis, American pharmacologist (b. June 4, 1916, Charleston, S.C.—d. May 19, 2009, Seattle, Wash.), shared, with Louis J. Ignarro and Ferid Murad, the 1998 Nobel Prize for Physiology or Medicine for the discovery that nitric oxide acts as a signaling molecule in the cardiovascular system. Their combined work uncovered an entirely new mechanism by which blood vessels in the body relax and widen. Furchgott received a B.S. in chemistry (1937) from the University of North Carolina and a Ph.D. in biochemistry (1940) from Northwestern University, Evanston, Ill. He joined SUNY-Brooklyn's department of pharmacology in 1956, a position he held until 1989, when he retired as professor emeritus and became an adjunct professor at the University of Miami

School of Medicine. In the work for which he shared the Nobel Prize, Furchgott demonstrated that cells in the endothelium, or inner lining, of blood vessels produce an unknown signaling molecule. The molecule, which he named endothelium-derived relaxing factor (EDRF), signals smooth muscle cells in blood vessel walls to relax, dilating the vessels. Furchgott also received (1996) the Albert Lasker Basic Medical Research Award.

Gaidar, Yegor Timurovich, Russian economist and government official (b. March 19, 1956, Moscow, Russia, U.S.S.R.—d. Dec. 16, 2009, Odintsovo, Russia), instituted sweeping economic reforms in the early days of post-Soviet Russia that aided the country's transition from communism to capitalism. Gaidar studied economics at Moscow State University (Ph.D., 1980) and, following a stint as a journalist, became (1990) director of the Institute for Economic Policy. Shortly before the fall of the Soviet Union in 1991, he was appointed deputy prime minister and economics minister under Pres. Boris Yeltsin, and he swiftly deregulated prices, slashed spending, and initiated the privatization of industry—measures that became known as “shock therapy.” In June 1992 Gaidar was named acting prime minister, though he was never approved by the legislature and was eventually ousted. After briefly serving (1993–94) as deputy prime minister, he became chairman (1994–2001) of the Democratic Choice of Russia party, and he later served (1999–2004) in the State Duma (lower house of parliament).

Gatti, Arturo, Italian-born Canadian boxer (b. April 15, 1972, Calabria, Italy—found dead July 11, 2009, Porto de Galinhas, Braz.), held two world titles during his 16-year professional career (1991–2007)—the International Boxing Federation (IBF) super featherweight (junior lightweight; 1995–97) and the World Boxing Council (WBC) junior welterweight (2004–05). Gatti's relentless aggression and fierce determination in the ring made him a perennial favourite with boxing fans, and his three brutal nontitle bouts against American Micky Ward (May 18, 2002; Nov. 23, 2002; and June 7, 2003), the latter two of which Gatti won, were considered by many to be among the most exciting fights in boxing history. He retired in 2007 with a career record of 40 wins (31 by knockout) and 9 losses. Although police initially sus-

Al Bello/Getty Images

Canadian boxer Arturo Gatti

pected that Gatti had been murdered by his Brazilian wife, authorities later ruled his death a suicide.

Gelbart, Larry Simon, American writer and librettist (b. Feb. 25, 1928, Chicago, Ill.—d. Sept. 11, 2009, Beverly Hills, Calif.), wrote comedy hits for the stage, screen, and television but was best known for creating the pilot (1972) for the enormously influential TV smash hit program *M*A*S*H*, which he adapted from Robert Altman's 1970 blockbuster film. During *M*A*S*H*'s 11-year TV run (Gelbart remained involved for 4), the show blended comedy and tragedy while following the lives of staff working in a Korean War military field hospital. After shifting his attention to the Broadway stage, Gelbart captured two Tony Awards for best book of a musical: the first in 1963 (with Burt Shevelove and Stephen Sondheim) for *A Funny Thing Happened on the Way to the Forum* (1962; he also wrote the 1966 screenplay) and the second in 1990 for *City of Angels* (1989). Gelbart's credits as a screenwriter include *The Notorious Landlady* (1962), *Oh, God!* (1977), and *Tootsie* (1982); the latter two garnered him Academy Award nominations.

Gelfand, Israil Moiseyevich, Soviet mathematician (b. Sept. 2, 1913, Okny, Ukraine, Russian Empire [now Krasni Okny, Ukr.]—d. Oct. 5, 2009, New

Brunswick, N.J.), was a pioneer in several fields of mathematics; his work in integral geometry provided the mathematical foundations for computed tomography (used in medical imaging), and his representation theory became the foundation used by physicists working with quantum mechanics. Among his most important results are the Gelfand representation of a Banach algebra, the Gelfand-Naimark theorem on C^* -algebras, and the Bernstein-Gelfand-Gelfand resolution for representation of simple Lie groups. In 1958, when his son Aleksandr was stricken with leukemia, Gelfand developed an interest in cell biology and was involved in establishing the Institute of Biological Physics of the Academy of Sciences of the U.S.S.R. Gelfand took an interest in mathematics education and set up correspondence programs in both the Soviet Union and the U.S. He was a recipient of the Order of Lenin (three times), the Kyoto Prize (1989), and the Leroy P. Steele Prize for Lifetime Achievement of the American Mathematical Society (2005).

George, Eddie (EDWARD ALAN JOHN GEORGE, BARON GEORGE OF ST. TUDY IN THE COUNTY OF CORNWALL; “STEADY EDDIE”), British economist and central banker (b. Sept. 11, 1938, Carshalton, near London, Eng.—d. April 18, 2009, St. Tudy, Cornwall, Eng.), as the outspoken inflation-fighting governor (1993–2003) of the Bank of England (BOE), guided the U.K. central bank to independence (1997) and thus full control over the country's monetary policy without undue political influence from the elected government. After studying economics at Emmanuel College, Cambridge, George served briefly in the Royal Air Force. He joined the BOE in 1962 and worked mainly in its international section. He was seconded to the Bank of International Settlements in the mid-1960s and the International Monetary Fund in the early 1970s. George was promoted to BOE executive director in 1982 and to deputy governor in 1990. In 1991 George faced criticism for his role in the collapse of the Bank of Credit and Commerce International when an official inquiry uncovered a series of failures in the BOE's systems of supervision and communication. He reestablished his reputation by his adept handling of the U.K.'s embarrassing withdrawal from the European exchange-rate mechanism in September 1992. His reward was promotion to

BOE governor in July 1993; he retired in 2003 at the end of his second five-year term. George was knighted in 2000 and made a life peer in 2004.

Gibson, Henry (JAMES BATEMAN), American actor and comedian (b. Sept. 21, 1935, Germantown, Philadelphia, Pa.—d. Sept. 14, 2009, Malibu, Calif.), won audiences over with his sly deadpan delivery as a placid reciter of ridiculous self-penned poetry in the 1960s television variety show *Rowan & Martin's Laugh-in*. Gibson also enjoyed a long movie and television career as a character actor and comic, appearing, most notably, in such Robert Altman-directed films as *The Long Goodbye* (1973) and the country-music masterpiece *Nashville* (1975) and such screen comedies as *The Nutty Professor* (1963), *The Blues Brothers* (1980), and *Wedding Crashers* (2005).

Ginzburg, Vitaly Lazarevich, Russian physicist and astrophysicist (b. Oct. 4 [Sept. 21, Old Style], 1916, Moscow, Russia—d. Nov. 8, 2009, Moscow), won the Nobel Prize for Physics in 2003 for his pioneering work in the 1950s on superconductivity. He shared the award with Alexey A. Abrikosov of Russia and Anthony J. Leggett of Great Britain. Ginzburg was also noted for his work on theories of radio wave propagation, radio astronomy, and the origin of cosmic rays. In addition, he was a member of the team that worked under physicist Igor Tamm to develop the first Soviet thermonuclear bomb; the bomb's design, first proposed by Andrey Sakharov in 1948 and refined by Ginzburg in 1949, was tested on Aug. 12, 1953. Ginzburg received the State Prize of the Soviet Union in 1953 and the Lenin Prize in 1966.

Goody, Jade Cerisa Lorraine, British reality television celebrity (b. June 5, 1981, London, Eng.—d. March 22, 2009, Upshire, Essex, Eng.), turned a stint in 2002 on the British reality TV show *Big Brother* into a lucrative high-profile public life, which was abruptly cut short by her equally public struggle with cervical cancer.

Gottschalk, Alfred, American rabbi and religious scholar (b. March 7, 1930, Oberwesel, Ger.—d. Sept. 12, 2009, Cincinnati, Ohio), as one of the principal institutional leaders within Reform Judaism, ordained the first women rabbis in the U.S. and Israel and oversaw the creation and development of

American rabbi and religious scholar
Alfred Gottschalk

the United States Holocaust Memorial Museum. As a Jewish child in Nazi Germany, Gottschalk was witness to pervasive anti-Semitic intimidation, and in 1939 he fled with his family to the U.S. He studied at Brooklyn (N.Y.) College (B.A., 1952) and Hebrew Union College—Jewish Institute of Religion, which, two years after his rabbinical ordination (1957), assigned him to direct its Los Angeles branch. In 1965 Gottschalk received a Ph.D. from the University of Southern California. Six years later he was named president of Hebrew Union, where he preserved its reputation as the intellectual locus of Judaism's liberal Reform movement until his retirement in 2000. A tireless reformer, he founded (1968) the School of Jewish Communal Service in Los Angeles and later served (2000–03) as president of the Museum of Jewish Heritage, New York City.

Granger, Sir Clive William John, Welsh economist (b. Sept. 4, 1934, Swansea, Wales—d. May 27, 2009, San Diego, Calif.), was corecipient (with the American economist Robert F. Engle) of the Nobel Prize in Economic Sciences in 2003 for his development of techniques for analyzing time series data with common trends. Granger attended the University of Nottingham (B.A., 1955; Ph.D., 1959), where he became a lecturer in statistics in the mathematics department. He spent some three decades (1974–2003; emeritus from 2003) as a professor at the University of California, San Diego.

Granger's books cover such subjects as time series analysis and forecasting, statistical theory, and applied statistics. In his seminal work, conducted in the 1970s and '80s, he developed concepts and analytic methods to establish meaningful relationships between non-stationary variables, such as exchange rates and inflation rates. Fundamental to his methods was his discovery that a specific combination of two or more nonstationary time series could be stationary, a combination for which he invented the term *cointegration*. Through his cointegration analysis, Granger showed that the dynamics in exchange rates and prices, for example, are driven by a tendency to smooth out deviations from the long-run equilibrium exchange rate and short-run fluctuations around the adjustment path. Despite spending most of his career in the U.S., Granger retained his British citizenship and was granted a knighthood in 2005.

Green, Archie (AARON GREEN), Canadian-born American folklorist (b. June 29, 1917, Winnipeg, Man.—d. March 22, 2009, San Francisco, Calif.), spent most of his lifetime gathering and preserving the songs, customs, beliefs, rituals, craft, and stories associated with union labourers, what he coined "laborlore," and successfully lobbied (1969–76) the U.S. Congress in the passage of the American Folklife Preservation Act, which resulted in the creation of the American Folklife Center (AFC) at the Library of Congress. Green specialized in occupational folklore and hillbilly music.

Greenwich, Ellie (ELEANOR LOUISE GREENWICH), American songwriter (b. Oct. 23, 1940, Brooklyn, N.Y.—d. Aug. 26, 2009, New York, N.Y.), harnessed the emotional earnestness of teenage love in a series of pop music songs that became iconic classics of the 1960s. Greenwich co-wrote such infectious girl-group hits (for the Shangri-Las, the Dixie Cups, the Crystals, and others) as "Leader of the Pack" and "Chapel of Love," but she scored her greatest successes with songwriting partner and husband Jeff Barry, who inspired her song "(Today I Met) The Boy I'm Gonna Marry" and with whom she penned "River Deep—Mountain High," "Baby I Love You," and "Be My Baby."

Grene, Marjorie (MARJORIE GLICKSMAN), American philosopher (b. Dec. 13, 1910, Milwaukee, Wis.—d. March

16, 2009, Blacksburg, Va.), was considered the founder of the philosophy of biology. Grene was known for her innovative theories on the nature of the scientific study of life and was one of the first to offer an interpretation of the philosophical meaning of random events that occur in the course of evolution. She also addressed the philosophical impacts of the inevitable increase in the understanding of evolutionary science and contributed to new ideas in epistemology—the philosophy of the nature of knowledge. Grene received a degree in zoology (1931) from Wellesley (Mass.) College and a Ph.D. in philosophy (1935) from Radcliffe College, Cambridge, Mass. In 2002 Grene became the first woman included in Southern Illinois University's Library of Living Philosophers series. Her works include *The Philosophy of Biology: An Episodic History* (2004; with David Depew).

Gwathmey, Charles, American architect (b. June 19, 1938, Charlotte, N.C.—d. Aug. 3, 2009, New York, N.Y.), was celebrated for his geometric-inspired Modernist architecture. Early in his career Gwathmey gained prominence as the youngest of five New York City-based architects (together with Michael Graves, Peter Eisenman, John Hejduk, and Richard Meier) influenced by the Modernist ideals of Swiss architect Le Corbusier; the group was called alternately the Five, the New York School, or the Whites (for the colour that dominated most of their buildings) and was the subject of the book *Five Architects* (1972). Gwathmey studied architecture at the University of Pennsylvania and Yale University (M.Arch., 1962). His meteoric rise to prominence began with the construction of his parents' home in Amagansett, N.Y., completed in 1966. The structure displayed what would become hallmarks of Gwathmey's work: bold geometric shapes wound seamlessly—and unapologetically—together. Gwathmey Siegel & Associates, the firm that he founded in 1968 with fellow architect Robert Siegel, was noted for bridging the divide between small and large projects, creating massive public buildings (especially museums) as well as private homes for exclusive clients.

Hakim, 'Abd al-'Aziz al-, Iraqi political leader (b. 1950, Al-Najaf, Iraq—d. Aug. 26, 2009, Tehran, Iran), became head of Iraq's largest Shi'ite political party after years of opposing the

regime of Saddam Hussein. Hakim was a member of a prominent clerical family that supported Shi'ite opposition political groups in Iraq and went into exile in Iran in 1980, shortly before the outbreak of the Iran-Iraq War (1980–90). In Iran, Hakim and his brother Ayatollah Muhammad Baqir al-Hakim established (1982) the Supreme Council for the Islamic Revolution in Iraq. While his brother chaired the organization, Hakim commanded its military arm, the Badr Organization, which fought with Iran in the Iran-Iraq War. Both brothers returned to Iraq shortly after the U.S.-led invasion in 2003. In July of that year, Hakim became a member of the Iraqi Governing

Behrouz Mehri—AFP/Getty Images

Iraqi political leader 'Abd al-'Aziz al-Hakim

Council appointed by the Coalition Provisional Authority. When his brother was killed by a car bomb in August, Hakim took over the leadership of the Supreme Council for the Islamic Revolution in Iraq (from 2007, the Islamic Supreme Council of Iraq) and built the Shi'ite political coalition the United Iraqi Alliance, which came to power in the December 2005 elections for the Transitional National Assembly.

Harmel, Pierre (PIERRE-CHARLES-JOSÉ-MARIE HARMEL), Belgian statesman (b. March 16, 1911, Uccle, Belg.—d. Nov. 15, 2009, Brussels, Belg.), was briefly prime minister of Belgium (1965–66), but he was best known for promoting NATO as a peacekeeping or-

ganization in a document that became known as the Harmel doctrine. The influence of this doctrine was felt in the introduction of the 1975 Helsinki Accords, which aided in the easing of relations between the Communist bloc and the West. Harmel began his career as a lawyer and professor before entering the political realm as a UN delegate in 1949. He held a number of governmental posts before serving an eight-month term as prime minister. It was in his role as Belgium's foreign minister (1966–73) that he began to examine NATO and its objectives. His career also included stints as speaker of the Belgian Senate and minister of state. He was made a count in 1991.

Harvey, Paul (PAUL HARVEY AURANDT), American radio commentator (b. Sept. 4, 1918, Tulsa, Okla.—d. Feb. 28, 2009, Phoenix, Ariz.), enthralled some 24 million listeners via more than 1,200 radio stations throughout the U.S. with his down-to-earth conservative radio programs during a career that spanned nearly 60 years; he was dubbed “the voice of Middle America” and “the voice of the silent majority.” Harvey's no-nonsense approach to news and editorials, laced with long pauses for suspense, along with the genuine warmth and humour that he brought to human-interest stories, created a personal connection with listeners. After being discharged from the Army Air Corps in 1944, Harvey became a broadcaster at Chicago radio station WENR. In 1951 his show, *Paul Harvey News and Comment*, was syndicated by ABC. By 1976 Harvey had begun producing a new show, *The Rest of the Story*, which featured short biographical accounts of famous people whose identities were not revealed until the end of the program. In 2000 Harvey signed a 10-year, \$100 million contract. Aside from a brief hiatus in 2001 due to a throat malady, he continued to broadcast until shortly before his death. Harvey was awarded the Presidential Medal of Freedom in 2005.

Haugland, Knut Magne, Norwegian soldier and adventurer (b. Sept. 23, 1917, Rjukan, Nor.—d. Dec. 25, 2009, Oslo, Nor.), played a prominent role in the Norwegian resistance during World War II and later captured the public's imagination as a member of the fabled *Kon-Tiki* expedition. Haugland trained in the army as a radio technician and saw combat in the German invasion of Norway (1940). He was better known,

however, for his exploits as a commando in the resistance movement, in particular his role in a daring raid in 1943 on a Norwegian hydroelectric plant feared to be sought by Germany as a source of atomic power; after extensive planning, he and others successfully destroyed the facility's supply of heavy water. Haugland's feats of bravado earned him numerous decorations, including Norway's War Cross with Sword and Britain's Distinguished Service Order. Following the war, he was a radio operator on the *Kon-Tiki*, a balsa-wood raft that sailed (1947) from Peru to French Polynesia to test a theory about pre-Columbian migration patterns. Haugland resumed his military career in the ensuing decades, rising to lieutenant colonel, and served as director of both the Kon-Tiki Museum (1949–90) and the Norwegian Resistance Museum (1963–83).

Hayami, Masaru, Japanese government official (b. March 24, 1925, Kobe, Japan—d. May 16, 2009, Tokyo, Japan), as governor (1998–2003) of the Bank of Japan (BOJ), introduced striking reform to the Japanese banking system in a bid to revive the country's slumping economy. Hayami was educated at the Tokyo University of Commerce and began work at the BOJ in 1947; he remained at the central bank for 34 years and worked in New York City and London. He left the bank in 1981 and assumed a position as senior managing director at Nissho Iwai Corp., a Japanese trading firm, becoming president of the corporation three years later and then presiding (1987–94) as chairman. From 1992 to 1998, he served as chairman of the board of trustees at Tokyo Women's Christian University. In his term as governor of the BOJ, Hayami cut (1999) interest rates to zero and led the bank to buy (2002) \$24 billion in stock holdings from large commercial banks in Japan.

Hewitt, Don (DONALD SHEPARD HEWITT), American television producer (b. Dec. 14, 1922, New York, N.Y.—d. Aug. 19, 2009, Bridgehampton, N.Y.), was best known as the creator and longtime producer (1968–2004) of the compelling television newsmagazine *60 Minutes*, which combined hard-hitting investigative reporting with candid profiles and interviews of celebrities and news makers. After serving as a war correspondent in World War II, Hewitt joined (1948) CBS. He directed its first televised evening news broadcast, with

Douglas Edwards (1948–62), and Edward R. Murrow's *See It Now* (1951–58) news show. He also served (1960–65) as the first executive producer of the *CBS Evening News* featuring Walter Cronkite (*q.v.*), and he produced (1960) the first-ever televised U.S. presidential debate—a forum for Richard M. Nixon and John F. Kennedy. Hewitt was the recipient of eight Emmy Awards and an Edward R. Murrow Award (2008).

Hughes, John Wilden, Jr., American filmmaker (b. Feb. 18, 1950, Lansing, Mich.—d. Aug. 6, 2009, New York, N.Y.), captured the essence of teen angst in comedic coming-of-age tales that he wrote for the big screen and also directed, notably the iconic films *Sixteen Candles* (1984), *The Breakfast Club* (1985), and *Ferris Bueller's Day Off*

KPA Honorar & Belege—United Archives GmbH/Alamy

American filmmaker John Hughes

(1986); he also captivated audiences with such comedies as *Planes, Trains and Automobiles* (1987) and wrote the screenplays for such films as *Mr. Mom* (1983), *Pretty in Pink* (1986), and three of the four Home Alone movies (1990, 1992, 1997). Other credits include screenplays written under the pseudonym Edmond Dantes. His last film as a director was *Curly Sue* (1991).

Iz the Wiz (MICHAEL MARTIN), American graffiti artist (b. Nov. 30, 1958, New York, N.Y.—d. June 17, 2009, Spring Hill, Fla.), painted his name hundreds of times on New York City subway cars, earning a reputation as one of the most

prolific graffiti artists of the 1970s and '80s. His style was marked by legible letters filled with colourful designs and often an inclusion of rock music lyrics. Iz never knew his father and grew up in foster homes in New York City after his mother was imprisoned. He began spray painting, or tagging, at age 14, and in 1975 a poster for the Broadway musical *The Wiz* inspired his name and trademark tag. He specialized in tagging the A-line subway, but he was said to have put his tag on every subway line more times than anyone else, making him an "all-city king." Iz said that in 1982 each night he painted more than 100 throw-ups (quickly done tags) and that during 1981–82 he painted at least 25 complete subway cars. In the mid-1980s Iz retired to Florida, where he suffered from financial troubles and drug abuse, but in the 1990s he resumed work in spaces approved for graffiti. His work was featured in books, documentaries, and galleries.

Jackson, Michael Joseph, American singer, songwriter, and dancer (b. Aug. 29, 1958, Gary, Ind.—d. June 25, 2009, Los Angeles, Calif.), was the most popular entertainer in the world in the early and mid-1980s. Jackson began his lifelong performance career as the youngest and most talented of five brothers known as the Jackson 5. Sporting the loudest fashions, the largest Afros, the snappiest choreography, and a youthful, soulful exuberance, the group scored (1969–70) four consecutive number one pop hits: "I Want You Back," "ABC," "The Love You Save," and "I'll Be There." Michael also topped the pop charts as a solo performer with "Ben," and "Rockin' Robin" reached number two on the charts. As Michael matured, his voice changed, family tensions arose, and a contract standoff ensued. The Jackson 5 finally broke with Motown Records, moving to Epic Records as the Jacksons. Michael's first solo effort with Epic, *Off the Wall* (1979), exceeded all expectations and became the best-selling album of the year (it had since sold more than 20 million copies) and yielded the international hit singles "Don't Stop 'til You Get Enough" and "Rock with You," both of which showcased Jackson's energetic style and capitalized on the contemporary disco dance fad. Three years later he returned with *Thriller*, a tour de force that featured an array of guest stars and elevated him to a worldwide superstar. The album captured numerous awards,

Reed Saxon/AP

The “King of Pop” Michael Jackson

including a record-setting eight Grammys; remained on the charts for more than two years; and sold more than 40 million copies, long holding the distinction of being the best-selling album in history. The album’s second single, “Billie Jean,” an electrifying dance track and the vehicle for Jackson’s trademark “moonwalk” dance, topped the pop charts, as did “Beat It,” which featured a raucous solo from famed guitarist Eddie Van Halen. Moreover, “Beat It” helped to break down the artificial barriers between black and white artists on the radio and in the emerging format of television music videos, while the electrifying 14-minute “Thriller” video (1983) became a cultural icon and set a new standard for production values in the genre. By the late 1980s Jackson was renowned worldwide as the “King of Pop.” His much-anticipated Victory reunion tour with his brothers was one of the most popular concert events of 1984. Further solo albums—notably *Bad* (1987) and *Dangerous* (1991)—solidified “Jacko’s” dominance in pop music. In 2001 he was inducted into the Rock and Roll Hall of Fame; the Jackson 5 had been inducted in 1997. Despite his professional success, Jackson’s eccentric, secluded lifestyle grew increasingly controversial in later years, clouded by allegations of child molestation in 1993, two brief marriages (one to Lisa Marie Presley [1994–96] and the other to Debbie Rowe [1996–99], the mother of two of his three children), an arrest on child molestation charges in 2003,

and finally, a financial collapse that nearly resulted in the loss of his lavish Neverland ranch.

Jagan, Janet (JANET ROSALIE ROSENBERG), American-born Guyanese politician (b. Oct. 20, 1920, Chicago, Ill.—d. March 28, 2009, Georgetown, Guyana), as president of Guyana from Dec. 19, 1997, to Aug. 11, 1999, was the country’s first white president and the first elected female president in South America. She was born into a middle-class Jewish family and attended college in Michigan. In 1942, while working as a student nurse in Chicago, she met Cheddi Jagan, a dentistry student from what was then British Guiana. The following year they were married and moved to Georgetown, British Guiana, where he set up a dental practice. They both became active in politics and cofounded (1950) the People’s Progressive Party (PPP), with a goal of gaining independence for the colony, which it achieved in 1966. She officially became a citizen of Guyana that year, having been stripped of her U.S. citizenship more than 20 years earlier because of her Marxist political views. While her husband served as prime minister (1953; 1961–64) and president (1992–97), Jagan held several cabinet posts and served in the parliament. She was also the PPP’s secretary-general for nearly 20 years. After her husband died in office, Jagan, although hesitant at first to run for the presidency, accepted the PPP’s nomination. Despite criticisms of her ethnicity and age, she defeated People’s National Congress leader Desmond Hoyte in the election on Dec. 15, 1997. Hoyte’s supporters protested the result so vehemently that, in an effort to quell the unrest, Jagan and Hoyte reached an agreement in January 1998 to hold new elections in 2000, two years earlier than required. Demonstrations continued throughout her presidency, however. In July 1999 Jagan suffered a mild heart attack, and the following month she stepped down.

Jameson, Betty (ELIZABETH MAY JAMESON), American golfer (b. May 9, 1919, Norman, Okla.—d. Jan. 31, 2009, Boynton Beach, Fla.), shot a 295 to capture the 1947 U.S. Women’s Open and thereby became the first female golfer to break 300 in a 72-hole tournament. Three years later she was one of the 13 founding members of the Ladies Professional Golf Association (LPGA); she went on to compete in LPGA events until 1970. As a professional, Jameson

won a total of 12 tournaments; she also won 14 amateur titles, including U.S. amateur championships in 1939 and 1940. In 1951 she was inducted into the Hall of Fame of Women’s Golf, and in 1967 she was one of the six original inductees of the LPGA Tour Hall of Fame. In addition, in 1999 Jameson was named to the Women’s Sports Foundation Hall of Fame.

Jarre, Maurice-Alexis, French composer (b. Sept. 13, 1924, Lyon, France—d. March 29, 2009, Malibu, Calif.), wrote the music sound tracks for more than 150 motion pictures, of which 3—*Lawrence of Arabia* (1962), *Doctor Zhivago* (1965), and *A Passage to India* (1984)—earned him the Academy Award for best original score and another 5—*Les Dimanches de Ville d’Avray* (1962; *Sundays and Cybele*), *The Message* (1976), *Witness* (1985), *Gorillas in the Mist* (1988), and *Ghost* (1990)—received nominations for the score. For many people, however, his best-known work was the balalaika-infused song “Lara’s Theme,” which was drawn from the *Doctor Zhivago* score. Jarre studied engineering at the Sorbonne before transferring to the Paris Conservatory, and he served as music director for the Théâtre National Populaire for more than a decade. His first movie sound track was for the short documentary *Hôtel des Invalides* (1952), and he was soon in demand by filmmakers on both sides of the Atlantic. Although Jarre was especially known for his lush melodies, he was sensitive to the needs of the script and often incorporated exotic motifs, ethnic instruments, and electronic effects to enhance the drama onscreen. His varied film scores include *The Longest Day* (1962), *Paris brûle-t-il?* (1966; *Is Paris Burning?*), *Ryan’s Daughter* (1970), *The Life and Times of Judge Roy Bean* (1972, including the Oscar-nominated song “Marmalade, Molasses & Honey”), *The Man Who Would Be King* (1975), *Die Blechtrommel* (1979; *The Tin Drum*), *The Year of Living Dangerously* (1982), *Dead Poet’s Society* (1989), and *A Walk in the Clouds* (1995). He also composed symphonic music and scores for such television films as *Uprising* (2001). Jarre was an officer of the Legion of Honour, and in February 2009 he was awarded the Berlin Film Festival’s Golden Bear for Lifetime Achievement.

Jeanne-Claude (JEANNE-CLAUDE DENAT DE GUILLEBON), French environmental artist (b. June 13, 1935,

Dominic Favre—Keystone/AP

French environmental artist Jeanne-Claude

Casablanca, Mor.—d. Nov. 18, 2009, New York, N.Y.), was originally described as the publicist and business manager for her artist husband, Christo, but from 1994 she received equal billing with him in all creative and administrative aspects of their work, notably their controversial outdoor sculptures and huge temporary displays of fabrics and plastics. Jeanne-Claude was born in Morocco, where her father was a general in the French army. She received (1952) a bachelor's degree in Latin and philosophy from the University of Tunis. In 1958 she met Christo Javacheff, who was already working in Paris as an artist; the next year she left her then husband to marry Christo. In 1964 the pair relocated to New York City. Christo and Jeanne-Claude's first joint works included *Dockside Packages* (1961; Cologne, Ger.) and *Iron Curtain—Wall of Oil Drums* (1962; Paris). Their best-known "wrapped" projects involved such natural and man-made features as a 2.4-km (1.5-mi) span of coastline in Little Bay near Sydney (draped with 90,000 sq m [1,000,000 sq ft] of synthetic fabric in 1969), the Pont Neuf (bridge) in Paris (covered in beige cloth in 1985), and Berlin's Reichstag (parliament) building (wrapped in metallic silver fabric in 1995). In an ambitious 1991 project, the couple installed 1,340 giant blue umbrellas across the Sato River valley in Japan and 1,760 giant yellow ones in

Tejon Pass, California. *The Gates, Central Park, New York City, 1979–2005*, built in 2005 along 37 km (23 mi) of walkway in Central Park, featured 7,503 steel gates standing 5 m (16 ft) high and decorated with saffron-coloured cloth panels. Most of the duo's installations were documented in print and on film.

Johansson, Ingemar (JENS INGEMAR JOHANSSON; "HAMMER OF THOR"), Swedish boxer (b. Sept. 22, 1932, Göteborg, Swed.—d. Jan. 30, 2009, Kungsbäck, Swed.), was world heavyweight boxing champion from June 26, 1959, when he scored a third-round knockout against the heavily favoured titleholder, Floyd Patterson of the U.S., until he was, in turn, knocked out by a revitalized Patterson in the fifth round of their rematch on June 20, 1960. Johansson lost a second rematch on March 13, 1961. He represented Sweden at the 1952 Helsinki Olympic Games but was disqualified in his semi-final bout against American Ed Sanders; Johansson rarely threw a punch during the fight, and the referee felt that the boxer was not giving his best. (Not until 1982 did the International Olympic Committee award him the silver medal.) In December 1952 Johansson turned professional. He won the European heavyweight title in 1956 against Francesco Cavicchi, and in 1958 he scored a one-round knockout over Eddie Machen, a leading American heavyweight, before facing Patterson the next year. Johansson won the European heavyweight championship again in 1962 against Dick Richardson, forfeited the title in 1963 for failing to defend it, and then retired in 1963 with a record of 26 wins (17 by knockouts) and 2 losses—to Patterson, the only defeats in his professional career.

Jones, Jack (JAMES LARKIN JONES), British trade union leader (b. March 29, 1913, Liverpool, Eng.—d. April 21, 2009, London, Eng.), as general secretary (1969–78) of the Transport and General Workers' Union (TGWU) and thus a central figure in the Trade Unions Congress (TUC), guided one of the world's largest trade unions, which in 1978 had a membership of some two million workers. Jones's power was so great, especially during Labour Prime Minister Harold Wilson's second government (1974–76), that he earned the nickname "Emperor Jones" for his extraordinary control of pro-labour regulations and parliamentary legislation. In the 1970s Jones supported the con-

troversial Social Contract, which proffered wage restraints in partnership with the government, and he deplored the widespread strikes during the so-called Winter of Discontent (1978–79) that led to the election in 1979 of Conservative Prime Minister Margaret Thatcher. Jones was made MBE in 1950 and appointed a Companion of Honour in 1978. His autobiography, *Union Man*, was published in 1986.

Jones, Jennifer (PHYLIS LEE ISLEY), American actress (b. March 2, 1919, Tulsa, Okla.—d. Dec. 17, 2009, Malibu, Calif.), lit up movie screens in the 1940s and '50s with her luminous performances in roles that alternated between fresh-faced naifs and tempestuous vixens. She won (1943) a best actress Academy Award for her star-making turn as a French peasant girl (St. Bernadette of Lourdes) in *The Song of Bernadette* (1943). Jones attended the American Academy of Dramatic Arts in New York City, and after appearing in a series of bit movie parts, she landed an audition with Hollywood mogul David O. Selznick, who signed her to a contract and promoted her as a rising star. Following the success of *The Song of Bernadette*, her first leading role, Jones captured successive Oscar nominations for *Since You Went Away* (1944), *Love Letters* (1945), and *Duel in the Sun* (1946); a final nomination came for *Love Is a Many-Splendored Thing* (1955). Much of her career was molded by Selznick, whom she married

American actress Jennifer Jones

Silver Screen Collection—Hulton Archive/Getty Images

in 1949 (she divorced actor Robert Walker in 1945). After Selznick's death in 1965, she appeared in only three more films; her last movie was *The Towering Inferno* (1974).

Jones, Uriel, American musician (b. June 13, 1934, Detroit, Mich.—d. March 24, 2009, Dearborn, Mich.), provided his characteristic hard-driving beat for numerous Motown hits while playing as a member (1963–72) of the label's house studio band, the Funk Brothers. Jones's interest in music began during his troubled teenage years while at the Moore School for Boys, where he first experimented with the trombone until he found his true calling as a drummer. During the early 1960s Jones toured with Marvin Gaye's band, but his biggest success came when he was recruited by Motown to play drums for the Funk Brothers. Jones could be heard beating out the rhythm for such chart-topping hits as "Ain't Too Proud to Beg," "I Heard It Through the Grapevine," "My Girl," "Signed, Sealed, Delivered, I'm Yours," and "Ain't No Mountain High Enough." Although the studio musicians were not originally credited for their work, Jones and others were finally recognized for their contributions in the documentary film *Standing in the Shadows of Motown* (2002) and were honoured in 2004 with a Grammy Award for lifetime achievement.

Kaplicky, Jan, Czech-born architect (b. April 18, 1937, Prague, Czech. [now Czech Rep.]—d. Jan. 14, 2009, Prague), created futuristic organically inspired designs that challenged some of the most basic ideas of modern architecture. His best-known designs were for the spaceshiplike semimonocoque Media Centre at Lord's Cricket Ground in London, which in 1999 won the Royal Institute of British Architects (RIBA) Stirling Prize, and the aluminum-covered, virtually windowless Selfridges department store in Birmingham, Eng., which won a RIBA Award in 2004. In 2007 Kaplicky's undulating "blob" design won the international competition to build a Czech National Library, but the Czech government refused to fund the project.

Katzir, Ephraim (EPHRAIM KATCHALSKI), Russian-born Israeli scientist and politician (b. May 16, 1916, Kiev, Ukraine, Russian Empire [now in Ukraine]—d. May 30, 2009, Rehovot, Israel), as the fourth president of Israel (1973–78), attempted to close the wide

Ya'akov Sa'ar—GPO/Getty Images

*Israeli scientist and politician
Ephraim Katzir*

gap that existed in education and social welfare between Sephardic and Oriental Jews and Ashkenazic Jews and to promote understanding between Israeli Jews and their Arab neighbours. Katzir moved with his family to Palestine when he was nine years old. After graduating from the Hebrew University of Jerusalem, he became an assistant in the university's department of theoretical and macromolecular chemistry (1941–45). During this period he was also a research fellow at Columbia University, New York City, and was active in the preindependence Jewish underground army, Haganah, to which he became scientific adviser. In 1949 Katzir was appointed acting head of the department of biophysics in the Weizmann Institute of Science at Rehovot, and he later became its director. A recognized authority on proteins, he was the first Israeli elected (1966) to the U.S. National Academy of Sciences. From 1966 to 1968 he was chief scientific adviser to the Israeli Ministry of Defense. Katzir was a member of the ruling Labour Party, and in 1973 he was elected president of Israel in a secret ballot of the Knesset (parliament).

Kell, George Clyde, American baseball player (b. Aug. 23, 1922, Swifton, Ark.—d. March 24, 2009, Swifton), was a slugging third baseman who played for 15 seasons (1943–57) for a succession of teams in the American League (AL), including the Philadelphia Athletics, the Detroit Tigers, the Boston Red Sox, the Chicago White Sox, and the Baltimore Orioles, and amassed a ca-

reer batting average of .306; in each year from 1946 to 1953 he topped .300, and in 1949 he edged out Ted Williams for the AL batting title. Kell, who also was named to 10 AL All-Star teams, was inducted into the Baseball Hall of Fame in 1983. After he retired as a player, he served (1959–96, with the exception of 1964) as the easygoing radio and television announcer for the Tigers.

Kelton, Elmer, American novelist (b. April 29, 1926, Andrews, Texas—d. Aug. 22, 2009, San Angelo, Texas), penned dozens of westerns, notably *The Good Old Boys* (1978; filmed 1995), that were recognized for their sharply drawn characters and historical verisimilitude. Kelton served (1944–46) in the U.S. Army before receiving a journalism degree (1948) from the University of Texas at Austin. The son of a cowman, he marked his debut as a fiction writer with *Hot Iron* (1956), about cattle ranching in Texas, and his many subsequent novels earned him numerous prizes, including the National Cowboy Hall of Fame's Western Heritage Award (four times) and the Western Writers of America's Spur Award (seven times); in 1995 the latter group also voted him the best western author of all time.

Kemp, Jack French, Jr., American politician and football player (b. July 13, 1935, Los Angeles, Calif.—d. May 2, 2009, Bethesda, Md.), after an illustrious career with the American Football League (AFL), became one of the country's leading conservative politicians following his election in 1970 to the U.S. House of Representatives; he represented suburban Buffalo, N.Y., for nine terms (1971–89) and was the Republican nominee for vice president in 1996. Earlier, Kemp was a standout quarterback on the football team at Occidental College in Los Angeles, where he earned a B.A. (1957). After brief stints with various professional teams, Kemp signed (1962) with the Buffalo Bills of the AFL. He led the Bills to the AFL championship in 1964 and again in 1965, when he also won the league's most valuable player award. He was named seven times to the AFL All-Star team and retired from the game in 1969 as the AFL's all-time leader in passing yards with 21,130.

Kenan, Amos (AMOS LEVINE), Israeli journalist, writer, and artist (b. May 2, 1927, Tel Aviv, British Palestine—d. Aug. 4, 2009, Tel Aviv, Israel), was a member of the Lehi (Stern Gang)

paramilitary group that fought for Israeli independence from the U.K., but he was strongly influenced by the anti-religious Canaanite movement that campaigned for an all-inclusive secular Israel based on “Hebrew” culture rather than a religious Jewish state. After having served in the Israel Defense Forces and been wounded in the 1948 Arab-Palestinian war, Kenan wrote (1951–52) a satiric antiestablishment column in the newspaper *Haaretz*. He lost his job when he was arrested on suspicion of planning to assassinate a government minister who was promoting a ban on driving on the Sabbath. Kenan was acquitted and in 1954 moved to Paris, where he worked as a sculptor, wrote plays, and contributed articles to French, Israeli, and American publications. Returning to Israel in 1962, he composed a column for the newspaper *Yedioth Aharonoth* and wrote more than a dozen volumes of Hebrew-language fiction, poetry, and essays. Kenan was a longtime supporter of the so-called two-state solution and in 1970 co-founded the Israeli-Palestinian Council.

Kennedy, Edward Moore (TED), American politician (b. Feb. 22, 1932, Boston, Mass.—d. Aug. 25, 2009, Hyanis Port, Mass.), was a respected U.S. senator (1962–2009), as well as a prominent figure in the Democratic Party and in liberal politics in general for more than four decades. Kennedy, the youngest child of Rose and Joseph P. Kennedy and the last surviving brother of Pres. John F. Kennedy, was also a noteworthy spokesman for the policies that had come to be associated with his family name—i.e., support for social welfare legislation and active participation in world affairs. After graduating (1956) from Harvard University, Kennedy studied at the International Law School, The Hague, and received a law degree (1959) from the University of Virginia. He campaigned for his brother John in the 1960 presidential race and two years later was elected to the president’s former Senate seat representing Massachusetts. Although an injury prevented him from campaigning actively for reelection in 1964, Kennedy was swept back into office for a full six-year term by a landslide vote. Early in 1969 he was elected Senate majority whip, and he became an early front-runner for the next Democratic presidential nomination. Then, on the night of July 18, 1969, he accidentally drove his car off an unmarked bridge on Chappaquiddick Is-

Office of U.S. Senator Edward M. Kennedy

American political icon Ted Kennedy

land, near Martha’s Vineyard, Massachusetts, and his companion in the car, 28-year-old Mary Jo Kopechne, was drowned. Kennedy was found guilty of leaving the scene of an accident. Although he was reelected to the Senate in 1970, he announced that he would not seek the presidency in 1972. He was a serious contender for the presidential nomination again in 1980 but withdrew from the race during the convention. Kennedy won reelection to eight full terms as senator; the last time in 2006, and became known as the “lion of the Senate,” serving as a leading advocate for many liberal causes, including voting rights, fair housing, consumer protection, and national health insurance. At the same time, he was recognized for his willingness to cooperate with Republicans to advance important legislation, such as the No Child Left Behind Act (2001). In May 2008 Kennedy was diagnosed with a malignant brain tumour. On March 4, 2009, he was granted an honorary British knighthood (KBE), and on August 12 he was awarded the U.S. Presidential Medal of Freedom. In the last months of his life, he completed his long-awaited memoir, *True Compass* (2009). Kennedy died just two weeks after his sister Eunice Kennedy Shriver (q.v.).

Kennedy, Sir Ludovic Henry Coverley, Scottish broadcaster and investigative journalist (b. Nov. 3, 1919, Edinburgh, Scot.—d. Oct. 18, 2009, Salisbury, Eng.), campaigned tirelessly against injustice, most notably in the areas of state-ordered execution and wrongful imprisonment. His efforts in several high-profile cases contributed

to the government’s abolishment (1965) of capital punishment in Britain. He also actively sought the legalization of assisted suicide and was a cofounder of the Voluntary Euthanasia Society (later Dignity in Dying).

Kennedy, Ted (THEODORE KENNEDY; “TEEDER”), Canadian ice hockey player (b. Dec. 12, 1925, Humberstone, Ont.—d. Aug. 14, 2009, Port Colborne, Ont.), as the tenacious centre and longtime captain of the National Hockey League’s (NHL’s) Toronto Maple Leafs, led the team to five Stanley Cup championships (in the 1944–45, 1946–47, 1947–48, 1948–49, and 1950–51 seasons). Kennedy joined the Maple Leafs in 1943 and remained with the franchise for all 14 of his seasons in the NHL. While not an outstanding skater, Kennedy compensated for his deficiencies with resourcefulness and determination and was considered by many the best face-off player in the NHL. He made the All-Star team five times and in 1955 was awarded the Hart Memorial Trophy as the NHL’s most valuable player. Kennedy retired with a career 231 goals and 329 assists, and in 1966 he was inducted into the Hockey Hall of Fame.

Khan, Ali Akbar, Indian musician and composer (b. April 14, 1922, Shibpur, East Bengal, British India [now in Bangladesh]—d. June 18, 2009, San Anselmo, Calif.), brought classical Indian music to Western audiences as one of the world’s most honoured sarod players and composers. Khan began serious study of music at age three and became an *ustad* (master) of the fretless 25-stringed sarod. Khan made his first public performance at age 13. He was the music director of All-India Radio in Lucknow, broadcasting as a solo artist and composing for orchestras, before becoming a maharaja’s court musician in 1943. In 1955 the violinist Yehudi Menuhin invited Khan to New York City, and thereafter he often performed and recorded in the West, frequently in collaboration with his brother-in-law, the composer and sitarist Ravi Shankar. Khan was the first to record full-length traditional Indian music, making it more available internationally; among his many albums are *The Forty-Minute Raga* (1968) and *Journey* (1990). As a composer he was known for his film scores—notably for Satyajit Ray’s *Devi* (1960) and the Ismail Merchant–James Ivory production *The Householder* (1963)—and as the creator of many ragas.

Khan, Feroz, Indian actor and director (b. Sept. 25, 1939, Bangalore, Karnataka state, British India—d. April 27, 2009, Bangalore, India), was a distinguished character actor, but he was best remembered as a heroic action star in a series of Bollywood “curry westerns” that earned him comparisons to American actor Clint Eastwood. Khan, the son of a Pathan Afghani immigrant and his Iranian wife, moved to Bombay (Mumbai) as a youth to pursue an acting career. He made his screen debut in *Didi* (1960) and had small roles in several movies, including

Jack Dabaghian—Reuters/Landov

Bollywood star Feroz Khan

the Hollywood film *Tarzan Goes to India* (1962), before attaining critical and popular success with the drama *Oonche log* and the sentimental romance *Arzoo* (both 1965). He received a Filmfare Awards nomination for best supporting actor for *Aadmi aur insaan* (1969) and another nomination for *International Crook* (1974). Khan also served as producer and director on some of his most accomplished films, notably the *Godfather*-inspired hit *Dharmatma* (1975), the first Hindi-language movie filmed on location in Afghanistan; *Qurbani* (1980); *Janbaaz* (1986); *Dayavan* (1988); and *Janasheen* (2003), which garnered his third Filmfare acting nomination. His last role was in *Welcome* (2007). Khan received Filmfare (2000) and Zee Cine (2008) lifetime achievement awards.

Khatibi, Abdelkebir, Moroccan educator, literary critic, and novelist (b. 1938, El Jadida, Mor.—d. March 16, 2009,

Rabat, Mor.), was a member of the angry young generation of the 1960s. The abstruse prose employed by this young generation of Maghribian authors reflected the desire to reject French culture by destroying and re-creating the French language, thus attacking the heart of the culture from within, with what Khatibi called a *littérature sauvage*. After completing his secondary education in Morocco, Khatibi pursued a degree in sociology at the Sorbonne in Paris. In his doctoral dissertation, *Le Roman maghrébin* (1968), he raised the question of how the committed writer can avoid becoming a propagandist, especially in a postrevolutionary society. His first novel, *La Mémoire tatouée* (1971), deals semiautobiographically with the typically Maghribian themes of acculturation and decolonization. Two plays, *La Mort des artistes* (1964) and *Le Prophète voilé* (1979), and the novel *Le Livre du sang* (1979), demonstrate his theoretical approach to literature. Khatibi's later works include the study *Figures de l'étranger dans la littérature française* (1987) and the novel *Un Été à Stockholm* (1990). He also wrote several sociological studies on Moroccan life.

Kim Dae-Jung, South Korean politician (b. Jan. 6, 1924?, Mokpo, Haeui Island, Korea [now in South Cholla province, S.Kor.]—d. Aug. 18, 2009, Seoul, S.Kor.), was a charismatic political opposition leader for more than three decades before serving as South Korean president (1998–2003), becoming the first opposition leader to win election to that office; Kim had lost three previous presidential bids. During his administration he was awarded (2000) the Nobel Prize for Peace for his efforts to restore democracy in South Korea and to improve relations with North Korea. Kim's “sunshine” policy allowed South Koreans to visit relatives in the North and eased rules governing South Korean investment in the country. In 1998, direct talks between the two countries resumed after a four-year hiatus, and in a June 2000 historic summit, he met with North Korean ruler Kim Jong Il. Kim became a wealthy businessman after taking over a Japanese-owned shipping company. During the Korean War (though he did not serve in the military and confessed to having adjusted his birthdate to Dec. 3, 1925, to avoid conscription), he was captured by communist forces but managed to escape. In the 1950s Kim became an ardent pro-democracy ac-

tivist. After five attempts to win elective office, Kim finally won (1961) a seat in the National Assembly, but the election was nullified following a military coup led by Major Gen. Park Chung-Hee. Kim became highly critical of Park's policies, and in 1971, a year after becoming president of the National Democratic Party, Kim ran against Park in a national presidential election. Kim lost, despite having secured more than 40% of the vote. In 1973 he was kidnapped from his hotel in Tokyo by agents of the Korean Central Intelligence Agency and was returned forcibly to South Korea, where he was placed under house arrest. In 1976 Kim was again arrested, but he was released from house arrest in 1979 only to be arrested in May 1980 on charges of sedition and conspiracy; he was sentenced to death, but Pres. Chun Doo-Hwan commuted the sentence to life imprisonment and later to 20 years. He was allowed in 1982 to seek medical treatment in the U.S., but on his return home in 1985, he was placed under house arrest. As founding leader (1995) of the political party the National Congress for New Politics, Kim won (1997) a narrow victory over ruling Democratic Liberal Party presidential candidate Lee Hoi-Chang.

Kim Sou-hwan, Stephen Cardinal, South Korean prelate (b. May 8, 1922, Taegu, Korea—d. Feb. 16, 2009, Seoul, S.Kor.), was South Korea's first Roman Catholic cardinal and an outspoken proponent of democracy during the 1970s and '80s, a time when the coun-

South Korean prelate Stephen Cardinal Kim Sou-hwan

Lee Jin-man/AP

try was led by military dictators. Kim called for democracy and denounced members of the government who trampled on the rights of citizens. In 1987 he allowed student demonstrators to take refuge in Seoul's main cathedral and refused to allow military authorities to seize the students. Kim was ordained a priest in 1951, became bishop of Masan in 1966 and archbishop of Seoul in 1968, and was elevated to cardinal in 1969.

Kiraly, Bela, Hungarian general and historian (b. April 14, 1912, Kaposvar, Hung.—d. July 4, 2009, Budapest, Hung.), led freedom fighters in the brief 1956 Hungarian uprising against Soviet forces. Kiraly graduated (1942) from the Ludovica Military Academy and served as an officer in World War II. He was captured by the Soviet army, but he escaped and walked back to Hungary. After having been promoted to general in 1950, he was arrested and given a death sentence (1951) on charges of subversion, which were widely believed to have been fabricated by the Hungarian Stalinist government. His sentence was changed to hard labour for life, but in 1956 he was one of many prisoners granted parole in an attempt to stem rising popular unrest regarding Soviet influence. Still weak from prison, Kiraly was appointed commander in chief of the National Guard and chairman of the Revolutionary Council for National Defense by Prime Minister Imre Nagy, who was negotiating for Soviet withdrawal from Hungary. Kiraly organized civilians into a fighting force, an act of political significance in spite of the inadequacy of Hungarian weaponry. The resistance lasted approximately two weeks; Soviet tanks surrounded Budapest on Nov. 4, 1956, and Kiraly and his forces fled over the Austrian border. Kiraly spent the next 33 years in the U.S. After the collapse of the communist government, he returned to Hungary, where he served (1990–94) in the National Assembly.

Kirchner, Leon, American composer (b. Jan. 24, 1919, Brooklyn, N.Y.—d. Sept. 17, 2009, New York, N.Y.), produced in his distinctive voice significant works that reflected his studies with Arnold Schoenberg and other major composers. At Harvard University (1961–89), Kirchner taught musical analysis through performance; his students—notably composer and conductor John Adams and cellist Yo Yo Ma—

remained advocates of his music. Kirchner's *String Quartet No. 3* (1966) won the 1967 Pulitzer Prize. In 2008 the Boston Symphony Orchestra premiered the composer's final work, *The Forbidden*, and in 2009 Columbia University's Miller Theatre celebrated Kirchner's 90th birthday with a retrospective in New York City.

Kolakowski, Leszek, Polish philosopher and historian of philosophy (b. Oct. 23, 1927, Radom, Pol.—d. July 17, 2009, Oxford, Eng.), began his scholarly career as an orthodox Marxist, but he later became a prominent intellectual critic of Marxism, which he described as “the greatest fantasy of our century.” Kolakowski was educated in Poland's underground school system during World War II. He studied philosophy at the Universities of Lodz (M.A., 1950) and Warsaw (Ph.D., 1953), where he taught and served as chair of the department of the history of philosophy until 1968. Kolakowski joined the communist Polish United Workers' Party (PUWP) in 1945. When he was sent to Moscow for a course for promising intellectuals, however, he became disenchanted with the Soviet Marxist system. Upon his return home, he joined the movement for democratization that led to the Polish workers' uprising of 1956. His revisionist critique of Joseph Stalin, *What Is Socialism?* (1957), was officially banned in Poland but was widely circulated nonetheless. A speech given by Kolakowski on the 10th anniversary of the uprising led to his expulsion (1966) from the PUWP; he also was dismissed (1968) from his professorship and soon afterward left Poland. In 1970 he accepted a senior research fellowship at All Souls College, Oxford, where he remained until his retirement in 1995. He also wrote on religion and the spiritual basis of culture and was the author of three plays and three volumes of stories. Among Kolakowski's many honours were the Erasmus Prize (1980), the Order of the White Eagle (Poland's highest honour; 1998), and the first John W. Kluge Prize for Lifetime Achievement in the Humanities and Social Sciences, awarded by the U.S. Library of Congress in 2003.

Kolff, Willem Johan, Dutch-born American physician (b. Feb. 14, 1911, Leiden, Neth.—d. Feb. 11, 2009, Newtown Square, Pa.), was a pioneering biomedical engineer who invented the

kidney dialysis machine and led the medical team that on Dec. 2, 1982, implanted the first artificial human heart in Barney Clark. In 1956 he devised a membrane oxygenator used in bypass surgery. His first artificial heart was implanted in a dog in 1957 and kept the animal alive for 90 minutes. Kolff was a founding member of the American Society for Artificial Internal Organs and was the recipient of more than 120 awards, notably the Albert Lasker Clinical Medical Research Award, which he shared in 2002. In addition, Kolff designed other artificial organs, including eyes, ears, and limbs, until his retirement in 1997.

Kramer, Jack (JOHN ALBERT KRAMER), American tennis player (b. Aug. 1, 1921, Las Vegas, Nev.—d. Sept. 12, 2009, Los Angeles, Calif.), won the All-England (Wimbledon) singles (1947) and men's doubles (1946 and 1947), captured the U.S. singles (1946–47), men's doubles (1940–41, 1943, 1947), and mixed doubles (1941) titles, and in 1946 and 1947 was on the victorious American Davis Cup teams. He also triumphed at the 1948 U.S. pro championship. Bothered by an arthritic back from 1952, Kramer eventually ceased competing and became a tennis promoter. He was instrumental in the organization of the Association of Tennis Professionals, a union for men players, and became (1972) its first executive director. Kramer also worked as a television analyst and authored several books, including the autobiography *The Game: My 40 Years in Tennis* (1979; co-written with Frank Deford). Kramer was named to the International Tennis Hall of Fame in 1968.

Krebs, Edwin Gerhard, American biochemist (b. June 6, 1918, Lansing, Iowa—d. Dec. 21, 2009, Seattle, Wash.), was awarded (with Edmond H. Fischer) the 1992 Nobel Prize for Physiology or Medicine. Krebs and Fischer discovered reversible protein phosphorylation, which is a biochemical process that regulates the activities of proteins in cells and thus governs countless processes that are necessary for life. Krebs earned a medical degree (1943) from Washington University, St. Louis, Mo., before conducting (1946–48) research there under the biochemists Carl and Gerty Cori. In 1948 Krebs joined the biochemistry faculty at the University of Washington at Seattle, where he became a full professor in 1957. In 1968 he moved

to the University of California, Davis, but he returned in 1977 to the University of Washington. Krebs and Fischer also showed that phosphorylase is inactivated by the removal of a phosphate group; this process is catalyzed by enzymes called phosphatases.

Kristol, Irving William, American essayist, editor, and publisher (b. Jan. 22, 1920, Brooklyn, N.Y.—d. Sept. 18, 2009, Arlington, Va.), was best known as an intellectual founder and leader of the neoconservative movement in the United States. He was the son of Jewish European immigrants. Kristol graduated with a degree in history (1940) from the City College of New York, where he was a member of a Trotskyist student organization. He married Gertrude Himmelfarb, later a distinguished historian, in 1942. After serving in the U.S. Army (1944–46), he was managing editor (1947–52) of *Commentary*, cofounder and coeditor of the English journal *Encounter* (1953–58), and editor of *The Reporter* (1959–60). In 1960 he was hired as an editor by Basic Books, Inc., and shortly thereafter became its executive vice president. He was most closely identi-

fied with the journal *The Public Interest*, which he cofounded (1965) with sociologist Daniel Bell. He later served as Henry R. Luce Professor of Urban Values (1969–87) at New York University and John M. Olin Distinguished Fellow (1988–99) at the American Enterprise Institute, a conservative think tank. Kristol was an avowed enemy of secular liberalism, which he blamed for causing alienation and moral degeneracy among American youth during the 1960s. His championing of supply-side economics and conservative moral values, his aggressive anticommunism, and his insistence on using U.S. power to shape the world “in accord with our national interests” greatly influenced the domestic and foreign policies of the Ronald Reagan, George H.W. Bush, and George W. Bush administrations. In 2002 Kristol was awarded the Presidential Medal of Freedom.

Kunzel, Erich, Jr., American conductor (b. March 21, 1935, New York, N.Y.—d. Sept. 1, 2009, Bar Harbor, Maine), brought orchestral music to national audiences with a showman’s flair. He led the much-recorded Cincinnati Pops Orchestra from its founding in 1977, and he conducted the National Symphony Orchestra in annual televised patriotic concerts from the lawn of the U.S. Capitol on Memorial Day and July 4. His sold-out concerts were renowned as variety shows featuring arrangements of show tunes and movie themes with costumed performers and theatrical lighting effects. He was awarded the National Medal of Arts in 2006.

Kurgapkina, Ninel, Russian ballerina (b. Feb. 13, 1929, Leningrad, Russia, U.S.S.R. [now St. Petersburg, Russia]—d. May 8, 2009, St. Petersburg), danced as lead soubrette for the Kirov Ballet (now Mariinsky Ballet) for more than three decades. After Kurgapkina graduated (1947) from the Vaganova Ballet Academy, she joined the Kirov Ballet, where she quickly became a featured soloist. She was the first partner of ballet stars Mikhail Baryshnikov and Rudolf Nureyev. With Nureyev she danced as Kitri in *Don Quixote*, as Princess Aurora in *The Sleeping Beauty*, and as Odette-Odile in *Swan Lake*. Throughout her career Kurgapkina was known for her vivacious charm and stunning technical precision, especially in leaps. She retired at age 52. Kurgapkina was named a People’s Artist of the U.S.S.R. in 1974.

Lang, Pearl (PEARL LACK), American dancer and choreographer (b. May 29, 1921, Chicago, Ill.—d. Feb. 24, 2009, New York, N.Y.), was a sterling member of the Martha Graham Dance Company and the first dancer whom Graham allowed to perform some of her own roles. Lang displayed her dancing talent at an early age and created her own dance when she was 10 years old. By the time she reached 16, she had choreographed and danced to Mozart’s serenade *Eine kleine Nachtmusik*. She went on to study (1938–41) at the University of Chicago in a special program for gifted students. Lang joined (1941) the Martha Graham Dance Company in New York City, but she left (1952) to form her own company, the Pearl Lang Dance Theatre. Some of her best-known performances include the productions *Diversion of Angels* (1948), in which she danced the role of the Woman in Red; *Shirah* (1960); *Appalachian Spring* (1974), in which she took Graham’s role; and Broadway musicals, such as *Carousel* (1945). Lang also taught at Yale University and the Juilliard School, New York City.

Laugerud García, Kjell Eugenio, Guatemalan politician (b. Jan. 24, 1930, Guatemala City, Guat.—d. Dec. 9, 2009, Guatemala City), served (1974–78) as president of Guatemala. His election in March 1974 was accompanied by violence, political assassinations, and accusations of fraud. Upon being inaugurated on July 1, he announced an economic austerity program. He launched a colonization program to settle landless peasants in the Petén region. Throughout his administration he conducted a vigorous campaign to reestablish Guatemalan sovereignty over neighbouring Belize but was hindered by international opposition. In 1977 he broke diplomatic relations with Panama over this issue. Following the disastrous earthquake of 1976, Laugerud obtained international loans, managed the distribution of relief supplies, and maintained order with efficiency. The political unrest that accompanied his election, however, continued to grow during the next four years. The May 1978 massacre of more than 100 indigenous peasants at Panzós in Alta Verapaz tainted Laugerud’s reputation at the end of his term. Amnesty International repeatedly condemned the actions of the White Hand, a right-wing civilian death squad with some paramilitary elements, and charged that Laugerud tacitly condoned the terrorism.

Neoconservative leader Irving Kristol

Keith Meyers—The New York Times/Redux

Lawrence, Andrea Mead, American skier (b. April 19, 1932, Rutland, Vt.—d. March 31, 2009, Mammoth Lakes, Calif.), was the first American Alpine skier to win two gold medals in a single Winter Olympics. At the 1952 Games in Oslo, she easily won the giant slalom for her first gold medal; the second she captured in the slalom with a comeback performance. Her Olympic victories, coupled with her U.S. championship titles in the downhill, slalom, and Alpine combined in 1950, 1952, and 1955 and the giant slalom in 1953, led to her induction (1983) into the International Women's Sports Hall of Fame.

Leonard, Hugh (JOHN JOSEPH BYRNE; JOHN KEYES BYRNE), Irish dramatist (b. Nov. 9, 1926, Dalkey, County Dublin, Ire.—d. Feb. 12, 2009, Dublin, Ire.), was admired in Ireland as one of the country's best playwrights, but outside his native land he was best known for the play *Da*, a bittersweet semiautobiographical exploration of the complex relationship between a man and his recently deceased adoptive father, or "da." The play, which was first produced in 1973 in an amateur theatre in Maryland, triumphed on Broadway for almost two years (1978–80) and won the Drama Desk Award for outstanding new play and four Tony Awards, including best play. (Leonard also wrote the screenplay for the 1988 film version.) In addition, two of his other plays earned Tony nominations, the two-hander *The Au Pair Man* (produced 1973–74) and *A Life* (produced 1980–81), which featured some of the minor characters from *Da*. While working for more than a decade in the Irish civil service, he took the pen name Hugh Leonard to prevent his employer from learning about his literary aspirations. He was able to quit his job, however, after the Abbey Theatre's 1956 mounting of *The Big Birthday*. Leonard also wrote 16 plays for the Dublin Theatre Festival, notably *A Walk on the Water* (produced 1960); contributed a regular column to Ireland's *Sunday Independent* newspaper; adapted dozens of television scripts, including several miniseries based on Dickens novels; and wrote two volumes of autobiography.

Lévi-Strauss, Claude, French social anthropologist (b. Nov. 28, 1908, Brussels, Belg.—d. Oct. 30, 2009, Paris, France), was one of the preeminent ethnologists of his time and a leading

exponent of structuralism, the analysis of cultural systems (e.g., kinship and mythical systems) in terms of the structural relations between their elements. Lévi-Strauss viewed cultures as systems of communication, and he constructed models based on structural linguistics, information theory, and cybernetics to interpret them. After studying philosophy and law (1927–32) at the University of Paris, he taught in a secondary school and was associated with Jean-Paul Sartre's intellectual circle. He served as professor of sociology (1934–37) at the University of São Paulo and did field research on the Indians of Brazil. He was then visiting professor (1941–45) at the New School for Social Research in New York City, where he was influenced by the work of structural linguist Roman Jakobson. From 1950 to 1974 Lévi-Strauss was director of studies at the École Pratique des Hautes Études at the University of Paris, and in 1959 he was appointed to the chair of social anthropology at the Collège de France. In 1949 Lévi-Strauss published his first major work, *Les Structures élémentaires de la parenté* (*The Elementary Structures of Kinship*, 1969). He attained popular recognition with *Tristes tropiques* (1955; *A World on the Wane*, 1961), a literary intellectual autobiography. This was followed by such major publications as *Anthropologie structurale* (1958; *Structural Anthropology*, 1963), *La Pensée sauvage* (1962; *The Savage Mind*, 1962), and *Le Totémisme aujourd'hui* (1962; *Totemism*, 1962). His massive *Mythologiques* appeared in four volumes between 1964 and 1971. Later works include a second volume of *Anthropologie structurale* in 1973; *La Voie des masques* (1975; *The Way of the Masks*, 1982), a two-volume study of native American Northwest Coast Indians; and a collection of essays, *Le Regard éloigné* (1983; *The View from Afar*, 1985).

Levine, David, American caricaturist and artist (b. Dec. 20, 1926, Brooklyn, N.Y.—d. Dec. 29, 2009, New York, N.Y.), for nearly 45 years (1963–2007) produced poignant pen-and-ink drawings for the *New York Review of Books* (NYRB) that served as commentaries on politicians, writers, celebrities, intellectuals, and sports figures. The distinctive heads of his caricatures were usually massive and the facial expressions dour, but Levine also created figures with large bodies and small heads (Orson Welles, 1972) and enlarged other bodily features, notably Marilyn

Alfred Eisenstaedt—Time Life Pictures/Getty Images

American caricaturist and artist David Levine

Monroe's breasts (1973). Prior to working for NYRB, he created drawings for *Esquire* (about 1,000), *Time* (some 100, including a notable 1967 "Man of the Year" cover featuring Pres. Lyndon B. Johnson as a raging King Lear, and dozens of others for such magazines as *The New Yorker* and *Rolling Stone* and the newspapers the *New York Times* and the *Washington Post*. Levine's favourite subject, Pres. Richard M. Nixon, was featured in 66 of his works. Unlike his caricatures, Levine's paintings had a sublime quality. His work was in the permanent collections of the Metropolitan Museum of Art, the Library of Congress, and the National Portrait Gallery, London.

Levitt, Helen, American photographer (b. Aug. 31, 1913, Brooklyn, N.Y.—d. March 29, 2009, New York, N.Y.), captured the bustle, squalor, and beauty of everyday life in New York City in images that prominently featured children, especially the underprivileged. Levitt began her career in photography at age 18 with work in a portrait studio in the Bronx. Inspired by the works of French photographer Henri-Cartier Bresson, she purchased a 35-mm Leica camera and scoured the poor neighbourhoods of her native New York City for subject matter. About 1938 she took her portfolio to photographer Walker

Evans's studio, where she also met novelist and film critic James Agee. She struck up friendships with the two men, occasionally accompanying the former on his photo shoots in the city. Her first show, "Photographs of Children," was held at the Museum of Modern Art (MoMA) in New York in 1943. Included in this show were images from her visit in 1941 to Mexico City, where she photographed the city's street life. Levitt's book of photographs entitled *A Way of Seeing: Photographs of New York* was compiled in the late 1940s, but the book was not published until 1965—10 years after the death of Agee, who had written a glowing introduction. In the mid-1940s Levitt collaborated with Agee, filmmaker Sidney Meyers, and painter Janice Loeb on *The Quiet One*, a prizewinning documentary about a young African American boy, and with Agee and Loeb on the film *In the Street*, which captured everyday life in East Harlem. For the next decade she concentrated on film editing and directing. In 1959 and 1960 she received Guggenheim fellowships to investigate techniques using colour photography. The slides that resulted from the project, shown in 1963 at MoMA, were stolen from her apartment before they could be duplicated. Levitt focused for the rest of the 1960s on film work and resumed photography in the 1970s, with a major MoMA show in 1974.

Locklin, Hank (LAWRENCE HANKINS LOCKLIN), American country and western singer (b. Feb. 15, 1918, McLellan, Fla.—d. March 8, 2009, Brewton, Ala.), was known for his tremulous tenor voice on such chart-topping hit singles as "Send Me the Pillow You Dream On" (1949; 1958) and "Please Help Me, I'm Falling" (1960); he also helped to establish the classic Nashville Sound of the 1950s and '60s. During a career that spanned some five decades, Locklin recorded 65 albums, sold 15 million records, and produced 70 charted singles, of which 6 reached number one on the *Billboard* country singles chart.

Long, Huey, American jazz guitarist (b. April 25, 1904, Sealy, Texas—d. June 10, 2009, Houston, Texas), who played with the influential Ink Spots in a musical career that lasted more than seven decades. Long began performing professionally when he filled in (1925) as banjo player for the Frank Davis Louisiana Jazz Band. During the 1930s he moved to Chicago, where he played

big band music and jazz, performed at the 1933–34 Century of Progress world's fair, and recorded several albums. He went on tour with Fletcher Henderson in the early 1940s and, after performing at the Apollo Theatre, decided to stay in New York City. He played alongside innovative jazz and bebop musicians Charlie Parker and Dizzy Gillespie in Earl Hines's band (1943) and as the leader of his own trio. In 1945 Long became a member of the Ink Spots, replacing their second guitarist for nine months until his predecessor returned. The Ink Spots were one of the most popular African American vocal groups, best known for "If I Didn't Care."

López, Orlando ("CACHAITO"), Cuban musician (b. Feb. 2, 1933, Havana, Cuba—d. Feb. 9, 2009, Havana), was internationally renowned for his virtuoso double-bass playing in the Buena Vista Social Club, the group of veteran Cuban musicians who created a global sensation in 1997 with their self-titled Grammy Award-winning debut album; López was regarded as the heartbeat of the group and was the only original member to have performed on all of the group's recordings. He played professionally in big bands and orchestras from his teenage years. He was the nephew of legendary bass player Israel

Cuban musician Orlando "Cachaito" López

Pascal Saez/Lebrecht Music Collection

("Cachao") López—hence his nickname, "Cachaito," or "Little Cachao." López became a bassist with the Cuban national symphony in the 1950s and later taught for many years at the Guillermo Tomás Music Conservatory in Havana. He was prominently featured in the film *Buena Vista Social Club* (1999), which documented the group and the making of its 1997 album. López also achieved notable success with his 2001 solo album, *Cachaito*, which in 2002 earned a BBC Radio 3 World Music Award.

Lü Zhengcao (LÜ ZHENGYAN), Chinese general (b. Jan. 4, 1905, Haicheng, Shengjing [now Liaoning province], China—d. Oct. 13, 2009, China), was a hero of the Sino-Japanese War (1937–45) and was one of the 57 first generals designated in 1955 by the People's Republic of China. Though he was purged in 1967 during the Cultural Revolution, he was fully rehabilitated in 1974. He became chairman of the Chinese Tennis Association in 1982.

Lye, Les (LESLIE EARNEST LYE), Canadian television actor (b. Nov. 18, 1924, Toronto, Ont.—d. July 21, 2009, Ottawa, Ont.), amused audiences as the only regular adult performer on all 143 episodes (1979–90) of the Canadian children's comedy show *You Can't Do That on Television*, on which he played such memorable characters as the greasy hamburger vendor Barth and the child executioner El Capitano. He began to work in radio, notably with comic Rich Little, but in 1961 he joined an Ottawa television station as a freelance writer and performer. There he and local actor Bill Luxton created the slapstick show *Uncle Willy and Floyd*, which ran for more than 20 years (1966–88). Lye's international break came when *You Can't Do That on Television* was picked up (1981) by the American cable network Nickelodeon; it became one of that network's most popular shows and continued in reruns until 1994. In 2003 Lye, with Luxton, was awarded a lifetime achievement award by the Alliance of Canadian Cinema, Television and Radio Artists.

Makarezos, Nikolaos, Greek military leader (b. 1919, Gravia, Greece—d. Aug. 3, 2009, Athens, Greece), as a leading member of the right-wing military junta that took over Greece in 1967, held the posts of deputy prime minister and minister for coordination. He was also in charge of economic policy

making. Makarezos served in the Greek army artillery during World War II, but after the Nazis invaded the country in 1941, he escaped to Egypt with the Greek government-in-exile. After the war he remained in the military, rising to colonel. In April 1967 he and two fellow officers, Georgios Papadopoulos and Stylianos Pattakos, seized power after leading a coup in Greece, forcing the king out of the country by year's end. The ensuing dictatorship, led by Papadopoulos, imposed strict martial law on the country and was responsible for the jailing, torture, and exile of thousands until a second military coup in late 1973 removed Papadopoulos and his cohorts from power. After democracy was restored in 1974, Makarezos was sentenced to death for mutiny, but this sentence was later commuted to life imprisonment. Health problems prompted his release in 1990.

Malden, Karl (MLADEN SEKULOVICH), American actor (b. March 22, 1912, Chicago, Ill.—d. July 1, 2009, Los Angeles, Calif.), won critical acclaim for his strong character roles, ranging from psychologically intense villains to the earnest Everyman, most notably alongside Marlon Brando in *A Streetcar Named Desire* (1951) and *On the Waterfront* (1954). While performing in New York in 1946, Malden met Brando and director Elia Kazan. Malden's career took off after Kazan cast him as the naive suitor, Mitch, in *Streetcar* on Broadway and in the screen adaptation, a role that won him the Academy Award for best supporting actor (1951). Malden acknowledged that his looks, especially his bulbous twice-broken nose, would prevent him from being cast as a handsome leading man. Nevertheless, he demonstrated his versatility in more than 50 roles. He reached a new audience as the lead detective, Mike Stone, in the television show *The Streets of San Francisco* (1972–77). Malden was presented with the 2003 Screen Actors Guild's Life Achievement Award.

Manahan, Anna, Irish character actress (b. Oct. 18, 1924, County Waterford, Irish Free State—d. March 8, 2009, Waterford, Ire.), originated the demanding role of Mag Folan, the controlling mother in playwright Martin McDonagh's fierce family drama *The Beauty Queen of Leenane*; she played the role in every performance, from its first stagings at the Druid Theater in Galway, Ire., through its London premiere (1996) and subsequent tour, to its

Irish character actress Anna Manahan

Tony Award-winning Broadway production (1998), for which she was awarded a Tony for best featured actress. Manahan joined the local Waterford Dramatic Society as a girl and worked in the professional theatre almost continuously thereafter, becoming one of Ireland's most respected stage actresses; John B. Keane reportedly wrote his 1969 play *Big Maggie* specifically for her. Manahan received a Tony nomination for her 1968 Broadway debut in Brian Friel's *Lovers*, and in 1977 she won the Evening Standard award for most promising newcomer for her performance in a revival of Sean O'Casey's *The Plough and the Stars* at Britain's National Theatre. She was also a regular face on British and Irish television, including continuing roles on *The Irish R.M.* (1983–85) and *Fair City* (2004–09).

Martin, Jean, French actor (b. March 6, 1922, Paris, France—d. Feb. 2, 2009, Paris), created the role of Lucky (a characterization he claimed to have based on Parkinson disease sufferers) in the original 1953 production of Samuel Beckett's *En attendant Godot* (*Waiting for Godot*) at the Théâtre de Babylone in Paris; four years later Martin was the original Clov in Beckett's *Fin de partie* (*Endgame*) at the play's world premiere in London. His other stage appearances included the French premiere of Harold Pinter's *The Caretaker* and a 1970 revival of Beckett's one-man play *Krapp's Last*

Tape, directed by Beckett himself. While serving in the Resistance during World War II, Martin made his film debut in *Cécile est morte!* (1944). Although he was briefly blacklisted for having been one of the signatories of the Manifesto of 121 (1960) supporting Algerian independence, Martin appeared in more than 90 television programs and films.

Martino, Al (ALFRED CINI), American pop singer (b. Oct. 7, 1927, Philadelphia, Pa.—d. Oct. 13, 2009, Springfield, Pa.), scored hits in the 1950s and '60s with a number of smoothly crooned romantic ballads but was perhaps best known for his film role as Johnny Fontane, the wedding singer who uses his Mafia ties to jump-start his career, in *The Godfather* (1972). In 1948, at the encouragement of a boyhood friend, opera singer Mario Lanza, he moved to New York City to pursue a singing career. Four years later Martino broke through with "Here in My Heart," which topped the charts at number one in both the U.S. and the U.K. and won him a contract with Capitol Records. More hits followed, notably "Spanish Eyes" (1965), one of nine songs of his that reached the U.S. top 40 between 1963 and 1967 even as rock and roll had begun to dominate the radio airwaves. Though his career slowed in the 1970s, he accompanied his appearance in *The Godfather* with a recording of the film's theme song and in 1975 achieved success with a disco version of the Italian pop standard "Volare." He also reprised his role as Johnny Fontane in *The Godfather, Part III* (1990).

Martyn, John (IAIN DAVID MCGEACHY), British singer and songwriter (b. Sept. 11, 1948, New Malden, Surrey, Eng.—d. Jan. 29, 2009, Kilkenny, Ire.), incorporated folk, jazz, blues, rock and roll, reggae, electronic effects, and avant-garde elements into his music while developing a distinctive slurred vocal style. Despite ongoing struggles with alcoholism and drug abuse, Martyn released more than 20 albums, the best of which, *Solid Air* (1973), was named (2000) one of the all-time best British albums by *Q Magazine*. In 2008 the BBC Radio 2 Folk Awards presented Martyn with a lifetime achievement award, and Island Records released *Ain't No Saint*, a four-CD compilation of his music. Martyn was made OBE in the 2009 New Year's Honours list.

Maw, Nicholas (JOHN NICHOLAS MAW), British composer (b. Nov. 5, 1935, Grantham, Lincolnshire, Eng.—d. May 19, 2009, Takoma Park, Md.), embraced Romantic styles in defiance of contemporary musical trends. He was perhaps best known for the longest continual symphonic piece of music, his 96-minute *Odyssey* (1987), which took 14 years to write, and for his 2002 opera adaptation of William Styron's 1979 novel *Sophie's Choice*. Maw began composing at the age of 15 and studied at the Royal Academy of Music in London and then in Paris with French composer Nadia Boulanger and Austrian-French composer Max Deutsch. Maw's first major success was *Scenes and Arias* (1962), a passionate piece for three female vocalists singing love poems. His vibrancy as a composer came from the blending of 20th-century atonality and serial techniques that he studied at school with a revival of Romantic style influenced by German Romantic composer Richard Strauss. Maw taught in England and the U.S., notably at the University of Cambridge (1966–70) and the Peabody Institute at Johns Hopkins University (1998–2008). He continued composing operas, symphonies, and shorter pieces, and a recording of his *Violin Concerto* (1993), written for and performed by American virtuoso Joshua Bell, received a Grammy Award in 2001.

Maximova, Ekaterina (YEKATERINA SERGEYEVNA MAXIMOVA), Russian ballerina (b. Feb. 1, 1939, Moscow, Russia, U.S.S.R.—d. April 28, 2009, Moscow, Russia), awed audiences the world over with her spirited dancing. Maximova began ballet school at age 10, and in 1958 she joined the Bolshoi Theatre's ballet company as the lead dancer in Yuri Grigorovich's *The Stone Flower*. Maximova excelled in varied roles, ranging from the tragic title character in *Giselle* to the exuberant female lead Kitri in *Don Quixote* to Princess Aurora in the classically styled *The Sleeping Beauty*. The beautiful, petite, and charismatic Maximova enjoyed one of the longest-running dance partnerships with her husband, Vladimir Vasilyev; they performed with the Bolshoi, most notably in *Spartacus* (1968), and later in their own company. Maximova left the Bolshoi in 1988 to serve as a coach at other companies, but when she retired in 1994, she

returned to Moscow, where Vasilyev directed (until 2000) the Bolshoi Theatre. There she became a beloved teacher. Maximova earned such nicknames as "the baby of the Bolshoi" and "Ekaterina the Great." She was named (1973) a People's Artist of Russia.

McCourt, Frank (FRANCIS MCCOURT), American author and teacher (b. Aug. 19, 1930, Brooklyn, N.Y.—d. July 19, 2009, New York, N.Y.), was perhaps best known for the Pulitzer Prize-winning memoir *Angela's Ashes* (1996), a vivid portrayal of a Dickensian childhood amid the grinding conditions of Irish slum life. Frank was the oldest child of Irish immigrants, but the Great Depression and his father's alcoholism kept the family destitute, and when Frank was four years old, the McCourts left New York to join relatives in Limerick, Ire. The family's situation, however, failed to improve. In 1941 his father left for England, but the family never received the money he had promised to send. At age 13 McCourt dropped out of school. With funds saved from delivering telegrams, he returned (1949) to New York City, where he worked on loading docks. After military service in the Korean War, he studied English at New York University (B.A., 1957) and earned an M.A. (1967) from Brooklyn College. He taught public school for 29 years, first in vocational schools and then at the elite Stuyvesant High School in Manhattan

(1972–87). After retiring from teaching in 1987, McCourt concentrated on writing. *Angela's Ashes*, a critical and commercial success, also won the National Book Critics Circle Award, and in 1999 it was adapted into a well-received film. McCourt also penned the memoirs *Tis* (1999) and *Teacher Man* (2005).

McGoohan, Patrick Joseph, Irish actor, screenwriter, and director (b. March 19, 1928, Queens, N.Y.—d. Jan. 13, 2009, Los Angeles, Calif.), was most closely identified with two 1960s British television series: the espionage drama *Danger Man* (U.S. title *Secret Agent*; 86 episodes during 1960–61 and 1964–67) and the cult hit *The Prisoner* (17 episodes, 1967–68). In *Danger Man*, McGoohan put a new spin on the secret agent formula by refusing to allow his character, John Drake, to carry a gun or indulge in sexual dalliances. The show's success made McGoohan Britain's highest-paid TV actor. It also provided the leverage he needed to produce *The Prisoner*, an allegorical Kafkaesque series in which he portrayed Number Six, an unnamed agent (thought by many to represent Drake) who angrily resigns and is then held captive in a superficially banal place called the Village, where the mysterious unseen Number One, the ever-changing Number Two, and others try to overcome the fiercely individualistic Number Six's escape attempts and pry information from him. McGoohan's later work included the short-lived medical mystery series *Rafferty* (1977); such films as *Ice Station Zebra* (1968), *Escape from Alcatraz* (1979), and *Braveheart* (1995); the Broadway spy drama *Pack of Lies* (1985); and a record four guest-villain appearances on the American detective series *Columbo*, two of which earned him Emmy Awards.

McMahon, Ed (EDWARD PETER LEO MCMAHON, JR.), American television personality and actor (b. March 6, 1923, Detroit, Mich.—d. June 23, 2009, Los Angeles, Calif.), was the jovial sidekick of Johnny Carson, the host of *The Tonight Show* (1962–92), and was best remembered for his infectious belly laughs and booming "H-e-e-e-e-ere's Johnny!" which was the nightly tagline used to introduce the late-night star. During the 1950s he appeared as a clown on

Russian ballerina Ekaterina Maximova in *Giselle*

The Bolshoi Theater Archive/AP

the TV show *Big Top* and was hired (1957) as Carson's announcer/straight man on the game show *Who Do You Trust?* In the 1980s McMahon joined Dick Clark as a host of *TV's Bloopers & Practical Jokes* and began a long run (1983–2003) as the emcee on the TV talent show *Star Search*.

McNair, Steve, American football player (b. Feb. 14, 1973, Mount Olive, Miss.—d. July 4, 2009, Nashville, Tenn.), threw 174 touchdown passes during his 13 National Football League (NFL) seasons (1995–2008) as one of a minority of high-profile African American quarterbacks. McNair grew up in Mississippi and chose to attend the rural Alcorn State, a nearby historically black Division I-AA school where he could play quarterback, rather than serve as defensive back at a major university. He was the third NFL draft pick in 1995. McNair was selected by the Houston Oilers (later the Tennessee Titans) and played with the franchise for 11 seasons before finishing his career with the Baltimore Ravens (2006–08). He led the Titans in 2000 to Super Bowl XXXIV, where the team came back from a 16-point deficit and McNair evaded a number of defenders before completing a pass that took the Titans within a yard of the tying touchdown, only to lose to the St. Louis Rams. In the NFL McNair passed for 31,304 yd, rushed for 3,590 yd, played in three Pro Bowls, and was named joint Most Valuable Player in 2003, along with Indianapolis Colts quarterback Peyton Manning. McNair was known for his tenacity in playing through injuries and his dexterity as a scrambler or passer, with a throwing ability that earned him the nickname "Air McNair." The married McNair was found dead in a condominium alongside a woman who police believed killed him and then herself.

McNamara, Robert Strange, U.S. government official and businessman (b. June 9, 1916, San Francisco, Calif.—d. July 6, 2009, Washington, D.C.), served (1961–68) as U.S. secretary of defense and played a major role in the country's military involvement in Vietnam. McNamara served (1943–46) in the Army Air Corps during World War II, but poor vision disqualified him from combat duty; instead he developed logistic systems for bomber raids and statistical systems for monitoring troops and supplies. After the war McNamara was one of the "Whiz Kids" hired to revitalize the Ford Motor Co. His plans, in-

CBS Photo Archive/Getty Images

U.S. Secretary of Defense Robert S. McNamara

cluding the institution of strict cost-accounting methods and the development of both compact and luxury models, met with success, and McNamara rose rapidly in the corporate ranks. In 1960 he became the first person outside the Ford family to assume the presidency of the company. After just one month as Ford's president, however, McNamara resigned to join the incoming administration of Pres. John F. Kennedy as secretary of defense. In his new post McNamara successfully gained control of Pentagon operations and the military bureaucracy, encouraged the modernization of the armed forces, restructured budget procedures, and cut costs by refusing to spend money on what he believed were unnecessary or obsolete weapons systems. McNamara was also at the centre of a drive to alter U.S. military strategy from the "massive retaliation" of the Dwight D. Eisenhower years to a "flexible response," emphasizing counterinsurgency techniques and second-strike nuclear-missile capability. Though McNamara initially advocated the deepening military involvement of the U.S. in Vietnam, as early as 1965 he secretly began to question the wisdom of U.S. military escalation, and by 1967 he was openly seeking a way to launch peace negotiations. He became the government's chief spokesman for the day-to-day operations of the war and acted as Pres. Lyndon B. Johnson's principal deputy in the war's prosecution. McNamara initiated

(1967) a top-secret full-scale investigation of the American commitment to Vietnam (later released as *The Pentagon Papers*) and came out in opposition to continued bombing of North Vietnam. He left the Pentagon on Feb. 29, 1968, to serve as president (1968–81) of the World Bank.

Middleton, Stanley, British novelist (b. Aug. 1, 1919, Bulwell, Nottinghamshire, Eng.—d. July 25, 2009, Nottingham, Nottinghamshire, Eng.), was a prolific and award-winning author celebrated for his attention to minutiae. His novel *Holiday* (1974), about a vacationing lecturer, garnered him the Booker Prize, which he shared with South African Nobel laureate Nadine Gordimer. Nearly all the settings in Middleton's novels were modeled on his native Nottingham (the fictional Beechnall) and told of the intricate lives of ordinary people. Though his no-frills style of writing fell out of literary style, his large body of work—he published a book nearly every year from the 1960s through the '90s—attracted critical acclaim; in 1998 he was elected a fellow of the Royal Society of Literature. His many works include *Harris's Requiem* (1960), *A Serious Woman* (1961), *The Other Side* (1980), *Valley of Decision* (1985), *Changes and Chances* (1990), and *A Place to Stand* (1992). Middleton's final novel, *Her Three Wise Men*, was published in 2008.

Mikhalkov, Sergey Vladimirovich, Soviet writer and poet (b. Feb. 28 [March 13, New Style], 1913, Moscow, Russia—d. Aug. 27, 2009, Moscow), co-wrote and then twice rewrote his country's national anthem; he also composed popular verses for children. In the early 1940s Mikhalkov and poet Gabriel El-Registan devised lyrics praising Joseph Stalin, then Soviet prime minister, and entered them into a contest for a new national anthem; their submission was chosen. In 1977 he was asked to revise the lyrics, which he did, removing references to Stalin and adding praise for Lenin. In 2000 Russian Pres. Vladimir Putin asked for another revision, and Mikhalkov once again obliged, this time purging Lenin and adding religious overtones. Mikhalkov was equally known in Russia for his children's literature, in particular the 1935 poem *Dyadya Styopa* ("Uncle Styopa"), about a tall policeman who always does good deeds. Mikhalkov, who also wrote plays, won several state awards for his work.

Mohn, Reinhard, German businessman (b. June 29, 1921, Gütersloh, Ger.—d. Oct. 3, 2009, Steinhagen, Ger.), reversed the fortunes of his family's ailing publishing house, Bertelsmann, making it into one of the world's leading media empires. At the time of Mohn's death, Bertelsmann's holdings included magazines, television channels, and other publishing companies, including Random House and Doubleday. During World War II, Mohn served in the Wehrmacht Afrika Korps until his capture by American forces in 1943. He was held in a prisoner-of-war camp in Kansas, where he acquired English-language skills as well as knowledge of American business practices. Upon his

Bertelsmann—AFP/Getty Images

German media mogul Reinhard Mohn

release (1946), he returned home to Gütersloh and the war-damaged buildings of Bertelsmann, until then a provincial publisher primarily of religious books. Mohn in 1950 applied the American model of book clubs to the German market, offering discounted books to customers who committed to serial purchases. By the mid-1950s membership numbers of Bertelsmann's book clubs topped seven figures. Mohn stepped down from active management in 1981. He received many honours, notably Spain's Prince of Asturias Prize in 1998, the same year that he was named Entrepreneur of the Century by *Die Zeit* magazine.

Mokae, Zakes Makgona, South African actor (b. Aug. 5, 1934, Johannesburg, S.Af.—d. Sept. 11, 2009, Las Vegas, Nev.), was an award-winning black performer most closely associated with the white antiapartheid playwright Athol Fugard. Mokae, who began his career as a jazz musician, was invited by Fugard to join his interracial drama group, and in 1960 the two men appeared onstage together in the first interracial production of a play in South Africa, Fugard's *The Blood Knot*. (They reprised their roles as half brothers in a 1985 revival of the play staged at Yale University.) Mokae left South Africa in 1961 after having been banned for his appearance in *The Blood Knot*. He eventually settled in the U.S. and made his Off-Broadway debut in 1970 in Fugard's *Boesman and Lena*. Mokae earned a Tony Award in 1982 as best featured actor in a play for his Broadway performance as Sam in the world premiere of Fugard's *Master Harold . . . and the Boys*. (In 1985 he was in a made-for-television adaptation with Matthew Broderick.) Mokae received another Tony nomination in 1993 for Tug Yourgrau's *The Song of Jacob Zulu*. He appeared frequently on American television and in such films as *Cry Freedom* (1987), *A Dry White Season* (1989), *A Rage in Harlem* (1991), and *Outbreak* (1995).

Montalbán, Ricardo (RICARDO GONZALO PEDRO MONTALBÁN Y MERINO), Mexican actor (b. Nov. 25, 1920, Mexico City, Mex.—d. Jan. 14, 2009, Los Angeles, Calif.), possessed a distinctive voice and debonair persona and enjoyed a 60-year career appearing onstage, in films (notably as the villainous Khan Noonien Singh in *Star Trek II: The Wrath of Khan* [1982]), and on television, where he starred as the suave Mr. Rourke in the hit TV series *Fantasy Island* (1978–84) and earned an Emmy Award for his performance as Indian chief Satangkai in the miniseries *How the West Was Won* (1978). Montalbán made his stage debut in the New York production *Her Cardboard Lover* (1941) but rose to stardom in Mexico. His singing and dancing talents were discovered by MGM studios, which cast him in *Fiesta* (1947), *On an Island with You* (1948), *The Kissing Bandit* (1948), and *Neptune's Daughter* (1949). He appeared as a Native American in *Across the Wide Missouri* (1951), but he was more often typecast as the stereotypical Latin lover, most notably in the 1953 films *Sombrero* and *Latin Lovers*. Montalbán continued to work

well into his 80s, appearing in the films *Spy Kids 2: Island of Lost Dreams* (2002) and *Spy Kids 3-D: Game Over* (2003). In 1970 he established the nonprofit organization *Nosotros* to help aspiring Hispanic actors.

Montazeri, Hossein Ali (HUSAYN-'ALI MUNTAZIRI), Iranian cleric (b. 1922, Najafabad, Iran—d. Dec. 20, 2009, Qom, Iran), became one of the highest-ranking authorities in Shi'ite Islam; Ayatollah Montazeri (grand ayatollah after 1984) was emphatic in his defense of human rights in Iran, however, and he spent long periods under arrest during both the regime of Mohammad Reza Shah Pahlavi and the Islamic republic that he himself helped to establish. Montazeri, the son of a farmer who taught the Qur'an, began studying Arabic grammar and Persian literature at age 7, and at 12 he enrolled in theological school in nearby Esfahan. At 19 he moved to Qom, where he studied under the future Ayatollah Ruhollah Khomeini. After the shah exiled (1964) Khomeini from Iran, Montazeri helped maintain his mentor's antiregime message and campaigned for Khomeini's return. Montazeri was arrested a number of times and was often exiled within Iran. After his arrest in 1974, he was imprisoned in solitary confinement for several months and tortured. Released in 1978, he traveled to Paris, where Khomeini named him his deputy in Iran. Following the overthrow (1979) of the shah, Montazeri was instrumental in the drafting of a new constitution, and in 1985 he was designated as Khomeini's successor. Montazeri contended that human rights abuses persisted in Iran, however, and when Ali Khamenei—a junior cleric—succeeded Khomeini upon his death in 1989, Montazeri denounced Khamenei's relatively low status. Montazeri was put under house arrest from 1997 until early 2003. In 2009 he opposed the controversial election of Pres. Mahmoud Ahmadinejad.

Morrison, Sir Howard Leslie, New Zealand entertainer (b. Aug. 18, 1935, Rotorua, N.Z.—d. Sept. 24, 2009, Rotorua), was one of New Zealand's most beloved vocalists as the leader of the often humorous Howard Morrison Quartet (1956–64) and then as a solo crooner. Morrison was the son of Temuera Morrison of the All Black national rugby team and was of mixed Te Arawa Maori, Scottish, and Irish ancestry. He sang with local Maori cul-

tural groups before founding his quartet, which recorded its first single, "There's Only One of You"/"Big Man," in 1958. The group became hugely popular, performing live across the region and releasing more than a dozen singles and two albums in 1960 alone. The quartet's best-known hits included the parodies "The Battle of Waikato" (1959) and "My Old Man's an All Black" (1960). After the quartet disbanded in 1964, Morrison established a solo career as a cabaret singer and on tour in Australia, New Zealand, and parts of Asia. He was also active in Maori affairs and was the founder of the Sir Howard Morrison Education Foundation, which provided help for college-bound Te Arawa youth. Morrison was made OBE in 1976, named New Zealand's Entertainer of the Decade in 1989, and awarded a knighthood in 1990.

Mortimer, Sir John Clifford, British barrister and writer (b. April 21, 1923, London, Eng.—d. Jan. 16, 2009, near Henley-on-Thames, Oxfordshire, Eng.), wrote plays for the stage, television, radio, and motion pictures, as well as novels and autobiographical works; he was best known, however, as the creator of the crusty old British barrister Horace Rumpole, whom he featured in numerous stories and on the long-running (42 episodes, 1978–92) TV series *Rumpole of the Bailey*. Mortimer was educated at Harrow and at Brasenose College, Oxford, and published his first novel, *Charade* (1947), before he was called to the bar in 1948. In 1949 he married Penelope Ruth Fletcher (the novelist Penelope Mortimer; divorced 1972). Many of his short stories and novels drew on his legal experience, and the 1962 television production of his play *The Dock Brief* established his reputation. Mortimer wrote many other plays, including *The Wrong Side of the Park* (performed 1960) and *The Judge* (performed 1967); his adaptations include the Georges Feydeau farce *A Flea in Her Ear* (1965) and Evelyn Waugh's novel *Brideshead Revisited* (1981). Mortimer's novels include *Paradise Postponed* (1985) and *Dunster* (1992). One of his finest works is *A Voyage Round My Father* (1971), an autobiographical play about his relationship with his blind father. He was knighted in 1998.

Mountford, Ces (CECIL MOUNTFORD; "THE BLACKBALL BULLET"), New Zealand rugby player and coach (b. June 16, 1919, Blackball, South Island, N.Z.—d. July 19, 2009, Gold Coast,

Queens., Australia), was considered to be one of the best stand-off halves in the sport of rugby league. Mountford moved to Lancashire, Eng., in 1946 to play for Wigan. He scored 70 tries and 55 goals over a 210-game career with Wigan (in 1947–48 he set a season-appearance record of 54 games) and led the side to two league titles, two Challenge Cups, and five Lancashire Cups. In 1952 he moved to Warrington in Cheshire as a player-coach, but a knee injury ended his playing days after only 37 games (six tries). As Warrington's manager (1952–61), Mountford steered the team to seven trophies, including a Challenge Cup and a Lancashire Cup. After a brief sojourn back in New Zealand, he returned to England to coach (1972–73) Blackpool Borough. He later went home to New Zealand, where he managed (1979–82) the national team. Mountford was made MBE in 1987 and in 1990 was one of the inaugural inductees into the New Zealand Sports Hall of Fame.

Næss, Arne Dekke Eide, Norwegian philosopher and environmentalist (b. Jan. 27, 1912, Slemdal, Nor.—d. Jan. 12, 2009, Oslo, Nor.), was one of the originators of the concept of deep ecology, which asserted the interconnectedness and equality of all organisms and sought fundamental reorientation of human values and practices to reflect that interconnectedness. Næss's participation in the environmental movement was motivated by his interest in mountaineering (he led the first expedition to climb the 7,690-m [25,230-ft] Tirich Mir in Pakistan); his engagement with the philosophies of Benedict de Spinoza, Mohandas Gandhi, and Buddhism; and Rachel Carson's book *Silent Spring* (1962). Næss was Norway's best-known philosopher. In 1939 he was appointed professor of philosophy at the University of Oslo, where he taught until 1970. At Oslo, Næss became the centre of a group of young philosophers and social scientists that became known as the Oslo School, which applied empirical methods to ascertain the meanings of philosophical terms (what they called empirical semantics). Næss's philosophical views evolved from an early pragmatist-inflected logical empiricism, through a pluralistic view of the history of philosophy, to a version of skepticism that has been referred to as sympathetic metaskpticism. In 1958 he founded the philosophical journal *Inquiry*. Næss was involved in the Norwegian resistance to the Nazis

in World War II and was a Green Party candidate for minor political office. In 2005 he was knighted and made a Commander with Star of the Royal Norwegian order of St. Olav First Class.

Neuhaus, Max Henry, American sound artist (b. Aug. 9, 1939, Beaumont, Texas—d. Feb. 3, 2009, Maratea, Italy), created aural artworks that he termed "sound installations." Many of his most noted works were featured in New York City, among them *New Work (Underground)* 1978, which featured a persistent throbbing growl that arose from a loudspeaker positioned beneath a grate in the sculpture garden of the Museum of Modern Art, and *Times*

Don Hogan Charles—The New York Times/Redux

American sound artist Max Neuhaus, standing over the subway grates that cover his installation *Times Square*

Square, which treated passersby to a rich textural sound (reminiscent of the fading peal of church bells) that emanated from subway grates. The latter work, which debuted in 1977, was discontinued by Neuhaus in 1992 owing to lack of funding, but it was reinstated in the early 2000s after being acquired by the DIA Foundation.

Neuhaus, the Rev. Richard John, Canadian-born American cleric and theologian (b. May 14, 1936, Pembroke, Ont.—d. Jan. 8, 2009, New York, N.Y.), wielded considerable political influence as an informal adviser to U.S. Pres. George W. Bush on a range of issues, including abortion, same-sex marriage, and stem cell research, and as one of the guiding forces behind a conservative coalition of evangelical Protestants and Roman Catholics. Neuhaus was ordained into the Lutheran ministry in the early 1960s. He was actively involved in the U.S. civil rights movement, marching alongside the Rev. Martin Luther King, Jr., in Selma, Ala., and leading protests to demand the integration of New York City public schools. Neuhaus later became a noted peace activist and helped found the antiwar group Clergy and Laity Concerned About Vietnam. In the 1970s, however, Neuhaus began increasingly to shift his political activism to conservative causes. He denounced the U.S. Supreme Court's 1973 ruling in *Roe v. Wade* that legalized abortion, supported the presidential candidacy of Ronald Reagan in 1980, and attacked the secularization of American life in his 1984 book *The Naked Public Square*. Neuhaus eventually converted to Roman Catholicism and was ordained a priest in 1991. He coedited the book *Evangelicals and Catholics Together: Toward a Common Mission* (1995), which was credited with helping to establish a politically powerful alliance of churchgoers of differing faith traditions. Neuhaus wrote or edited some 30 books. His final book, *American Babylon: Notes of a Christian Exile*, appeared in 2009.

Newman, David ("FATHEAD"), American jazz and pop musician (b. Feb. 24, 1933, Corsicana, Texas—d. Jan. 20, 2009, Kingston, N.Y.), wedded the harmonic and rhythmic sophistication of bop to blues melody as the tenor-saxophone soloist (1954–64 and 1970–71) in Ray Charles's small and big bands and in subsequent reunions with Charles's bands. *Fathead: Ray Charles Presents David Newman* (1959), with Charles on piano and saxophonist Hank Crawford (q.v.), was the first of many albums that Newman led. He went on to lead jazz groups; to solo often on other jazz, rhythm-and-blues, and pop stars' recordings; and to work with jazz artists, including Crawford, Herbie Mann, and Red Garland. Newman was also a versatile alto and baritone saxophonist and flutist.

Nimeiri, Gaafar Mohamed el- (JA'FAR MUHAMMAD AL-NUMAYRI, OR NIMEIRY, OR NIMEYRI), Sudanese military leader and politician (b. Jan. 1, 1930, Wad Nubawi, Omdurman, Sudan—d. May 30, 2009, Omdurman), governed The Sudan from 1969, when he overthrew the civilian regime of Isma'il al-Azhari, until he was himself ousted in a bloodless coup in 1985. Nimeiri was credited with the negotiations that led to a settlement of a 10-year conflict in the southern Sudan region, to which he granted autonomy in 1972, but his at-

Reuters/Landov

Sudanese military leader and politician Gaafar Mohamed el-Nimeiri

tempts to promulgate measures of Islamic law (Shari'ah) in The Sudan alienated many in the predominantly Christian southern region. After graduating (1952) from the Sudan Military College, Nimeiri acted as commander of the Khartoum garrison and led campaigns against rebels in southern Sudan. He also joined in attempts to topple the government. In 1966 he graduated from the U.S. Army Command College at Fort Leavenworth, Kansas. After ousting Azhari, Nimeiri was promoted to major general and became prime minister and chairman of the Revolutionary Command Council (RCC). He put down a right-wing revolt in March 1970 but was briefly overthrown by a communist coup in July 1971. Two months later he was elected president in a plebiscite, with 98.6% of the vote. Nimeiri dissolved the RCC and established (1972) the Sudanese

Socialist Union party, of which he became president. In April 1985, while he was in the U.S., Nimeiri was overthrown by his defense minister. He sought refuge in Egypt, where he spent 14 years in exile.

Nolan, Christopher, Irish author (b. Sept. 6, 1965, Mullingar, Ire.—d. Feb. 20, 2009, Dublin, Ire.), suffered severe brain damage at birth that left him speechless and paralyzed with cerebral palsy, yet he nevertheless earned recognition as a gifted writer at an early age and at age 21 won the prestigious Whitbread Book of the Year award for *Under the Eye of the Clock* (1987). This autobiographical novel, written in the third person, tells the story of Joseph Meehan, whose life closely resembles Nolan's. During childhood Nolan began taking a drug that permitted him some control over his head and neck. At the suggestion of a physical therapist, Nolan's family made him a "unicorn stick," which they strapped to his forehead. Using the stick, he was able to peck out letters on a keyboard. In 1981 a collection of Nolan's plays, stories, poems, and autobiographical material was published as *Dam-Burst of Dreams*. After the success of *Under the Eye of the Clock*, he wrote the novel *The Banyan Tree* (1999), which took him 12 years to complete. A departure from his previous autobiographical work, the novel chronicles the life of Minnie O'Brien, a rural Irish woman born at the beginning of the 20th century. As in his previous work, Nolan's mesmerizing and melodious prose displayed his linguistic agility and his genius for coining new words and innovative turns of phrase.

Novak, Robert (ROBERT DAVID SANDERS NOVAK), American political journalist and commentator (b. Feb. 26, 1931, Joliet, Ill.—d. Aug. 18, 2009, Washington, D.C.), wrote the influential syndicated newspaper column "Inside Report" for more than 40 years and from 1980 pugnaciously espoused a conservative viewpoint on a number of political television talk shows, notably CNN's *Crossfire*. Novak worked as a political reporter for the Associated Press (1954–58) and *The Wall Street Journal* (1958–63). In 1963 Rowland Evans, Jr., recruited him to team up on a joint column, "Inside Report," for the *New York Herald-Tribune*. The column, which appeared in as many as 300 newspapers, moved to the *Chicago Sun-Times* in 1966, and Novak contin-

ued it on his own after Evans retired in 1993. In 2003 Novak ignited a firestorm of controversy with a column in which he identified Valerie Plame as a CIA operative after her husband, Joseph Wilson, had publicly asserted that the administration of Pres. George W. Bush had distorted intelligence to justify the 2003 invasion of Iraq. Novak was known for his combative demeanour on political talk shows, including *The Capital Gang*, *The McLaughlin Group*, and *Face the Nation*; after he stormed off the set of *Crossfire* in 2005, his television career continued on the Fox News Network.

O'Brien, (Michael) Vincent, Irish racehorse trainer (b. April 9, 1917, Churchtown, County Cork, Ire.—d. June 1, 2009, Straffan, County Kildare, Ire.), was the trainer of numerous winners of top European hurdle and flat races between 1943 and 1994 and was the founder of the famed Coolmore Stud breeding empire. His record boasted victories spanning a remarkably broad range of prestigious events, including four Cheltenham Gold Cups, three Champion Hurdles, three Grand Nationals, and Thoroughbred achievements encompassing wins at 16 English classics and 27 Irish classics. In 1951 O'Brien purchased Ballydoyle House, a farm in County Tipperary, and transformed it into a training ground at which he lived and trained horses for 45 years. He became known for his attention to detail, knowledge of bloodlines, and astounding ability to handpick champions, becoming a national hero. One of his finest achievements was in 1970, when Nijinsky won the English Triple Crown. O'Brien's Coolmore Stud breeding operation, which he founded in 1975, was credited with infusing European breeding with the pedigree of Northern Dancer, a Canadian-bred Thoroughbred whose bloodline was among the most famous in the racing world. A 2003 poll by the *Racing Post* ranked O'Brien as the single most important figure in horse racing.

Parkinson, Georgina, British ballerina and ballet mistress (b. Aug. 20, 1938, Brighton, East Sussex, Eng.—d. Dec. 18, 2009, New York, N.Y.), was a dancer with the Royal Ballet (1957–78; principal from 1962), for which she originated a number of roles in contemporary ballets as well as appearing triumphantly in the company's 1964 revival of *Les Biches*, in a role for

which she was chosen by the piece's original choreographer, Bronislava Nijinska. Parkinson later spent more than 30 years (1978–2009) as ballet mistress with American Ballet Theatre (ABT) and performed occasional character roles with the company. Parkinson's talent was discovered by the nuns at her convent school, and after taking classes locally, she studied at the Sadler's Wells Ballet School. Although classically trained, Parkinson received the greatest praise for her dancing in new works by living choreographers, notably Kenneth McMillan, who created a number of roles for her in such works as his revised *Anastasia* (1971) and *Manon* (1974). She went to the U.S. to coach Mikhail Baryshnikov and others for the ballet film *The Turning Point* (1977), which led to the job with ABT.

Paul, Les (LESTER WILLIAM POLSFUSS), American musician and inventor (b. June 9, 1915, Waukesha, Wis.—d. Aug. 13, 2009, White Plains, N.Y.), designed a solid-body electric guitar in 1941, but by the time the Les Paul model was produced by the Gibson Guitar Co. in 1952, Leo Fender had already mass-produced the Fender Broadcaster four years earlier and had thus beaten Paul to popular credit for the invention. Nonetheless, the Gibson Les Paul acquired a devoted following, and its versatility and balance made it

the favoured instrument of such guitarists as Eric Clapton, Jimmy Page, and Peter Dinklage. Before focusing his attention on electric guitar design, Paul was a working country and jazz musician—performing with his own trio in the 1930s and with singers such as Bing Crosby and the Andrews Sisters in the 1940s—and for a time had his own radio program. In the 1950s, while continuing to perform—mostly with his wife, Mary Ford—Paul pioneered the development of multitrack recording and is credited with having invented the first eight-track tape recorder and the technique of overdubbing. After Paul and Ford divorced (1964), his recording output tapered off, but in 1977 he earned a Grammy Award for *Chester & Lester* (1976), an instrumental duet album with country legend Chet Atkins. The exhaustive *The Legend and the Legacy* (1991) collected a trove of remastered tracks from the 1940s and '50s, as well as previously unreleased recordings and full episodes of Paul's radio show. In 2006 he collected two more Grammys, for the songs "Caravan" and "69 Freedom Special" from the tribute album *American Made World Played* (2005). Paul was inducted into the Grammy Hall of Fame (with Ford; 1978), the Rock and Roll Hall of Fame (1988), and the National Inventors Hall of Fame (2005). He was awarded a National Medal of Arts by Pres. George W. Bush in 2007.

Pavle (GOJKO STOJCEVIC), Serbian Orthodox patriarch (b. Sept. 11, 1914, Kucanci, Austria-Hungary [now in Croatia]—d. Nov. 15, 2009, Belgrade, Serb.), as archbishop of Pec, metropolitan of Belgrade and Karlovci, and the patriarch of the Serbian Orthodox Church (1990–2009), led some seven million adherents during the difficult and often violent breakup of Yugoslavia and Serbia's subsequent loss of Kosovo. Although Pavle never publicly opposed Serbian ultranationalism, he denounced the ethnic violence between Orthodox Serbs, Catholic Croatians, and Muslim Bosnians, and in 2000 he called for the resignation of Serbian Pres. Slobodan Milosevic. After studying both medicine and theology, he adopted the name Pavle and entered monastic orders in the late 1940s. Pavle continued his studies, however, and received a doctorate from the Theological Academy in Athens in 1957, the same year he was named bishop of Raska and Prizren. He continued in this bishopric, which included Kosovo, until he was named patriarch.

Penn, Irving, American photographer (b. June 16, 1917, Plainfield, N.J.—d. Oct. 7, 2009, New York, N.Y.), was noted for his sophisticated fashion images, which communicated elegance and luxury through compositional refinement and clarity of line rather than through the use of elaborate props and backdrops, and for his incisive celebrity portraits, in which he combined simplicity and directness with great formality. Penn initially intended to become a painter, but at age 26 he took a job designing photographic covers for the fashion magazine *Vogue*. He began photographing his own ideas for covers and soon established himself as a fashion photographer. He also developed an array of colour techniques used in *Vogue* advertising to highlight various beauty products and fashion accessories, including diamonds. In 1950 he married Swedish model Lisa Fonsagraves, whom he photographed for much of his best work. A memorable series of portraits he created in 1950–51, collectively called *Small Trades*, featured labourers in New York City, Paris, and London formally posed in their work clothes and holding the tools of their trade. This project eventually extended to places such as Nepal, New Guinea, Dahomey (now Benin), and Morocco. Penn's later platinum prints of female nudes and of cigarette butts are characterized by the same

tonal subtlety, compositional virtuosity, and serenity that mark his fashion photography and portraiture. Three hundred of Penn's images were published in *Moments Preserved* (1960). His other books include *Worlds in a Small Room* (1974) and *Passage* (1991).

Perle, George, American composer, music theorist, and educator (b. May 6, 1915, Bayonne, N.J.—d. Jan. 23, 2009, New York, N.Y.), was the leading expert on the music of Austrian composer Alban Berg, who was renowned for his atonal and 12-tone compositions. Perle's theoretical contribution was to expand ways of working with all 12 notes of the Western chromatic scale, eventually developing a framework of musical relationships that extended traditional tonal harmony and rhythmic schemes into new territory, which he called "12-note tonality." The book based on his dissertation, *Serial Composition and Atonality: An Introduction to the Music of Schoenberg, Berg, and Webern* (1962; 6th ed., rev., 1991), presented Perle's groundbreaking analysis and became the standard in the field. Perle earned (1938) a B.A. in music from DePaul University, Chicago, and continued compositional studies with Austrian-American composer Ernst Krenek, a prominent exponent of the serial technique of musical composition. Perle's writings on Berg were seminal, and his work on the opera *Lulu* led to the first complete performances of that masterpiece. Although his body of musical work was relatively small, he was well regarded for his expressive, lyrical, and apparently (but deceptively) uncomplicated pieces. The *Wind Quintet IV* (1984) won the 1986 Pulitzer Prize.

Pinelli, Tullio, Italian screenwriter (b. June 24, 1908, Turin, Italy—d. March 7, 2009, Rome, Italy), collaborated with filmmaker Federico Fellini on the scripts for more than two dozen motion pictures, 13 of them directed by Fellini, including *La strada* (1954), *Le notti de Cabiria* (1957; *Nights of Cabiria*), *La dolce vita* (1960), and *8½* (1963). Four of their joint screenplays—*I vitelloni* (1953), *La strada*, *La dolce vita*, and *8½*—earned Academy Award nominations, with *La strada*, *Le notti de Cabiria*, and *8½* winning the Oscar for best foreign language film. Pinelli also worked on more than 50 screenplays for other directors, notably Pietro Germi, and at age 90 he wrote the short-story collection *La casa di Robespierre* (1998).

Planchon, Roger, French director, actor, and playwright (b. Sept. 12, 1931, Saint-Chamond, France—d. May 12, 2009, Paris, France), spearheaded post-World War II French theatre, finding new meanings in classical texts for more than 50 years with his groundbreaking theatre company. Inspired by German dramatist Bertolt Brecht and a belief that classical texts should be challenged, Planchon staged daring productions, notably Shakespeare's *Henry IV* (1957) and Molière's *George Dandin* (1960) and *Tartuffe* (1962), that drew both great criticism and praise. Planchon's strong directing choices of light, movement, staging, and costume elicited interpretations outside, and often unrelated to, the playwright's original message. He began his theatre company, Théâtre de la Comédie, in Lyon in 1950 but moved to Villeurbanne in 1957 for better funding and renamed the company Théâtre de la Cité. Planchon refused to move to Paris, but by 1959 the company was touring abroad and presenting a regular season in Paris. When the French government abolished (1972) the Théâtre National Populaire in Paris, they transferred its title, attributes, and funding to Planchon's company. Planchon was also a producer, actor (starring in many of his own productions), and playwright, although he was criticized for staging his own plays too often. He later began directing films, notably a screen version of his adaptation of *Georges Dandin* (1987) and *Louis, enfant roi* (1991).

Pnueli, Amir, Israeli computer scientist (b. April 22, 1941, Nahalal, Palestine [now in Israel]—d. Nov. 2, 2009, New York, N.Y.), was the recipient of the 1996 A.M. Turing Award, the highest honour in computer science, for "seminal work introducing temporal logic into computing science and for outstanding contributions to program and system verification." Pnueli received a bachelor's degree in mathematics from the Israel Institute of Technology and a doctorate (1967) in mathematics from the Weizmann Institute of Science. He switched to computer science as a postdoctoral fellow at Stanford University and IBM's Watson Research Center. Pnueli returned to Israel as a senior researcher in the department of applied mathematics at the Weizmann Institute. In 1973 he moved to Tel Aviv University, where he founded the department of computer science. He returned to the Weizmann

Institute from 1981 to 1999, when he joined the computer science faculty at New York University. Pnueli also co-founded the software company Mini-Systems in 1971 and AdCad, a developer of computer-aided engineering software, in 1984.

Pokrovsky, Boris Aleksandrovich, Russian artistic director (b. Jan. 23, 1912, Moscow, Russia—d. June 5, 2009, Moscow), embodied the spirit of the Bolshoi Opera in a career that spanned more than five decades and some 180 production credits. Pokrovsky joined the Bolshoi in 1943 and became its artistic director in 1952. His productions, notably of Tchaikovsky's *Eugene Onegin* and Sergey Prokofiev's *War and Peace*, reflected the traditional style of the company, with grand scale and realistic stagings. Pokrovsky often took his shows abroad; in 1959 he directed a cast of more than 200 at the Russian Festival of Music and Dance in New York City, and in 1975 he took the Bolshoi Opera to the U.S. for the first time, performing at the Metropolitan Opera in New York City and the Kennedy Center for the Performing Arts in Washington, D.C. In 1972 he founded the Moscow Chamber Opera Theatre, where he mounted less-lavish productions of new and more obscure Russian works, notably a revival of Dmitry Shostakovich's *The Nose*. Pokrovsky retired from the Bolshoi in the early 1980s. He was named a People's Artist of the Soviet Union in 1961.

Popovich, Pavel Romanovich, Soviet cosmonaut (b. Oct. 5, 1929, Uzin, Ukraine, U.S.S.R.—d. Sept. 30, 2009, Gurzuf, Ukr.), became the sixth man in orbit when he piloted the Vostok 4 spacecraft (Aug. 12–15, 1962). He and Andriyan G. Nikolayev, who was launched on August 11 in Vostok 3, were the first two men to be in space simultaneously; the two spacecraft came within five kilometres (three miles) of each other. Popovich, a herdsman in his early youth, graduated from a technical school in Magnitogorsk, Russia, U.S.S.R., in 1951, when he entered the army. After transferring to the air force, he graduated (1954) from military aviation training and became a pilot. In 1960 he was among the first to enter cosmonaut training. Popovich was also the commander of the Soyuz 14 mission (July 3–19, 1974), on which he and flight engineer Yury P. Artyukhin docked their craft with Salyut 3, a military space

station that had been placed in orbit on June 25, and engaged in a 15-day program of reconnaissance of the Earth's surface. From 1980 to 1989 Popovich was the deputy chief of the Yury Gagarin Cosmonauts Training Centre in Star City, near Moscow. He retired as a cosmonaut in 1982. At the

RIA Novosti/Alamy

Soviet cosmonaut Pavel Popovich

time of his death, Popovich was chairman of the board of the All-Russia Institute of Agricultural Aero-Photo-Geodesic Studies.

Pousseur, Henri, Belgian composer (b. June 23, 1929, Malmédy, Belg.—d. March 6, 2009, Brussels, Belg.), created works that encompass a variety of 20th-century musical styles, particularly serial music, in which various musical elements are rigidly controlled, and aleatory music, involving many types of highly unpredictable events. Pousseur studied at the Liège Conservatory (1947–52) and the Brussels Conservatory (1952–53) and composed his first piece, *Sonatine* for piano, in 1949. Many of his best-known works reflect his aleatory style, notably *Répons mobile pour sept musiciens* (1960), in which the course of the composition is partly determined by lottery and by the players' free choice based on moves on a checkerboard. In the operalike *Le Miroir de votre Faust* (1961–68; also called *Votre Faust*) an audience vote determines which one of the four possible denouements will be presented at a particular performance. Pousseur's later compositions include *Couleurs*

croisées (1967), a series of variations on the civil rights song "We Shall Overcome"; its sequel, *Croisées des couleurs croisées* (1970), for female voice, pianos, tape recorders, and two radio receivers; *Liège à Paris* (1977); *Traverser la forêt* (1987), a cantata for speaker, two vocal soloists, chorus, and 12 instruments; and *Le Village planétaire vu de Nivelles* (2000), a 16-hour multimedia program of music, poetry, and visual imagery.

Powell, Billy (WILLIAM NORRIS POWELL), American rock musician (b. June 3, 1952, Corpus Christi, Texas—d. Jan. 28, 2009, Orange Park, Fla.), played keyboards for the Southern-rock band Lynyrd Skynyrd. Powell's initial association with the band was as a roadie. He became its keyboardist in 1972 and played the piano introduction to the hit song "Free Bird" on the group's first album, *Pronounced Leh-Nerd Skin-Nerd* (1973). Powell's work on the piano and Hammond organ underpinned the guitar work that was the band's signature sound on five subsequent albums. In 1977 Powell survived a crash of a tour plane that killed several members of the band. The remaining members, including Powell, regrouped in 1987 and continued touring and recording. Lynyrd Skynyrd was inducted into the Rock and Roll Hall of Fame in 2006.

Powell, Jody (JOSEPH LESTER POWELL, JR.), American presidential adviser (b. Sept. 30, 1943, Cordele, Ga.—d. Sept. 14, 2009, Cambridge, Md.), served (1977–81) as press secretary to U.S. Pres. Jimmy Carter and became known for his easy drawl and quick temper as well as his powerful loyalty to the president. Powell entered the U.S. Air Force Academy after graduation but was expelled for cheating in his senior year. He attended Georgia State University and received a master's degree in political science from Emory University, Atlanta. Powell, formerly Carter's chauffeur, became his friend and most trusted adviser, beginning with Carter's gubernatorial campaign. After he left the White House, Powell headed two public relations firms.

Prabhakaran, Velupillai, Tamil nationalist and guerrilla leader (b. Nov. 26, 1954, Velvettithurai, Jaffna Peninsula, Ceylon [now Sri Lanka]—d. May 18, 2009, near Nanthikadal Lagoon, Sri Lanka), founded (1972) the Liberation Tigers of Tamil Eelam (LTTE) and built

STR—AFP/Getty Images

Tamil nationalist and guerrilla leader Velupillai Prabhakaran

that organization, commonly known as the Tamil Tigers, into one of the world's most relentless insurgent groups. Prabhakaran dedicated his life to the dream of establishing an independent homeland for the Tamil ethnic minority in northern Sri Lanka. In 1975 he was accused of having murdered the mayor of Jaffna. The LTTE eventually became a formidable force and between 1990 and 1995 controlled the far-north Jaffna Peninsula. Over a 30-year period, Prabhakaran's forces were held responsible for thousands of deaths, and Tiger suicide bombers killed numerous high-profile victims, notably former Indian prime minister Rajiv Gandhi in 1991 and Sri Lankan Pres. Ranasinghe Premadasa in 1993. After months of heavy fighting against government troops in early 2009, the Tigers were crushed, and Prabhakaran was killed in action.

Presnell, Harve (GEORGE HARVEY PRESNELL), American actor (b. Sept. 14, 1933, Modesto, Calif.—d. June 30, 2009, Santa Monica, Calif.), enchanted stage and screen audiences with his leading-man looks and rich baritone voice before becoming an austere character actor decades later. Presnell studied voice at the University of Southern California and then sang with the Roger Wagner Chorale in the 1950s and on a 1960 recording of Carl Orff's opera *Carmina Burana* conducted by Eugene Ormandy. His acting career took off in 1960 with the Broadway opening of *The Unsinkable Molly*

Brown, with Presnell as the male lead. After more than 500 performances, he reprised the role of Johnny Brown on tour and in the 1964 screen adaptation. Film musicals were on the decline by the 1960s, however, and after *Paint Your Wagon* (1969), Presnell returned to the stage in such shows as *Annie Get Your Gun* (1977) and the short-lived 1972 musical adaptation of *Gone with the Wind*. He was especially popular as Daddy Warbucks in the hit musical *Annie* (and its less-successful 1989 and 1993 sequels).

Purdy, James Otis, American novelist and short-story writer (b. July 17, 1914, near Hicksville, Ohio—d. March 13, 2009, Englewood, N.J.), explored the American way of life in works that presented a vision of human alienation, indifference, and cruelty. His first two works—*Don't Call Me by My Right Name and Other Stories* and *63: Dream Palace*, a novella (both 1956)—were rejected by a number of American publishing houses and were first offered by Purdy through a subsidy publisher. These books won the support of British poet Dame Edith Sitwell and, following their publication in England, met with critical acclaim in the U.S. Purdy's fiction examines the relationships between individuals and the effects of family life. *Malcolm* (1959) tells the story of the experiences of a 15-year-old boy in a fruitless search for his identity. In Purdy's later works, such as *The Nephew* (1960) and *Cabot Wright Begins* (1964), he further developed the bleak worldview that he first propounded in *Malcolm*. In his continuous novel cycle, *Sleepers in Moon-Crowned Valleys*—comprising *Jeremy's Version* (1970), *The House of the Solitary Maggot* (1974), *Mourners Below* (1981), and *On Glory's Course* (1984)—Purdy explores small-town American life and destructive family relationships. Purdy also published story collections, plays, and poems.

Qian Xuesen (TSIEN HSUE-SHEN), Chinese rocket scientist (b. 1911, Hangzhou, Zhejiang province, China—d. Oct. 31, 2009, Beijing, China), was known as the father of China's missile and space programs because of his leadership in the development of the country's first ballistic missiles and first satellite. Qian in 1935 immigrated to the United States, where he became involved in the study and development of rocketry and was a founding member of what became the Jet Propulsion Lab-

oratory at the California Institute of Technology. During World War II he served on the U.S. government's Science Advisory Board. After the Communist Party of China came to power in China in 1949, however, Qian came under investigation, and within a year his security clearance was revoked. In 1955 he was sent back to China, where he established the Institute of Mechanics in Beijing and worked within the Chinese Academy of Sciences.

Quick, Richard, American swim coach (b. Jan. 31, 1943, Akron, Ohio—d. June 10, 2009, Austin, Texas), led numerous American swimmers to collegiate and Olympic victory in a career of more than 30 years. Beginning in 1984, Quick coached for six consecutive Olympic Games; he was head coach for the men's and women's swim teams in Seoul (1988) and for the women's team in Atlanta (1996) and Sydney (2000). As an Olympic coach he worked with swimmers Matt Biondi, who won eight gold medals, and Janet Evans, who won four. Quick was also a successful college coach with 13 National Collegiate Athletic Association (NCAA) titles, more than any other Division I swimming coach. He won seven titles with the Stanford University women's team and five with the University of Texas women's team. The record-breaking title was won by the Auburn (Ala.) University men's team in 2009, though Quick was too ill to attend the event; he had been diagnosed with a malignant brain tumour. The College Swimming Coaches Association named Quick the NCAA Coach of the Year six times and in 2009 honoured him with its first Lifetime Achievement Award. In 2000 he was inducted into the International Swimming Hall of Fame.

Rahbani, Mansour, Lebanese composer, lyricist, and poet (b. March 17, 1925, Antelias, near Beirut, Leb.—d. Jan. 13, 2009, Beirut), collaborated with his older brother, Assi, on hundreds of songs and more than 20 musical theatre productions, many of which they created as a showcase for Assi's wife, the vocalist and widely feted cultural icon Fairuz. The Rahbanis both worked as police officers while studying music and trying to establish a joint theatrical career. In contrast to the Arab tradition of long, complex, epic song-poems, the brothers began to compose European-influenced three-minute songs about everyday life and love, usu-

Thos Robinson/Getty Images

ally with Assi providing the music and Mansour adding the lyrics. The Greek Orthodox Rahbani Brothers were often associated with Lebanon's Christian community, but they were largely successful in writing nonreligious pan-Arabic music that appealed to all segments of Arab society. One of their plays, *Biya el-khawatim* ("The Ring Seller"), was made into a 1965 motion picture, directed by Egyptian filmmaker Youssef Chahine and starring Fairuz. After Assi's death in 1986, Mansour maintained a successful solo career; the last of his dozen musical plays, *The Return of the Phoenix*, was being produced in Beirut at the time of his death.

Prosperity preacher Reverend Ike

Reverend Ike (FREDERICK JOSEPH EIKERENKOETTER II), American clergyman (b. June 1, 1935, Ridgeland, S.C.—d. July 28, 2009, Los Angeles, Calif.), built his ministry on the concepts of self-motivated prosperity and material satisfaction. Reverend Ike attended the American Bible College (B.A., 1956) in Chicago and was a chaplain in the U.S. Air Force; he founded his own church in South Carolina and practiced faith healing in Boston before settling in New York City. There he set up the Christ Community United Church in an old movie theatre in Harlem. (In order to present his name on the narrow theatre marquee, he shortened it to Rev. Ike.) Then he founded the United Church Science of Living Institute in another old movie theatre, which he purchased (1969) for more than \$500,000 and decorated luxuriously. Rev. Ike's nontraditional philosophy—which encouraged his congregation to channel the "God in you" in the pursuit of happiness, success, and wealth—drew criticism from traditional clergy and civil rights activists. He built a congregation of about 5,000 parishioners, however, and during his peak popularity in the 1970s, Rev. Ike had an audience of about 2.5 million. His sermons were broadcast on television and some 1,770 radio stations, and he sold motivational books, tapes, magazines, and videos, such as *The Master of Money* and *How to Get out and Stay out of the Hell of Poverty, Sickness, and Suffering*. With these sales and donations from his supporters, Rev. Ike became a multimillionaire, and he spent liberally on flashy clothing, expensive cars, and luxury goods. His business

was investigated by the U.S. Postal Service and the Internal Revenue Service. In June 2009 Rev. Ike handed over his ministry to his son, Xavier.

Rhone, Trevor, Jamaican playwright, screenwriter, actor, and director (b. March 24, 1940, Kingston, Jam.—d. Sept. 15, 2009, Kingston), won international acclaim for his screenplay for the 1972 crime film *The Harder They Come* and for such plays as *Smile Orange* (1971) and *Old Story Time* (1979). Rhone's works were noted for their keen explorations of racial, social, and

political tensions in Jamaica. After studying in London at the Rose Bruford Training College of Speech and Drama, Rhone returned to Jamaica in the mid-1960s and helped to found the Barn Theatre in Kingston, where he staged many productions. In 1976 he directed the film version of *Smile Orange*, and in 1988 his screenplay for the film *Milk and Honey* received the Canadian Genie award for best original screenplay at the Toronto International Film Festival. He also wrote and acted in the one-man autobiographical play *Bellas Gate Boy* (2002). The Jamaican government named him a Commander of the Order of Distinction in 1980.

Richard, Wendy (WENDY EMERTON), British actress (b. July 20, 1943, Middleborough, Eng.—d. Feb. 26, 2009, London, Eng.), displayed her versatility on two long-running BBC television shows: as the sassy Grace Brothers department store sales assistant Shirley Brahms on all 69 episodes of the bawdy sitcom *Are You Being Served?* (1972–85), in the 1977 movie of the same name, and in the 12-episode BBC sequel, *Grace and Favour* (1992–93; U.S. title, *Are You Being Served? Again!*) and then as the long-suffering working-class matriarch Pauline Fowler on the evening soap opera *EastEnders* from its debut on Feb. 19, 1985, until she quit in 2006 af-

British actress Wendy Richard (left), with Are You Being Served? castmate Mollie Sugden

Pictorial Press Ltd/Alamy

ter more than 1,400 episodes. Richardson left school at age 15, worked as a department store assistant, and studied acting at the Italia Conti Stage Academy. She played a series of small roles, notably in such hit sitcoms as *Up Pompeii!*, *Please, Sir!*, *On the Buses*, and *Dad's Army*, as well as in several film comedies before getting her break as Miss Brahms. Richardson was made MBE in 2000, the same year she published her autobiography, *Wendy Richard . . . No 'S': My Life Story*.

Richardson, Natasha Jane, British-born actress (b. May 11, 1963, London, Eng.—d. March 18, 2009, New York, N.Y.), arose within a renowned British acting dynasty to make her own mark in motion pictures and, especially, on-stage in London's West End and on Broadway. She was the elder daughter of director Tony Richardson and actress Vanessa Redgrave—herself the daughter of actors Sir Michael Redgrave and Rachel Kempson, the sister of actors Corin Redgrave and Lynn Redgrave, and the granddaughter of silent-film actor Roy Redgrave. Richardson made her debut (along with her younger sister, actress Joely Richardson) at age four in her parents' film *The Charge of the Light Brigade*. After training at the Central School of Speech and Drama in London and at the West Yorkshire Playhouse in Leeds, she appeared on television before making her West End debut in 1985 opposite her mother in Anton Chekhov's *The Seagull*, winning a London Drama Critics' Award as most promising newcomer. Richardson made her official film debut as Mary Shelley in *Gothic* (1986) and captured the attention of American audiences with her starring roles in *Patty Hearst* (1988), *The Handmaid's Tale* (1990), and *The Comfort of Strangers* (1990). Later films include the comedies *The Parent Trap* (1998) and *Maid in Manhattan* (2002); *The White Countess* (2005), with her mother and her aunt in supporting roles; and the drama *Evening* (2007), again opposite her mother. In 1993 Richardson captured a Tony nomination for her performance in the revival of Eugene O'Neill's *Anna Christie* co-starring Irish actor Liam Neeson, who became her second husband soon after. She returned to Broadway three times: in an acclaimed revival of the musical *Cabaret*, winning the Tony this time for her star turn as Sally Bowles; as Anna in *Closer* (1999); and as Blanche Du Bois in a 2005 revival of A

Streetcar Named Desire. Richardson died of a head trauma sustained on March 16 in what initially appeared to be a minor fall at a ski resort outside Montreal.

Roberts, (Granville) Oral, American evangelist (b. Jan. 24, 1918, near Ada, Okla.—d. Dec. 15, 2009, Newport Beach, Calif.), was widely recognized as one of the leading figures in Christianity in the U.S. during the latter half of the 20th century, bringing Pentecostal theology and practice into the mainstream by means of a vast business empire and a pervasive media presence. The son of a Pentecostal minister, Roberts initially rejected his father's faith but underwent a conversion experience at the age of 17 and thereafter served as a pastor in several towns in the South while studying (1943–45) at Oklahoma Baptist College. In the late 1940s, claiming divine inspiration, he began the Oral Roberts Evangelistic Association and became an itinerant preacher at revival meetings, where he gave fiery sermons and practiced faith healing. Roberts expanded his ministry in the 1950s through regular radio and television broadcasts, which gave him a national audience, and further extended his brand with the founding (1963) of Oral Roberts University (ORU), Tulsa, Okla., which eventually became the largest charismatic Christian university in the world. As his wealth grew, Roberts was frequently criticized for his luxurious jet-set lifestyle, and in 1987, while his City of Faith medical centre (opened 1981 in Tulsa) was struggling financially, he was subject to public ridicule for having told his supporters that "God could call Oral Roberts home" if he did not raise \$4.5 million within two months. The facility closed two years later, and Roberts assumed the chancellorship of ORU in 1993.

Robson, Sir Bobby (SIR ROBERT WILLIAM ROBSON), British association football (soccer) player and manager (b. Feb. 18, 1933, Sacriston, Durham county, Eng.—d. July 31, 2009, Durham county), was one of England's most respected players and managers. At the height of his professional career, Robson played 20 matches with the national team, including appearances in the 1958 and 1962 World Cup finals; later, serving as the England manager (1982–90), he steered the national team to two World Cup finals tournaments

(1986, 1990). He spent most of his career on the field with Fulham (1950–56, 1962–67), where he scored a total of 77 goals in 345 games, and West Bromwich Albion (1956–62), scoring 56 goals in 239 games. He coached for one brief season (1967–68) in North America with the Vancouver Royals before returning home as Fulham's manager (1968). The next season he took charge of Ipswich Town. After leading the previously little-known Ipswich club to the FA Cup (1978) and the Union des Associations Européennes de Football (UEFA) Cup (1981) titles, he was appointed (1982) England's manager. He left England after eight years in that position to manage PSV Eindhoven (1991–92), leading that club to the Dutch league championship for two straight years. Thereafter he worked in Portugal at Sporting Lisbon (1992–93) and FC Porto (1994–96), where he secured the Portuguese Cup (1994) and league (1995, 1996) championships, and in Barcelona (1996–98), where in 1997 the club captured both the Spanish Cup and the UEFA Cup Winners' Cup. After a brief stint (1998) back with PSV Eindhoven, he returned to England in 1999 to manage Newcastle United; he was forced to retire in 2004. Robson was knighted in 2002 and was inducted into the English Football Hall of Fame in 2003.

Rocher, Yves, French cosmetics executive (b. April 7, 1930, La Gacilly, Brittany, France—d. Dec. 26, 2009, Paris, France), founded (1959) a cosmetics line that grew into a beauty empire, with some 2,000 stores worldwide. He was an early advocate of using botanicals in cosmetics, and the Yves Rocher lines—which included makeup, skin- and hair-care products, and perfumes—were known for their use of natural ingredients and for their reasonable prices. Rocher's company began as a mail-order service in his hometown of La Gacilly, where he also served as mayor from 1962 to 2008. In 1968 he opened his first store.

Roh Moo-Hyun, South Korean politician (b. Aug. 6, 1946, Gimhae, near Pusan, Korea [now in S.Kor.]—d. May 23, 2009, Pusan), served (2003–08) as president of South Korea during a time in which he faced labour unrest and a faltering economy and found himself in the midst of a financial scandal after several of his aides were accused of having accepted illegal campaign donations. Roh worked as a

Torsten Leukert—Vario Images GmbH & Co.KG/Alamy

South Korean politician Roh Moo-Hyun

night watchman in high school and later served (1968–71) in the military. Although he did not attend college, he passed (1975) the bar exam and was appointed (1977) a judge and later became a highly respected human rights lawyer. In the late 1980s Roh entered politics at the invitation of then opposition leader Kim Young-Sam. Roh won (1988) a seat in the National Assembly and gained notice for criticizing the military regime of Pres. Chun Doo-Hwan. In 1990 Roh split with his party when Kim made an alliance with the general-turned-president, Roh Tae-Woo. That alliance led to Kim's election as president, and Roh Moo-Hyun's political fortunes seemed to crumble. He lost his seat in the National Assembly in 1992 and failed to regain it in 1996. He also lost a bid to become mayor of Pusan in 1995. Roh eventually led a small opposition party into an alliance with Kim Dae-Jung (*q.v.*), and when Kim came to power in 1998, Roh served in his cabinet. In December 2002 Roh was successful in defeating Lee Hoi-Chang in a tightly contested presidential race. In March 2004, however, Roh was impeached by the parliament following allegations of election law violations and economic mismanagement. Though forced to temporarily step down, he was reinstated as president in May after the Constitutional Court overturned the impeachment, and he completed his five-year term. Roh was later investigated over allegations of bribery, and in May 2009 he jumped off a cliff to his death.

Ronis, Willy, French photographer (b. Aug. 14, 1910, Paris, France—d. Sept. 12, 2009, Paris), crafted powerful black-and-white images in which he captured the rich texture of everyday working-class life in post-World War II Paris. In 1932 he took over the family photography business. Ronis moved away from formal portraits to work as a photo-journalist until 1940, when he escaped to the south from the advancing German troops and took a job with a touring theatrical company. After liberation (1944), he and his wife, artist Marie-Anne Lansiaux, returned to Paris, where in 1946 he joined the Rapho photo agency. In the early 1950s, Ronis became known in the U.S. through his commissions for *Life* magazine and the 1951 Museum of Modern Art exhibition "Five French Photographers" (Ronis, Henri Cartier-Bresson, Robert Doisneau, Brassai, and Izis Bidermanas). His many honours included the Kodak Prize (1947), the gold medal at the Venice Biennale (1957), the Nadar Prize (1981), and the title Commander of the Order of Arts and Letters (1985).

Ruby, Karine, French snowboarder (b. Jan. 4, 1978, Bonneville, France—d. May 29, 2009, Chamonix, France), was the most decorated female snowboarder in the world, with two Olympic medals, six Fédération Internationale de Ski (FIS) world championship gold medals, and 67 FIS Snowboard World Cup victories. Ruby became the first woman to win an Olympic medal in the sport of

snowboarding (which became an event at the 1998 Nagano [Japan] Games) when she took the gold medal in the giant slalom. She competed in the two following Olympics and won silver in the parallel giant slalom in Salt Lake City, Utah (2002). After a disappointing Olympic quarterfinal elimination in 2006, she retired to train as a mountain climbing guide. Ruby, who grew up in the French Alps and had a lifelong passion for mountaineering, was killed in a climbing accident weeks before finishing her training.

Russell, George Allan, American jazz artist (b. June 23, 1923, Cincinnati, Ohio—d. July 27, 2009, Boston, Mass.), composed works teeming with melodic and rhythmic vitality and created the Lydian Chromatic Concept of Tonal Organization (LCCOTO), an influential theory of musical structure that he first unveiled in a 1953 pamphlet. He also composed two major works: "Cubana Be-Cubana Bop" (1947), an innovative Afro-Cuban jazz piece for Dizzy Gillespie's band, and "A Bird in Igor's Yard" (1949), which fused the music of Charlie Parker and Igor Stravinsky for Buddy DeFranco's big band. In the 1950s Russell's LCCOTO began to influence Miles Davis and other modal-jazz pioneers. Russell went on to release the albums *Jazz in the Space Age* and *New York, New York*, which virtually burst with layers of multiple sonic and rhythmic colours. He led (1960–64) a noted sextet that played his songs in the U.S. and Europe, composed *Othello Ballet Suite* (1968), and experimented with electronic music while living (1964–69) in Scandinavia. He then taught (1969–2004) at the New England Conservatory of Music and formed big bands to play new compositions that often included electronic and rock elements.

Safire, William (WILLIAM LEWIS SAFIR), American writer (b. Dec. 17, 1929, New York, N.Y.—d. Sept. 27, 2009, Rockville, Md.), was known for his fiercely opinionated conservative columns (1973–2005) for the *New York Times* as well as his witty and meticulous columns (1979–2009) in *The New York Times Magazine* that traced the origins and meanings of popular phrases; he also won fame as a speechwriter for Pres. Richard M. Nixon. Safire ran a public relations company in 1960–68 and in 1968 joined the Nixon administration as a speechwriter; he coined the famous

French snowboarder Karine Ruby

Diana Walker—Time Life Pictures/Getty Images

*Pulitzer Prize-winning columnist
William Safire*

phrase “nattering nabobs of negativism” in a speech written for Vice Pres. Spiro Agnew. Safire won a Pulitzer Prize for commentary in 1978 and was a member (1995–2004) of the Pulitzer Board. His books include the best-selling novel *Full Disclosure* (1977) and *Safire’s Political Dictionary* (1978; rev. ed. 1993, 2008). Safire was awarded the Presidential Medal of Freedom in 2006.

Sailer, Anton Engelbert (TONI; “THE BLACK BLITZ FROM KITZ”), Austrian Alpine skier (b. Nov. 17, 1935, Kitzbühel, Austria—d. Aug. 24, 2009, Innsbruck, Austria), in the 1956 Olympic Winter Games held in Cortina d’Ampezzo, Italy, was the first skier to sweep the gold medals in the Alpine competition, which at that time consisted of the slalom, giant slalom, and downhill events. Sailer, a 20-year-old plumber, was at the time the youngest skier ever to capture a gold medal in men’s Olympic Alpine skiing, and his 6.2-second margin of victory in the giant slalom set an Olympic record that still stood in 2009. Winning the gold medals also meant that Sailer received three world championship titles and a world champion classification for the combined event. By the end of the 1958 season, he had secured an additional three world titles and one second-place finish. In 1959 Sailer announced his retirement from amateur competition

and said that he would not be participating in the 1960 Winter Games. He rejoined the Austrian Alpine ski team as manager in the early 1970s. In 1999 Sailer was named Austria’s Sportsman of the Century.

Sales, Soupy (MILTON SUPMAN), American television and radio personality (b. Jan. 8, 1926, Franklinton, N.C.—d. Oct. 22, 2009, New York, N.Y.), achieved widespread popularity in the 1960s as the zany host of the syndicated television program *The Soupy Sales Show*. Sales was especially known for his pie-throwing routines, and he once estimated that 20,000 pies had been hurled at him or his guests during the show’s run.

Salih, al-Tayyib (TAYEB SALIH), Sudanese novelist and short-story writer (b. 1929, Al-Shamaliyah province, Sudan—d. Feb. 18, 2009, London, Eng.), crafted polyrhythmic and haunting Arabic-language prose in works that explore the intersections of traditional and modern life in Africa. Salih attended universities in Khartoum, Sudan, and in London and devoted much of his professional life to radio broadcasting, for many years as head of drama for the BBC Arabic Service. Coming from a rural background of small farmers and orthodox religious teachers, he attempted in his work to harmonize the traditions of the past with the worldliness of the “traveled man,” the African who has returned from schooling abroad. His novel *Mawsim al-hijrah ilā al-shamāl* (1966; *Season of Migration to the North*, 1969), often referred to as a prose poem, reflects the conflicts of modern Africa, while the tales collected in *Urs al-Zayn* (1967; *The Wedding of Zein and Other Stories*, 1968) evoke the warmth, compassion, humour, and sadness of traditional Sudanese Arabic life through beautifully structured narrative rhythms. In the 1970s Salih wrote two short volumes, translated into English as *Bandarshah*.

Samak Sundaravej, Thai journalist and politician (b. June 13, 1935, Bangkok, Thai.—d. Nov. 24, 2009, Bangkok), served as prime minister of Thailand during Jan. 29–Sept. 9, 2008. Samak was the first Thai prime minister to be democratically elected since the ousting of Prime Minister Thaksin Shinawatra in a September 2006 military coup, but he was forced to step down after less than nine months in

office after the Constitutional Court found him guilty of having illegally accepted payment for television cooking show appearances that he had made while serving as prime minister. Originally a member of the Democrat Party, he was elected to the parliament in 1973. Three years later he spearheaded a radio campaign against pro-democracy activists at Thammasat University and voiced support for the October 1976 crackdown in which dozens of students were killed. After serving as interior minister (1976–77), Samak was the founder and head (1979–2000) of the Prachakorn Thai Party. In 1992, after a military junta had toppled the government, Samak was appointed deputy prime minister, and in May of that year he conspicuously supported a bloody suppression of pro-democracy demonstrators. In 2000 Samak won the Bangkok mayoral race, but his four-year term ended amid allegations of corruption. He went on to host political talk TV shows as well as a popular cooking program, returning to politics in 2006 with a run for the Senate, where he briefly served until Thaksin’s overthrow. With Thaksin living in exile, Samak helped establish (August 2007) the pro-Thaksin People Power Party, which subsequently formed a multiparty governing coalition under Samak.

Samuelson, Paul Anthony, American economist (b. May 15, 1915, Gary, Ind.—d. Dec. 13, 2009, Belmont, Mass.), was awarded the Nobel Memorial Prize in Economic Sciences in 1970 for his fundamental contributions to nearly all branches of economic theory. Samuelson was educated at the University of Chicago (B.A., 1935) and at Harvard University (Ph.D., 1941). He became a professor of economics at the Massachusetts Institute of Technology (MIT) in 1940 and built MIT into a world-class centre of graduate studies in economics. He also served as an economic adviser to the U.S. government. Samuelson contributed to many areas of economic theory through powerful mathematical techniques that he employed essentially as puzzle-solving devices. His *Foundations of Economic Analysis* (1947) provides the basic theme of his work, with the universal nature of consumer behaviour seen as the key to economic theory. His introductory textbook, *Economics* (1948), remained a classic. *The Collected Scientific Papers of Paul A. Samuelson* was published (1966–86) in five volumes.

Yale Joel—Time Life Pictures/Getty Images

American economist Paul A. Samuelson

Samuelson also was a columnist (1966–81) for *Newsweek* magazine and the coauthor of the textbooks *Microeconomics* and *Macroeconomics*, both in 1989.

Saxon, Sky (RICHARD ELVERN MARSH; SKY SUNLIGHT SAXON), American musician (b. Aug. 20, 1937?, Salt Lake City, Utah—d. June 25, 2009, Austin, Texas), melded British pop style, free-love ideals, and abrasive rock rhythms to form the Seeds, a hallmark proto-punk band. Saxon's musical career began when he moved to Los Angeles after high school, originally performing as Little Richie Marsh. The Seeds formed in 1965 and quickly became one of the most popular bands on the Los Angeles scene, with Saxon singing, writing, and playing electric bass. Their single "Pushin' Too Hard" reached the American Top 40 (1967) and endured as a rock-and-roll standard. The group's first two albums, *The Seeds* (1966) and *A Web of Sound* (1966), were both successes, but by 1968 the band could not commercially compete with rivals such as Love and the Doors.

Schulberg, Budd (SEYMOUR WILSON SCHULBERG), American novelist, screenwriter, and journalist (b. March 27, 1914, New York, N.Y.—d. Aug. 5, 2009, Westhampton Beach, N.Y.), published to great acclaim his first novel, *What Makes Sammy Run?* (1941), about an unprincipled motion-picture studio mogul, and earned a 1954 Academy Award for his story and screenplay

for the classic film *On the Waterfront*, which garnered a total of eight Oscars. He was the son of motion-picture producer Benjamin Percival ("B.P.") Schulberg and grew up in Hollywood. He became a "reader" and then a screenwriter after completing his education (1936) at Dartmouth College, Hanover, N.H. Schulberg began writing and publishing short stories and became a member of the Communist Party, but he broke with the party in 1939, when it insisted that *What Makes Sammy Run?* be written to reflect Marxist dogma. In 1947 he published his second novel, *The Harder They Fall*, a fictional exposé of corrupt practices in professional boxing. In 1950 his novel *The Disenchanted* won an American Library Award for fiction. When the House Committee on Un-American Activities launched (1951) a second wave of inquiries into Hollywood, probing for names of those affiliating with the Communist Party, Schulberg gave damaging testimony.

Scott-James, Anne (ANNE ELEANOR SCOTT-JAMES; LADY LANCASTER), British journalist and writer (b. April 5, 1913, London, Eng.—d. May 13, 2009, Berkshire, Eng.), defied gender roles as one of the first female career journalists and columnists on Fleet Street, the hub of the British press until the 1980s. Scott-James left Somerville College, Oxford, two years before graduating because she was impatient to pursue a career. She was hired at age 20 by *Vogue* magazine, where she later became beauty editor. She left *Vogue* during World War II to become the women's editor at *Picture Post* photo-journalism magazine. After the war she was the editor of the magazine *Harper's Bazaar* (1945) and then an editor and columnist for the *Sunday Express* (London) in the 1950s and for the *Daily Mail* (London) during the 1960s. Scott-James's columns were widely read by both men and women, and her articles ranged from social critique to interviews to investigations abroad. Scott-James was known for her professionalism and her quick wit, which was demonstrated in her 14 years as a panelist on the BBC radio game show *My Word* (1964–78). After her stint at the *Daily Mail*, she worked as a freelance writer, primarily covering gardening, and published several books, notably *The Pleasure Garden: An Illustrated History of British Gardening* (1977), which was illustrated by her third husband, Sir Osbert Lancaster.

Sedgwick, Eve Kosofsky, American author (b. May 2, 1950, Dayton, Ohio—d. April 12, 2009, New York, N.Y.), was a professor of English (1988–92) at Duke University, Durham, N.C., when she published the highly influential *Epistemology of the Closet* (1990), a groundbreaking work in the academic field of queer studies, which she was credited with founding. In Sedgwick's analysis there were two understandings of homosexuality—a minoritizing view, which held that there is a "distinct population of persons who 'really' are gay," and a universalizing view, in which "apparently heterosexual persons...are strongly marked by same-sex influences." She theorized that those who subscribed to the latter understanding were in favour of strong state injunctions against same-sex marriage.

Seeger, Mike, American folk musician (b. Aug. 15, 1933, New York, N.Y.—d. Aug. 7, 2009, Lexington, Va.), collected and performed traditional American music from the 1920s and '30s and was a major influence in the folk music revival of the 1960s and later. Seeger was a member of a prominent family in American folk music; his sister Peggy Seeger and half brother Pete Seeger were also renowned musicians. Seeger began collecting field recordings in the early 1950s. He mastered several string instruments—including guitar, banjo, fiddle, and mandolin—and in 1958 was a founding member (with Tom Paley and John Cohen) of the New Lost City Ramblers, who performed traditional music in its original manner. In addition to numerous performances and albums with the New Lost City Ramblers and other groups, Seeger served as the director of the Smithsonian American Folklife Company (1968–76) and of the American Old Time Music Festival (1975–78).

Shank, Bud (CLIFFORD EVERETT SHANK, JR.), American musician (b. May 27, 1926, Dayton, Ohio—d. April 2, 2009, Tucson, Ariz.), was a leading figure in 1950s West Coast jazz as an alto saxophonist with a bright, singing sound and as a pioneering modern-jazz flutist. Shank played (1950–52) in Stan Kenton's Innovations in Modern Music orchestra before becoming noted as a fluent Art Pepper-influenced altoist (1953–56) in the Lighthouse All-Stars, in which he also was showcased improvising on flute in duets with oboist Bob Cooper. Shank subsequently led groups and recorded prolifically in

cool- and bop-jazz combos as well as big bands, with singers, with Brazilian guitarist Laurindo Almeida in the early jazz-samba album *Brazilliance* (1953), in the L.A. Four (beginning in 1974), with Indian sitarist Ravi Shankar, and later as saxophone soloist with symphony orchestras.

Shi Pei Pu, Chinese opera singer and spy (b. Dec. 21, 1938, Shandong, China—d. June 30, 2009, Paris, France),

AP

Chinese opera singer and spy Shi Pei Pu

engaged in a bizarre love affair and in espionage work with French embassy clerk Bernard Boursicot that became the basis for a Tony Award-winning play. Shi worked as an opera singer and as a librettist in Beijing, where he met Boursicot in 1964 while teaching Chinese to diplomats' families. Shi convinced Boursicot that he was actually a woman disguised as a man, and the two began a love affair that continued for 20 years, during which time Shi also told Boursicot that he had become pregnant and had a son. Boursicot turned over as many as 150 French embassy documents through Shi to the Chinese secret service before returning to France in the early 1980s. Shi and his "son," whom he had purchased from a doctor in China, joined Boursicot in Paris, where Shi won acceptance in the French community with his cultural performances, even appearing on television. He and Boursicot

were arrested in 1983 and charged with espionage. They were each sentenced to six years in prison, but since the documents passed were of minimal political significance, after 11 months both were pardoned and released. Shi's story inspired the Tony Award-winning Broadway play *M. Butterfly* (1988; film adaptation 1993) by Chinese-American David Henry Hwang and was recounted in the book *Liaison* (1993) by American author Joyce Wadler.

Shriver, Eunice Kennedy (EUNICE MARY KENNEDY), American social activist (b. July 10, 1921, Brookline, Mass.—d. Aug. 11, 2009, Hyannis, Mass.), worked tirelessly to improve the lives of the mentally disabled and, in an effort to provide a forum for them to compete athletically, founded (1968) the Special Olympics. Shriver, the sister of Pres. John F. Kennedy and Senators Robert F. Kennedy and Edward M. Kennedy (*q.v.*), was close to her developmentally disabled sister, Rosemary. After earning a degree in sociology from Stanford University in 1943, Shriver became a social worker. In 1957 she became director of the Joseph P. Kennedy, Jr., Foundation, the goals of which were to seek the causes of mental retardation and improve the social treatment of the mentally challenged. The concept of the Special Olympics was born in 1962 while Shriver hosted a summer day camp for intellectually disabled children at her farm in Maryland. The first Special Olympics were held in Chicago, sponsored by the Chicago Park District and the Kennedy Foundation, and saw the participation of 1,000 contestants from 26 states and Canada. Shriver was also a force behind the 1962 creation by Pres. John F. Kennedy of the National Institute of Child Health and Human Development, now the Eunice Kennedy Shriver National Institute of Child Health and Human Development. Shriver was granted the 1966 Albert Lasker Public Service Award, and in 1984 she received the Presidential Medal of Freedom.

Simmel, Johannes Mario, Austrian German-language writer (b. April 24, 1924, Vienna, Austria—d. Jan. 1, 2009, Zug, Switz.), penned some 35 sociopolitical novels, as well as novellas, short stories, and a score of film screenplays. Simmel's carefully researched novels—many of them rousing tales of espionage and intrigue set during World War II and the subsequent Cold War—were best sellers in Germany and Aus-

tria, with more than 70 million copies sold, and were translated into 33 other languages. His first publication was the story collection *Begegnungen im Nebel* (1947; "Encounters in the Fog"), but it was his wartime spy novel *Es muss nicht immer Kaviar sein* (1960; "It Can't Always Be Caviar"; filmed 1961) that finally brought him wider recognition.

Sims, Naomi Ruth, American model and business executive (b. March 30, 1949, Oxford, Miss.—d. Aug. 1, 2009, Newark, N.J.), shattered the barrier that had prevented black models from achieving supermodel status when she appeared (1968) on the cover of *Ladies' Home Journal*, becoming the first black model to adorn the cover of that mainstream magazine. Despite her difficult childhood living in foster homes in predominately poor white neighborhoods in Pittsburgh, Sims earned (1966) a scholarship to study merchandising and textile design at the Fashion Institute of Technology, New York City. A counselor there encouraged the statuesque Sims, with her heart-shaped face and long limbs, to pursue a modeling career. Although she was turned down by numerous agencies, some of which cited her too-dark complexion, Sims persuaded some photographers to help her compile a portfolio. Agencies

Supermodel Naomi Sims on the cover of Life magazine in 1969

Yale Joel—Time Life Pictures/Getty Images

continued to reject her, however, even after she scored (1967) the cover of the *New York Times* fashion supplement then known as *Fashions of the Times*. Sims then made an agreement with former model Wilhelmina Cooper, who was forming her own agency, to send copies of that supplement to various advertising agencies, with the caveat that Cooper would earn a commission if agencies called her in response. Soon afterward Sims began earning weekly paychecks of \$1,000. Her star rose steadily; in addition to *Ladies' Home Journal*, she appeared on the cover of *Life* (1969) and *Cosmopolitan* (1973) magazines and did runway modeling for several top designers. After ending her modeling career (1967–73) she developed a synthetic fibre that resembled straightened black hair, and she launched the Naomi Sims Collection of wigs. The business thrived, and in 1981 Sims introduced her signature fragrance. In 1985 she launched Naomi Sims Beauty Products Ltd., which by 1989 was grossing \$5 million annually.

Snodgrass, William D(e)Witt (S.S. GARDONS), American poet (b. Jan. 5, 1926, Wilkesburg, Pa.—d. Jan. 13, 2009, Erieville, N.Y.), composed verse that was distinguished by a careful attention to form and by a relentless yet delicate examination of personal experiences. His first collection, *Heart's Needle* (1959), which won the Pulitzer Prize, is marked by careful formal control and a sensitive and solemn delineation of his experience of losing access to his daughter through divorce; that work was credited with ushering in the confessional poetry that became the hallmark of the 1970s and '80s. The collection *After Experience* (1968) continued these formal and thematic concerns. In his later work, including *Remains* (1970), *If Birds Build with Your Hair* (1979), and *D.D. Byrde Calling Jennie Wrenn* (1984), he employed free verse. In *W.D.'s Midnight Carnival* (1988) and *The Death of Cock Robin* (1989), each poem is paired with a painting by DeLoss McGraw. Other writing by Snodgrass includes numerous translations of European ballads and *In Radical Pursuit* (1975), a volume of criticism. *The Führer Bunker: A Cycle of Poems in Progress* (1977) is a collection of poems written as dramatic monologues by various Nazis who shared Adolf Hitler's last days. The complete cycle, with later additions, was published in 1995.

Söderström, (Anna) Elisabeth, Swedish soprano (b. May 7, 1927, Stockholm, Swed.—d. Nov. 20, 2009, Stockholm), was a member of the Swedish Royal Opera for more than three decades and performed regularly at London's Covent Garden, New York City's Metropolitan Opera, and other opera venues. She was also in demand for recitals until well into her 60s. Söderström was known for her superb acting and her rich creamy voice, notably in Claudio Monteverdi and Mozart roles early in her career and later in operas by Tchaikovsky, Richard Strauss, and Leos Janáček. She also excelled at contemporary works and sang in the 1988 world premiere of Dominick Argento's *The Aspern Papers*. Söderström studied at the Royal Academy of Music in Stockholm and made her professional debut in 1947 at the nearby Drottningholm Court Theatre, where she returned as artistic director (1993–96) after retiring from the stage.

Sonnenfeldt, Richard Wolfgang, German-born American interpreter (b. July 23, 1923, Berlin, Ger.—d. Oct. 9, 2009, Port Washington, N.Y.), served as the chief interpreter and sometime interrogator for American prosecutors at the post-World War II Nürnberg trials of accused Nazi war criminals. Sonnenfeldt's Jewish parents sent him to England to be educated, but in 1940 he was deported to Australia as an enemy alien. He was allowed to leave Australia, and after a harrowing journey across the ocean and three continents, he managed to reunite with his family in 1941 in Baltimore, Md., where he became a U.S. citizen and worked as an electrician. While serving as a private in the army, Sonnenfeldt was a member of the American forces that liberated the Dachau concentration camp in 1945. His bilingual fluency led to his recruitment for the trials after the war.

Sosa, Mercedes (HAYDÉE MERCEDES SOSA), Argentine folk singer (b. July 9, 1935, San Miguel de Tucumán, Arg.—d. Oct. 4, 2009, Buenos Aires, Arg.), was known as “the voice of the voiceless” for her songs that spoke of the struggle for economic and political justice. She was a leading proponent of the *nueva canción* movement of the 1960s, which used traditional music to express political themes. Sosa, who possessed a powerful and dramatic alto voice, was known as a peerless interpreter of songs written by others. Her first album, *La voz de la zafra*, appeared

in 1959, but it was her 1965 performance at Argentina's national folklore festival in Cosquín that brought her national attention and increasing popularity. After the military took power in 1976, she was subject to official harassment that culminated in the public arrest of Sosa, her band, and much of her audience at a concert in 1979. Sosa went into exile, during which time she began to expand her repertoire to include other forms of popular music; she returned to Argentina in 1982. She won Latin Grammy Awards for best folk album in 2000 for *Misa Criolla*, in 2003 for *Acústico*, in 2006 for *Corazón libre*, and in 2009 for *Cantora Vol. 1*.

Storm, Gale (JOSEPHINE OWAISSA COTTLE), American actress and singer (b. April 5, 1922, Bloomington, Texas—d. June 27, 2009, Danville, Calif.), was the vivacious star of two popular television sitcoms, *My Little Margie* (1952–55) and *The Gale Storm Show: Oh! Susanna* (1956–60); she also enjoyed a recording career with a number of chart-topping hit songs, including “I Hear You Knockin’,” “Teenage Prayer,” “Memories Are Made of This,” “Why Do Fools Fall in Love?,” “Ivory Tower,” and “Dark Moon.” Storm, who broke into show business as the winner of the Gateway to Hollywood national talent contest, also appeared in a number of films, including three with Roy Rogers, notably *Red River Valley* (1941).

Sugden, Mollie (MARY ISOBEL SUGDEN), British actress (b. July 21, 1922, Keighley, West Yorkshire, Eng.—d. July 1, 2009, Guildford, Surrey, Eng.), gained cult status on both sides of the Atlantic as ladies' wear department head Mrs. Betty Slocombe on BBC television's bawdy sitcom *Are You Being Served?* (1972–85), as well as the 1977 movie of the same name and the 12-episode BBC sequel, *Grace and Favour* (1992–93; U.S. title, *Are You Being Served? Again*). Sugden's Mrs. Slocombe delighted the show's fans with her outrageously coloured bouffant hair and makeup, ambiguous double-entendres (especially those relating to her “pussy,” Tiddles), and girlish chats with her assistant, Miss Brahms (played by Wendy Richard [*q.v.*]), as well as such deadpan catchphrases as “I am unanimous in this.” Sugden was credited with creating Mrs. Slocombe's ever-changing coiffure by dying her own hair a different vivid colour for each episode of the show's first season; she later wore

a series of incredible wigs—often multihued ones. Sugden also had continuing roles on *Hugh and I* (1962–66), *The Liver Birds* (1971–79, 1996), *Come Back Mrs. Noah* (1977–78), *That's My Boy* (1981–86), and *My Husband and I* (1987–88), the latter opposite her real-life husband, actor William Moore.

Suzman, Helen (HELEN GAVRONSKY), South African legislator and anti-apartheid activist (b. Nov. 7, 1917, Germiston, S.Af.—d. Jan. 1, 2009, Johannesburg, S.Af.), as a longtime member (1953–89) of the South African Parliament, was an outspoken advocate for the country's nonwhite majority. In 1948, when the largely Afrikaner proapartheid National Party won the national elections, Suzman joined the United Party, a moderate coalition of Afrikaners and English-speaking white South Africans. She was elected to Parliament in 1953. Six years later she and 11 other liberal MPs formed the aggressively anti-apartheid Progressive Party, but in the 1961 elections only Suzman was re-elected, and until 1974 she was the sole antiapartheid MP. Serving as an advocate for the disenfranchised, Suzman was in constant conflict with her conservative colleagues and often cast the lone vote against apartheid measures.

*South African antiapartheid activist
Helen Suzman*

Sarie—Gallo Images/Alamy

After retiring from Parliament in 1989, Suzman was president (1991–93) of the South African Institute of Race Relations, served on the Independent Electoral Commission that oversaw the country's first multiracial election in 1994, and was a member (1995–98) of the Human Rights Commission. Her dedication to human rights and democracy garnered many honours and led to the establishment of the Helen Suzman Foundation, which promoted liberal democracy.

Swayze, Patrick Wayne, American actor and dancer (b. Aug. 18, 1952, Houston, Texas—d. Sept. 14, 2009, Los Angeles, Calif.), used his New York City training with the Harkness and the Joffrey Ballet schools to captivate audiences in his breakout performance as a seductive dance instructor in the smash-hit film *Dirty Dancing* (1987) and went on to even greater acclaim as the romantic lead in the box-office sensation *Ghost* (1990); he received Golden Globe nominations for both movies, which became cult classics. He appeared briefly as Danny Zuko in the original Broadway production of *Grease* before making his film debut in *Skatetown, U.S.A.* (1979). Such films as *The Outsiders* (1983), *Red Dawn* (1984), *Road House* (1989), *Next of Kin* (1989), and *Point Break* (1991) followed. *People* magazine in 1991 selected him as one of the 50 Most Beautiful People in the World. Other film roles include *To Wong Foo, Thanks for Everything, Julie Newmar* (1995), in which Swayze played against type as a drag queen, and *Dirty Dancing: Havana Nights* (2004). On television Swayze appeared as the rebel soldier Orry Main in the two-part (1985–86) miniseries *North and South*, and in 2009, despite battling pancreatic cancer (diagnosed in January 2008), he starred in the series *The Beast*.

Taylor, Koko (CORA WALTON), American blues singer (b. Sept. 28, 1928, Bartlett, Tenn.—d. June 3, 2009, Chicago, Ill.), forged a musical career that spanned nearly half a century and earned her the nickname “Queen of the Blues.” In the early 1950s, she moved to Chicago with Robert (“Pops”) Taylor, whom she later married. She worked as a housekeeper during the day and frequented blues clubs at night. It was while singing at one of these clubs in 1963 that Taylor came to the attention of Chess Records producer Willie Dixon, who promptly signed her to that label. Tay-

James F. Quinn—MCT/Landov

“Queen of the Blues” Koko Taylor

lor was soon recording with such blues legends as Buddy Guy, Big Walter Horton, and Robert Nighthawk. Under Dixon's guidance, Taylor released a pair of albums and a number of singles for Chess, most notably the 1965 hit “Wang Dang Doodle.” That song, which thrust Taylor into the mainstream, sold more than a million copies and reached the top five on the *Billboard* rhythm-and-blues chart. With the demise of Chess in the early 1970s, Taylor moved to Alligator Records, where she recorded a string of albums over the next three decades that helped solidify her place as a preeminent female blues vocalist. She garnered eight Grammy Award nominations and collected more than two dozen Blues Music Awards. Health issues slowed her recording output in the 2000s, but Taylor's final album, *Old School* (2007), featured vocals as robust and brassy as ever.

Tellado, Corín (MARÍA DEL SOCORRO TELLADO LÓPEZ), Spanish romance novelist (b. April 25, 1927, Viavélez, Spain—d. April 11, 2009, Gijón, Spain), produced more than 4,000 popular romance novellas that were widely read in both Spain and Latin America; many were turned into radio and television serials. Tellado's stories were set in the present, and because during much of her career she was subject to draconian

censorship under the rule of Francisco Franco, they were suggestive rather than sexually explicit. She published her first novella in 1946, and the following year the Bruguera publishing house engaged her to write one short novel each week. In 1951, Tellado contracted with the Hispanic women's magazine *Vanidades* to contribute two novellas a month. After Franco's death in 1975, she published several erotic novels under pseudonyms.

Tikhonov, Vyacheslav, Russian actor (b. Feb. 8, 1928, Pavlovsky Posad, Russia, U.S.S.R.—d. Dec. 4, 2009, Moscow, Russia), appeared in dozens of films, most famously as a Soviet war hero or spy. The aristocratically handsome, quintessentially Russian actor gained international renown for his turn as Prince Andrey Bolkonsky in Sergey Bondarchuk's monumental film adaptation (1967) of Leo Tolstoy's novel *War and Peace*, which won the Academy Award for best foreign-language film in 1968. He left his job as a metalworker in 1945 to attend a state film school and made his screen debut in *Molodaya gvardiya* (1948; *The Young Guard*) while still a student. Tikhonov continued to win parts in various wartime dramas, including *Zhazhda* (1959; "Thirst"), which marked his first appearance in the oft-repeated role of a spy. In the television series *Semnadtsat mgnoveniy vesny* (1973; "Seventeen Moments of Spring"), adapted from Yulian Semyonov's novel of the same name, Tikhonov achieved cult status playing a spy masquerading as a high-ranking German officer. He was later named the People's Actor of the U.S.S.R.

Todd, Richard (RICHARD ANDREW PALETHORPE-TODD), Irish actor (b. June 11, 1919, Dublin, Ire.—d. Dec. 3, 2009, Little Humby, Lincolnshire, Eng.), earned a reputation for his intensity and force playing military men and dashing heroes in such films as *Rob Roy*, *the Highland Rogue* (1953), *The Dam Busters* (1955), and *The Hasty Heart* (1949), for which he received an Academy Award nomination for best actor. Todd, the son of an army officer, had a childhood that was split between England, India, and his native Ireland. He enrolled in drama school in the hopes of becoming a playwright but soon switched his focus to performing. He cofounded the Dundee (Scot.) Repertory Company, but his career was interrupted by World War II. In his memoirs, *Caught in the Act* (1986), Todd, a genuine war hero, compared

his experiences parachuting into Normandy on D-Day to preparing for a role onstage. After the war he won the part of the dying Scotsman in the 1945 Broadway production of *The Hasty Heart*, the same role that he would later immortalize on-screen. His skill with a Scottish accent also earned him the role of Peter Marshall, the Scottish American chaplain of the U.S. Senate, in the film biography *A Man Called Peter* (1955). He was made OBE in 1993.

Torres, José ("CHEGUI"), Puerto Rican boxer (b. May 3, 1936, Ponce, P.R.—d. Jan. 19, 2009, Ponce), reigned (1965–66) as world light heavyweight (175 lb) champion after knocking out American Wilfred (Willie) Pastrano in the ninth round on March 30, 1965; he defended his title four times before losing the last bout on Dec. 16, 1966, in a 15-round decision to Dick Tiger of Nigeria. On May 16, 1967, Torres lost a championship rematch with Tiger on another 15-round decision. In addition, Torres was a member of the 1956 U.S. Olympic boxing team and a silver medalist in the light middleweight (156.5 lb) division before turning professional in 1958. After Torres retired in 1969 with a record of 41 wins (29 by knockouts), 3 losses, and 1 draw, he stayed active in the sport, working as a journalist for boxing publications. He was president (1990–95) of the World Boxing Organization (WBO) and was inducted into the International Boxing Hall of Fame in 1997.

Toulmin, Stephen Edelston, British philosopher and educator (b. March 25, 1922, London, Eng.—d. Dec. 4, 2009, Los Angeles, Calif.), was particularly noted for his study of the history of ideas. In his work on ethics, Toulmin was concerned with describing prescriptive language—that is, imperative sentences and value judgments used for ethical statements—while holding that ethics, or the logical study of moral language, cannot be reduced to subjective or objective facts but is a unique expression of duty or right. Toulmin studied mathematics and physics at Kings College, Cambridge (B.A., 1942), and then returned to Cambridge after his World War II military service to study philosophy (M.A., 1946; D.Phil., 1948) under Ludwig Wittgenstein and John Wisdom. Toulmin lectured at the University of Oxford before becoming department head and professor at the University of Leeds (1955–59) and director (1960–64) of the Nuffield Foun-

dation's Unit for the History of Ideas. He then moved to the U.S., where he taught. Toulmin's books include *The Uses of Argument* (1958), *Human Understanding* (1972), *The Return to Cosmology: Postmodern Science and the Theology of Nature* (1982), *Cosmopolis: The Hidden Agenda of Modernity* (1990), and *Return to Reason* (2001).

Travers, Mary Allin, American folk singer (b. Nov. 9, 1936, Louisville, Ky.—d. Sept. 16, 2009, Danbury, Conn.), performed as part of the popular folk music trio Peter, Paul, and Mary, which was known for smooth harmonies and earnest, often politically tinged anthems. Despite the group's soft-edged sound, their lyrics addressed the issues of the civil rights movement, and in 1963 the trio performed at the Rev. Martin Luther King, Jr.'s March on Washington. The group's protest songs included covers of Bob Dylan's "Blowin' in the Wind" and "The Times They Are a-Changin'," and they scored hits with renditions of John Denver's "Leaving on a Jet Plane" and the Pete Seeger–Lee Hayes call to arms "If I Had a Hammer." Having studied music in her youth, Travers sang backup for Seeger and appeared in the brief Broadway

Mary Travers of the American folk-singing trio Peter, Paul, and Mary

Central Press/Getty Images

run of *The Next President*. It was her central role in the burgeoning Greenwich Village folk scene, however, that ensured her a place in musical history. Though quite shy, she began performing folk arrangements in 1961 with fellow singers Peter Yarrow and Noel Paul Stookey. The following year the group released its first album, the self-titled *Peter, Paul, and Mary*. It coasted to the top of the charts, as did the albums *Movin'* (1963) and *In Concert* (1964). Though the group disbanded in 1970, and Travers embarked on a solo career, the trio often reunited for concerts.

Tshabalala-Msimang, Manto (MANTOMBAZANA EDMIE TSHABALALA-MSIMANG), South African physician and politician (b. Oct. 9, 1940, Durban, S.A.—d. Dec. 16, 2009, Johannesburg, S.A.), as South Africa's health minister (1999–2008), earned the epithet Dr. Beetroot for her insistence that AIDS could be treated with vitamins and a diet rich in such vegetables as garlic, potatoes, and beets. Tshabalala-Msimang denied that HIV caused AIDS and actively prevented the distribution in South Africa of antiretroviral drugs, which she denounced as poison. A report from Harvard University researchers in 2008 estimated that Tshabalala-Msimang's policies, supported by South African Pres. Thabo Mbeki, resulted in more than 350,000 premature deaths from AIDS. Tshabalala-Msimang was active from an early age in the African National Congress and spent many years living in exile. After graduating (B.A., 1961) from the University of Fort Hare in Cape Province, she studied medicine at First Leningrad Medical Institute (now St. Petersburg Medical University; M.D., 1969) and pursued an advanced degree in obstetrics and gynecology (1972) at the University of Dar es Salaam, Tanz. Returning to South Africa in 1990, she was elected to Parliament in 1994 and joined the government as deputy justice minister in 1996 before being named health minister. At the time of her death, due to complications from a liver transplant in 2007, she was reportedly preparing a presentation modifying her earlier stand on AIDS and denying that she had ever opposed the use of antiretroviral drugs.

Robert Spencer—The New York Times/Redux

Pulitzer Prize-winning novelist and poet John Updike

Updike, John Hoyer, American writer (b. March 18, 1932, Reading, Pa.—d. Jan. 27, 2009, Danvers, Mass.), was renowned for his careful craftsmanship and realistic but subtle depiction of “American, Protestant, small-town, middle-class” life. After graduating (1954) from Harvard University, Updike began (1955) an association with *The New Yorker* magazine, to which he contributed editorials, poetry, stories, and criticism throughout his career. His poetry—intellectual, witty pieces on the absurdities of modern life—was gathered in his first book of verse, *The Carpentered Hen and Other Tame Creatures* (1958), which was followed by his first novel, *The Poorhouse Fair* (1958). *Rabbit, Run* (1960), considered to be one of Updike's best novels, concerns a former star athlete who is unable to recapture success when bound by marriage and small-town life and flees responsibility. Three novels, *Rabbit Redux* (1971), *Rabbit Is Rich* (1981), and *Rabbit at Rest* (1990)—the latter two of which won Pulitzer Prizes—follow the same character during later periods of his life. *Rabbit Remembered* (2001) returns to characters from those books in the wake of Rabbit's death. In addition to Harry (“Rabbit”) Angstrom, Updike often expounded upon other characters from earlier novels, omitting decades of their lives only to place them in the

middle of new adventures. *The Witches of Eastwick* (1984; filmed 1987), a black comedy about a coven of modern witches, was followed by *The Widows of Eastwick* (2008), which trails the women into old age. *Bech: A Book* (1970), *Bech Is Back* (1982), and *Bech at Bay* (1998) humorously traced the tribulations of a Jewish writer. Updike's several collections of short stories include *The Same Door* (1959), *Pigeon Feathers* (1962), *Museums and Women* (1972), and *Trust Me* (1987). *Still Looking: Essays on American Art* (2005) examines both art and its cultural presentation, and *Due Considerations* (2007) collects later commentary spanning art, sexuality, and literature. Two works were published posthumously: the book of verse *Endpoint and Other Poems* and *My Father's Tears and Other Stories*.

Upward, Edward Falaise, British writer (b. Sept. 9, 1903, Romford, Essex, Eng.—d. Feb. 13, 2009, Pontefract, West Yorkshire, Eng.), was the last surviving member of a close circle of literary friends who helped shape English literature in the 1930s; several associates—notably novelist Christopher Isherwood and poets W.H. Auden and Stephen Spender—credited Upward as a key influence on their own development. Upward was educated at Repton College, where he met Isherwood, and Corpus Christi, Cambridge (B.A., 1924; M.A., 1925). While attending Cambridge together, Upward and Isherwood crafted a series of fantastic stories set in a fictional English village called Mortmere. The often outrageous tales were widely circulated in manuscript among the pair's friends but were not published until *The Mortmere Stories* appeared in 1994. Although his first novel, *Journey to the Border*, was published by Leonard and Virginia Woolf in 1938, Upward's literary efforts were often eclipsed by his fierce leftist perspective (he had joined the Communist Party in 1932), and he did not publish again for many years. Upward's later works include *The Railway Accident and Other Stories* (1969), a trilogy of autobiographical novels (*In the Thirties* [1962], *The Rotten Elements* [1969], and *No Home but the Struggle* [1977]) that were published jointly as *The Spiral Ascent* (1977), and *A Renegade in Springtime* (2003).

Valenzuela, Ismael ("MILO"), American jockey (b. Dec. 24, 1934, McNary, Texas—d. Sept. 2, 2009, Arcadia, Calif.), won more than 130 major horse races, including the Kentucky Derby twice, during a career that spanned nearly 30 years. Valenzuela raced quarter horses as a child and won his first Thoroughbred race at age 16. In 1958 he rode Tim Tam to victories in the Kentucky Derby and the Preakness Stakes, and he matched the feat 10 years later aboard Forward Pass. Valenzuela experienced his greatest success, however, with five-time Horse of the Year honoree Kelso, which he guided to 22 wins in 35 races between 1962 and 1964. Valenzuela was elected to the National Racing Hall of Fame in 2008.

Van Bruggen, Coosje, Dutch-born American art historian and writer (b. June 6, 1942, Groningen, Neth.—d. Jan. 10, 2009, Los Angeles, Calif.), worked closely for more than three decades with her Swedish-born husband, Pop artist Claes Oldenburg, on more than 40 Large-Scale Projects, giant sculptures of everyday items, including the iconic *Batcolumn* (1977) in Chicago, *Spoonbridge and Cherry* (1988) at the Walker Art Center in Minneapolis, Minn., *Shuttlecocks* (1994) at the Nelson-Atkins Museum of Art in Kansas City, Mo., and *Flying Pins* (2000), which was commissioned by the city of Eindhoven, Neth. After having studied art history at the University of Groningen, van Bruggen was hired as an assistant curator at Amsterdam's Stedelijk Museum. She first met Oldenburg in 1970, but it was not until 1976, when she was teaching at the Academy of Fine Arts in Enschede, that the couple reconnected. They were married in 1977 and settled in New York City. Oldenburg credited van Bruggen as a full collaborator in the design of his massive sculptures from the beginning of their marriage, although her signature was not officially attached to any of the Large-Scale Projects until the University of Nevada, Las Vegas, commission *Flashlight* (1981).

Van Es, Hubert (HUGH), Dutch photojournalist (b. July 6, 1941, Hilversum, Neth.—d. May 15, 2009, Hong Kong, China), was a war photographer whose work spanned decades and included coverage of such conflicts as the Soviet invasion of Afghanistan and the Moro rebellion in the Philippines, but he was most famous for his 1975

image of evacuees lining up on a Saigon rooftop to board a helicopter at the frenzied close of the Vietnam War. Often erroneously said to show the American embassy in Saigon—in reality, it depicts an apartment building that housed the CIA station chief and his staff—the photograph came to have iconic status as an encapsulation of the futility of the U.S. war effort. From 1972 to 1975 he documented the Vietnam War for United Press International, after which he returned to Hong Kong, where he spent the rest of his life as a photojournalist in Asia.

Vandenbroucke, Frank, Belgian cyclist (b. Nov. 6, 1974, Mouscron, Belg.—d. Oct. 12, 2009, Saly, Senegal), had an unsteady career marked by early success but marred by drugs and instability that overshadowed his celebrated skill as a cyclist. Following a rural upbringing in a Belgian village—and despite a childhood injury that led to several surgeries—Vandenbroucke won his first race at the age of 17. He emerged onto the professional scene in 1994 and dominated in more than 50 races, including the Paris–Nice and Ghent–Wevelgem in 1998 and the Liège–Bastogne–Liège in 1999. That year marked his first drug arrest, by French police. Additional drug arrests, suicide attempts, and his wife's claims of domestic violence continually clouded Vandenbroucke's life, and his numerous attempts at making a comeback were repeatedly derailed. He was found dead of a pulmonary embolism.

Varennikov, Valentin Ivanovich, Russian military officer and politician (b. Dec. 15, 1923, Krasnodar *kray* [territory], Russia, U.S.S.R.—d. May 6, 2009, Moscow, Russia), was an ardent nationalist who helped lead the failed 1991 coup against Soviet Pres. Mikhail Gorbachev. Varennikov was a veteran of the Battles of Stalingrad (1942–43) and Berlin (1945) and rose to prominence during the Cold War. In 1984 he commanded Soviet forces in Afghanistan. He was seconded to oversee the cleanup of Chernobyl following the 1986 nuclear accident and then returned to Afghanistan, where he remained until Soviet forces withdrew in 1989. He was awarded the Hero of the Soviet Union and promoted to deputy defense minister. Following the 1991 coup attempt, he refused a proffered amnesty and was subsequently

acquitted of any wrongdoing. Varennikov was elected to Russia's State Duma (lower house of parliament) in 1995.

Venkataraman, Ramaswamy, Indian politician and lawyer (b. Dec. 4, 1910, Rajamadam, Madras [now Tamil Nadu], India—d. Jan. 27, 2009, New Delhi, India), was president of India from July 25, 1987, to July 25, 1992; in this largely ceremonial post, he provided relative stability amid a politically turbulent period during which he appointed three prime ministers. Venkataraman studied law at the University of Madras and in 1935 began his legal practice in Madras (now Chennai). He became involved in India's independence struggle and was consequently jailed (1942–44) by the British. After his release he practiced law, founded (1949) the *Labour Law Journal*, and helped draft newly independent India's constitution, which was adopted in 1950. Venkataraman was elected (1950) to the Provisional Parliament as a member of the Indian National Congress party. He subsequently was a member of the Lok Sabha (lower house of Parliament) during 1952–57 and from 1977 onward. From 1957 to 1967 he was minister of industry and labour for the state of Madras. Venkataraman eventually joined the central government, serving as minister of finance and industry (1980–82), minister of defense (1982–84), and vice president (1984–87) before being elected president by an electoral college.

Vieira, João Bernardo ("NINO"), Guinea-Bissauan politician (b. April 27, 1939, Bissau, Portuguese Guinea [now Guinea-Bissau]—d. March 2, 2009, Bissau), was president (1980–99 and 2005–09) of his country, but ethnic tensions, rivalries within the ruling African Party for the Independence of Guinea and Cape Verde (PAIGC), and ongoing conflict between Vieira and the military led to his temporary exile in 1999–2005 and to his eventual assassination. Vieira, a member of the minority Papel ethnic community, trained as an electrician before joining (1960) PAIGC and fighting in the liberation war against the colonial power, Portugal. After independence in 1974, he served as Guinea-Bissau's minister of defense (1974–78) and prime minister (1978–80), and in 1980 he took control in a bloodless coup against Pres. Luís Cabral. Having achieved a modicum of economic and political stabil-

ity, Vieira won the country's first multiparty presidential vote in 1994 and was reelected four years later. He was overthrown in 1999, but another coup in 2003 expedited his return from exile in Portugal. Running as an independent, Vieira was unexpectedly returned to power in the 2005 presidential poll. He survived an assassination attempt in November 2008, but on March 2, 2009, one day after the army chief of staff died in a bomb attack, Vieira was shot dead by government soldiers.

Wahid, Abdurrahman (GUS DUR), Indonesian Muslim religious leader and politician (b. Sept. 7, 1940, Denanyar,

Paula Bronstein—Newsmakers/Getty Images

Indonesian Muslim scholar and political leader Abdurrahman Wahid

East Java, Dutch East Indies [now Indonesia]—d. Dec. 30, 2009, Jakarta, Indon.), was (1999–2001) the first president of Indonesia to be elected through a vote by the People's Consultative Assembly, as opposed to the earlier, consensus-seeking process. He was a well-known scholar who opposed radical Islamism and encouraged interfaith dialogue for the promotion of world peace. Wahid's grandfathers were co-founders of the world's largest Islamic organization, the Nahdlatul Ulama

(NU). He studied the Qur'an intensively at a religious boarding school founded by his paternal grandfather and in Jakarta when his father was Indonesia's first cabinet minister for religion. Wahid earned (1963) a scholarship at Al-Azhar University in Cairo, but instead of studying more scripture, he devoured New Wave movies, read French and English books, and studied Marxism. Leaving without a degree, he moved to Baghdad, where his religious writings attracted attention. After returning to Indonesia in the early 1970s, Wahid became a scholar. He was made general chairman of the NU in 1984. He also headed the political discussion group Forum Demokrasi, which welcomed dissidents and human rights advocates. Wahid was honoured (1993) with the Magsaysay Award and was subsequently elected (1994) to lead the World Council on Religion and Peace. In 1994 President Suharto loyalists within the NU tried in vain to end Wahid's chairmanship. In the wake of the forced resignations of Suharto (1998) and his successor, Bacharuddin Jusuf Habibie (1999), Wahid was elected president, but economic and political instability, coupled with a corruption crisis in which he was implicated, led to his impeachment and removal from office in 2001.

Waller, Gordon (GORDON TRUEMAN RIVIERE WALLER), British singer (b. June 4, 1945, Braemar, Aberdeenshire, Scot.—d. July 17, 2009, Norwich, Conn.), was the lanky lower-voiced member of the pop-singing duo Peter and Gordon during the so-called musical British Invasion of the 1960s. Between 1964 and 1968, Waller and his red-haired school chum and singing partner, Peter Asher, racked up nine top 20 hit records. The duo were especially known for romantic ballads with plaintive lyrics and close vocal harmonies—including “Nobody I Know,” “I Don't Want to See You Again,” “I Go to Pieces,” “True Love Ways,” and “Woman”—with the notable exception of the novelty hit “Lady Godiva.” Their debut single, “A World Without Love” (written by Beatle Paul McCartney, as were several of their later records), reached number one on the charts in both the U.K. and the U.S. After Peter and Gordon amicably split in 1968, Asher became a successful record producer and manager, while Waller pursued a solo singing career, which included the 1972 album *Gordon* (U.S. title, . . . and Gordon) and a stint on-

stage (1973) in *Joseph and the Amazing Technicolor Dreamcoat*. He later settled in the U.S., where he ran a music publishing company.

Walters, Sir Alan Arthur, British economist, government adviser, and educator (b. June 17, 1926, Leicester, Eng.—d. Jan. 3, 2009, London, Eng.), as Prime Minister Margaret Thatcher's chief economic adviser—both unofficially (from 1976) and officially (1981–84, 1989)—formulated the monetarist economic policies that characterized Thatcher's government; he was particularly noted for his endorsement of tax increases and spending cuts in the recession budget of 1981 and for his strong opposition to Britain's joining a common European currency. Prime Minister Edward Heath in 1970 offered Walters a part-time advisory position, which ultimately led to his job with Thatcher. In 1989 Chancellor of the Exchequer Nigel Lawson, who supported a common European currency, accused Walters of interfering with his department. When Thatcher refused to dismiss Walters, Lawson resigned, as did Walters; the scandal contributed to Thatcher's fall from power a year later. Walters was knighted in 1983.

Wasserstein, Bruce, American financier (b. Dec. 25, 1947, Brooklyn, N.Y.—d. Oct. 14, 2009, New York, N.Y.), played a pivotal role in some of the largest corporate acquisitions of the 1980s and 1990s (he was involved in some 1,000 deals) and was renowned for his aggressive tactics, which were recounted, along with other such maneuvers, in the best-selling book *Barbarians at the Gate: The Fall of RJR Nabisco* (1990). While in graduate school he worked as one of Nader's Raiders (the name given to consumer activist Ralph Nader's acolytes) and became interested in corporate mergers and acquisitions while studying at the University of Cambridge. In 1972 Wasserstein joined the law firm Cravath, Swaine & Moore, but in 1976 Joseph Perella lured him to the corporate acquisitions department of First Boston. The two men became dominant players in mergers and acquisitions at First Boston and later through Wasserstein Perella, a private equity firm they founded in 1988. Perella quit in 1993, and Wasserstein sold the firm for a total of \$1.56 billion in 2001. Notorious for talking up the value of a takeover target, Wasserstein helped raise Kohlberg Kravis Roberts's 1989

buyout of RJR Nabisco to \$31 billion, earning the nickname "Bid 'em up Bruce." After moving in 2002 to Lazard Ltd., one of Wall Street's most time-honoured investment banks, he wrested control of the firm from Michel David-Weill (whose ancestors had founded Lazard in 1848), assumed the title of CEO, and in 2005 took the firm public. At the time of his death, Wasserstein was chairman of private investment firm Wasserstein & Co.

Whitmore, James, American actor (b. Oct. 1, 1921, White Plains, N.Y.—d. Feb. 6, 2009, Malibu, Calif.), won critical acclaim for his live one-man shows during the 1970s; he portrayed the title character in *Will Rogers' U.S.A.*, Harry Truman in *Give 'Em Hell, Harry!*—the film version (1975) earned him an Academy Award nomination—and Theodore Roosevelt in *Bully!* The burly Whitmore, whose roughly hewn features were ably suited to war films, earned an Oscar nomination for his portrayal of platoon sergeant Kinnie in the World War II drama *Battleground* (1949). Other film credits include *The Asphalt Jungle* (1950), *Oklahoma!* (1955), *Guns of the Magnificent Seven* (1969), *Tora! Tora! Tora!* (1970), and *The Shawshank Redemption* (1994). Whitmore also appeared on several television programs, including *The Twilight Zone*, *Gunsmoke*, *Bonanza*, *CSI: Crime Scene Investigation*, and *The Practice*, for which he won (2000) an Emmy Award as outstanding guest actor in a drama series. His first love was the theatre, however, and he earned a Tony Award as the best newcomer for his performance in the Broadway production *Command Decision* (1947).

Willoughby, Bob (ROBERT HANLEY WILLOUGHBY), American photographer (b. June 30, 1927, Los Angeles, Calif.—d. Dec. 18, 2009, Vence, France), specialized in creating portraits that captured Hollywood stars in unguarded moments, especially when they were involved in film rehearsals or relaxing backstage. His candid shots were a departure from the glamour photos that were popular during the 1950s. Early in his career Willoughby compiled (1949–54) a portfolio that profiled dancers and jazz performers. His first

Hollywood assignment, as a special photographer for Warner Bros. studios, featured Judy Garland in *A Star Is Born* (1954). He covered more than 100 films. Other favourite subjects included Audrey Hepburn (he collected her images in two books: *Audrey: An Intimate Collection* [2002] and *Remembering Audrey 15 Years Later* [2008]), Marilyn Monroe, Frank Sinatra, Dustin Hoffman, and Anne Bancroft. Willoughby's works were housed in the National Portrait Gallery, London; the Museum of Modern Art, New York City; and the Bibliothèque Nationale, Paris, among others. He lived in Ireland from 1972 until 1989 and then moved to the south of France.

Woods, Gordon, American equine reproduction specialist (b. July 14, 1952, Idaho—d. Aug. 20, 2009, Loveland, Colo.), was a leader of the team of University of Idaho and Utah State University scientists whose research led to the birth (2003) of the first equine clone—a mule named Idaho Gem. Woods also was known for his pioneering research into the use of equines as models for better understanding of human disease.

Woodward, Edward (EDWARD ALBERT ARTHUR WOODWARD), British actor (b. June 1, 1930, Croydon, Surrey, Eng.—d. Nov. 16, 2009, Truro, Cornwall, Eng.), received five Emmy Award nominations for his portrayal of a disillusioned intelligence agent turned good-guy vigilante in the American television show *The Equalizer* (1985–89). He had previously shot to fame in his native Britain playing another embittered spy on television's *Callan* (1967–72), for which he won a BAFTA in 1970. Woodward studied acting at the Royal Academy of Dramatic Art, making his stage debut in 1946. He performed Shakespeare in London and made his first appearance on Broadway in 1963, which led to his being cast in Noël Coward's long-running musical *High Spirits*.

Wyeth, Andrew Newell, American artist (b. July 12, 1917, Chadds Ford, Pa.—d. Jan. 16, 2009, Chadds Ford), was a watercolourist and worker in tempera noted primarily for his realistic depictions of the buildings, fields, hills, and people of his personal world. Wyeth's father, N.C. Wyeth, was a well-known illustrator who had studied under Howard Pyle and who, starting in 1932, served as his son's only teacher. The subject matter of Andrew Wyeth's works came almost entirely from two localities, the Brandywine Valley around Chadds Ford and the area near his summer home in Cushing, Maine. His work displays a strong linear quality, and within his limited palette—consisting mostly of earth tones—he achieved a subtly extensive range of colour. His paintings are precise and detailed, yet he moved them beyond photographic naturalism by imbuing them with a sense of subjective emotion. *Christina's World* (1948), his best-known painting, achieves a note of melancholy in its depiction of a disabled woman whom Wyeth knew seemingly trying to crawl up a hill. This work also exemplifies his use of unusual angles and his mastery of light. Between 1971 and 1985 Wyeth secretly painted Helga Testorf, his neighbour in Chadds Ford, creating hundreds of images of her, including nudes. Wyeth's first exhibition was in 1936 at the Art Alliance of Philadelphia, but his first im-

American artist Andrew Wyeth with a print of his painting *Her Room*

Bill Ingraham/AP

portant New York City show occurred in 1937 at the Macbeth Gallery, where every painting was sold. His 1967 exhibition at the Whitney Museum of American Art in New York City established a new attendance record for that institution. Other important exhibitions included a 1987 show of his "Helga pictures," organized by the National Gallery of American Art in Washington, D.C., and a 2006 retrospective at the Philadelphia Museum of Art. Wyeth was the first painter to receive the Presidential Freedom Award (1963), the first American artist since John Singer Sargent to be elected to the French Académie des Beaux-Arts (1977), the first living American artist to be elected to Britain's Royal Academy (1980), and the first artist to be awarded the U.S. Congressional Gold Medal (1990). In 2007 he was a recipient of the National Medal of the Arts.

Yang, Jerry (YANG XIANGZHONG), Chinese-born American reproductive biologist (b. July 31, 1959, Weixian, Hebei province, China—d. Feb. 5, 2009, Boston, Mass.), was a pioneer in cloning research who in 1999 succeeded in producing the first cloned farm animal in the U.S.—a Holstein calf named Amy. He was able to show that cloned animals could have a normal life span and also helped to determine that meat and dairy products from cloned animals would be safe for human consumption.

Yang Xianyi, Chinese translator and intellectual (b. Jan. 10, 1915, Tianjin, China—d. Nov. 23, 2009, Beijing, China), together with his wife, Gladys—the daughter of a British missionary to China—made a number of classical and modern Chinese works available in English. He also translated the works of such writers as Homer, Aristophanes, Jules Verne, and George Bernard Shaw into Chinese and was considered the foremost Chinese literary translator. Yang was the son of a banker. He studied classics at Merton College, Oxford, where he met his wife. In 1940 Yang returned to China with his wife, and together they began working as translators, joining the Foreign Languages Press in 1952. Yang was instrumental in founding the periodical *Chinese Literature*, a leading source of translations from the Chinese. Like many other intellectuals in China, the Yangs were arrested during the Cultural Revolution; they were held separately for four years (1968–72). Before

and after that period, they translated selected works by the first Chinese historian, Sima Qian, and stories from several periods of Chinese literature (such as *The Courtesan's Jewel Box: Chinese Stories of the Xth to XVIIth Centuries*, *Poetry and Prose of the Tang and Song*, and *A Dream of Red Mansions*), as well as a number of 20th-century works, including many by Lu Xun, Ding Ling, Guo Moruo, and Liu E. Yang's autobiography, *White Tiger*, was published in 2002.

Yankovsky, Oleg (OLEG IVANOVICH YANKOVSKY), Russian actor (b. Feb. 23, 1944, Jezkazgan, Kazakhstan, U.S.S.R. [now in Kazakhstan]—d. May 20, 2009, Moscow, Russia), won critical and commercial acclaim as one of the U.S.S.R.'s most popular figures of stage and screen. Yankovsky was admired for his ability to elicit complex emotions and to inhabit characters; his handsome features made him something of a sex symbol, a label he found insulting. He graduated from the Solonov Actors Studio in 1965 and joined the Saratov Theatre Company. Yankovsky moved to the big screen with *Shchit i mech* (1968; "Shield and Sword") and appeared in more than 70 films, notably *Tot samyi Myunkhauzen* (1979; "That Very Munchhausen"). Internationally he was perhaps best known for his work with Soviet filmmaker Andrey Tarkovsky in *Zerkalo* (1975; "The Mirror") and *Nostalghia* (1983; "Nostalgia"). Yankovsky was recognized for his ability to humanize historical figures, appearing notably as Vladimir Ilich Lenin in a stage adaptation of *Blue Horses on Red Grass* (1979). In his final film, *Tsar* (2009), he played Metropolitan Philip, the saintly adversary of the first Russian tsar, Ivan the Terrible. In 1991 Yankovsky was the last actor named a People's Artist of the Soviet Union.

Yow, (Sandra) Kay, American basketball coach (b. March 14, 1942, Gibsonville, N.C.—d. Jan. 24, 2009, Cary, N.C.), was a legendary figure in women's college basketball who served (1975–2009) as the head coach at North Carolina State University and became one of the winningest coaches in National Collegiate Athletic Association (NCAA) Division I history. She tallied a career coaching record of 737–344 over 38 seasons on the collegiate level and, at the time of her death, was one of only six Division I women's basketball coaches to have won 700 games. from leading North Carolina State to 20 appearances in the NCAA tournament—including a berth in the Final Four in 1998—Yow was the head coach of the U.S. women's team that captured a gold medal at the 1988 Olympic Games in Seoul. She was inducted into the Naismith Memorial Basketball Hall of Fame in 2002. Yow, who waged a long battle with breast cancer, was known for her efforts to promote research and awareness of the disease, which included helping to establish the Kay Yow/WBCA Cancer Fund in 2007.

Zamecnik, Paul Charles, American molecular biologist (b. Nov. 22, 1912, Cleveland, Ohio—d. Oct. 27, 2009, Boston, Mass.), co-discovered (1956) tRNA (transfer ribonucleic acid), a molecule essential for protein synthesis, and pioneered research into antisense DNA, which selectively inhibits the activity of genes. In 1990 he co-founded Hybridon, Inc. (now Idera Pharmaceuticals), a company that specialized in the development of antisense therapeutics; he served as a member of Idera's board of directors until 2006. Zamecnik was elected to the National Academy of Sciences (1968) and received the National Medal of Science (1991) and the Albert Lasker Award for Special Achievement in Medical Science (1996).

The Great Recession

Upset over rising unemployment and a rapidly deteriorating economy, Latvians gather for an antigovernment demonstration in Riga on January 13.

by Joel Havemann

When 2009 dawned, no one knew whether the global financial crisis that had burst into full bloom the previous autumn would develop into the second Great Depression. Twelve months later, what many called the Great Recession showed signs of coming to an end, and the worst appeared to have been averted. On the whole, private economists applauded the U.S. government's response to the crisis at hand, but some of the remedies enacted there and in

other countries seemed poised to haunt the world economy in years to come.

Even if the financial crisis did not send the world back to the 1930s, it turned economic growth into contraction in many countries and slowed expansion practically everywhere else. The ripple effects of the financial crisis ranged far beyond the financial. Governments fell in Iceland and Latvia. The Chinese brushed aside pleas for more accommodating human rights and currency valuation policies. European political union was put under strain. Japan proposed

only weak measures to combat climate change.

Most of the major industrial democracies adopted domestic government programs designed to awaken their slumbering economies; the U.S. package, at \$787 billion, was the biggest. The world's economic outlook brightened as the year proceeded, however, and most countries began growing again in mid-2009 after recessions that were, for most, the deepest since the Great Depression. In a rare exception, China escaped the slump; if anything, the global recession burnished

The Bank of England cuts its interest rate from 2% to 1.5%, the lowest since the bank's founding in 1694. It lowers the rate again in March, to 0.5%.

Iceland's government falls owing to the collapse of the country's economy.

It is reported that 3.6 million jobs have been lost in the U.S. since the recession began in December 2007.

Pres. Barack Obama signs a \$787 billion economic stimulus bill into law.

The U.S. reports that the economy shrank 6.2% in the final quarter of 2008, not 3.8% as previously stated.

China's apparent ambition to challenge U.S. dominance in the global economy. (See Special Report on page 174.)

The U.S. Leads the Way. The U.S. housing market was the domino that, when it fell, toppled many of the world's major economies and led the world into recession. For the first half of the decade, aggressive investing by homebuyers, mortgage lenders, Wall Street investment houses, and insurers had driven up the median price of a single-family home by almost 10% a year, with housing in some parts of the country escalating even faster. When home prices headed back down in 2007, large numbers of homeowners faced rising adjustable-rate mortgage payments and/or could no longer borrow against a rising home value to finance other expenses. By the middle of 2009, the median home price had fallen close to its 2000 level. Those with heavy investments in housing, including risky mortgage-backed securities, found them all but worthless. The government stepped in with a massively expensive bailout program in late 2008 and continuing into 2009.

The devastation to the U.S. economy spread far beyond housing. The banking industry was especially hard hit. (See Sidebar on page 219.) Altogether, 176 banks in the U.S. failed in 2009, many of them small and local. Even financially secure banks, not trusting potential borrowers to pay them back, stopped lending. Businesses—especially small and new businesses—could not find the credit that they needed to pay creditors or buy inventory or to pay their own workers, much less to hire new ones. Even short-term interest rates close to zero did not fully thaw credit markets. Businesses that relied on their customers' ability to secure loans had a rough time. Automakers General Motors (GM) and Chrysler, both of which reorganized after brief trips through bankruptcy in 2009, qualified for bailout money. The overall economic slowdown sent stock prices reeling, with the benchmark Dow Jones Industrial Average (DJIA) sinking by about 54% in the 17 months from the market high in October 2007 to the trough in March 2009.

As U.S. Transportation Secretary Ray LaHood (centre, background) looks on, Colorado Gov. Bill Ritter (right, foreground) and other officials use jackhammers during the ceremonial groundbreaking for a bicycle trail and highway reconstruction project in Lakewood, Colo., on June 30. The project was funded by the \$787 billion fiscal stimulus package passed by the U.S. Congress in February.

As 2009 began, comparisons with the Great Depression were as common as foreclosed houses in Nevada, but there was one important difference: policy makers this time had the experience of the Depression to guide them. They identified three policy areas where they vowed not to make the same mistakes that seemed to have prolonged the Depression: fiscal, monetary, and trade.

In the 1930s, national leaders generally pledged allegiance to fiscal policies based on balanced budgets. With tax revenue falling in tandem with economic growth, balancing budgets meant cutting spending just when economies needed to stimulate business expansion and job growth. This time around, however, political leaders poured money into such projects as road construction and schools. Although some governments were more aggressive than others, just about all countries joined the stimulus parade.

In 1929 the U.S. Federal Reserve Board (Fed), seeking to restrain a speculative rise in stock prices, instituted a monetary policy of tight money and high interest rates. The economy predictably contracted, and the Depression officially began that August. Neverthe-

less, the Fed further tightened its grip on the money supply in 1931, adding to the squeeze on the domestic economy. Through all of 2009, however, the Fed held the Fed Funds rate (the interest rate that banks pay each other for overnight loans) in a range of 0.0–0.25%. Most other central banks also loosened monetary policy. The Fed and many of its foreign counterparts also injected capital into banks and bought their shaky loans.

When economies go haywire, there is a natural tendency to close ranks by tightening trade policy and refraining from buying foreign goods. In 1930 the U.S. Congress enacted the Smoot-Hawley import tariffs. Many U.S. trading partners followed suit. The result was a decline in world trade volume estimated in late 1932 at about 30% and still growing, an outcome almost universally seen as having fueled the Great Depression. This time there was no such rush to protect industry at home, although worldwide trade actually dropped even more sharply in the current financial crisis than during the beginning of the Depression. This was not the result of new trade barriers; rather, the faltering global economy sapped

The Dow Jones Industrial Average (DJIA) closes at 6547.05, its lowest level of the year.	The IMF projects that the world economy will shrink 1.3% in 2009, the first global contraction since World War II.	Chrysler LLC files for bankruptcy protection; after a merger with Italy's Fiat, it emerges on June 10.	General Motors, once the world's largest corporation, files for bankruptcy; it emerges on July 10.	Japan reports that its economy grew by 0.9% in the second quarter; thus, the country is no longer in recession.

demand for goods and services, whether produced at home or abroad.

The World Follows. Enlightened decision making may have blocked another Depression, but it could not prevent a great deal of misery. The financial crisis struck individual countries with an impact that depended heavily on two factors: whether local institutions had ties to the U.S. financial sector and whether the local economy depended on export sales to the West. Most of the developed countries had close financial and trade relations with the United States. Of the 33 countries that the International Monetary Fund considered to have “advanced economies,” only Australia seemed likely to avoid a period of contraction.

The dynamic economies of Asia were well positioned, and three large Asian countries—India, Indonesia, and China—escaped relatively unscathed. At least in the short run, India benefited from having isolated itself from the crosscurrents of the global economy. Japan’s economy, the largest in the world after the U.S., was fused to the West’s, and Japan marched alongside the West into recession. With a large economic stimulus package in place, however, Japan pulled out of recession in the third quarter of 2009. Fearful that strict limits on greenhouse gas emissions could cripple the economic rebound, the Japanese government proposed weaker limits than those under discussion in Europe and the U.S.

Europe, with its close financial and trade ties to the U.S., stood in sharp contrast to Asia. Even Norway, which had virtuously invested its North Sea oil revenue with considerable prudence while the U.K. was spending its windfall on government programs, could not escape recession. Norway slipped into a mild slump in late 2008 and emerged early in 2009. Most of the rest of Europe fared worse. Many countries approved economic stimulus packages to extricate themselves from recession, and many resumed economic growth, although the U.K., Spain, and others remained in recession for the first nine months of 2009. In the fourth quarter, the U.K. barely emerged from recession,

with growth of 0.1%. Reflecting fears of future inflation, the stimulus programs in Europe were smaller than those in the U.S. Perhaps more significant, the largesse stopped at national borders. Germany, France, and other wealthy European Union countries defeated Hungary’s request that the EU’s Western European members give \$240 billion to members in Eastern Europe to combat the slump.

Hardest hit were countries at the four “corners” of Europe: Iceland, Latvia, Greece, and Spain. Iceland became the first country to lose its government over the financial crisis. Iceland’s three largest banks, privatized in the early 1990s, had grown fat on securities trading, but they failed in 2008 when the financial crisis left them unable to pay a mountain of foreign obligations. The conservative prime minister resigned in January 2009 and was replaced by a leftist, Jóhanna Sigurðardóttir (see BIOGRAPHIES), who promptly recapitalized the banks.

International trade—or the sudden lack of it—was Latvia’s undoing. Latvia had boasted Europe’s strongest economic growth rate (10%) as recently as 2007. Then the tables turned, and the Latvian economy shrank at double-digit rates in 2009—possibly the worst performance in Europe, although its Baltic neighbours, Lithuania and Estonia, were not far behind. In the Latvian capital of Riga, a street demonstration in January to protest economic decline turned violent, and a month later the prime minister resigned.

In Greece, where the budget deficit reached nearly 13% of annual economic output (even greater than the 11% in the U.S.), the three credit-rating services—Fitch, Moody’s, and Standard and Poor’s—downgraded the country’s debt. At year’s end Greece had the lowest credit rating of the 16 countries in the euro zone. That made it more expensive for Greece to finance its debt, which at 130% of economic output was nearly the highest in Europe. A default on its debt would be a giant headache not only for Greece but also for the entire EU. Spain, whose budget deficit was rocketing toward 11%, was on the

same path as Greece, although less far along. Standard and Poor’s also downgraded Spain, which started at a much higher level.

The fiscal problems that put Greece and Spain on a slippery slope were common across Europe, especially among economies that had grown the most (largely on borrowed money) during the heady early years of the decade. Ireland, heretofore an EU success story, was a typical case. The Irish government, determined not to let the budget deficit reach 13%, proposed to raise taxes, cut benefits, and trim government workers’ pay.

The U.S. Response. In the United States, the government followed a two-pronged strategy to reverse the financial crisis: bail out distressed financial institutions (lest they transmit their failure to their creditors) and pump government money into the economy (to stimulate business activity when private loans were scarce). What emerged from the bailout was an extraordinary degree of government involvement in—and sometimes even majority ownership of—the private sector. Altogether, the government by late 2009 had provided an estimated \$4 trillion to keep the financial sector afloat. Many of the biggest bailout beneficiaries quickly paid the government back, and the ultimate cost of the bailout to taxpayers was estimated at “only” \$1.2 trillion.

Congress in February handed Pres. Barack Obama the first legislative triumph of his month-old presidency when it enacted a \$787 billion fiscal stimulus bill that comprised \$288 billion in tax cuts and \$499 billion in spending, most of it for public-works programs such as school construction and highway repair. Although Republicans groused that checks for much of the \$499 billion would be issued too late to do any good, the nonpartisan Congressional Budget Office said that thanks to the tax measures, about three-quarters of the full \$787 billion would be spent in 18 months. Obama claimed that the bill would create or preserve 3.5 million jobs, a figure that many of his opponents called far too optimistic.

▲ 9/1/2009	▼ 10/16/2009	▲ 10/29/2009	▼ 11/6/2009	▲ 11/13/2009
New figures reveal that unemployment in the euro zone rose in July to 9.5%, the highest in a decade.	The U.S. reports the largest budget deficit since 1945, \$1.4 trillion, or 10% of GDP.	It is reported that the U.S. economy grew 3.5% in the third quarter and has emerged from recession.	U.S. unemployment figures show an increase to 10.2% in October, the high for the year and the first double-digit rate since 1983.	The euro zone is no longer in recession, with a reported 1.6% annualized growth in the third quarter.

Congress also played a role in the bailout of failing financial institutions. At the end of 2008, Congress enacted the Troubled Asset Relief Program (TARP) authorizing the Department of the Treasury to invest up to \$700 billion by buying unproductive real-estate investments or even becoming part owners by purchasing financial company stock. The Fed, using authority that it already had, played an even bigger role. Printing more money when not enough was available, the central bank invested heavily in foundering institutions and guaranteed the value of their shaky assets. By the end of 2009, the government owned almost 80% of American International Group (AIG), the country's biggest insurer, at a cost of more than \$150 billion. It also owned 60% of GM and had a stake in some 700 banks. It initially spent \$111 billion to prop up Fannie Mae and Freddie Mac, the companies sponsored by Congress to buy mortgages from their issuers. The government promised to play no role in managing these companies and to sell its ownership stakes as soon as practical. TARP provided the Treasury with only a fraction of the funds used for the bailout, however. The Fed was responsible for the lion's share, and even the massive AIG rescue was engineered entirely outside the legislated Treasury Department program.

Reflecting public views, members of the government expressed outrage that some of the same executives who helped precipitate the financial crisis should make millions of dollars a year in salaries and bonuses. Treasury Secretary Timothy Geithner (*see* BIOGRAPHIES) appointed a "special master for executive compensation" to review the compensation packages of top financial executives at firms that received bailouts. Many of the biggest bailout beneficiaries balked at the proposed salary limits and strove to get out from under them by paying the government back.

More ominously for the financial institutions, many members of Congress marched into 2010 with a determination to regulate them more closely. The House passed a bill in 2009 that for the

A house in San Antonio, Texas, faces imminent foreclosure.

first time would bring exotic financial instruments under review by federal regulators. The bill would also establish a single agency to protect financial consumers and guarantee shareholders a chance to vote on the compensation packages of corporate executives. The Senate planned to take up the issue in 2010.

An Uncertain Future. Despite the year-end sighs of relief over the improving economy, the economic destruction had not necessarily run its course. Many banks that survived the crisis were badly bruised by the collapse of the housing market and remained less willing than before to provide the credit that greases all capitalist economies. Huge government budget deficits, designed to facilitate economic growth in the short term, loomed like dark clouds on the horizon, threatening inflation and currency devaluations. Low interest rates encouraged immediate business activity, but, like budget deficits, they could ultimately feed inflation. International trade, which suffered as countries hunkered down and adopted "me-first" policies, held below precrisis levels. In the U.S., foreclosure rates were high and rising. Nearly one house

in four was worth less than what the occupants owed on the mortgage, and similar problems in commercial real estate were mounting.

Despite this, harbingers of prosperity were not hard to find. Stock markets turned robustly upward, with the DJIA making up half of its losses by year-end 2009. Although unemployment in the U.S. reached a peak of 10.2%, its highest level since 1983, it declined to 10%, and the 2.2% annual growth rate that the economy registered in the third quarter suggested future job growth. Economists even took heart from the plight of Dubai World, a government-owned developer in Dubai, U.A.E., that could not pay back \$3.5 billion in loans by a December 14 deadline. Just in the nick of time, fellow emirate Abu Dhabi bailed out Dubai with \$10 billion. Not only was that enough to get Dubai World well beyond its immediate default date, but it also proved that not every financial cough would mean pneumonia for the global economy.

China and the New World Order

by Janet H. Clark

On Oct. 1, 2009, Beijing marked the 60th anniversary of the founding of communist China by an exhibition of its military strength, with a huge and impressive cavalcade of Chinese-built fighter aircraft and military hardware. The Chinese space industry also was developing at a rapid pace. These technical advances—combined with China's booming economy during a worldwide downturn and its increasing visibility on the international diplomatic stage—attested to the country's strong progress toward superpower status.

In contrast to much of the world, China's economy in 2009 demonstrated extraordinary resilience with a return to rapid economic growth—expected to exceed 8.5%—which the government attributed to its version of communism in contrast to laissez-faire capitalism. Early in the year the closure of export-producing factories in the south and east coastal areas resulted in a flow of millions of workers back to rural areas. In 2008 the high cost of food and fuel had squeezed household budgets, and tight monetary and credit policies were adopted to prevent inflation and overheating. This caused a slump in China's construction industry and property markets. The government responded quickly to this in November 2008 with a stimulus package of 4 trillion yuan (about \$586 billion). Nearly half of the

Fireworks fill the sky over Beijing's Tiananmen Square during the October 1 commemoration of the 60th anniversary of the founding of the communist People's Republic of China.

package was designated for development of the country's infrastructure, much of it in the rural areas, including airports and railways, with another 25% for reconstruction of Sichuan province, which had been devastated by an earthquake in May 2008. State banks were instructed to accelerate lending. This resulted in a 164% surge in renminbi/yuan loans in the first eight months of 2009, which allowed the economy to rebound quickly in comparison with other large economies. Exports were recovering well in the second half of the year, and China looked to be on target to surpass Germany as the world's top exporter. There was growing speculation as to whether China could return to the dominant position that it held until the early 19th century, when it accounted for a third of the world's manufactured output, compared with less than a quarter in the West. A year-end free-trade deal with the Association of Southeast Asian Nations made this outcome even more likely.

China, as the world's biggest creditor, had a mutually advantageous relationship with the United States, the world's largest debtor, that had become crucial in the rebalancing of the world economy. On March 23 a statement released by Zhou Xiaochuan, governor of the People's Bank of China (PBOC), called for the U.S. dollar to be replaced as the dominant world currency by an international currency that would be un-

connected with individual countries and would remain stable over the long term. The PBOC suggested that Special Drawing Rights, created by the IMF in 1969 for use between governments and international institutions, could be used much more widely and adopted for payment in international trade and financial transactions, thereby reducing price fluctuations and the associated risks. This bold initiative was repeated in July in Italy at the annual summit of the Group of Eight (G-8) advanced countries. Members of the so-called Group of Five (China, India, Brazil, Mexico, and South Africa) emerging economies were invited to attend, and China, with India and G-8 member Russia, called for an end to dollar domination of the international monetary system. World Bank president Robert Zoellick warned that the U.S. dollar was under threat from the growing strength of the Chinese yuan and the euro. China had overtaken Japan as the U.S.'s main creditor, and Beijing expressed concern that U.S. indebtedness and falling confidence in the dollar would undermine the value of its \$800.5 billion of U.S. Treasury securities and other dollar assets, which together accounted for two-thirds of China's \$2.2 trillion foreign-exchange reserves and one-third of total world foreign-exchange reserves.

In 2009 international attention was increasingly focused on China's burgeoning overseas investments, especially in

Africa. China's investments in some oppressive regimes there evoked criticism in the West, but its reputation as Africa's "best friend" was reflected in the November Forum on China-Africa Cooperation meeting in Egypt, where Chinese Premier Wen Jiabao was warmly welcomed by more than 50 African leaders and government ministers. The World Bank welcomed China's involvement in Africa, especially when many other aid donors were in financial difficulty. Trade between China and Africa exceeded \$106 billion in 2008, and nearly 10% of China's overseas direct investment was destined for Africa. In early November 2009 alone, several multibillion-dollar deals were made in swaps of minerals for infrastructure aid, and China promised \$10 billion in cheap loans. It had given loans of up to \$20 billion by 2009 to fund Angola's post-civil war reconstruction and in return had benefited from millions of barrels of oil.

China's financial strength enabled it to take a more benign view of investments that were more risky or in hostile environments than could many other heavily indebted countries. In early November the state-owned China National Petroleum Corporation (CNPC), jointly with the U.K.'s BP, signed the largest oil deal with Iraq since the 2003 U.S.-led invasion of that country. More significant was Beijing's willingness to invest in war-torn Afghanistan, where the state-owned China Metallurgical Group

An ethnic Uighur protester (right) confronts paramilitary police during a demonstration on July 7 in Urumqi, the capital of China's Xinjiang region.

(MCC) had begun development of the Aynak copper field, believed to be one of the world's largest undeveloped copper reserves, located south of Kabul in a former al-Qaeda stronghold. MCC won the concession with a \$3 billion bid because of its promise to build a coal-based power plant and construct Afghanistan's first freight railway. In August economic ties with Myanmar (Burma) were strengthened through a \$5.6 billion gas project in the Bay of Bengal. The Shwe gas project was to supply the CNPC with gas for 30 years via a \$2 billion pipeline to China's Yunnan province border with Myanmar.

Although it had experienced impressive economic performance, China remained a low-income country, a factor that could hinder its progress toward superpower status. Despite the rapid growth of China's middle class, the gap between rich and poor continued to widen, and regional disparities contin-

ued. Badly needed improvements to the infrastructure were being accelerated in 2009, but job shortages persisted both in the rural areas and for the rapidly growing urban college-graduate workforce. A demographic time bomb also was looming as a result of China's one-child policy. The working-age population was expected to start to shrink by 2015, and it was projected that in 2050 there would be only 1.6 working-age adults to support each person over age 60, compared with 7.7 in

1975. In July the government took the first steps toward relaxing the one-child policy, but it could prove to be too little too late.

Meanwhile, China's preoccupation with its 55 official minorities was costly in time and money. These peoples accounted for only 8.5% of the 1.3 billion population but inhabited sparsely populated regions encompassing two-thirds of the land, much of it rich in natural resources, and many were located on the borders and represented a strategic threat. In July the simmering problem of the minorities was drawn to international attention by the plight of the mainly Muslim Uighur people in Xinjiang region, which was home to 20 million people from 13 major ethnic groups. Bloody rioting in 2009 in Urumqi, the capital of Xinjiang, claimed the lives of 197 people, with nearly 2,000 others injured. China's inability to fully integrate the Tibetans also remained an ongoing concern.

While 2009 marked a watershed for China's global influence, it was difficult to judge the country's longer-term aspirations. While the reputation of the U.S. was tarnished in the wake of the Iraq invasion and the collapse of many American banks, that of China had been enhanced by its rapid economic progress. For the vast majority (92%) of China's population, the willingness of the communist government to develop an increasingly capitalist economic system was not incompatible, and most Chinese citizens lived comfortably in a society that was once again being encouraged to adopt the fundamental values of Confucianism, a philosophy that demands a hierarchy and respect for authority.

Mexico's Raging Drug Wars

by Jorge Chabat

Forensic investigators inspect the body of a man who had been handcuffed to a fence and shot to death by drug hitmen outside a nightclub in Juárez in August.

Though drug trafficking flourished in Mexico throughout much of the 20th century, the ever-increasing brutal violence associated with the production and trafficking of illicit drugs had by 2009 sparked the dispersal of 45,000 Mexican soldiers and 5,000 policemen across the country and attracted worldwide attention as images of beheaded corpses were featured in the international media. From December 2006 (when Felipe Calderón succeeded Vicente Fox as president of Mexico) to October 2009, some 14,000 people in the country were executed by drug traffickers, and more than 3,000 of those deaths occurred during the first half of 2009 alone. These statistics underscored the enormity of the situation and the fact that the Mexican government was at war with a very powerful enemy.

The Wave of Violence. During the 20th century Mexico was a primary source of marijuana and heroin for the U.S. market, and since the 1980s the country had served as an important transit point for South American cocaine destined for the U.S. The marked escalation in drug-related violence in the 21st century could be partly attributed to the rise to power of younger cartel leaders, more prone to violence, who took the place of their bosses when vast numbers of them were arrested in a crackdown during the Fox administration (2000–06). Another factor was the dramatic increase since the late 1990s in the consumption of illegal drugs in Mexico; as domestic consumption grew, fights between drug cartels erupted over new territories. As part of their preparations for war against other cartels, many drug-trafficking organizations hired trained mercenaries. The

Gulf cartel based in the border city of Matamoros, for example, recruited a group of former Mexican army commandos called the Zetas, who became known for their efficient use of violence. Other cartels recruited members of Central American street gangs, or *maras*, as well as former Guatemalan elite troops known as the Kaibiles.

Most of the recent killings resulted from confrontations between the cartels. Approximately 90% of those murdered were linked to the drug trade. The remainder were policemen and soldiers—some of them probably involved in drug trafficking—and a small number of civilians. The spike in violence between the cartels was one sign of the accelerating fragmentation of these organizations. The big cartels that appeared in the mid-1990s in Mexico—such as the Tijuana, Juárez, Sinaloa, and Gulf cartels—by 2009 did not exist in the same configuration. Splits occurred in all of them, with new groups emerging to challenge for control over the drug trade. This fragmentation along with the growth in the domestic market for illegal drugs led not only to more executions but also to the increasing brutality with which killings were carried out. The purpose of this cruelty was twofold: it was used to intimidate other cartels, and it created an image of extreme violence in the country that might lead to public pressure on the Mexican government to modify its antidrug strategy. Many bodies of those executed had been found with messages intended for other drug-trafficking organizations as well as for the Mexican authorities. The cartels also posted messages in public places accusing the government of having engaged in corruption or of having favoured one cartel over the others; in addition, they were said to sponsor popular protests against the presence of the army in some parts of the country. In response, the Calderón administration argued that organized crime was waging a

A Mexican marine sets afire bales of seized marijuana at a naval base in the port city of Guaymas.

propaganda war in an effort to intimidate the government into backing down from its fight against drug trafficking.

The Government's Dilemma. Over the past three years, criticism of the extreme violence and the government's use of military forces in combating drug trafficking increased. Some of Calderón's critics suggested openly or implicitly that the government should return to the policy of tolerance of—or even complicity with—drug trafficking that was for the most part adhered to by the Institutional Revolutionary Party (PRI), which ruled Mexico from 1929 to 2000. This argument was based on the fact that during those years there were lower levels of drug-related violence. It was tolerance, however, that allowed the cartels to grow to the point that they became a serious national security threat. This policy was possible in an authoritarian system in which the rule of law did not exist. A negotiation or even a simple indifference to the activities of drug traffickers would be impossible in a truly democratic system. Clearly, tolerance was not an option for the Calderón administration. Consequently, the Mexican government in the short term decided to combat drug trafficking with the few resources it had. Unfortunately, the Mexican state historically had very poor law-enforcement tools; institutions were weak, corruption was rampant, legal culture was virtually nonexistent, and human and material resources were insufficient. The Mexican government was forced to fight this war handicapped. It was precisely the weakness of the Mexican state that precipitated the high levels of violence seen during recent years. If the cost of tolerance is corruption and the

aggravation of the problem, the cost of confrontation is violence.

Calderón's Bet: Strengthening Institutions. Calderón made the fight against drug trafficking a priority of his government. Some argued that this was an easy way to secure domestic legitimacy, given his close and contested victory in the presidential elections of 2006. When he became president, however, drug traffickers controlled significant parts of the country, and there was a clear demand

With Mexican army soldiers standing guard, Eduardo Morquecho (centre), a U.S. citizen with suspected links to the Arellano Félix cartel, is displayed to the press along with drugs, guns, and equipment seized during his arrest in Tijuana in July.

from the public for a harder stance against this phenomenon. Several polls confirmed popular support for Calderón's efforts. In a poll conducted at the end of 2008, 72% of Mexicans considered the government's attempts to combat drug trafficking to be adequate. Another poll taken in July 2009, after the country's midterm elections, revealed that 51% of Mexicans believed that the government was going to win the war in the long run; only 31% thought that the drug traffickers would win. This high level of domestic support allowed Calderón to promote significant reforms of the police force and judicial system—reforms that were supported by all political parties. The proposed changes, which included the establishment of oral trials (rather than those conducted secretly through written briefs) and the strengthening of the federal police force in the hope that it could replace the army in the war on drug trafficking, promised to give the government more resources to fight organized crime.

Perspectives. If the security reforms approved over the past three years are successful, the Mexican government may be able to control the pervasive effects of drug trafficking. The goal is to transform the problem of drug trafficking into a public security issue rather than a national security threat. The final result, however, is uncertain. The main obstacle that the Mexican government faces is corruption. If the government is unable to control corruption, the Mexican war on drugs will be lost, and the temptation to go back to the policy of tolerance—despite the fact that it will likely worsen the problem—will be tremendous. If that happens, at some point Mexico and the international community will have to think of alternatives “outside the box,” such as legalizing or decriminalizing some drugs. Although in August Mexico decriminalized small-scale drug possession, this move only suggested that the government considers it pointless to prosecute small-time users; it does not mean that the legalization of drugs is imminent—a still very distant scenario. Meanwhile, the only choice that the Mexican government has is to continue to fight drug trafficking and have faith that when the judicial and police-related reforms are put into place, they will be successful.

Pakistan's Precarious Security Situation

by Lawrence Ziring

The year 2009 was a pivotal one in the history of Pakistan. Violent events were shaking Pakistani society at its roots and occurring with increasing frequency in ever more numerous settings. A consequence of both internal and foreign circumstances, the nuclear weapons-owning country found itself struggling to cope with forces that it set in train as well as those imposed from afar. The ongoing fight against Islamic militants—notably al-Qaeda, Taliban, and Punjabi extremists—escalated, especially along the border with Afghanistan and the adjacent regions where Taliban strongholds were located: the North-West Frontier Province (NWFP) and the Federally Administered Tribal Areas (FATA). (See MAP.) An interested observer would thus need a historical perspective to understand Pakistan's long and thus far failed attempts to achieve a modicum of stability.

By the start of the 21st century, Pakistan had never known true security, which many thought might account for its long tryst with military dictatorships and the resulting stunting of its political process. Established as a predominantly Muslim but supposedly secular state in the wake of the United Kingdom's retreat from empire, Pakistan, like India, was the consequence of an outstanding South Asian personality. Mohammed Ali Jinnah shared the spotlight with Mohandas K. Gandhi in the days leading up to the partition of British India in August 1947, but unlike the Mahatma, who chose not to participate in the political process following British dispensation, Jinnah assumed the role as Pakistan's first head of state, and it was around him that the government took form. Gandhi's assassination soon after the transfer of power therefore did not have the impact on India's governance as Jinnah's death hardly a year after Pakistan's independence. Jin-

nah left a power vacuum that could not be filled. Moreover, his vision of a progressive state could not be institutionalized, and the country drifted from its intended objective to a series of arbitrary maneuvers that eventually opened the way for the Pakistan army to dominate the political scene.

From the moment of independence, Pakistan found itself locked in a violent contest with India. Immediately following the transfer of power, India and Pakistan went to war over the northern Kashmir territory, and their conflict set the scene for a bitter relationship in the decades that followed. The two countries waged war again in 1965 and most significantly in 1971. Although the latter struggle was largely played out in Pakistan's Bengal province, it could not be kept from spilling over into Kashmir. Moreover, the loss of East Bengal (East Pakistan [now Bangladesh]), as a consequence of New Delhi's intervention in the Pakistan civil war, ended the original Pakistan. Humiliated by the success of Indian arms, the Pakistan army fell

back on a substitute strategy that emphasized avoiding direct conflict with its larger, more powerful neighbour but nevertheless aimed at sustaining the struggle for Kashmir through clandestine means. The Pakistan army's role in raising, equipping, and deploying jihadists for operations in Kashmir brought an end to the country's pre-civil war secular objectives. Islamist organizations, practicing obscurantist versions of religious expression and marginalized in the original Pakistan, came to assume mainstream roles in the army and throughout the country.

Still another dimension of Pakistan's security dilemma was its ties to the United States. Pakistan's membership in the Southeast Asia Treaty Organization (SEATO) in 1954 and the Baghdad Pact in 1955 (subsequently the Central Treaty Organization [CENTO] in 1958) brought the country American military assistance, ostensibly to defend the region against communist forces but in actuality to balance the threat posed by India. Moreover, although the Soviet

Union proved difficult to woo, Pakistan saw no contradiction in establishing relations with Communist China. Just as Pakistan straddled both sides in the Cold War, however, its American ally also practiced inconsistencies, most notably during the 1965 war with India, when the U.S. refused to support Pakistan. More significant, however, was Pakistan's role as a frontline state when the Soviet Union invaded neighbouring Afghanistan in 1979, and Washington, after some hesitation, judged Pakistan a proxy in its contest with Moscow. Washington's decision to abandon the region following the Soviet army's withdrawal in 1989, however, left the Pakistanis to shape their future free of U.S. interference. The consequence of this was the Pakistan army's determination not only to sustain the struggle for Kashmir but also to establish a sphere of influence over Afghanistan.

Islamabad, which continued to perceive New Delhi as its number one enemy, sought to bolster Pakistan's defenses by developing more significant capabilities along the Pakistan/Afghanistan frontier. Thus any attempt by the multiethnic and tribal Afghans to rebuild their country following the Soviet retreat was sabotaged by Pakistani military maneuvers. Moreover, the sustained chaos in Afghanistan allowed Pakistan to introduce a third force into the region, a still more virile jihadist array known as the Taliban.

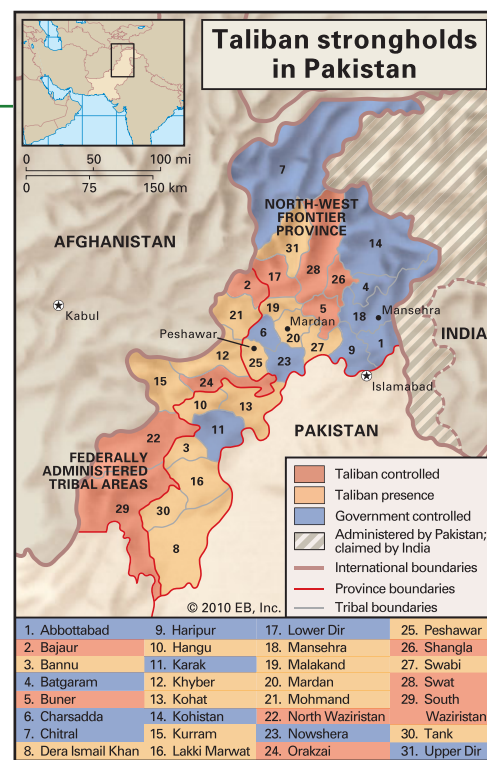

The Taliban, much of it composed of young Afghan refugees who had been educated at *madrasahs* (Islamic religious schools) in Pakistan's Pashtun border region, was organized and expanded under the direction of Pakistan's *sub rosa* Inter Services Intelligence directorate (ISI). With the aid of substantial Pakistani resources in men and weapons, the Taliban gained control over most of Afghanistan. After seizing Kabul in 1996, the Taliban declared Afghanistan an Islamic Emirate guided by ultraconservative Islamic law; Islamabad quickly recognized the new order. Pakistan appeared to have achieved its most immediate national security objective, and most important, it seemed to gain control over the Pashtun peoples domiciled on both sides of their shared border with Afghanistan. Pakistan's security, however, proved short-lived. The success of the austere Islamists and the formation of a chaste Islamic state in Central Asia drew the attention of Muslims from other parts of the world, among them Osama bin Laden and his

al-Qaeda organization. The latter, bent on forcing American influence from Islamic countries, saw in the resurrected Afghan emirate a base of operations ideally suited to press al-Qaeda's worldwide strategy.

The terrorist attacks in the U.S. on Sept. 11, 2001, were quickly traced to Afghanistan, where bin Laden and the Taliban emir had entered into cooperative and intimate association. Washington's decision to destroy the al-Qaeda/Taliban combination, however, could not be implemented without logistic support from the military government in Pakistan. Islamabad's strategy—its quest for security—therefore again ended in failure when the U.S.-promoted "war on terrorism" enveloped the very region that Pakistan had endeavoured to bring under its influence.

The first decade of the 21st century found Pakistan immersed in protracted and indecisive conflict not only on all its frontiers but also throughout the country. Pakistan achieved nuclear weapons status in 1998 but weapons of mass destruction are of little value in multidimensional struggle. Meanwhile, the loss of East Pakistan in 1971 had done nothing to improve relations between Pakistan's remaining ethnic groups. Internal conflict remained intense and unyielding in Balochistan, while the Pashtuns of the NWFP and adjoining FATA formed the bulk of the by-now rebellious Taliban. Moreover, the dominant role played by the Punjabis in Pakistani life and government remained a continuing source of enmity in Sind province as well as among the Mohajir community of Karachi. Successive failures at deeper national integration, coupled with ineffective and corrupt government and repeated military coups, left the attentive public disenchanted and prompted the vast semi-literate and undereducated population to seek salvation in spiritual experience mentored by opponents to anything resembling cosmopolitan culture.

Pakistan's economy—like its political and social institutions—was in shambles. Unable to cope with multiple domestic needs Pakistan became ever more dependent on external assistance, notably from the United States, but foreign aid does little to address a dilemma within. Moreover, American aid intertwined with Islamabad's sup-

port for the "war on terrorism." With many people fearful that the U.S. dependency diminished Pakistan's sovereignty, new strains emerged in Pakistani-American relations. No less significant, in the wake of the terrorist assault in late 2008 on Mumbai (Bombay), which was mounted from Pakistan, the stage appeared to be set for still another more deadly conflict with India. Nuclear deterrence, let alone mutually assured destruction, had limited value as policy in South Asia. Furthermore, the Kashmir dispute remained as intractable as it was in those first years following independence, and the government in Kabul resolutely opposed Islamabad's interference in Afghan affairs.

Finally the Pakistan army's direct or indirect association with terrorist organizations exposed its long-term agenda. That agenda, centred on perceived hostile forces in India and Afghanistan, reinforced the need to preserve if not enhance relations with Islamic extremists calculated to remain influential long after American forces withdraw from the region. Trapped in circumstances largely of their own making, the guardians of Pakistan's security continued to view India as their mortal enemy and thus appeared determined to perpetuate their country's deepening insecurity.

Child Soldiers:

From Recruitment to Reintegration

by Michael Wessells

When in April 2009, 112 child soldiers who had served with the rebel National Liberation Forces (FLN) were freed following the signing of a cease-fire agreement between the FLN and the government of Burundi, the existence of modern-day child soldiers was brought forcefully into the international spotlight. Worldwide, armed forces and nongovernmental armed groups recruit and exploit children, who are defined under international law as those under 18 years of age. Though the number of child soldiers is unknown—many child recruiters successfully hide their actions, and some children lie about their age in order to join political struggles—it is estimated that at any time, there are approximately 250,000 child soldiers, many of whom are girls. Although most child soldiers are teenagers, the recruits also include children as young as six or seven years of age. Children may also be born into armed groups. For example, the Lord's Resistance Army (LRA), which abducted many children and fought against the government of Uganda, maintained military camps in southern Sudan, where its leader, Joseph Kony, sired many children who subsequently became soldiers.

Armed forces and groups recruit children for diverse reasons. Commanders often select children because they are available in large numbers and can be recruited with impunity, because they can be fashioned into effective fighters, and because commanders know that they can manipulate children easily by employing terror tactics and offering incentives for bravery and initiative in

A boy in Mogadishu, Som., is armed with an ammunition belt and a rocket-propelled grenade used by Islamist fighters in attacks against the government.

combat. Armed with small lightweight weapons, such as AK-47 assault rifles, even young children can be effective fighters. They may also serve as spies who can slip behind enemy lines without suspicion. Teenagers are often sought for their size and strength, their willingness to take risks that many adults would avoid, and their political consciousness. In Sri Lanka the Liberation Tigers of Tamil Eelam fought government forces in part by recruiting teenage girls to serve as suicide bombers.

The Recruitment of Children. Child recruitment is contextual and may involve force or decisions made by the child. The LRA forcibly recruited as many as 60,000 children by abducting and subjugating them into obedience through a regime of terror. To deter escape the LRA forced abducted children to surround recaptured escapees and

beat them to death. Forced recruitment was also used in Sierra Leone, where the opposition group Revolutionary United Front forced young people at gunpoint to join and often required children to kill members of their own villages or families.

Some children decide to join armed groups, but their choices may not be “voluntary,” since they are made in desperate circumstances and involve a mixture of “push” and “pull” factors. In Colombia, for example, a boy who has been abused in his home may leave and seek an alternate “family” in the form of an armed group. In other countries youths have been lured by propaganda and an ideology of liberation into believing that by becoming soldiers, they will help to liberate their people. In Rwanda

young Hutu were recruited into a youth militia (the Interahamwe) and were taught that Tutsi had to be eliminated; more than 800,000 people, mostly Tutsi, were killed in the 1994 genocide.

Other pull factors may include retribution, money, family ties, and power. In Liberia some children join armed groups in an effort to avenge wrongs, such as the killing of one's parents by government forces. Children may also be eager to earn money that they can send home to support impoverished families. In northern Afghanistan children frequently joined the Northern Alliance to fight the Taliban because their fathers, brothers, or uncles were members and because they regarded fighting as a matter of family honour and village protection. Some children seek power and prestige. Many children report that because they carry a gun and wear a uniform, they are treated with

a level of respect that they never enjoyed as civilians.

Inside armed groups, children play diverse roles. A common myth is that all child soldiers are fighters, when in fact many recruits serve as porters, cooks, bodyguards, and domestics, among other roles. Another myth is that all child soldiers are boys. In conflicts in countries such as Liberia and Sierra Leone, girls were recruited to serve not only as fighters but also as sex slaves, whose refusal to provide sex often led to severe punishment or death.

The Reintegration of Formerly Recruited Children. Because they have been socialized into lives as soldiers, child soldiers may themselves become a means of perpetuating violence and armed conflict. To break cycles of violence, a key priority has been to demobilize child soldiers and help them to transition or reintegrate into civilian life. Typically, this is done through a process of disarmament, demobilization, and reintegration. Having turned in their weapons (disarmament), child soldiers are demobilized by being officially stood down from armed groups. They are reintegrated through rehabilitation and work with families and communities to help them find a place in civilian society.

Rehabilitation requires attention to mental health issues that cause distress and impede reintegration. In countries

Former child soldiers perform a play at a refugee camp near Gulu, Ugan.

such as Liberia and Sierra Leone, where commanders had plied child soldiers with drugs to make them fearless, many former child soldiers developed problems of substance abuse. In other countries a minority of former child soldiers develop clinical problems, such as depression, anxiety, and trauma, particularly the post-traumatic stress disorder that can arise following extreme events, including exposure to deaths or active engagement in killing. Effective treatment of these problems requires specialized supports, such as counseling by well-trained psychologists or psychiatrists, few of whom are available in war zones. In addition, mental health issues may have indigenous roots. In Angola, for example, former child soldiers were terrified because they believed that they were haunted by the unavenged spirits of the people they had killed. In this case, rather than counseling, the children benefit from the services of a traditional healer, who conducts a cleansing ritual to remove their spiritual pollution.

It is often everyday social issues, however, that cause the greatest distress and the most formidable barriers to reintegration. To rectify family separation it is essential, when possible, to reunify former recruits with their families and to manage family conflicts. Nearly all former child soldiers struggle because they have lost years of education and lack the income needed to start a family or the social skills to assume the role of mother or father. Some develop unruly behaviour, while others have difficulty meeting expectations associated with ordinary living. Many former child soldiers—particularly girls—are stigmatized and called “rebels” or are viewed as aggressive troublemakers. Media ac-

counts sometimes support these stereotypes by referring to former child soldiers as a “Lost Generation.”

Effective reintegration is possible through holistic community-based supports. It is important to mobilize communities to support the livelihood, acceptance, and education of former child soldiers and to activate protection mechanisms that guard against rerecruitment or retaliation. Nevertheless, reintegration efforts are not sufficient by themselves; equal efforts should be given to prevention, particularly to ending the impunity that allows recruitment to continue.

Recognition by the international community of the serious nature of enlisting children in warfare was highlighted in 2009 when the warlord Thomas Lubanga Dyilo became the first person to be tried by the International Criminal Court. He was accused of having committed war crimes (recruiting children as soldiers in the Democratic Republic of the Congo). The UN was also at the forefront of strengthening international standards against child recruitment and urged governments to ratify the Optional Protocol on the involvement of children in armed conflict. The optional protocol, which was adopted in 2000 to augment the UN Convention on the Rights of the Child (1989), raises the minimum age of participation in hostilities from 15 years of age to 18. These efforts will succeed, however, only if all countries agree to abide by the optional protocol and thus safeguard the world's children.

Michael Wessells is Professor of Clinical Population and Family Health, Columbia University, New York City; he is the author of Child Soldiers: From Violence to Protection.

The Deeper Meaning of the Darwin-Lincoln Double Bicentennial

by Adam Gopnik

The year 2009 marked the double bicentennial of Abraham Lincoln, the 16th president of the United States and the author of the 1863 Emancipation Proclamation, which ended slavery in the rebellious Confederacy, and Charles Darwin, British naturalist and author of *On the Origin of Species by Means of Natural Selection* (1859). Born on the very same day—Feb. 12, 1809—these two icons, one of emancipation and the other of evolution, continue to stir us in the 21st century and remain contemporary in startling ways. If anything, they are more alive for us now than they were at the moment of their centenary. A hundred years ago, with civil rights unaccomplished and genetics not yet in place to explain the mechanisms of inheritance, Lincoln was perceived by many as a pious but in some ways impotent figure, and Darwinism was a speculative road, largely not taken.

Now their triumph is evident: U.S. Pres. Barack Obama cites and echoes Lincoln in most of his speeches and many of his actions, and arguments over Lincoln's faith, acts, and attitudes continue to raise temperatures and feelings. There is even more dispute about Darwin and his legacy—attempts to use Darwinism to understand not only biology but also art and literature pour out, while counterattacks from the religious-minded arraign Darwin for killing God and favouring eugenics. Alone among the great scientists, he still lends his name to the tradition that he engendered. (We still refer to Darwin and Darwinism in a way that we do not refer to Newton and Newtonianism.)

Although both Lincoln and Darwin have become the centre of polemics—surely a sign of their continuing relevance—the kinds of arguments that they inspired (and still inspire) are very different. Different controversies surrounded both men throughout the bicentennial year. With Lincoln, the most vivid arguments turned on that “piety” and the politics that it produced. Was Lincoln—in a view first formulated by critic Edmund Wilson and later popularized by writer Gore Vidal—an American Bismarck, whose choice of abolition was a merely tactical maneuver in the midst of a drive toward power? Or was he a man of fixed morality who adapted to changing realities? Was he a truly eloquent writer or merely a conventional speechmaker sanctified by memory? Fred Kaplan's recent book *Lincoln: The Biography of a Writer* (2008) helps to make the case for Lincoln's essential “literary” qualities. Harvard professor Henry Louis Gates, Jr., wrote a searching book, *Lincoln on Race and Slavery* (2009), and hosted an equally searching public television documentary, *Looking for Lincoln*. Beginning with his own skepticism about Lincoln's sincerity on the race question, Gates worked his way around to the view—widely shared—that Lincoln's antislavery views, though they may have begun without a clear vision of equality, ended with such a vision and were consistently courageous for their time. John Stauffer's *Giants: The Parallel Lives of Frederick Douglass and Abraham Lincoln* (2008) emphasizes Lincoln's moral education at the hands of the great African American abolitionist. Others tried to argue, on the whole

rather feebly, that Lincoln was really just a politician—as though eloquence and politics are alien to each other. Indeed, Lincoln did not simply become a politician as a young man in Illinois; he became an antislavery politician, and the Republican Party that he came to head was not just a gathering of different-minded individuals but rather a group created with the sole purpose of coalescing antislavery opinion into a single unit—from radical abolitionists to those who regretted the existence of slavery but could see no immediate way to end it everywhere in the country. In any case, to segregate Lincoln's work as a word maker from his work as a politician is historically absurd. Lincoln became a plausible candidate for president because—and only because—of his reputation as an orator; his political life and his writing life were one.

Darwin has been the subject of another kind of assault. Where once left-wing critics attacked his attitudes for being too easily taken hostage by right-wing ideas of social order and hierarchy, now religious fundamentalists attempt, in well-funded and heavily hyped films and books, to insist that Darwin was a racist and that his ideas even influenced Nazism (which was, in point of historical fact, utterly hostile to his notion of a single family of man). In this regard, the most important study of Darwin to appear in the bicentennial year was that of his British biographers Adrian Desmond and James Moore in their book *Darwin's Sacred Cause: How a Hatred of Slavery Shaped Darwin's Views on Human Evolution* (2009). In it, they establish what had long been known to Darwin scholars, though not

in such detail: that Darwin's commitment to abolition and the antislavery cause—derived in part from his Wedgwood ancestors—was an essential piece of the background to his evolutionary theory. He believed that the family of man was unified, not separately created (or divided into good white “Adamic” and lesser brown “pre-Adamic” types, as many theologians insisted). The central insight of evolutionary theory—that the story of life, from first microbe to finished man, is one—was part of his abolitionist heritage. Darwin, courteous by nature, gave a respectful hearing to his cousin Francis Dalton's eugenicist ideas (as he did, for that matter, to the ideas of Karl Marx), but in his own work he explicitly and unequivocally rejected those first stirrings of social Darwinism, emphasizing instead the role of culture in fostering humane progress and that of the instinct of sympathy in making certain that human groups continued to care for the helpless. Darwin was certainly a “Europeanist,” who believed that the liberal culture of his time was better than tribal culture, but he thought that those differences were the result of an increase in the spread of social sympathy rather than something inborn or natural only to one race. Both Darwin and Lincoln emerged from their bicentennial trials as men of their time with the marks of their time—but as men who, on the whole, grew in moral understanding as they aged and came to embrace the kindest and wisest ideas

Abraham Lincoln

about human equality that their time offered.

Yet, although the polemics about them are importantly different, the two men are still worth taking together. It is (as I meditated at length in my own long essay *Angels and Ages*) not a simple parallel in life but a common liberal temperament—a modern turn of mind—that melds them together. There was not some kind of secret magic connecting these two very disparate figures but rather a field of new feelings and voices that connected many of the liberal voices of the day, including John Stuart Mill, Ralph Waldo Emerson, George Eliot, and William James.

One might propose three common elements that gave this temperament a shape. First, they shared a taste for argument from below, rather than insistence from above. Darwin and Lincoln both began their great works not with grand principle and moral exhortation but with simple evocations of homely evidence. Lincoln's great antislavery speech, his Cooper Union address of 1860—the speech that “made him president”—begins with a modest and even tedious invocation of the acts of the 39 signers of the Constitution: had they voted on national questions regarding the extensions of slavery? By the time the long answer has been reached—yes, they did—Lincoln has demonstrated that slavery is a national, not a regional question, and then the question becomes: is it right or wrong? Darwin had begun his epoch-making *Origin of Species* not with the “cosmic question” that he would solve but with an almost absurdly homely description of the breeding of dogs and pigeons. Darwin's argument is more than an analogy—his point is similar to (and as cosmic as) Newton's contention that a boy throwing a ball and the motions of the planets follow the same rules, even if one is volitional and one is not.

Second, both Lincoln and Darwin practiced the habit, at times exasperating to their admirers, of sympathetic summary. The ability to enter into an opponent's argument without contempt or sarcastic bitterness was common to them both. Darwin did not merely articulate his opponents' arguments against evolution; in every case he anticipated them and refuted them in advance. This is not merely instrumental, or a sign of softness—Lincoln went to war; Darwin annihilated a thousand years of biblical literalism—but it is a sign of sureness and part of the liberal inheritance.

Charles Darwin

Finally, they shared a tragic sense of life that did not paralyze their capacity for moral action. Both men rejected organized religion and searched for some other way to understand the presence of pain and suffering in the world; they sought some other model—for Lincoln, a kind of private providentialism; for Darwin, a stoical resignation and contemplation of the power of time—to make sense of mortality. They were stoics but not cynics.

These three elements—argument from below, from evidence; sympathetic summary; and an ability to recognize the man-made nature of morality without succumbing to meaninglessness or searching for false comfort—are the touchstones, the key notes of the liberal temperament, and the real event of the bicentennial was to see how Darwin and Lincoln helped to set them. In the politics of the newly inaugurated President Obama and in the efflorescence of evolutionary arguments, Darwin and Lincoln persist as central figures of liberal civilization—the civilization in which scientific progress and democratic politics are, as British natural philosopher Sir Karl Popper showed half a century ago, deeply and permanently intertwined.

Adam Gopnik is a staff writer for The New Yorker magazine and is the author of *Angels and Ages: A Short Book About Darwin, Lincoln, and Modern Life*, among other books.

Woodstock Remembered:

The 40th Anniversary

by Chris Salewicz

A free concert to mark the 40th anniversary of a cultural and musical phenomenon—the legendary rock festival known as Woodstock—being organized by Michael Lang, one of the original promoters in 1969, to take place in Brooklyn, N.Y., in August 2009 was canceled just days prior to the event but an anniversary concert featuring Woodstock alumni including Richie Havens and Country Joe McDonald at the Bethel Woods Center for the Arts, at the original site, was a success. Other performers included Big Brother and the Holding Company, Canned Heat, and Levon Helm.

The Woodstock Music and Art Fair, the largest mass celebration of the alternative values of the 1960s, took place in extreme climatic conditions on Aug. 15–18, 1969, at a natural amphitheatre in upstate New York. The event's name was in tribute to the deified Bob Dylan, whose home was in the arts community of Woodstock, 113 km (70 mi) from the festival site. After efforts to hold the festival close to the actual town of Woodstock had been stymied, the organizers—Lang, Artie Kornfeld, John Roberts, and Joel Rosenman—secured land outside the town of Bethel.

Local dairy farmer Max Yasgur was the owner of the 240-ha (600-ac) plot on which half a million young people braved the elements to watch an extraordinary star-studded music lineup; Yasgur would become sanctified in the

Woodstock festivalgoers enjoy the music despite the rainy conditions.

public's perception as a personification of the alleged utopian values of the decade. Posters for the event promised "Three Days of Peace and Music." The genesis of Woodstock, however, took place amid the establishment surroundings of a leafy golf course on Long Island: meeting over a game of

golf, Roberts and Rosenman, a pair of affluent young men attracted to the age's "underground" lifestyle, bankrolled the festival, a project they conceived as merely a business opportunity.

Ultimately, this "Aquarian Exposition" (another of the poster's claims, attributed to Lang, the festival's groovy front man) was a tribute to hippie capitalism: the promoters sold approximately \$1.4 million in tickets and paid the artists a total of \$150,000. (Jimi Hendrix was the highest-paid.) Later, *Woodstock* (1970), the Academy Award-winning feature documentary film of the "counterculture festival," was a worldwide box-office hit, turning Cocker, Ten Years After, Sly and the Family Stone, and Santana into international stars and boosting the careers of John Sebastian, the Who, and Crosby, Stills, Nash and Young.

Despite the business plan of the organizers, by late July members of hard-core American alternative society had begun arriving at the festival site. The Merry Pranksters, the counterculture legends who were the alumni of author Ken Kesey, turned up in their famous psychedelic bus. Aware that the Pranksters' presence was proof of the festival's credibility, the Woodstock organizers ignored what would become a major problem. There was further counterculture involvement: Abbie Hoffman, late of the Chicago Seven trial and the leader of New York City's hard-left politicians, set up a printing press; he published a daily newspaper informing

Jimi Hendrix

festivalgoers where to find food and water and how to deal with the physical excrement that was being created. Further integrity was provided by the arrival of the Hog Farm (the longest-running hippie commune in the U.S.), a self-styled “mobile, hallucination-extended family,” who brought with them literally tons of muesli and bulgar wheat, as well as truckloads of assorted vegetables and fruit.

A week before the festival was set to begin, most of the venue seemed in readiness. Unaccountably, the turnstiles and gates were not ready for operation, which created a considerable problem. By the night of August 13, about 50,000 people had arrived, mostly without tickets, and entered for free; by the end of the next day, the crowd had doubled in size. On the morning of August 15, a young man was killed, accidentally driven over by a tractor.

By the afternoon of August 15, all roads within a 32-km (20-mi) radius of Woodstock were utterly blocked; the organizers summoned up to 16 helicopters. By Friday evening the festival audience was 500,000 strong, eagerly awaiting the first act, unaware that electricity had yet to be fully piped to the stage. To maximize the limited power, acoustic acts were summoned. The first artist to play was Richie Havens, opening the event as a solo performer only because he had been able to fit into the four-seater helicopter that was all that was available at the time for taking acts to the site. “FREE-

DOM,” Havens exulted into the microphone, “FREEDOM!.....FREEDOM!.....FREEDOM!”

Armed with only an acoustic guitar, Country Joe McDonald was cajoled into following Havens onstage. Hanging out backstage, not booked to perform, was Sebastian, formerly of the Lovin’ Spoonful. Asked to play, Sebastian went out in front of the crowd and provided one of the key moments of the event. Joan Baez delivered another acoustic triumph. Later that evening there was a fierce rainstorm—though nothing compared with what was yet to come.

The spirit of the event was inculcated in the 8:00 AM Saturday morning wake-up call over the sound system. “Good morning. Last night was really groovy, and today is going to be even better. We have one of the biggest cities in the United States, and we ought to be proud of ourselves. And everything’s OK and we’re on top of it. The rest of the world thinks that we’re having trouble, but we’re not. And within 15 minutes we’re going to be distributing these bags to everybody to help clear up.” With the site in danger of being overrun by garbage, the audience worked as one to eliminate this health hazard. By now, the music was in full flow, with triumphant performances from Creedence Clearwater Revival, the Who—briefly interrupted by a stage protest from Hoffman—and the Grateful Dead.

Joe Cocker

Jerry Garcia of the Grateful Dead

Sly and the Family Stone sealed the day’s glory with a mind-blowing show.

By mid-morning of August 17, the weather was extremely hot. At midday, however, as Cocker and the Grease Band delivered a memorable set, fat clouds rolled in and the heavens opened, transforming Yasgur’s land into an ocean of mud. As though adversity was being turned to advantage, the mud became a feature of the festival, with festivalgoers playing mud-sliding games. That morning Gov. Nelson Rockefeller had declared the festival a disaster area; it was his intention, he stated, to send in the National Guard and remove the entire audience. Urgent negotiations with the governor’s staff resulted in his decision to assist the festivalgoers: a field hospital and medical teams were sent in by U.S. army helicopters. Meanwhile, Crosby, Stills, Nash and Young, performing live for only the second time, delivered a set of almost transcendent bliss.

Woodstock came to a close on Monday morning, August 18, following Hendrix’s performance of his interpretation of “The Star-Spangled Banner.” His rendition of the U.S. national anthem was etched into the memories of the remaining 25,000 people in the audience and provided the conclusion of a remarkable experience.

Chris Salewicz, a former writer for the New Musical Express magazine, is the author of more than a dozen books and has chronicled popular culture.

UAVs Crowd the Skies

by Peter Saracino

A little-known but important milestone in modern warfare was reached in 2009: in that year the U.S. Air Force trained more operators of unmanned aerial vehicles (UAVs) than it did pilots. In an age when war is increasingly dominated by robots, the U.S. military alone fields at least 7,000 of these machines, which are either remotely guided by a human using a radio link or self-guided by preprogrammed flight plans. Interest in UAVs is global, however. More than 60 manufacturers in at least 40 countries are now servicing a market that is expected to exceed tens of billions of dollars over the next decade. It is not surprising, then, that Quentin Davies, the U.K.'s minister for defense equipment and support, predicted in July 2009 that the world is now witnessing the last generation of manned combat aircraft and that by 2030 UAVs will have displaced them.

A Growing Technology. UAVs, also called remotely piloted vehicles (RPVs) or unmanned aircraft systems (UASs), are aircraft without a pilot onboard. Fixed-wing UAVs resemble "smart weapons" such as cruise missiles, but they are superior because they return to their base after a mission and can be reused. Also, UAVs have two decisive advantages over manned aircraft: their use does not risk the lives of aircrews, and they can loiter over areas of interest longer than most types of aircraft with human pilots. The current generation of UAVs varies in size from small propeller-driven hand-launched models such as the German army's Aladin to jet-powered intercontinental-range craft such as the U.S. Air Force's RQ-4 Global Hawk. Prices range from a few hundred thousand dollars for small models to well over \$100 million for a Global Hawk.

UAVs first took to the skies during World War II with radio-controlled target drones, and they continued to develop slowly through the Vietnam era, when film cameras were mounted onto jet-powered drones for photoreconnaissance missions. Truly modern UAVs did not begin to appear over battlefields

A soldier from the U.S. 1st Infantry Division prepares an RQ-11 Raven miniature unmanned aerial vehicle for a mission to search for weapons caches in Kunar province, Afg., April 10, 2009.

until the 1980s, when a number of technical advancements made them much more effective. Advanced composite materials made for lighter, stronger airframes, and improved electronics permitted the development of high-resolution TV and infrared cameras. Also, full implementation of the Global Positioning System (GPS) in the 1990s made it possible to navigate UAVs with a precision that was previously unattainable.

UAVs began to garner media attention during NATO's intervention in the Yugoslav civil war of the 1990s. In 1995 the U.S. Air Force put the RQ-1 Predator into service for airborne surveillance and target acquisition. With its pusher propeller driven by a four-cylinder gasoline engine, the Predator could cruise at 140 km/h (87 mph), stay aloft for up to 16 hours, and reach altitudes of 7,600 m (25,000 ft). Predators flying over Yugoslavia, for example, tracked troop movements, monitored refugees, and marked targets so that manned aircraft could attack them with laser-guided bombs.

The Predator remains the most widely used battlefield UAV operated by the United States. The entire system consists of the vehicle itself (with built-in radar, TV and infrared cameras, and laser designator), a ground-control station, and a communication suite to link the two by satellite. Though pilotless, the Predator is operated by approximately 55 personnel, including a pilot operator and a sensor operator as well as intelligence, maintenance, and launch and recovery specialists. The current version, designated the MQ-1, went into service in 2001 armed with two laser-guided AGM-114 Hellfire missiles, giving the UAV the ability to attack targets as well as identify them. The first time a Predator made a confirmed kill was in Yemen in 2002, when one operated by the CIA destroyed a vehicle carrying six members of al-Qaeda. A turboprop-powered version of the Predator, called the MQ-9 Reaper, is significantly larger and has a greater payload. The Reaper has been operational since 2007 with U.S. forces and is also used by Britain's Royal Air Force.

The Limits of High Technology. UAV technology may be sophisticated, but it is still in its infancy. By 2009 some 65 Predators (each costing \$4 million) had crashed, including at least 3 in 2009. Of those crashes, 36 were attributed to human error. Since UAVs are not yet completely autonomous, their operators must display great skill in judging distance and speed when landing, a task made more difficult by a slight delay in signal transmission between the UAV and the ground-control station. Moreover, there are occasional technical glitches, such as the one that occurred in September 2009 when a Reaper on a combat mission over Afghanistan could no longer be controlled and had to be shot down by U.S. warplanes.

Successful attacks by UAVs depend upon the accuracy and timeliness of intelligence. This principle was demonstrated in 2009 when an al-Qaeda military planner was believed to have been killed by an American UAV in September but suddenly appeared in a media interview in October. Also, high-tech weapons may win engagements on the battlefield, but they cannot solve political problems—and on occasion they may even aggravate them. In July 2009 the Brookings Institution think tank estimated that for every militant killed by a UAV in Afghanistan and Pakistan, approximately 10 civilians were also killed, a situation that was alienating the local population and turning them against the United States and its NATO allies. UAV use also raises issues of accounta-

A U.S. Air Force MQ-1 Predator unmanned aerial vehicle prepares to land at Balad Air Base, Iraq, after a combat mission. Two television cameras are mounted on the underside of its fuselage.

bility. According to the nongovernmental organization Human Rights Watch, Israeli UAVs unlawfully killed at least 29 Palestinian civilians during the Gaza incursion in late 2008 and early 2009 because UAV operators allegedly failed to verify that targets were combatants.

Future Uses in War and Peace. Most UAVs remain dedicated to what the military calls ISTAR—intelligence, surveillance, target acquisition, and reconnaissance. For example, American UAVs began patrolling off the coast of Somalia in October 2009 in order to provide early warning of pirate vessels approaching merchant ships and to guide naval forces. However, the number of potential uses for UAVs is growing. In August

2009 the U.S. Marine Corps awarded contracts to Boeing and a joint venture between Lockheed Martin and Kaman to develop cargo UAVs that would be capable of delivering supplies to troops on the battlefield. The goal is to demonstrate how such UAVs could reduce risk and expense in logistics. Currently it is expensive to operate ground supply convoys on the poor roads and in the back country of Afghanistan; also, convoys must be heavily guarded, and they continually run risks from roadside bombs and ambushes.

Besides these military uses, UAV technology is attracting interest from police forces and other civilian agencies. For example, the U.S. Customs and Border Patrol has been using the Predator to patrol the Mexico-U.S. border since 2005 and the Canada-U.S. border since early 2009, and two maritime-patrol variants are scheduled to be operational in 2010. UAVs are also being developed for use in search-and-rescue operations to help locate survivors and deliver emergency supplies to them. In addition, UAVs are being evaluated for their potential in assessing damage suffered from disasters such as hurricanes, forest fires, and maritime oil spills.

As robotic vehicles become more commonplace, UAVs can be expected to be used wherever possible to minimize threats to personnel and to do tasks that exceed human strength and endurance. If current trends continue, UAVs could one day evacuate casualties from the heat of battle and mount round-the-clock surveillance missions for months and maybe even years at a time.

Electric Cars

Gear Up

by Lee Hudson Teslik

German Chancellor Angela Merkel and Chinese State Councilor Dai Bingguo arrive in electric cars for a meeting at a Group of Eight summit in L'Aquila, Italy, on July 10.

In retrospect, 2009 may come to be seen as a year in which the movement toward electric automobiles gained momentum. This sudden gathering of energy actually brought together a number of forces that had begun independently the previous year. First was a spike in oil prices, which reached \$147 per barrel in July 2008 and hovered in the \$60–\$80 range through much of 2009. Gasoline prices followed, threatening to make sport-utility vehicles (SUVs) and pickup trucks less economically viable for American consumers. Second was the severe recession that gripped first the United States and then the rest of the world in 2008 and 2009, squeezing sales of new automobiles to their lowest levels in half a century and bringing major automotive companies such as General Motors to their knees. Third was a growing international awareness of the challenges posed by climate change, which led policymakers to seek ways to reduce carbon emissions such as those produced in automobile exhaust. Finally, the electric car movement was given a lift by improvements in technology and by government commitments to help develop the

infrastructure needed to support electric vehicles.

Some Historical Perspective. Electric cars in fact are nothing new. Indeed, in the late 19th century and the first two decades of the 20th, electricity was the preferred method of powering automobiles in Western Europe and the United States. Electric motors did not have to be started manually; they were quieter than gasoline engines; and they provided a smoother ride because there were no gears to shift. But a variety of innovations and discoveries proved enough to tilt consumers toward gasoline-powered cars. Among these were the exhaust muffler, the electric starter, the discovery of underground reserves of petroleum in the United States, and, ultimately, Henry Ford's assembly-line model for producing cars cheap enough to be owned by the common man.

The internal combustion engine dominated the rest of the 20th century, its success perpetuated by low fuel prices. In addition, businesses helped to entrench gasoline-powered vehicles by establishing the infrastructure—gasoline stations—to support them. Electric vehicles, meanwhile, were sidelined. Generally more expensive than fuel-

powered alternatives, they were unable to travel long distances without recharging. Most significantly, the infrastructure needed to support a large fleet of electric cars—mainly, battery-charging facilities—did not exist. Given the dearth of electric vehicles on the road, there was little demand for infrastructure—which in turn made it even less worthwhile to produce electric cars.

During the 1990s electric vehicles briefly reentered the public sphere in response to a mandate by the California Air Resources Board (CARB) that “zero emission vehicles” make up 10% of vehicle sales in that state by 2003. General Motors introduced the first modern mass-produced electric vehicle, the EV1; Toyota followed suit with an electric version of its RAV4 SUV; and other automakers announced their own plans. By 2003, however, the vehicles had been withdrawn from production, and CARB had rescinded its stringent requirements. Critics alleged that the automakers had intentionally undermined the market for electric cars in order to protect their existing product lines—an idea popularized by the 2006 film *Who Killed the Electric Car?* Automakers responded that the programs they had worked on simply were not commercially viable at the time.

Meanwhile, Toyota and Honda introduced hybrid electric automobiles, the Prius and the Insight, to the Japanese market in 1997 and to the U.S. market by 2000. Featuring a small gasoline engine that supplemented an electric motor when necessary for added propulsion, hybrid vehicles proved popular, in part because they did not have to be plugged into the electric power grid to be recharged.

Electric Vehicles and Hybrids Today. The gathering economic forces of 2008–09 prompted renewed interest not only in hybrids but also in fully electric vehicles and so-called plug-in hybrids (models with an extra capacity to

recharge their batteries off the power grid). During his campaign for the U.S. presidency in 2008, Barack Obama promised that half of all vehicles purchased by the federal government by 2012 would be plug-in hybrids or fully electric. In August 2009 Obama, now president, announced that \$2.4 billion of his economic stimulus package had been awarded to some 48 automakers or parts manufacturers in order to increase production of electric vehicles. An additional \$400 million was aimed at developing infrastructure.

Other countries made similar efforts. China's government announced that it would provide subsidies for research and would also subsidize the purchase of electric or hybrid vehicles for use in Chinese taxi fleets and by government agencies. Britain's Prime Minister Gordon Brown said in July 2009 that he wanted all new cars sold in his country by 2020 to be electric or hybrid—though British automakers retorted that Brown's offer earlier in the year to subsidize purchases of electric vehicles would have little effect on sales.

Auto companies scrambled to capitalize on new grants and subsidies. General Motors, which by July 2009 was majority-owned by the U.S. government, announced plans to roll out its new electric car, the Chevrolet Volt, in late 2010. The Volt was an "extended range" model, one whose batteries would be recharged overnight by a plug-in connection or on the road by a small gasoline engine. Also in August, Nissan Motor Co. announced produc-

Nissan Motor Co.'s zero-emission electric car, the Leaf, is displayed in August in Yokohama, Japan. The electric vehicle, powered by a lithium-ion battery, was scheduled for release in late 2010.

The owner of an electric vehicle plugs into a charging point in London's Berkeley Square. In 2009 the British government announced plans to offer subsidies to buyers of electric or plug-in hybrid cars.

tion of the Leaf, a fully electric automobile that would boast zero tailpipe carbon emissions.

Efforts were being made on the infrastructure end as well. The mayor of London, vowing to make that city the "electric car capital of Europe," announced plans to have as many as 25,000 charging points installed in accessible areas by 2015. In Yokohama, Japan, the U.S.-based company Better Place, founded by Israeli-born entrepreneur Shai Agassi (see BIOGRAPHIES), demonstrated the prototype of an automated battery-exchange station that it intended to install throughout Israel and Denmark as part of a program to encourage a mass market for electric automobiles.

Challenges for the Future. Despite the gathering momentum of 2009, several challenges will have to be overcome if a sizable portion of the world's auto fleet is to be replaced with electric or hybrid vehicles. First, at current gasoline prices it is unclear whether fully electric vehicles can be an economically viable alternative on a broad scale.

Second is the problem of range. Given the limitations of current battery capacities, and given current technologies that partly recharge batteries by using energy produced while braking, electric vehicles at this time are best suited for stop-and-go, short-range city driving. Before fully electric vehicles can realistically be expected to replace fuel-powered cars or hybrids, charging and battery-exchange stations will have to be put in place everywhere cars are driven—not just in a few cities.

Finally, even assuming the establishment of networks of charging stations, technological problems would have to be addressed. For instance, many plug-in models take hours to recharge, whereas gasoline-powered cars take only minutes to refuel. Stations that are capable of charging car batteries rapidly are possible in theory, but they would have to be designed and operated in such a manner that they would avoid straining municipal power grids. Also, as long as electric power plants continue to run on fossil fuels such as coal, recharging fleets of plug-in electric cars will not eliminate the emission of carbon into the atmosphere.

Ardipithecus:

A Hominin Ancestor for Lucy?

by Stephen L. Zegura

The long-awaited results of a monumental effort to reconstruct the skeletal biology, paleoecology, and evolutionary position of *Ardipithecus ramidus* were published at last in the Oct. 2, 2009, issue of the journal *Science*. The issue featured 11 research articles written by an international team of 47 authors and a number of related stories and online materials.

The story began on Dec. 17, 1992, with the discovery of a molar tooth, the first specimen of what would come to be known as *Ardipithecus*, at Aramis, Eth., in the Middle Awash valley, by Gen Suwa, then a graduate student at the University of California, Berkeley, working with American anthropologist Tim White. Over the next year 16 additional specimens were found, including a number of teeth, a mandibular fragment, parts of four cranial bones, and four arm bones. When information about these 4.4-million-year-old hominins (hominids) was published in 1994, they were considered a new species of *Australopithecus*, but they were more morphologically primitive than the other members of this genus. Starting in November 1994, remains of a spectacular partial skeleton were unearthed at Aramis, and the novelty of this new material necessitated a change in generic status from *Australopithecus* to *Ardipithecus*. The badly crushed and fragmented partial female skeleton nicknamed "Ardi" and many of the other 35 (or more) individuals repre-

This frontal view (reconstructed) of the skeleton of Ardipithecus ramidus, reveals some of the dramatic conclusions of years of painstaking work. This drawing of "Ardi" reveals, among other features, A. ramidus's apelike opposable big toe (hallux).

sented in the now more than 110 *Ardipithecus* specimens from Aramis

required especially painstaking excavation, preservation, and reconstruction techniques. For instance, it took three entire field seasons of surface crawling to locate and subsequently extract the pieces of Ardi's skeleton, and it took 14 pelvis and 10 cranial reconstructions before the authors were satisfied with the accuracy of their models.

The Aramis site is one of 300 fossil-bearing localities in the Middle Awash River valley in the Afar depression. White, co-director of the Middle Awash Project, which included 70 scientists from 18 countries, had been collecting fossils in this region since 1981. Remains of eight different hominin species spanning almost six million years of evolution were uncovered there. The *A. ramidus* fossils at Aramis were very securely dated because they occurred between two key layers of volcanic tuff. Thus, the fossils were probably deposited on an alluvial floodplain during a very narrow time interval lasting from approximately 100 to 10,000 years.

A. ramidus represents a less-specialized grade of hominin organization than the fully bipedal australopithecines. For instance, judging from Ardi's mosaic-like foot skeleton, although she walked bipedally when on the ground, she retained an apelike opposable big toe (hallux) and also climbed trees. In arboreal settings she operated as a monkeylike quadruped while moving on the top of branches and bridging between branches. Her pelvis structure combined typical features of both hominins and apes. Her virtually complete hands revealed that

Ardi was not a knuckle walker like African apes. Rather, a large very flexible midcarpal joint permitted her to support nearly all of her 50-kg (110-lb) body weight on her palms when clambering along tree branches. An important evolutionary implication of Ardi's postcranial material was that the approximately seven-million-year-old hypothetical common ancestor of humans and chimpanzees was most likely not morphologically or behaviorally similar to modern African apes, as was once envisioned. That is, it was not a chimpanzee-like vertical climbing ape. Experts now believe that it was more probably a palmigrade quadrupedal climber that may have resembled some Miocene apes and the earliest hominins in its locomotor adaptations. Thus, the comparative analysis of *Ardipithecus* necessitated a complete paradigm shift.

Ardipithecus lived in a humid, cool woodland with a grassy substrate and occasional patches of open forest. The 150,000 fossil plant and animal specimens from Aramis documented the presence of browsers, fruit eaters, and leaf eaters. The remains of spiral-horned kudus, two species of monkey, various kinds of small mammals, parrots, peafowl, catfish, palm tress, fig trees, shrubs, and grasses were plentiful, whereas turtles/tortoises, crocodiles, and invertebrates were present but less abundant. Ardi was an omnivore, most likely consuming a diet of insects, small mammals, fruits, and nuts.

Ardi was only 1.2 m (4 ft) tall—short for a female hominin—but her height proved to be typical for both males and females of her genus; i.e., males in the rest of the assemblage did not have larger bones and were not taller than females, as among other hominins. Both male and female *Ardipithecus* specimens had relatively small canines with diamond-shaped crowns. No upper canine-lower premolar honing (sharpening) was present in any of the specimens. Molar enamel thickness in *Ardipithecus* was intermediate between that of later hominins (thicker) and modern African apes (thinner). The postcanine megadontia that characterized the australopithecines was absent, underscoring *Ardipithecus*'s physical inability to process a hard, abrasive diet. Ardi's cranial capacity was estimated at 300–350 cu cm (18–21 cu in), similar to many modern chimpanzees and a bit smaller than the estimate of 320–380 cu cm (19–23 cu in) for the approximately

(Top) A comparison of images of dentitions from human (left), *Ardipithecus ramidus* (middle), and chimpanzee (right), all males. (Bottom) Corresponding samples of the maxillary first molar in each. The red areas reveal thicker enamel; the blue, thinner. Contour lines map the topography of the crown and chewing surfaces.

seven-million-year-old *Sahelanthropus* from Chad, which is the oldest putative hominin in the fossil record. Ardi's face was relatively small with a projecting muzzle, especially in the midface, much like *Sahelanthropus* but unlike the extreme lower facial projection of modern apes. *Ardipithecus* lacked the large flaring cheeks of the australopithecines associated with heavy chewing but did share a short cranial base with both the australopithecines and *Sahelanthropus*. The short face (from top to bottom) also was reminiscent of *Sahelanthropus*'s face.

The numerous craniofacial similarities between *A. ramidus* and *Sahelanthropus* led to the following conjecture: that all of the preaustralopithecine hominins represented a separate grade of hominin organization. Grades are levels of functional organization usually associated with a particular adaptive zone. Thus, hominins were divided into three separate grades: (1) the *Ardipithecus* grade, (2) the australopithecine grade, and (3) the *Homo* grade. The *Ardipithecus* grade would presently contain the approximately 7-million-year-old *Sahelanthropus* cranium and associated jaw fragments and teeth; the approximately 6-million-year-old *Ororin* from Kenya known primarily from postcranial material; the 5.5-million–5.8-million-year-old *A. kadabba* teeth, cranial, and postcranial fragments also found in the Middle Awash region west of Aramis; the 11 specimens (teeth, finger bones,

and a jaw fragment) of *A. ramidus* from Gona, Eth., a site 66 km (41 mi) north of Aramis, found between 1999 and 2003 and dated at 4.32 million–4.51 million years ago; and the entire collection of 4.4-million-year-old Aramis material. All of the above fossils may actually represent a single genus (*Ardipithecus* would have priority) that contained the evolutionary forerunners of the australopithecines and occupied a distinct adaptive zone.

In terms of social behaviour and life-history strategies, inferences from *Ardipithecus*'s dental and skeletal anatomy combined with principles and theories from evolutionary biology have led to a number of assertions. Among these are the supposition that regular food carrying, pair bonding, and female ovulation concealment supposedly led to intensified male parental investment during the two million–three million-year evolutionary emergence of the *Ardipithecus* grade from the last common ancestor humans share with the chimpanzee. Increased male parental investment was seen as an important "breakthrough" adaptation for early hominins. In addition, the overall dental morphological pattern of *Ardipithecus* and the lack of pronounced sexual dimorphism in this taxon both signify that male-to-male conflict and aggression had been reduced.

Stephen L. Zegura is a Professor of Anthropology at the University of Arizona.

Primate Research:

A Key to Understanding What It Means to Be Human

by Lisa M. Newbern

Laughter, tantrums, and swinging are actions readily associated with human children, whereas planning for the future, tooth flossing, and music appreciation are actions typically associated with human adolescents and adults. A number of investigations of nonhuman primates, however, connected these six topics in 2009. Researchers worldwide surveyed the behaviours of nonhuman primates by analyzing the responses of great apes that were tickled, monitoring the public tantrums of young rhesus macaques (*Macaca mulatta*) and the abilities of long-tailed macaque (*M. fascicularis*) mothers to facilitate learning, observing the planning activities of a captive chimpanzee (*Pan troglodytes*), and testing the responses of chimpanzees and cotton-top tamarins (*Saguinus oedipus*) to different kinds of music. What the researchers learned further defined the connections between humans and nonhuman primates and offered additional insight into what makes humans truly unique.

According to Marina Davila Ross of the University of Portsmouth, Eng., Elke Zimmermann of the University of Veterinary Medicine Hannover, Ger., and Michael Owren of Georgia State University, who tested a hypothesis that human emotional expressions began in ancestral nonhuman primate behaviours, laughter is not unique to humans. As reported in one of the most widely publicized studies of 2009, the researchers examined the acoustics of tickle-induced vocalizations from infant and juvenile orangutans (*Pongo pygmaeus*), gorillas (*Gorilla gorilla*), chimpanzees, and bonobos (*Pan paniscus*) as well as tickle-induced laughter from human infants. Not only did they find that the origins of human laughter

A baby orangutan laughs in response to a researcher's tickling, providing evidence that laughter emerged in animals millions of years before humans evolved.

could be traced 10 million to 16 million years ago to the last common ancestor of humans and modern great apes, but they also concluded that laughter is a cross-species phenomenon.

The great apes are not the only non-human primates with humanlike displays of expression. Infant rhesus macaques were found to be expressive too, especially when they did not get what they wanted. Stuart Semple of Roehampton University, London, and his colleagues discovered that having a tantrum works to an infant's favour when potentially aggressive animals are nearby. Their mothers were found to be about twice as likely to give in to their offspring when the tantrum occurred in the presence of potentially threatening animals. This study was considered the first to demonstrate how bystanders could affect the communication between the mother macaque and infant.

Until Susannah Thorpe and Roger Holder from the University of Birming-

ham, Eng., and Robin H. Crompton from the University of Liverpool, Eng., observed how orangutans moved through trees, little was known about how animals travel through complexly structured environments. Researchers found that orangutans, the largest habitually arboreal mammal, use unique maneuvers to overcome the safety risks associated with accessing food and crossing gaps in tree crowns. The irregular movements, which include shifting from side to side and using all four limbs at once, cause a minimal disturbance to the trees and facilitate the orangutans' motion and access to food. Because orangutans remain on the verge of extinction, it is critical that scientists understand their needs, their movement limitations, and their ability to overcome the environmental challenges posed by humans and their activities. Such knowledge could form the basis for animal and environmental conservation programs.

Santino, a chimpanzee, roams around his enclosure at the Furuviik Zoo in Sweden. He was observed stockpiling stones, which he later hurled at the zoo's visitors. This behaviour was proof that apes are capable of planning for the future.

One particular zoo became well known for the behavioral study of a bad-tempered primate resident in 2009. Santino, an adult male chimpanzee, repeatedly gathered stones and concrete chips from his home at the Furuviik (Swed.) Zoo and stockpiled them in scattered areas throughout his habitat. These objects were later thrown at the zoo's visitors. In the more than 10 years Santino has been accumulating his arsenal, the zoo's animal-care staff has removed hundreds of weapon caches. According to cognitive science researcher Mathias Osvath of Lund (Swed.) University, who reported on Santino's actions, what made this study so interesting was that the chimpanzee was preparing for the future. It was observed that Santino collected the objects while he was calm; however, he threw them at zoo visitors a number of hours later during his agitated dominance displays. Such behaviour indicated that Santino was spontaneously planning for a future mental state, which suggests that chimpanzees have highly developed consciousness, a characteristic many scientists have been reluctant to attribute to nonhuman primates.

Tooth-flossing behaviour is not typically attributed to nonhuman primates. Nobuo Masataka, Hiroki Koda, and Kunio Watanabe from Kyoto University, Inuyama, Japan, and Nontakorn Urasopon of Ubon Rajathanee University in Bangkok, however, observed a group of long-tailed macaques in Thailand that used human hair or a flosslike material between their teeth. The study

was designed to investigate the proliferation of tool use throughout a population in a small group of females who were rearing infants. In this experiment floss was the tool of choice. The researchers found that the mothers' pattern of using tools changed when the infants were present; the adults paused more, repeated their actions, and spent more time on flossing activities with infants in attendance. The researchers concluded that the mothers' slow repetition and emphasis on the proper use of the floss might help their offspring

learn how to use the tool.

A different primate study conducted at the Itozu-no-Mori Park, Fukuoka, Japan, tested the responses of Sakura, an infant chimpanzee, to music. It was determined that Sakura could indeed appreciate music and preferred consonant, or harmonious, sounds to dissonant, or discordant, sounds. A team of researchers from three Japanese insti-

It was shown that cotton-top tamarin monkeys, such as this one from the Roger Williams Park Zoo in Providence, R.I., respond emotionally to music that incorporates sounds based on the pitch, tone, and tempo of their calls.

tutions—Kyushu University, the University of Shiga Prefecture, and the Itozu-no-Mori Park—used a computerized apparatus that enabled the production of consonant and dissonant music when Sakura pulled a string attached to her arm. During six weekly sessions, Sakura consistently preferred to produce consonant music for a longer period of time than dissonant music.

Halfway around the world, David Teie—a lecturer at the University of Maryland who doubles as a cellist in the National Symphony Orchestra—and Charles Snowdon of the University of Wisconsin–Madison conducted another type of music study. Using tamarin monkeys, the researchers sought to determine if music could influence the behaviour of nonhuman species. In accordance with the researchers' predictions, music specifically composed for the tamarins, which used acoustical characteristics of tamarin affiliation and threat vocalizations, had a greater behavioral effect on the animals than music composed for humans. In addition, the researchers were correct in thinking that contrasting forms of music would have appropriately contrasting behavioral effects. For example, when the researchers played fear-based or threat-based music, the monkeys' movements and social behaviour showed signs of increased arousal. Alternatively, when the researchers played affiliation-based music, the monkeys responded with decreased activity and increased calm behaviour, such as that which occurs during foraging activities.

Other studies of primates published in 2009 revealed evidence that some monkeys and apes discerned right from wrong, chimpanzees negotiated with their troopmates and constructed mental maps based on geometric coordinates to navigate their home range, bonobos used their vocalizations to rank foods, and subordinate monkeys were capable of deceiving dominant ones to garner a greater share of a particular resource. These investigations and others also indicated that humans might not be as unique as they once thought and that research with nonhuman primates would continue to provide a portal through which humans might better know and understand themselves.

H1N1 Flu: The Pandemic

by Kara Rogers

In February 2009 a young boy in the small Gulf-coast town of La Gloria, Veracruz, Mex., fell ill with an influenza-like disease of unknown cause. Within weeks nearly 30% of the town's residents had been affected by a similar sickness, and people in nearby villages had fallen ill as well. The young boy, however, was the only individual from the region to test positive for a new strain of influenza virus—named swine influenza, or swine flu, because it contained genetic material from existing swine flu viruses. He represented the first documented case of the disease and thus became known as “patient zero.” By mid-March a sickness resembling the one from La Gloria had emerged in Mexico City, and not long after, cases of the respiratory illness were reported throughout the country. After several infected persons died, the country's health officials decided to send more than 50 patient samples to a lab in Canada for analysis. When 16 of them turned up positive for swine flu, authorities at the World Health Organization (WHO) convened an emergency meeting to assess the situation.

The newly identified virus, deemed to have significant pandemic potential (the ability to spread easily over a wide geographic area) owing to the lack of pre-existing immunity in humans, appeared in the United States in mid-April. It subsequently spread to Canada and the United Kingdom, to Europe, and to New Zealand. By June 1, WHO was reporting more than 17,400 cases and 115 deaths worldwide, and 10 days later Margaret Chan, director general of WHO, declared the swine flu outbreak a pandemic. It was the first pandemic to occur since 1968, when the Hong Kong flu claimed the lives of more than 750,000 people globally. Although the majority of individuals who became infected with swine flu experienced only mild symptoms of fever, cough, and runny nose, the rapid spread of the virus and confusion about the risk of death and which

Doctors at the Mexico City Navy Hospital wear protective gear as they tend to patients complaining of swine flu-like symptoms.

populations were most susceptible generated significant fear among the public.

The Pandemic Virus. The swine influenza virus at the root of the 2009 pandemic was a newly identified strain of influenza A subtype H1N1. Influenza A viruses are the primary cause of seasonal influenza in humans, and they are constantly evolving. One mechanism of evolution is viral reassortment—when multiple strains of influenza viruses infect a single host and recombine to give rise to a new strain. In the case of the 2009 swine flu virus, genetic material from three organisms—humans, birds, and pigs—mixed and recombined in a pig host, giving rise to a triple reassortant virus.

Similar to all other influenza viruses, swine flu also was subject to constant evolution through antigenic drift as it circulated between the Northern and Southern hemispheres. As it crossed the globe, strains carrying mutations

for drug resistance emerged, with the first strain appearing in Denmark in June and demonstrating resistance to Tamiflu (oseltamivir), one of the most effective antiviral drugs used to treat swine flu. Scientists immediately began to search for ways to overcome resistant strains. In laboratory studies, combinations of existing antiviral agents proved promising. At least one such agent was investigated clinically.

The genetic constitution of the reassortant virus rendered it more contagious than typical seasonal influenza, though it was still transmitted in typical flu fashion—via infectious droplets expelled into the air from infected persons when sneezing or coughing. The virus could survive on hard surfaces for 24 hours, providing ample opportunity to spread to another person. Individuals most susceptible to complications from infection included pregnant women, persons over age 65, children

under age 5, and persons suffering from chronic illness or with suppressed immunity. Actual case-fatality rates for swine flu were relatively low.

The name initially given to the virus, “swine influenza,” was fitting in several respects; the virus not only contained genetic segments from two different swine influenza viruses but also appeared to have originated on a pig farm near La Gloria. The farm belonged to Granjas Carroll de Mexico, a joint venture operation working in partnership with U.S.-owned Smithfield Foods, Inc., a major international producer of pork products. Countries such as China, Thailand, and Russia temporarily arrested the import of pigs from affected areas. The name “swine flu,” however, also created widespread confusion. For example, Egyptian Minister of Health Hatem al-Gabali ordered the slaughter of up to 400,000 of the country’s pigs, though there was no evidence that they were infected with the virus. The mandate instantly sparked riots and protests from Egyptian farmers who depended on raising and selling pigs as a source of income. In an effort to dispel confusion, WHO changed the name of the virus to influenza A (H1N1) in late April.

Global Dissemination. When the influenza A (H1N1) virus was discovered in Mexico, it was not considered of international concern. As the disease spread across Mexico City, into the United States and Canada, and overseas to Spain, the United Kingdom, and the Middle East in late April, however, WHO acknowledged that global dispersion was imminent and issued a level 5 pandemic alert. The alert served as a signal to national health agencies to finalize plans for the implementation of

control measures, such as limiting travel to and from affected regions and distributing face masks to limit disease spread, and for the acquisition and mobilization of stocks of antiviral drugs.

When the pandemic was declared in June, cases had climbed to nearly 30,000 worldwide, and the virus had spread to many regions of the world, including Southeast Asia, Scandinavia, the West Indies, and Central and South America. By early September, with the exception of several places, including Greenland, Mongolia, and some areas of Africa, swine flu was established in

all parts of the world. In late December some 622,480 cases and 12,220 deaths were confirmed globally. Because not all cases and fatalities could be tracked, however, the actual figures were believed to be far greater.

Preparing for a Second Wave. Studies of past influenza pandemics revealed that outbreaks occur in waves, or alternating periods of high and low disease activity in the same region, with each “wave” representing a period of increased activity. In some cases three or more waves of illness may hit a single region. In the postpeak period of swine flu activity during the summer of 2009 in North America, cases of illness dropped off significantly. WHO issued a warning in late August, however, to countries in the Northern Hemisphere to prepare for a second pandemic wave, evidence of which began to emerge in the first week of September in the U.S., where some isolated areas experienced sudden spikes in influenza A (H1N1) activity.

When the pandemic potential of the virus was first realized in April, scientists set to work on vaccine development. In July, just four months after the isolation of the new virus, the first swine flu vaccine for humans entered clinical testing. The vaccine, however, required two shots, administered three weeks apart, which raised concerns that there was not enough time for full immunity to be established and that vaccine supplies would run out before a second wave hit. Just days later, however, single-dose vaccines emerged, and meeting global vaccine demand appeared feasible once again. A single-dose vaccine developed by Sinovac Biotech Ltd., a Chinese company, was approved in China in early September, and similar vaccines developed by other pharmaceutical companies worldwide became available shortly thereafter.

As summer turned to fall in North America, a second pandemic wave, equal to or greater in severity, seemed certain. Despite this, U.S. health officials remained confident that the virus could be contained. The generation of single-dose vaccines, WHO’s effective surveillance program, and existing global mitigation and control measures, which were repeatedly strengthened and reevaluated throughout the pandemic, served vital roles in alleviating public fears as the Northern Hemisphere headed into the winter flu season.

The Autism Spectrum

by Simon Baron-Cohen

In 2009 researchers made numerous discoveries concerning the prevalence, neuropathology, and treatment of autism spectrum conditions (also known as autism spectrum disorders). Indeed, new estimates of prevalence in both the United States and the United Kingdom indicated that roughly 1 in every 100 children was diagnosed with one of these conditions. Autism is a spectrum condition—it is manifested to varying degrees of severity. At one extreme a person may have no social skills, no language skills, and major learning difficulties. At the other extreme the individual may have average or even above-average IQ and precocious vocabulary but odd social skills (e.g., being extremely self-centred). The former would receive a diagnosis of classic autism. The latter would receive a diagnosis of Asperger syndrome. Both of these are subgroups on the autistic spectrum, and those living with either condition share a strong preference for routines and repetition and are characterized by an obsessional interest in highly specific topics.

Prevalence. In the late 1990s the prevalence of autism spectrum conditions was found to have increased substantially relative to previous decades, and data published in 2009 revealed that the number of children diagnosed with these conditions was continuing to follow this same trend. A study published in December by the Autism and Developmental Disabilities Monitoring Network, a part of the U.S. Centers for Disease Control and Prevention, stated that in 2006 between 1 in 80 and 1 in 240 U.S. children had been diagnosed with an autistic condition. The study assessed the prevalence of these conditions in eight-year-olds, since this represented the age by which most affected U.S. children had been placed under a specialist's care. A similar

prevalence estimate, about 1 in 100 children, had been reported previously in the United Kingdom. This figure was also representative of an increase in the number of persons diagnosed with autism spectrum conditions, relative to previous decades in the United Kingdom. It remained unclear, however, whether such increases were due to the conditions' becoming more widespread or to improvements in knowledge and diagnostic procedures used to detect them.

Information on the incidence of autism spectrum disorders in other countries remained controversial. A study published early in 2009 in the *Israel Medical Association Journal* addressed the incidence of autism spec-

trum disorders in that country. The study, which represented the first comprehensive analysis of autistic disorders performed in Israel, reported that the incidence of the conditions had increased from 2 diagnosed cases in 1985 to 428 in 2004. These figures were further assessed in terms of the total number of children under age 18 who lived in the country during the time period investigated. Thus, the per capita prevalence of autism spectrum disorders in Israel in 2004 was estimated to have been 1.9 per 10,000 children. A group of researchers from the Sheba Medical Center near Tel Aviv later wrote to the journal claiming that the reported figures were underestimates. The group stated that for children born

in Israel between 2001 and 2004, the prevalence of autism spectrum disorders was about 36 per 10,000, placing the incidence of the conditions in the country closer to estimates of worldwide incidence reported in a study published in 2006 in the journal *Lancet*. The Israel figure cited by the group at Sheba Medical Center had not yet been published in a peer-reviewed journal and was based on data that the researchers had obtained from the Israel Ministry of Social Affairs.

Psychological Aspects. One of the most distinguishing characteristics of people affected by autism spectrum conditions is atypical behaviour. Such behaviour has been associated with two primary psychological aspects, empathy and systemizing. Empathy involves imagining another person's thoughts and feelings and having an appropriate emotional reaction to those feelings. Children and adults with Asperger syndrome show their empathizing difficulties on tests of emotion recognition, theory of mind, and spontaneous empathy. Theory of mind is the ability to attribute mental states to oneself or others and is regarded as the cognitive component of empathy. Emotion recognition is sometimes regarded as part of theory of mind because emotions are mental states. Often emotion-recognition deficits appear only if complex emotions are tested, though in some individuals with autism, the deficit is evident even when basic emotions are tested. This deficit can explain the difficulties in social and communicative development and in imagining others' minds.

Systemizing is the drive to analyze a system in terms of underlying rules in order to understand and predict its behaviour. People with autism spectrum conditions show precocious understanding of systems, relative to their mental age, on tests of intuitive physics or questionnaires assessing how interested a person is in different types of systems (maps, train timetables, machines, syntax, etc.). The repetitive behaviour, the desire for routines, and the need for sameness can be interpreted as being the result of a strong drive to systemize. Systemizing also requires excellent attention to detail, and individuals with autism or Asperger syndrome are relatively fast on tests of attention to detail. Adept systemizing can often explain the exceptional mental abilities possessed by some persons affected by these conditions.

An autistic child views a movie during a demonstration of magnetoencephalography (MEG). This technique can be combined with magnetic resonance imaging (MRI) to obtain information about abnormalities in brain function in individuals with autism.

Neurological Aspects. Anatomical abnormalities have been identified in different brain regions in individuals with autism. These abnormalities are not found in every case, and there are inconsistencies between studies, such that sometimes overgrowth or underdevelopment is found. The brain regions that have been reported to be atypical include the cerebellum, the corpus callosum, the hippocampus, and the amygdala. Epilepsy also occurs in a proportion of individuals with autism spectrum conditions, though the exact rate is not clear. Although in classic autism one-third of cases develop epilepsy by adolescence, in the Asperger subgroup these rates may be much lower and have not been systematically studied. In terms of neuropathology, the number of Purkinje cells (large neurons with many branching extensions) in the cerebellar cortex in people with autism is abnormally low. Abnormalities have also been reported in the density of neurons in the hippocampus, the amygdala, and other parts of the limbic system. One report also suggested a reduction in the size of cortical minicolumns, though the significance of this is unclear.

Functional neuroimaging studies of autism spectrum conditions show abnormalities in the amygdala and in the orbitofrontal and medial prefrontal cortex, among other areas. These atypical patterns of neural activity occur in relation to the empathizing deficits. Using magnetic resonance imaging (MRI), some reports have suggested that the

autistic brain involves transient postnatal macroencephaly (accelerated brain growth). For example, in a study of children diagnosed with autism, some 90% who were born with normal head circumference were found to have, by ages two to four, MRI-based brain volumes that were larger than average. Independent confirmation of these abnormal growth rates is needed.

Genetic and Hormonal Aspects. In recent years the sibling risk rate for autism has been estimated to be about 5 to 10 times higher than general population rates. That is, while 1% of children have an autism spectrum condition, the sibling recurrence rate is 5–10%. Regarding twin studies where one twin had autism, 60% of MZ (identical) pairs were found to be concordant for autism, meaning that both twins were affected. In contrast, no pairs of DZ (fraternal) twins demonstrated concordance. Genetic linkage studies have led to the implication of a number of chromosomal regions in autism. In addition, abnormalities affecting the X chromosome have been identified in association with autism, which may explain the sex ratio's being markedly biased toward males. The marked sex ratio in autism may also reflect hormonal factors. For example, studies have indicated that levels of fetal testosterone are associated with the number of autistic traits present in an individual. Within typical development, fetal testosterone is negatively correlated with the later development of eye contact, vocabulary, empathy, and social

skills. The hormone also is positively correlated with the emergence of narrow interests, systemizing, and autistic traits. Thus, the higher the levels of the hormone during fetal development, the more likely these features are to appear in early childhood.

Early Diagnosis. The earliest that classic autism has been reliably diagnosed is 18 months of age. This was shown by a screening approach known as the Checklist for Autism in Toddlers (CHAT), which tests for the absence of “joint attention behaviours,” such as pointing and gaze following, and the absence of pretend play, all of which are typically present by this age. Population-based studies have shown that CHAT, developed by the U.K.-based Autism Research Centre, has excellent specificity—children who failed on this test had an 83.3% chance of developing autism or a related pervasive developmental disorder. The approach, however, has a low level of sensitivity—it detected only two out of every five cases, mostly missing the Asperger subgroup. Revisions of CHAT are under way to further improve the technique. Asperger syndrome was found

Autistic children gather around a computer to watch a movie made with Lego toys. Lego therapy has been shown to help children with autistic disorders develop their social communication and turn-taking skills.

In programs such as PEERS (Program for the Education and Enrichment of Relational Skills), at the University of California, Los Angeles, autistic teens develop important social skills through activities such as playing games with others.

to be reliably diagnosed by age five by using a screening technique called Childhood Autism Spectrum Test (CAST).

Intervention. The most effective interventions for children on the autistic spectrum are special education, such as social skills teaching, and applied behaviour analysis (ABA), in which appropriate skills and behaviours are taught through principles of reinforcement. The key ingredients for effective early intervention are that the methods are highly structured, intensive, and individualized. Medical treatments are not usual. Indeed, there are ethical issues surrounding the notion of trying to cure autism. Although some aspects of the condition do require help (e.g., the empathy difficulties and the lack of language development), other aspects may not (e.g., the systemizing talents). For many years “treatment” in autism proceeded on the basis of an approach that was tried and tested but without any real rationale for why it should be effective. ABA is one such example. The principles behind it enable target skills to be broken down into simpler units to be acquired through shaping and mass practice. While there is some evidence for the effectiveness of ABA, the methods require external reinforcers or rewards to maintain the child’s attention and cooperation, which suggests that they are not as autism-friendly as they could be. In contrast, newer interventions have been designed to harness individuals’ areas of strength and their natural in-

terests as a means for building new skills. One example is *Mind Reading* DVD educational software, in which the individual’s natural interest in law-ful, predictable computers and in information’s being systematically organized renders the domain of emotions easier to learn about. A second example is *The Transporters* DVD animation, which relies on the child’s natural interest in the mechanical, predictable motion of vehicles to help the child attend to the film and to enable implicit learning of emotions, since these are grafted onto the vehicles. A final example is Lego therapy, which also exploits the child’s strong interest in systems (in this case, constructional systems) to encourage turn taking and social communication.

All treatments that are claimed to be useful for children or adults with autism spectrum conditions should be subjected to a scientific evaluation. This is to confirm that there are indeed benefits relative to no intervention and that there are no unwanted side effects. Web sites have been developed to help parents as well as professionals make informed decisions about which treatment option to pursue, given that these are often expensive and that new methods are announced almost annually.

Mental Health in Affected Teenagers and Adults. Teenagers and adults with Asperger syndrome often suffer from additional mental health problems, the most common being depression. Many also feel suicidal, and tragically some

are so desperate as to attempt suicide. The high levels of depression are not surprising if people with Asperger syndrome feel that they do not fit into society and feel rejected by the majority. For teenagers this may be because the peer group becomes less tolerant of those who do not fit in and because a failure to conform in the educational system can also mean underperforming academically. In adulthood, depression may be associated with the challenges of living independently or with the difficulties in securing employment if the selection is via an interview (i.e., relying on social skills). Those adults with high-functioning autism or Asperger syndrome who are fortunate to have a job may find that they either lose their jobs (e.g., through interpersonal difficulties at work) or fail to be promoted (e.g., because they cannot manage others). Such depression may therefore be secondary to the condition and may be preventable with appropriate support. Such support for teenagers may include special education, a buddy system, social skills training, and organized social groups. Support in adulthood may include sheltered employment, mentoring, advocacy, befriending, social groups for Asperger syndrome, and help with housing.

The adult Asperger community has generated its own term for those who do not have Asperger syndrome or

autism: *neurotypicals*. This is in part intended to convey that one view of autism spectrum conditions is that they are not a disease or a disorder but simply an atypical form of neurological development, akin to left-handedness. This view is less stigmatizing and makes an important political point—namely, that those individuals whose brains develop and work differently need not be judged to be inferior to the majority. They are simply “different.” This view is called the neurodiversity movement and resembles the civil rights movement that was necessary to gain equal opportunities for ethnic minorities and for women. There is much to recommend this view, since the profile of autism spectrum conditions entails not just disability but also areas of strength (e.g., in attention to detail and systemizing). Nevertheless, it is important that the disability element is not overlooked in this shift of emphasis, since the diagnosis is given only if the individual is suffering to some extent, with their autistic traits leading to significant interference in their everyday life. This diagnostic criterion is important as a yardstick of severity, since if the features of the condition are very mild, they may not require a diagnosis. This relates back to the notion of an autistic spectrum, a dimension of autistic traits that runs right through the population. The current view is that all humans lie somewhere on this spec-

An autistic teenager holds his puppy and a small bucket of his belongings after receiving a Project Lifesaver tracking bracelet at the Staunton (Va.) Police Department.

trum and that it is only those who are at the extreme end and those who are experiencing difficulties as a result of their high number of autistic traits who will require a diagnosis. Not all doctors share this view of autism spectrum conditions' simply being a case of neurodiversity. For example, the American Psychiatric Association retains the term *autism spectrum disorder*, since this group of conditions includes the pervasive developmental disorders, which involve varying degrees of impairment of language acquisition, communication, social behaviour, and motor function.

Those individuals on the autistic spectrum who also have below-average IQs (and therefore are at risk of broader developmental delays) are likely to need special support throughout their lives. They will remain vulnerable even as adults. The issues and challenges that low IQ raises are in some respects no different from those issues raised by low IQs in other individuals (who are not on the autistic spectrum) and are probably best served by the same learning disability agencies.

Simon Baron-Cohen is Professor and Director of the Autism Research Centre at the University of Cambridge.

Communities for autistic adults, such as Cascina Rossago in Italy, create a living environment that caters to the unique needs of these individuals.

ANTHROPOLOGY

Key developments in the field of physical anthropology during 2009 included news about the reconstruction and analysis of an extraordinarily complete skeleton of a controversial Eocene primate. The 47-million-year-old adapiform primate, *Darwinius masillae*, was announced to the world on May 19 via the most extensive public relations multimedia campaign in the history of primate paleontology. The specimen was originally unearthed in 1983 near Messel, Ger. (then in West Germany), and was cleaved into two parts that were subsequently sold separately. Jørn H. Hurum from the University of Oslo in 2006 reunited the two fossil-bearing slabs and assembled an international team of researchers who described the nearly complete (albeit crushed) specimen, which lacked only part of the lower left leg. The remains, nicknamed Ida, were those of a juvenile female who would have attained a body weight of 650–900 g (23–32 oz) had she lived to adulthood. She was probably nocturnal, and her incredibly well-preserved digestive tract contents indicated a diet of leaves and fruit. An agile arboreal quadruped, she inhabited a rainforest and died near a volcanic lake. She also possessed a mixture of primitive and advanced morphological traits that led to controversial claims about her taxonomic relationships and phylogenetic position within the order Primates. The authors proposed an unorthodox taxonomy: that the adapiform *D. masillae* represented an early haplorhine, a group that includes the tarsiers as well as the anthropoids (monkeys, apes, and hu-

mans). The consensus favoured by most experts not connected to the research team placed *Darwinius* and other adapiforms within the lemurlike strepsirhines and not among the haplorhines. Thus, the well-publicized conjecture that *Darwinius* was a linking form between lemurlike primates and anthropoids—hence an ancestor of humans—was considered to be false by many of the world's leading paleoanthropologists.

A group of Polish scientists with the assistance of a geneticist from Uppsala (Swed.) University identified the skeletal remains of Nicolaus Copernicus, the

The 47-million-year-old Eocene primate fossil Darwinius masillae.

University of Oslo—PA Photos/Landov

world's most famous astronomer. Copernicus, who died in 1543, was buried in the Frombork (formerly Frauenburg) Cathedral (now in Poland). Although the cathedral contained more than 100 mostly unnamed tombs, experts suspected that Copernicus's grave would be located near the St. Cross Altar because he had been in charge of this altar when serving as an unordained canon at the cathedral. Several skeletons were excavated near the St. Cross Altar in 2005, and subsequently, on the basis of a cranio-facial reconstruction, one incomplete skeleton of a 60–70-year-old male was proposed to be that of Copernicus.

DNA analyses presented in July confirmed this putative identification. DNA was extracted from three upper molars and both femora of this skeleton, and the mitochondrial DNA (mtDNA) profiles of these different samples were identical, which implied that the cranium and postcranial samples represented a single individual. Although no relatives who could provide a DNA reference sample had been identified, investigators found a clever substitute source. By carefully examining Copernicus's heavily annotated copy of Johann Stoeffler's calendrical treatise *Calendarium Romanum magnum* (published 1518)—which had resided at Uppsala since the mid-17th century—they found nine hairs, two of which possessed the identical mtDNA profile of the molar and femur samples. As a result, those strands of hair could be used as a reference sample for his skeletal DNA and thereby confirmed the identification of the skeletal remains as his. Interestingly, although portraits of Copernicus usually showed him with dark eyes, genetic analysis revealed that he had the genotype predominant among blue- or gray-eyed humans and thus actually may have had a light iris colour.

Sarah Tishkoff of the University of Pennsylvania led an international team of scientific collaborators who spent more than a decade collecting and analyzing the largest African genetic database yet assembled. The team genotyped a panel of 1,327 polymorphic markers in 2,432 Africans from 121 geographically diverse populations. They also genotyped 98 African Americans and 21 Yemenites and incorporated data from 952 previously studied indi-

viduals from around the world. Statistical analysis indicated 14 ancestral clusters present in the African data set. Strong associations between geography, language, and genes reflected the concomitant spread of people, languages, and sometimes culture or ethnicity. Genetic diversity was generally highest in African populations and declined with increasing distance from Africa consistent with serial founder effects that resulted from global migrations that initially departed from northeastern Africa near the midpoint of the Red Sea. The analyses also indicated that modern human migration within Africa may have originated near the coastal border of Namibia and Angola, an area that constitutes the current San homeland. The San speak Khoisan (Khoisan) languages characterized by click sounds. The genetic analyses further suggested that the southern African Khoisan speakers, the eastern African Khoisan-speaking Hadza and Sandawe, and the central African Pygmies are all remnants of a widespread proto-Khoisan-Pygmy population of hunter-gatherers that existed more than 35,000 years ago. According to this intriguing scenario, the Pygmies were originally Khoisan speakers who, in a rare example of complete language replacement, subsequently adopted the nonclick Niger-Congo languages spoken by their neighbours. Among the other populations studied, African Americans had primarily West African roots, deriving 71% of their ancestry from both Bantoid and non-Bantoid Niger-Congo-speaking populations, only 8% from the rest of Africa, 13% from European admixture, and the remaining 8% from a number of different source populations.

The October 2 issue of the journal *Science* devoted much space to the skeletal biology, paleoecology, and evolutionary position of the 4.4-million-year-old hominin (hominid) *Ardipithecus ramidus* found at Aramis, Eth. (*Ardipithecus* represented a less-specialized grade of hominin than the later australopithecines.) (See Special Report on page 190.) (STEPHEN L. ZEGURA)

ARCHAEOLOGY

Eastern Hemisphere. In 2009 the largest-known trove of Anglo-Saxon treasure was unearthed in a farmer's field in Staffordshire, Eng. Discovered by local resident Terry Herbert with his metal detector, the find was later excavated by archaeologists from the University of Birmingham and the Staffordshire

Part of the Anglo-Saxon treasure known as the Staffordshire Hoard is displayed at the Birmingham (Eng.) Museum and Art Gallery in September.

County Council. The so-called Staffordshire Hoard was dated to the 7th century CE and was composed of more than 1,500 pieces of gold and silver, weighing 5 kg (11 lb) and 2.5 kg (5.5 lb), respectively. Among the rarest items in the hoard were fragments of a gold helmet—only four helmets from the period had been previously found—and a gold strip bearing the Latin inscription “Surge Domine et dissipentur inimici tui et fugiant qui oderunt te a facie tua” (“Rise up, o Lord, and may thy enemies be dispersed and those who hate thee be driven from thy face”). The Staffordshire Hoard dwarfed the cache of objects recovered in 1939 at the Anglo-Saxon burial site of Sutton Hoo in Suffolk, whose precious gold weighed 1.66 kg (3.7 lb).

Hohle Fels Cave in the Ach Valley, southwestern Germany, continued to yield extraordinary Ice Age finds, among them the world's oldest Venus figurine. Dated to more than 35,000 years ago and carved out of mammoth ivory, the 6-cm (2.4-in)-tall statuette was thought to be the earliest-known example of figurative art, predating previous finds by some 5,000 years. The figurine was found in six fragments amid domestic debris. Its patina and a loop on its back suggest it may have been worn as a pendant. In addition to the Venus figurine, Nicholas J. Conard and his University of Tübingen, Ger., team recently recovered the remains of three flutes from the Swabian Hills site, one of which was 21.8 cm (8.5 in) long with five holes and was fashioned from the radius of a griffon vulture (*Gyps fulvus*); the other two instruments were made of mammoth ivory. These artifacts brought to eight the total number

of known instruments from the Swabian Aurignacian, which suggested that music was an important element of human cultural expression at this early date.

In Rome archaeologist Françoise Villedieu of the École Française de Rome and her colleagues found the remains of a circular banquet hall with a complex rotation system—thought to have been hydro-powered—within the Domus Aurea, the sprawling Palatine Hill palace built by the Roman emperor Nero (ruled 54–68 CE). The hall, which measures some 16 m (52 ft) in diameter and was likely built of wood, rested upon a 4-m (13-ft)-wide pillar that had four spherical rotating mechanisms, affording Nero's guests a panoramic view of the city as they dined. This device, like the rest of the palace, was said to have been built atop the smoldering ruins of Rome after the great fire of 64 CE.

The wrecks of five Roman trading ships that had foundered in more than 100 m (330 ft) of water between the 1st century BCE and the 5th century CE were discovered during a survey of the seabed near the remote Italian island of Ventotene, one of the Ponza Islands in the Tyrrhenian Sea. The ships had been transporting wine from Italy, *garum* (fermented fish sauce—a key condiment in ancient Roman cuisine) from provinces in Spain and North Africa, and metal for making weapons and utensils. According to archaeologist Timmy Gambin of the Aurora Trust, which found the cargo ships, the vessels were likely seeking safe harbour near the island during storms when they sank.

Also in Italy, recent scrutiny of aerial photographs of farmland around the Venetian lagoon—taken in July 2007

during a severe drought—revealed details of the ancient Roman metropolis of Altinum, complete with gated city walls; a complex network of canals, streets, and bridges; harbour facilities; and numerous structures, including houses, shops, and an amphitheatre. According to project leader Andrea Ninfo of the University of Padua, Altinum was the only large Roman city in northern Italy and one of the few in Europe that was not buried by later construction. He also stated that the images made it clear that the citizens of the city, which reached its apogee in the mid-2nd century BCE, had mastered their marshy environment.

Remains of the oldest-known settlement in the Aegean came to light during excavations in June at Ouriakos on the Greek island of Limnos. There, according to site director Nikos Efstratiou of Aristotle University of Thessaloniki, 14,000-year-old stone tools were found along with the remains of animal bones and seashells belonging to the Epipaleolithic Period. Before these materials were unearthed, the earliest evidence for organized human activity in the Aegean had come from the so-called Cyclops Cave in the islet of Gioura (Yioura), from the site of Maroula on the island of Kythnos, and from Kerame on the island of Ikaria, all of which postdate the 9th millennium BCE.

Also in Greece, ongoing research at the submerged city of Pavlopetri off the Laconian coast pushed back the date of the town's habitation to c. 2800 BCE, more than a millennium earlier than previously thought. The site, thought to be the oldest-known sunken city in the world, covers more than 35,000 sq m (some 42,000 sq yd) and includes streets, houses, temples, and tombs. Current exploration of the site—first identified by Nicholas Flemming of the University of Southampton, Eng., in 1967—was being carried out by Jon Henderson of the University of Nottingham, Eng., and Elias Spondylis of the Ephorate of Underwater Antiquities, a department of the Hellenic Ministry of Culture, and was expected to yield abundant new information on trade in the Bronze Age, Minoan, and Mycenaean periods (approximately 3000–1100 BCE) as well as on the tectonic events that led to its destruction.

Biomolecular analysis of residue within an amphora recovered from the multichambered tomb of the early Egyptian pharaoh Scorpion I (c. 3150 BCE) at Abydos revealed that the ancient Egyptians added a host of herbs

and resins to their wines to endow them with medicinal properties. According to Patrick T. McGovern of the University of Pennsylvania Museum of Archaeology and Anthropology, who led the study, wines were steeped with herbs, including balm, sage (*Salvia*), and savory (*Satureja*), as well as the resins of pine and terebinth (*Pistacia terebinthus*); analysis of wine residue in a vessel from the 4th- to early 6th-century-CE site of Gebel Adda in southern Egypt, decanted during the last period of winemaking in Egypt prior to the Islamic conquest, yielded traces of rosemary (*Rosemarinus officinalis*) as well as pine resin, which attested to a long tradition of using herbal wine additives, largely to aid in digestion.

University of Exeter, Eng., archaeologist Alan Outram and his colleagues found the earliest evidence for horse domestication—dated to between 5,700 and 5,100 years ago—at a suite of Botai culture sites in northern Kazakhstan. Equine bones recovered at the four study sites revealed that the horses had had slenderer builds than their wild counterparts—a principal trait of domesticated horses from later Bronze Age sites—and their teeth exhibited wear patterns consistent with bridling. Containers found within pit houses and in nearby middens at the semisedentary village sites also bore traces of fat solids from the horse milk once stored in them. Before this discovery, the earliest-known evidence for horse domestication had come from a series of late 3rd-millennium-BCE chariot burials belonging to the Sintashta culture of Central Asia.

Shards of pottery recovered from a cave in southern China's Hunan province were dated to 18,000 years ago, making them the oldest-known examples of clay craft in the world. Analyzed by Elisabetta Boaretto of Israel's Bar-Ilan University and Xiaohong Wu of Peking University in Beijing, the shards came from at least two ceramic vessels. They were found in Yuchanyan Cave among sediments rich in animal bone and charcoal fragments, bone and shell tools, and cobble and flaked artifacts. The site was thought to have been used as a seasonal foragers' camp during the Late Paleolithic (beginning about 40,000 years ago). Prior to this discovery, the earliest-known evidence for pottery had come from a suite of Chinese sites in Hunan, Jiangxi, and Guangxi provinces, dating to 10,000–16,000 years ago.

And in the isolated Himalayan kingdom of Mustang, once a centre of Tibetan culture and now part of north-

central Nepal, Himalaya expert Broughton Coburn and Everest mountaineer Pete Athans in 2007 and 2008 discovered a long-lost library of 15th-century manuscripts, many adorned with illuminated miniatures. Found within Mardzong Cave, part of a rock-hewn monastery complex carved into a cliff face overlooking the upper Kali Gandaki River, the more than 8,000 folios belong to some 30 religious tracts—most associated with Bon, an animist faith that flourished in the region before the arrival of Buddhism in the mid-7th century CE; adherents of the religion still resided in the area. Among the newly discovered volumes was a heretofore-unknown version of the *Lubum*, a sacred Bon text devoted to the propitiation of *naga* (Tibetan *Lu*) serpent deities. The manuscripts, which were discovered during a cave-documentation project, were transported to a local monastery for conservation and study. (ANGELA M.H. SCHUSTER)

Western Hemisphere. In 2009 archaeological research at the Fisher Mounds Site Complex in southern Wisconsin continued to expand knowledge about Cahokia Mounds, the largest and most complex Native American civilization in North America. Led by Timothy Pauketat at the University of Illinois at Urbana-Champaign, these excavations uncovered evidence of a small colony of Mississippian peoples originating from the Cahokia area some 800 km (500 mi) to the south near modern-day St. Louis, Mo. These Cahokians apparently brought pots and chert (fine-grained quartz) tools with them, as there was little evidence from excavated features for the use of local lithic materials and clay sources. The Mississippian houses, potsherds, and stone tools recovered from these excavations dated to about 1050 CE, coinciding with Cahokia's punctuated regional political consolidation. Why Cahokians traveled so far northward was unclear. The absence of a palisade wall at the site, however, indicated that the colony enjoyed a relatively peaceful existence.

Excavations in East St. Louis, Ill., uncovered large portions of one of the largest Mississippian mound centres in the eastern United States. These excavations fundamentally revised archaeological understandings of the Cahokia civilization. Archaeologists had previously believed that the East St. Louis mound centre witnessed its peak residential occupation while the nearby site of Cahokia was being depopulated. On the basis of ongoing excavations by the

American archaeologist Richard Hansen points out details of one of the two recently discovered 8-m (26-ft)-long panels carved in stucco from the pre-Classic Mayan site of El Mirador, Guat.

Illinois Transportation Archaeological Research Program, however, researchers determined that both the Cahokia and East St. Louis sites experienced their highest population densities contemporaneously, indicating a larger regional population than previously posited. To date more than 100 Mississippian buildings and other features had been uncovered, including a burned structure among whose intact artifacts were an elaborately carved stone figurine of a kneeling female holding a marine shell.

Excavations continued at the Topper site near the Savannah River in South Carolina. Topper was once a Paleo-Indian quarry and habitation site where Clovis points were manufactured. Work at the site in 2009 recovered more detailed information about the Clovis occupation of the site.

The presence of blades, cores, and flake tools indicated that manufacturing activities beyond the production of bifacial stone tools occurred at Topper. The site was also famous for a controversial pre-Clovis occupation argued by Albert Goodyear to date from c. 15,000 to as early as 50,000 BP. Evidence for this claim consisted of various objects argued to be bend-break unifacial tools. If this claim was proved accurate, it would overturn most current theories for the peopling of the New World.

Excavations at the Chimney Rock site near Pagosa Springs, Colo., provided important insight into Southwestern prehistory. Steve Lekson and a team of excavators from the University of Colorado at Boulder investigated two rooms in the site's great house to better understand how it was linked politically to the great houses of Chaco Canyon culture some 144 km (90 mi) away in northern New Mexico. Lekson believed the site to be directly affiliated with Chacoan society and used as a lunar observatory by Chacoan elites. Among the information gleaned from these excavations was the possibility that the elites who lived at Chimney Rock enjoyed a diet of deer and elk, while lower-status residents of the site dined on smaller game.

(GREG WILSON)

Among the significant Mesoamerican archaeological discoveries in 2009 was that of two large stone sculptures in Mexico City by archaeologist Leonardo López Luján. These works provided additional depth to current understand-

ings of Aztec sacrifice and funeral rituals. The first sculpture, a 13-ton monolith, was discovered in October 2006 and was believed to represent Tlaltecuhltli, a female Aztec deity of the earth, known both for her nurturing symbolism and her voracious thirst for blood. Stone representations of this goddess often served as platforms for the cremation rituals of deceased kings. Pigment residues identified on the surface of the sculpture indicated that it would have been decorated in black, red, and blue. The second sculpture discovered more recently by López Luján depicted a large cactus, believed to have been used as a platform for rituals involving Aztec sacrifice; this interpretation of the sculpture's function was based on an Aztec legend that indicates that sacrificial rituals performed atop cacti confer the gods' favour upon the performers.

Archaeologist Richard Hansen recently discovered two 8-m (26-ft)-long panels carved in stucco from the pre-Classic Mayan site of El Mirador, Guat., that depict aspects of the Popol Vuh, the Mayan origin story. The panels—which date to about 300 BCE, some 500 years before the Classic-period florescence of Mayan culture—attested to the antiquity of the Popol Vuh. In explaining how the Mayan gods created the world, the Popol Vuh features the Hero Twins, Hunahpu and Xbalanque, who were transformed into, respectively, the Sun and the Moon. One of the panels depicts the Hero Twins beneath a bird deity; the other panel features a Mayan

maize (corn) god surrounded by a serpent. The panels thus authenticated the earliest written version of the Mayan origin story, transcribed in the 1700s by Spanish colonial priest Francisco Ximénez.

Additional findings at the Classic Maya farming village of Cerén, El Sal., continued to provide major insight into ancient subsistence and food production. Discovered by archaeologist Payson Sheets in 1978, Cerén—which, like the ancient city of Pompeii, was buried in volcanic ash—was pivotal in providing amazing detail about ancient Mesoamerican lifeways. An eruption 1,400 years ago covered the site in 5 m (16.5 ft) of ash, preserving houses and adjacent agricultural plots. The use of ground-penetrating radar and limited test excavations during

the 2007 field season revealed the presence of this agricultural field. Excavations at the site in the spring of 2009, however, revealed the extent of intensive cassava (manioc, or yuca) cultivation in the New World, as evidenced in 18 3 × 3-m (10 × 10-ft) excavation blocks. Although the actual cassava plants had long ago decomposed, their presence was revealed in the ash as hollow spaces that, as in Pompeii, were filled with dental plaster to determine shape and size of the missing object. Cassava, a starchy root crop, is rarely preserved archaeologically, unlike the more common Mesoamerican triad of maize, beans, and squash, the seeds of which have durable structures that can survive charring. In tropical and temperate regions, macroscopic plants can remain in preserved form only if they have been carbonized in fires; cassava is composed mostly of sugars, which melt away when burned. As a result, manioc often was overlooked in the reconstruction of ancient Mesoamerican foodways. The recent findings at Cerén thus filled a significant gap.

Analysis of chili pepper DNA by botanists Seung-Chul Kim, Araceli Aguilar-Meléndez, and Mikeal Roose revised previous interpretations of chili domestication in the New World. Kim and his colleagues suggested that chilies, formerly believed to have been domesticated first in central Mexico, were domesticated independently and from several different wild ancestors in different areas of Mesoamerica.

(AMBER VANDERWARKER)

Architecture and Civil Engineering

Although the **ECONOMIC DOWNTURN** may have ushered in the **END OF AN ERA** in architecture, significant **MUSEUM** projects were completed in Athens and Chicago, New York City transformed an old **ELEVATED RAIL LINE** into a **PARK**, and additions to the remarkable **DALLAS ARTS NEIGHBOURHOOD** were well under way.

ARCHITECTURE

The top story in 2009 in architecture, as in many other fields, was the disastrous impact of the global economic recession. Building projects around the world were suddenly stopped for lack of funding. Some of them left holes in the ground where foundations had been planned. The impact was especially strong in some places that had been growing and building rapidly—for example, such tourist destinations as Dubai, U.A.E. Some of the world's most-successful architects felt the brunt. Staff cuts of 50% or more were common. As just one example, the American Frank Gehry, perhaps the world's best-known architect, reduced the size of his office from 250 employees to 112. In Germany and other countries, firms were cutting back to a four-day week for lack of work. There was concern that many talented younger architects, after being laid off, might not ever return to architecture. Most economic predictions foresaw only a slow recovery for the building market in 2010 and 2011. Some journalists predicted that the era of so-called iconic architecture—the age of heavily publicized prominent buildings by famous-name architects that was said to have begun in the 1990s with the construction of Gehry's Guggenheim Museum in Bilbao, Spain—had come to an end. Also having an impact on architecture was the threat of global warming, which encouraged architects to design “green” buildings—buildings that would generate less atmospheric pollution.

Notable Buildings. Despite the shrinking economy, many notable buildings

did reach completion in 2009. Among the most interesting structures was the new Acropolis Museum in Athens designed by Swiss-born Franco-American architect Bernard Tschumi. Working only 300 m (1,000 ft) from the ancient Parthenon temple, which was possibly the world's most famous building, Tschumi created a modern museum of concrete and stainless steel for 4,500 sculptures and other historical objects. American architect Thom Mayne's 41 Cooper Square in New York City included a student centre, faculty offices, and classrooms for Cooper Union, a school of engineering, art, and architecture. The building's exterior was sheathed in a gleaming mesh of stainless steel, and the interior featured a vast freely shaped stairway that quickly also became a student social centre. Italian architect Renzo Piano, the world's leading designer of art museums, added a large new Modern Wing to the 1893 building of the Art Institute of Chicago. The glass-faced exterior was topped by what Piano called a “flying carpet,” a translucent roof of glass that projected from the building's walls like the visor of a hat.

Several major buildings completed in 2008 continued to garner much critical attention during 2009. The Shanghai World Financial Centre, at 101 stories and 492 m (1,614 ft) high, was one of the world's tallest towers. It was designed by the American firm Kohn Pedersen Fox. The first 77 stories were office space, and a hotel and observatory occupied the upper floors. Gehry transformed the Art Gallery of Ontario in Toronto by wrapping a new glass and steel addition around an older art museum dating from 1918. In Spain in the

Museum of the Roman Theatre of Cartagena, Spanish architect Rafael Moneo wove his own work into the old city. He created a path along which his new buildings merged harmoniously with historical ones, a public path that climbed upward through the hilltop city. In Philadelphia, American architect Robert A.M. Stern, known usually for architecture in traditional styles, designed a 58-story Modernist office tower, the Comcast Center. It contained a dramatic glass-covered lobby called the winter garden. One entire side of the lobby was a media wall, with very realistic ever-changing video imagery. Some thought that the media wall might be an omen of the architecture of the future, in which whole facades might someday consist of digital signage, rather than solid stone, brick, concrete, or glass.

The glass-covered public lobby of Philadelphia's Comcast Center features life-size sculptures of people strolling on steel tubes.

Richard Drew/AP

New York City's High Line (green area at centre), a project that converted an abandoned elevated rail line into a long, narrow park, opened in June.

Parks and Civic Projects. The most remarkable and popular “city-making” design of the year, at least in the U.S., was the transformation of the so-called High Line in New York City. This abandoned overhead freight-rail line sliced through the air across 22 blocks in Manhattan and had been scheduled for demolition. Instead, after pressure from a volunteer citizens’ group, the city converted much of it into a linear park. The park was immensely popular and also spurred development; a number of new buildings quickly appeared near it. The park’s designers, who were careful to preserve some of its gritty industrial aesthetic, were landscape architect James Corner and architects Diller Scofidio + Renfro. The Promenade Plantée in Paris, another park along a former elevated rail line, was one of the inspirations for the High Line.

Also in New York City, the site of the World Trade Center still remained without a single completed structure eight years after the attacks of Sept. 11, 2001. Blamed were endless bickering and disagreement among the owners and others. By way of contrast, the city of Dallas was well on the way to completion of the AT&T Performing Arts Center, which was dedicated in October and began performances in the same month. It featured venues for opera, theatre, and ballet and was the work of several architects: Foster + Partners (led by Lord Foster) in London; Office

for Metropolitan Architecture (OMA; led by Rem Koolhaas) in Rotterdam, Neth.; REX (led by Joshua Prince-Ramus) in New York City, and Skidmore, Owings & Merrill in Chicago.

Awards. The coveted Pritzker Prize was awarded in 2009 to Swiss architect Peter Zumthor. Much admired by architects around the world but little known to the general public, Zumthor

was a reclusive man with a small office of 15 employees. Among his best-known buildings was an art museum in Bregenz, Austria, which was a shimmering four-story glass box set beside a lake, with magical daylight interiors. Also well known was his complex of indoor and outdoor thermal baths in the mountains of Switzerland. Here the visitor moved from dark, cave-like interiors out to sun-drenched terraces. Zumthor also designed the Swiss Pavilion for Expo 2000 and the Kolumba art museum, both in Germany.

The annual Gold Medal of the Royal Institute of British Architects went to famed Chinese-born American architect I.M. Pei. Pei, who turned 92 in 2009, was best known for his renovations to the Louvre Museum in Paris. His Museum of Islamic Art, in Qatar, opened in 2008. Among other notable Pei buildings were the East Building of the National Gallery of Art in Washington, D.C.; the Everson Museum of Art in Syracuse, N.Y.; the Fragrant Hill Hotel in Beijing; the John F. Kennedy Presidential Library and Museum in Boston; and the Bank of China Tower in Hong Kong.

The Gold Medal of the American Institute of Architects (AIA) was presented to Peter Bohlin. Founder of the American firm Bohlin Cywinski Jackson, Bohlin was especially known for his beautiful rural houses. Usually made of natural materials such as wood and stone, they

Notable Civil Engineering Projects (in work or completed, 2009)					
Name	Location		Year of completion	Notes	
Airports		Terminal area (sq m)			
Barcelona (El Prat) (Terminal T1)	southwest of Barcelona	544,066	2009	Opened June 17; new second terminal building is located midfield Largest U.S. airport expansion under way in 2009; original terminal is being remodeled and expanded to become the North Terminal	
Miami International (North Terminal)	northwest of central Miami	316,000	2011		
Muscat International (new terminal building)	west of Muscat, Oman, near Al-Sib	240,000	2011		
Berlin Brandenburg International	Schönefeld airport, southeast of Berlin	220,000	2011	Schönefeld to be expanded; other Berlin airports closed in 2008 (Tempelhof) or will close in 2011 (Tegel)	
Cairo International (new Terminal 3)	northeast of Cairo	211,000	2009	Opened April 27; Africa's 2nd busiest airport	
Sabiha Gokcen International (new international terminal)	eastern (Anatolian) shore of Istanbul near Pendik, Tur.	200,000	2009	Opened Oct. 29; designed to withstand a 7.5–8.0-magnitude-level earthquake	
Sheremetyevo International (Terminal 3)	northwest of Moscow	170,000	2010	Swan-shaped terminal will be home to Aeroflot	
Tripoli International (East and West terminals)	south of Tripoli (Tarabulus), Libya	162,000	2011	East Terminal completed 2009	
New Doha International (phases 1 and 2)	near Doha, Qatar	130,000	2011	Being built on 28 sq km of Persian Gulf landfill	
Larnaca International (new terminal)	Larnaca, Cyprus	100,000	2009	Opened Nov. 11; principal airport of vacationers on Cyprus	
Cape Town International (new central terminal)	east of Cape Town	50,000	2009	Opened Nov. 8; combined international/domestic terminal; completed before the start of 2010 FIFA World Cup South Africa	
Al Maktoum International	at Jebel Ali, southwest of Dubai, U.A.E.	41,000*	2020?	To become largest commercial airport in the world (3 passenger terminals, 16 cargo terminals); *size of cargo terminal; will be the world's largest maintenance and repair centre; first phase of operation in 2010?	
Branson Regional	south of Branson, Mo., near Arkansas state line	5,400	2009	Opened May 8; first privately funded commercial airport in U.S.	
Bridges		Length (main span; m)			
Hong Kong–Zhuhai Crossing	Hong Kong to China link (via Macau) (in Pearl River estuary)	c. 50 km	2016	To include world's largest sea bridge (c. 35 km) and world's longest immersed tube tunnel (c. 5.5 km); construction began in mid-Dec. 2009	
Hangzhou Bay #2 (Jiashao)	between Jiaxing and Shaoxing, China	2,689*	2012	*Will be world's longest all-span cable-stayed bridge Opened Aug. 1; *total length of two sections; Africa's second longest bridge; first bridge over Mozambican part of the Zambezi River	
Zambezi bridge at Caia	Caia–Chimuara, Mozam.	2,276*	2009		
Walkway over the Hudson (rehab of Poughkeepsie–Highland Railroad Bridge)	Poughkeepsie–Lloyd, N.Y.	2,063	2009 (1888)	Reopened for new use Oct. 3 (closed as railroad bridge in 1974); world's longest pedestrian bridge—it is 65 m above the Hudson	
Fourth Yangtze Bridge	Nanjing, China	1,418	2013	To be world's 6th longest suspension bridge	
Bridge Crossing to the Russky Island	Vladivostok–Russky Island, Russia (across the Eastern Bosphorus Strait)	1,104	2012	To be world's longest cable-stayed bridge	
Stonecutters (Angchuanzhou)	Tsing Yi–Sha Tin, Hong Kong	1,018	2009	Opened Dec. 20; world's 2nd longest cable-stayed bridge; links container terminals	
Second Inch'on (Incheon)	Inch'on–Yongjong (Yeongjong) Island, South Korea	800	2009	Opened Oct. 16; world's 7th longest cable-stayed bridge	
Chaotianmen ("Face the Sky")	Chongqing, China (across the Yangtze)	552	2009	Opened April 29; world's longest steel arch bridge; designed to resemble the Sydney Harbour Bridge (completed 1932)	
John James Audubon	New Roads–St. Francisville, La. (across the Mississippi)	483	2010	To be longest cable-stayed bridge in North America	
Chenab River	between Katra and Laole, Jammu and Kashmir, India	480	2010	To be world's 6th longest steel arch bridge; bridge will be 359 m above the river, making it the highest railroad bridge in the world	
Hoover Dam Bypass Project	Arizona–Nevada border (just south of Hoover Dam)	323	2010	274 m above the Colorado River; to be world's 4th longest concrete arch bridge	
Samuel Beckett Bridge	River Liffey, Dublin	120	2009	Officially opened Dec. 11; designed by Santiago Calatrava—Calatrava's first Dublin bridge, the James Joyce Bridge, opened in 2003	
Takutu River Bridge	Lethem, Guyana–Bom Fin, Braz.	?	2009	Officially opened Sept. 14; first road link between Brazil and Guyana; expect increased Brazilian–Caribbean trade once road to northern Guyana is paved	
Buildings, Observation/Television Towers		Height (rooftop; m)			
Burj Khalifah	Dubai, U.A.E.	828	2010	Opened Jan. 4, 2010; became world's tallest man-made structure in April 2008; known as Burj Dubai ("Dubai Tower") prior to Jan. 4, 2010	
Shanghai Tower	Shanghai	632	2014	To be world's 2nd tallest building and the tallest in China	
Guangzhou TV & Sightseeing Tower	Guangzhou, China	610	2010	To be world's tallest observation/television tower; height to rooftop 454 m, with spire 610 m	
Abraj Al Bait ("Royal Clock") Towers	Mecca, Saudi Arabia	577	2011	To be world's 3rd tallest building; 6 residential/hotel towers to house 65,000 people	
Freedom Tower or 1 World Trade Center	New York City	"1,776 ft" (541.3 m)	2013	Complex to include 6 new buildings, a memorial, and a museum	
Pentominium	Dubai, U.A.E.	516	2013	Will be world's tallest residential tower	
Burj Al Alam ("World Tower")	Dubai, U.A.E.	510	2013	One of the world's tallest buildings when completed	
International Commerce Centre	Hong Kong	484	2010	To be Hong Kong's tallest (in 2010) and have world's highest hotel	
Trump International Hotel and Tower	Chicago	423	2008/2009	On the basis of new criteria from the Council on Tall Buildings and Urban Habitat released in November 2009, becomes world's 6th tallest building and 2nd tallest in North America	
Torre Central of Faros del Panamá	Panama City, Pan.	346	2011	Torre Central will be the tallest building in Latin America; part of a 3-building complex; 346 m includes spire	
Ryugyong Hotel	Pyongyang, N.Kor.	330	2011?	Work began in 1987 and halted in 1993; construction on what will be North Korea's tallest building resumed in mid-2008	
Dams		Crest length (m)			
Santo Antonio (SA)/Jirau (J) (2 dams on the Madeira River)	(SA): near Porto Velho, Rondônia, Braz. (J): between Porto Velho and Bolivian border	(SA) 1,173 (J) 550	2012 2014	Together will provide 8% of the electricity for Brazil by 2014	
Merowe (earth core rockfill) Dam	on Nile, 350 km north of Khartoum, Sudan	841	2009	Inaugurated March 3; to contain 20% of Nile annual flow; to double The Sudan's power capacity	
Bakun Hydroelectric Project	Balui River, Sarawak, Malay.	750	2010	To be largest concrete-faced rockfill dam in the world; will provide electricity to Singapore and peninsular Malaysia	
Xiluodu (part of upper Yangtze hydropower development scheme)	184 km upriver of Yibin, China	698	2013	First of 4-dam scheme that will generate more electricity than Three Gorges	
Gilgel Gibe III	Omo River, southwestern Ethiopia	610	2012	Production will surpass domestic needs; additional electricity will be exported to The Sudan and Kenya	
Sangtuda 1 & 2	on Vakhsh River, south of Dushanbe, Tajik.	(1) ? (2) 385	2009 2011	Russian-built Santuda 1 became operational July 31; with the completion of the Iranian built Sangtuda 2, Tajikistan will be energy self-sufficient	
Manuel Piar (Tocoma) (4th of 4-dam lower Caroní development scheme)	Caroní River; northern Bolívar, Venez.	?	2012	Final unit of world's 3rd largest hydroelectric complex	
Xiaowan	on Mekong (Lancang) River, southwestern Yunnan, China	?	2013	World's tallest (292 m) arch dam; potential hydroelectric capacity equal to the combined capacities of all other Southeast Asian reservoirs	
1 m=3.28 ft; 1 km=0.62 mi					

Notable Civil Engineering Projects (in work or completed, 2009) continued

Name	Location	Year of completion	Notes
Highways		Length (km)	
South Interoceanic Highway	Iñapari (at Brazilian border)–Ilo/Matarani/ San Juan de Marcona, Peru	c. 2,000 2011	To be paved road for Brazilian imports/exports from/to Asia via 3 Peruvian ports; to link the Atlantic and Pacific oceans
Shanghai–Chongqing National Highway	Shanghai–Chongqing, China	1,900 2009	Final, 320-km Hurongxi section completed Dec. 19; links China's largest city with centrally located Chongqing via a modern expressway
Mombasa–Nairobi–Addis Ababa Road Corridor	Addis Ababa, Eth.–Mombasa, Kenya	1,284 2011?	To facilitate trade between landlocked Ethiopia and the world through the Kenyan port of Mombasa
East-West Highway (across northern Algeria)	Tunisian border (near Annaba)–Algerian border (near Tlemcen)	1,216 2010	To facilitate economic development and trade across North Africa
Egnatia Motorway	Igoumenitsa–Kipoi, Greece	670 2009	Opened May 30; first Greek highway at int'l standards; 76 tunnels, 1,650 bridges
A2 Motorway ("east to west expressway across Poland")	Polish border near Frankfurt an der Oder; Ger.–Brest, Belarus (via Warsaw)	610 2012	Will link to German autobahn; 106-km Nowy Tomysl–Swiecie section under construction in 2009
Transylvanian Motorway	Brasov–Bors, Rom.	415 2013	To link Romania and Hungary and open Transylvania to tourism; 42-km Turda–Gilau section opened Dec. 1, 2009
Trans-Labrador Highway (phase III)	Happy Valley–Goose Bay to Cartwright Junction, Newfoundland and Labrador	280 2009	Final phase of all-weather gravel road near timberline wilderness completed Dec. 9
Canals and Floodgates		Length (m)	
St. Petersburg Flood Protection Barrier	Gulf of Finland embankment, Russia (Gorskaya–Bronka via Kotlin Island)	25,400 2010	To protect city from tidal surges; navigation channel opened October 2008; begun 1980, halted 1987, resumed 2003
New Orleans Surge Barrier	near confluence of Gulf Intercoastal Waterway and Mississippi River Gulf Outlet, east of New Orleans	2,300 2011	Central component of 3.2-km-long project to prevent storm-surge flooding, using 7.9-m barrier walls and floodgates
Project Moses (flood-protection plan)	lagoon openings near Venice	— 2014	Rows of 78 20-m-wide submerged gates in 3 lagoon openings will rise in flood conditions
Panama Canal Expansion	between Panama City and Colón, Pan.	— 2014	Will include new wider and longer 3-chamber locks, doubling the canal's capacity and allowing the passage of world's biggest container ships
Eastmain-1-A Powerhouse and Rupert Diversion	Rupert River watershed to Eastmain River watershed, northern Quebec	— 2012	Most recent Hydro-Québec development; water diversion scheme to create an additional capacity of 918 MW
Railways (Heavy)		Length (km)	
Benguela Railway (rehabilitation; closed by civil war 1975–2002)	Benguela–Luau, Angola (at DR Congo border)	1,314 2011	Will enable resumption of copper exports from DR Congo and Zambia
North South Rail Project (Phase A)	Al-Zubairah–Ras Al-Zour, Saudi Arabia	818 2010	To facilitate the export of phosphate and bauxite from mines in the interior via the Persian Gulf
Sena Railway (destroyed during 1976–92 civil war)	Moatize–Beira, Mozambique	673 2010	Declared free of land mines in 2006; 320-km stretch from Beira to Sena opened in May 2009; important for coal export
Xinqiu–Bayan Ul Railway	Xinqiu, Liaoning–Bayan Ul, Inner Mongolia, China	487 2010	To be important for coal transport; future link to Mongolia expected
Kashmir Railway	Udhampur–Baramula, Jammu and Kashmir, India	290 2012	80% bridges or tunnels in mountainous terrain; 18-km Qazigund–Anantnag section opened on Oct. 28
KATB rail project	Baku, Azer.–Kars, Tur. (via Georgia)	258 2011	Caspian Sea to Turkey link, bypassing Armenia; 98 km of new rail, remainder modernized; new transport outlet for Georgia
Lhasa–Xigaze railway	Lhasa–Xigaze, Tibet, China	254 2010	Extension of the world's highest railroad will link Tibet's two largest cities; future extension to Nepal is a possibility
North Luzon Railway System project	Caloocan (north Metro Manila)–Clark international airport, Philippines	84 2011	To accelerate development of central Luzon
Railways (High Speed)		Length (km)	
Jinghu High-Speed	Beijing–Shanghai	1,318 2012	To halve travel time between capital and financial centre
Wuhan–Guangzhou High-Speed	Wuhan–Guangzhou, China	968 2009	Opened Dec. 26; average speed of 350 km/hr
Turkish High-Speed	Ankara–Istanbul	533 2013	To connect capital with largest city; 245-km section from Ankara to Eskisehir opened March 13, 2009
Zhengxi High-Speed	Zengzhou–Sian (Xian), China	457 2010	Includes 3 tunnels between 7,600 m and 8,500 m in length
Bothnia Line (Botniabanan)	Nyland–Umeå, Swed.	190 2010	Along north Swedish coast; difficult terrain with 25 km of tunnels
HSL–Zuid	Amsterdam–Belgian border	125 2009	Opened Sept. 7; enables high-speed links with Brussels, London, and Paris
Gautrain	Johannesburg–Pretoria, S.Af.	80 2011	First phase to be completed in October 2010 after the FIFA World Cup competition in June 2010
Subways/Metros/Light Rails/Commuter Rails		Length (km)	
Dubai Metro (Red Line)	Dubai, U.A.E.	52.1 2009	Opened Sept. 9; 22.5-km Green Line to open in 2010; 2 lines together will be world's longest fully automated driverless transport system
Shanghai Metro (Line 7)	Shanghai	34.5 2009	Opened Dec. 5; length of lines opened since 1995 equals 284.6 km
Circle MRT	Singapore	33.3 2010/2011	To connect 3 existing MRT lines
Namma Metro	Bengaluru (Bangalore), India	33.0 2011	2 lines to be built; construction began in 2007
Guangzhou Metro (Line 5)	Guangzhou, China	31.9 2009	Opened Dec. 28; total length of metro network at end of 2009 equaled 178.5 km
Delhi Metro	Delhi	27.5 2009	5 lines or extensions of lines opened in 2009; 8 lines or extensions of lines (totaling 93.6 km) are scheduled to open in 2010
Seattle Light Rail	Seattle	25.1 2009	2 sections opened on July 18 and Dec. 19; links downtown Seattle with Seattle-Tacoma International Airport
Vancouver (Canada Line)	Vancouver	19.5 2009	Opened Aug. 17; 3rd metro line; link between Vancouver International Airport and city centre
Mecca (Makkah) monorail	Mecca, Saudi Arabia	18.1 2010	to link various holy sites in Mecca; 500,000 pilgrims can be transported every 6 to 8 hours
Métro d'Alger (Line 1, phase 1)	Algiers	9.0 2010	Mainly underground near the city centre and eastward; delayed by archaeological finds
Tunnels		Length (m)	
Apennine Range tunnels (9)	Bologna, Italy–Florence (high-speed railway)	73,400 2009	Rail line opened to traffic Dec. 13; longest tunnel (Vaglia, 18.6 km); tunnels cover 93% of railway
Brenner Base Tunnel	Innsbruck, Austria–Fortezza, Italy	55,392 2015	To ease congestion of freight travel from across Europe passing through the Alps
Marmaray railroad project tunnels	connecting European and Asian portions of Istanbul	13,600 2011	Includes 1.4-km-long bored tunnel, world's deepest sunken-tube tunnel (56 m under the Bosphorus strait); completed (though not opened) Oct. 13, 2008
East and West tunnels of A86 ring road	western outskirts of Paris	10,000/7,500 2010	Two tunnels under Versailles and nearby protected woodlands
Busan–Geoje Fixed-Link project	Busan–Geoje island, South Korea	3,200 2010	To be world's deepest immersed roadway tunnel
1 m=3.28 ft; 1 km=0.62 mi			

(continued from page 207)

seemed to grow out of the landscape. Among Bohlin's larger urban buildings, the most admired was the Fifth Avenue Apple Store in New York City, a gemlike all-glass cube. The AIA's annual 25-Year Award, given to a work of architecture that had proved its merit over at least a quarter of a century, went to the Faneuil Hall Marketplace in Boston, a renovation of a group of wholesale market buildings dating from 1826. American architect Benjamin Thompson restored the markets in 1976, converting them into what he called a "festival marketplace" of indoor and outdoor streets of shops and restaurants. The AIA presented its annual Honor Awards for new architecture to nine buildings, including the New York Times Building by Piano, a striking pale-gray 52-story tower in midtown Manhattan, and the Cathedral of Christ the Light in Oakland, Calif., by American architect Craig Hartman of Skidmore, Owings & Merrill. The latter was a tall boat-shaped worship space filled with warm-toned light from above.

Preservation. The hottest preservation issue of the year arose over a proposal by British Pritzker Prize winner Lord Rogers for a site in London. Called the Chelsea Barracks, the project would have been built next to a historical 1692 landmark, the Chelsea Royal Hospital by legendary British architect Sir Christopher Wren. Rogers proposed 552 apartments in a row of Modernist steel and glass buildings. He was opposed by Britain's Prince Charles, a frequent critic of modern architecture, who demanded a more traditional design. The prince won the battle in June when the project's developers, investors from Qatar, dropped the Rogers scheme. A happier preservation story was the restoration of the Darwin D. Martin House in Buffalo, N.Y., a 1904 masterpiece by American architect Frank Lloyd Wright. The restoration of the exterior was completed in 2008, and in 2009 the house acquired a new visitors' centre next door. It was designed by architect Toshiko Mori in a crisp glass style that acted as a foil to the heavier brick of the house. In Scotland, American architect Steven Holl won the coveted job of designing an addition to another beloved and legendary building, the Glasgow School of Art, a 1909 work by Scottish architect Charles Rennie Mackintosh.

Exhibitions. A show called "Frank Lloyd Wright: From Within Outward" filled the great domed spiral space of the Guggenheim Museum in New York City. The Guggenheim itself was a

Swiss architect Peter Zumthor, winner of the 2009 Pritzker Architecture Prize, poses in front of his home in Haldenstein, Switz.

Wright building, and the exhibit was timed to mark its 50th anniversary. Also in New York City, at the Architectural League, was "Toward the Sentient City," an exhibit exploring the ways in which computer technology was transforming architecture and cities. New York City's Museum of Modern Art (MoMA) presented "Bauhaus 1919–1933: Workshops for Modernity," an exhibit of the history of the German Bauhaus school, which was one of the major sources of the modern movement in art and architecture. MoMA also presented a retrospective entitled "What Was Good Design? MoMA's Message 1944–56." At the Heinz Architectural Center in Pittsburgh, "Palm Springs Modern: Photographs by Julius Shulman" displayed the work of a 20th-century architectural photographer best known for his images of modern houses in California. An exhibit at Los Angeles's Central Library featured artwork by 20th-century architect Richard Neutra. At the Barbican Art Gallery in London was a massive exhibit of the work of the Swiss Modernist Le Corbusier, one of the three or four leading architects of the 20th century. In 2008 Le Corbusier had been the subject of a tell-all biography, *Le Corbusier: A Life*, by Nicholas Fox Weber, and of an enormous compilation of his work and life entitled *Le Corbusier Le Grand*. Taken as a group, these notable books and exhibitions seemed to mark a resurgence of a taste for Modernism in contemporary culture.

Deaths and Other News. Sverre Fehn, 84, regarded as the leading Norwegian

architect and a winner of the 1997 Pritzker Prize, died in February. Also in February came the death of J. Max Bond, Jr., 73, a noted American architect, educator, and advocate for African Americans in the architectural profession. Arthur Erickson, the most influential Canadian architect, died at age 84 in May. Erickson's buildings included the Canadian embassy in Washington, D.C., and Simon Fraser University, Burnaby, B.C. August brought the death of Charles Gwathmey, 71, who was especially noted for a series of influential modern vacation houses on Long Island, N.Y. (See OBITUARIES.) In September Joan Goody, 73, a pioneer and leader among American women architects, died in Boston.

In other news, the China Central Television (CCTV) headquarters, a major building by OMA, burned while under construction in Beijing. The fire, which completely gutted the 33-story tower, was believed to have been started by fireworks in celebration of the Lunar New Year. Washington, D.C., was the site of competitions for two major civic landmarks. Gehry won the competition for the design of a memorial to U.S. Pres. Dwight D. Eisenhower, to be located on a site just off the Mall. David Adjaye, a British architect born in Tanzania, led a team whose design won the competition for the National Museum of African American History and Culture. It was to be built on an edge of the Mall not far from the Washington Monument. (ROBERT CAMPBELL)

Art and Art Exhibitions

"POP-UP" GALLERIES featuring works by young artists **SPROUTED** up in **VACANT PROPERTIES** in London and in cities across the U.S. Meanwhile, the global economic **RECESSION** resulted in **CHOPPED** museum budgets and a general **LAG** in art sales, with the exception of **CHINESE** contemporary art and works by established **MODERNISTS**. Photographer William Wegman, who had established a worldwide following with books that starred his own **WEIMARANER** dogs, published his latest volume, **DOGS ON ROCKS**.

ART

The economic downturn of autumn 2008 cast a pall on every sector of the 2009 art market. The auction houses faced straitened circumstances with new strategies as well as shaken confidence and diminished expectations. Lowered estimates and restricted reserves—as well as tighter credit limits—were seen in all the major sales rooms, but bidders were equally cautious.

At Phillips de Pury & Co., London, 12 out of the 43 contemporary lots remained unsold. At Christie's in mid-May in New York City, sales were within the estimate range, and of the 54 lots offered, only 5 were not sold. Price records for individual artists were set by Claes Oldenburg's pop sculpture *Typewriter Eraser* (1976) at more than \$2.2 million and David Hockney's iconic painting *Beverly Hills Housewife* (1966–67) at nearly \$8 million, but it was a pale showing compared with those shattered in the previous year's sales. In December, Christie's sold Rembrandt's *Portrait of a Man, Half-Length, with His Arms Akimbo* for a record price of \$33.2 million.

Chinese contemporary art brought strong returns at Sotheby's spring sale in Hong Kong, and a new record was set there in October for the work of Zhang Xiaogang, whose austere

black-and-white oil paintings of ordinary citizens were inspired by Cultural Revolution-era found photographs. The double portrait *Comrade* (2005) surpassed its estimate by nearly a third, but its closing price of about \$1 million, including commission, illustrated the ongoing disparity between the market value of Eastern and Western con-

Toby Melville—Reuters/Landov

temporary art. The highest bidders were based in China.

The singular exception was the sale of Yves St. Laurent and Pierre Bergé's collection of art and antiques at Christie's in Paris at the end of February. It was promoted as the "sale of the century," and the previews brought in thousands of viewers; the return on the 700 lots at nearly \$500,000,000 outstripped all predictions. The best returns were seen for Modern paintings; records were set for works by Constantin Brancusi, Piet Mondrian, and Marcel Duchamp. Henri Matisse's *Les Coucous, tapis bleu et rose* (1911) doubled its estimate at more than \$40 million. A scandal followed the sale when an anonymous bidder, who secured two 18th-century bronze animal heads from China, refused to pay. Cai Mingchao, a consultant for China's National Treasures Fund, revealed that he bid only to bring attention to the works' suspect provenance. Originally part of a fountain with a zodiac motif at the Old Summer Palace in Beijing, the bronzes had been looted by British and French troops during the Second Opium War. In the end, Bergé retained the bronze heads.

Galleries countered the stagnant market by limiting expansion, closing branches, and canceling extravagant exhibitions, such as Chris Burden's *One Ton One Kilo*, slated for a March debut at the Beverly Hills, Calif., branch of the Gagosian Gallery and involving 100 kg (220 lb) of gold bars valued at \$3.3 million. Some clients turned to galleries for private sales, accepting lower returns to avoid the public embarrassment of selling off their collections. Few buyers were willing to make daring purchases, preferring the established work of Modernists, such as Alexander Calder, over that of reigning art superstars, such as Damien Hirst and Takashi Murakami. "Pop-up" galleries—temporary installations in vacant properties in London, New York City, Philadelphia, and Chicago—struck an optimistic trend as a showcase for young artists, bringing notice if not sales.

The decreased value of endowment investments, as well as a

6.4% decline in charitable giving to the arts and humanities, forced museums to make drastic cuts in their operating budgets. Major museums in the United States cut staff numbers and salaries, instituted hiring freezes, and imposed staff furloughs without pay. The Metropolitan Museum of Art, New York City, closed 15 satellite gift shops throughout the country. There were program cuts as well, and museum directors encouraged their curators to create in-house exhibitions based on permanent collections to avoid the insurance and transportation expenses incurred by traveling exhibitions.

The success of the new Modern Wing at the Art Institute of Chicago offered a bright spot in a dire year. After a decade in planning and construction, the addition opened in May to record crowds that boosted attendance rates by 80% during a weeklong celebration (during which admission was waived) and averaged out to a 20% rise over the previous year. Designed by Renzo Piano, the spacious and elegant Modern Wing featured permanent collection galleries for Modern and contemporary art, as well as designated space for architecture, design, and photography exhibitions, a large education facility, and outdoor spaces for changing displays of contemporary sculpture. With an addition of 24,526 sq m (264,000 sq ft)—a 35% increase of total display space—the Art Institute became the second largest art museum in the country.

Antony Gormley's *One and Other*, staged on the empty Fourth Plinth in London's Trafalgar Square from July 6 to October 14, attracted worldwide attention through streaming coverage on the Internet by Sky Arts, receiving more than seven million hits. Out of a pool of 35,000 applicants from every region in the United Kingdom, 2,400 "plinthers" (24 per day) were chosen by a random computer selection to occupy the plinth for the space of an hour to do whatever they liked. The first, Rachel Wardell of the East Midlands, who used her time to promote children's charities, described herself as a normal "stay at home mum," embodying the "sample of now" that Gormley sought to present in his project. One plinther launched a paper airplane; another sat naked on a beach towel and read *Treasure Island*; and another displayed a paper cutout of a British woman on death row in a Texas prison to protest capital punishment.

Bruce Nauman finally launched the skywriting project that he conceived in

1969 called *Untitled (LEAVE THE LAND ALONE)* over Pasadena, Calif., on September 12, in conjunction with the 20th anniversary celebration of the city's Armory Center for the Arts. The letters spelling out his ecological dictum dispersed within the hour's performance; the show also lived on as a YouTube video. On October 29 artist Robert Pruitt staged the First Annual Art Awards at the Solomon R. Guggenheim Museum in New York City. Combining a mischievous performance with a critique of the celebrity art world, Pruitt presided over an invitation-only dinner at which he presented awards to art world luminaries in the form of light bulbs—honouring Jasper Johns—inserted into champagne bottles.

The short list for the 25th Turner Prize was released in April. Included were two painters: Enrico David, a self-described surrealist who used a hard-edged style and disturbing commedia dell'arte characters, and Richard Wright, whose intricate patterns on existing architecture were often painted over at the close of an exhibition. Also listed were installation artist Roger Hiorns, who transformed derelict rooms in South London into glittering blue crystal caves with liquid copper sulfate, and Lucy Skaer, whose drawings and sculptural installations hovered between abstraction and figuration. The prize was awarded to Wright in December. Visual artists named as John D. and Catherine T. MacArthur Foundation fellows included mixed-media installation artist Mark Bradford, landscape painter Rackstraw Downes, and digital artist Camille Utterback. Chris Burden was cited for lifetime achievement by the College Art Association, and *New York Times* arts writer Holland Cotter was awarded the Pulitzer Prize for criticism.

Notable deaths in the art world included painters Andrew Wyeth and Nancy Spero; graffiti artist Iz the Wiz; sculptor Ruth Duckworth; installation artist Jeanne-Claude; and curator and writer Coosje van Bruggen. (See OBITUARIES.) Other losses included those of painters Tyeb Mehta, Ray Yoshida, and Robert Colescott; mixed-media artist Dash Snow; sculptors Tony Rosenthal and Ingeborg Hunzinger; and art dealer Christopher Wood. In late April a brush fire consumed the Hernando county, Fla., home and studios of James Rosenquist, who lamented that everything he owned, including all of his current work, was "wiped out."

(DEBRA N. MANCOFF)

ART EXHIBITIONS

The spring art auction season opened in March 2009 on a positive note that countered dire predictions, and most observers attributed the optimism to the recent spectacular sale of the Yves Saint Laurent private art collection in Paris. Sales were steady at the fairs, but, in fact, the market had not taken an upswing, and many dealers were selling works from established collections to raise cash for their clients. At the European Fine Art Fair in Maastricht, Neth., 239 dealers represented 15 countries; a number of big-name galleries canceled at the last minute, providing an opportunity for smaller dealers to step in, and European clients noticeably outnumbered Americans. In the United States the 11th edition of the Armory Show in New York City hosted 243 dealers with strong international representation. Sales were slow but better than expected, and a new feature called "Special Projects" presented large-scale site-specific works in public venues.

The 10th Havana Biennial, which was held at the Museo Nacional de Bellas Artes, welcomed the first comprehensive representation of American contemporary art in Cuba in more than

A rubber figure, representing the corpse of an art collector, floats face down in a swimming pool in an installation by Danish duo Michael Elmgreen and Ingar Dragset that was displayed in front of the Nordic and Danish pavilions at the 53rd Venice Biennale.

Alberto Pellaschi/AP

Alessandra Benedetti/Corbis

American artist Bruce Nauman's *Topological Gardens* included this installation under the theme "Heads and Hands"; the exhibition earned the United States Pavilion the Golden Lion for best national participation at the 53rd Venice Biennale.

half a century. The installation *Chelsea Visits Havana*, two years in planning, was curated by Cuban-born, New York-based Alberto Magnan and featured the work of major figures, including Marina Abramovic, Matthew Barney, and Guy Ben-Ner. With 68 dealers, the third Art Dubai fair, held at the Madinat Jumeirah resort, enjoyed good attendance, but business was slower than at the previous year's edition. Art Vilnius '09 opened in early July in the Lithuanian capital as the first international art fair to be held in the Baltic states. Good sales were reported at the 40th edition of Art Basel in Switzerland, but "blue-chip" works in conventional media, such as sculpture by Donald Judd and Alexander Calder, were favoured over innovative new media work by younger artists, and this prompted dealer Arne Glimcher to observe that "the bling is really off." Critics noted that energy was high and that European attendees outnumbered Americans.

"Making Worlds" ("Fare Mondi") was the theme for the 53rd Venice Biennale. Artist duo Michael Elmgreen and Ingar Dragset curated two pavilions in a single installation called *The Collectors*, a deadpan critique of owning art in the current market. The sleek California-

style Nordic Pavilion hosted the home of a fictional playboy collector, with works of Wolfgang Tillmans and Tom of Finland on the walls and scantily clad house boys wandering through the rooms. The adjacent Danish Pavilion was "for sale" with a real-estate agent on hand to point out the amenities. In a pool in front of the pavilions, a figure—one of the "collectors"—floated face-down, dead in the water. Elmgreen and Dragset won the Curating Worlds Special Mention for their installation. British artist Liam Gillick filled the German Pavilion with simple pine kitchen furnishings in the installation *Kitchen*, inspired by the 1926 modernist designs of Viennese architect Margarete Schütte-Lihotzky. The spare cabinetry lacked fixtures and appliances, subverting the intended efficiency of the original design. The presence of a talking animatronic cat heightened the absurdity.

The Golden Lion for best national participation went to the United States Pavilion for Bruce Nauman's *Topological Gardens*; it was the first such award granted to an American exhibition since 1991. The exhibition, organized by the Philadelphia Museum of Art, filled three venues—two local universities supplied the additional space to the U.S. Pavilion in the Biennale's Giardini—with a four-decade retrospective of the artist's work. Nauman defined his concepts as "Heads and Hands," "Sound and Space," and "Fountains and Neon," with all three themes blended in each venue. German artist

Tobias Rehberger won the Golden Lion for best artist for his eye-popping retro-chic black-and-white installation *Cafeteria*, which took shape in the old cafeteria of the Palazzo delle Esposizioni (the former Italian Pavilion). The Silver Lion, citing the promise of a young artist, honoured Swedish artist Nathalie Djurgberg, whose *Experiment* was a multimedia installation of nature gone awry. John Baldessari and Yoko Ono received Golden Lions for lifetime achievement.

The New Museum in New York's Bowery district presented *Younger than Jesus*, the first edition of their Generational, a triennial event planned to showcase rising talent. The exhibition was sponsored by the Andy Warhol Foundation and presented 50 artists—all born after 1976—chosen from 500 international applicants. Intended to track shifting trends as the largest generation since the baby boomers came of age, the exhibition revealed the full assimilation of digital media and the displacement of irony with sentiment. Divisions between media were permeable, as seen in Turkish artist Emre Huner's combined painting and animation and in Texan Ryan Trecartin's use of paint as cosmetics in performance. Many works defied categories, such as French artist Cyprien Gaillard's three-part filmed performance, shot in Ukraine, Russia, and France, featuring a disjunctive narrative of staged and real violence and destruction, with a sound track of anthems composed for the production.

At the 53rd Venice Biennale, German artist Tobias Rehberger was awarded the Golden Lion for best artist for his eye-popping installation *Cafeteria*.

Andrea Merola—epa/Corbis

Mid-career surveys dominated retrospective exhibitions, including a 30-year overview of works by Roni Horn at the Tate Modern, London, and a 40-year survey of works by Dan Graham (see BIOGRAPHIES) at the Museum of Contemporary Art, Los Angeles. A retrospective dedicated to Jenny Holzer (see BIOGRAPHIES) at the Whitney Museum of American Art, New York City—*Jenny Holzer: Protect Protect*—spanned 15 years and included her new redaction paintings based on content from declassified U.S. government documents associated with the Afghanistan and Iraq wars. Two exhibitions featured the work of Cy Twombly: a 100-work retrospective at the Guggenheim Museum Bilbao in Spain and *The Natural World, Selected Works 2000–2007*, presented as the inaugural exhibition in the Modern Wing at the Art Institute of Chicago.

Combining fashion, performance, and sculpture, Chicagoan Nick Cave's Soundsuits provided a pansensory experience in the new exhibition *Meet Me at the Center of the Earth* at the Yerba Buena Center for the Arts, San Francisco. (See BIOGRAPHIES.) In contrast, Polish artist Miroslaw Balka's *How It Is*, a massive steel chamber lined with felt and installed in the Tate Modern's Turbine Hall, plunged visitors into silence and darkness. London-based Yinka Shonibare used colourful Dutch-wax fabrics to craft the elaborate costumes worn by the headless mannequins that populate tableaux interrogating African identity and colonial power in the exhibition *Yinka Shonibare MBE* at the Brooklyn (N.Y.) Museum of Art.

New exhibitions challenged accepted art historical perspectives. *Titian, Tintoretto, Veronese: Rivals in Renaissance Venice*, co-organized by the Boston Museum of Fine Arts and the Louvre Museum, Paris, exposed how the three artists pushed one another toward innovation. *Jan Lievens: A Dutch Master Rediscovered*, curated by Arthur K. Wheelock, Jr., at the National Gallery of Art, Washington, D.C., shed new light on the painter whose own fame had been obscured by his friend Rembrandt's gigantic shadow. *Becoming Edvard Munch: Influence, Anxiety, and Myth*, curated by Jay A. Clarke and

based on documents that reveal Munch's ambitious career strategies and his keen awareness of prevalent trends in the art world across Europe, was seen only at the Art Institute of Chicago. It provided new insights and a much broader international context for the Norwegian painter's emotionally charged work.

Budget cutbacks discouraged plans for large loan exhibitions, prompting curators to rethink their permanent collections. At the Museum of Modern Art in New York City, Chief Curator of

PHOTOGRAPHY

In 2009 the attention of the world on the inauguration of Barack Obama as the 44th president of the United States (and the first African American to hold this office) rekindled interest in contemporary American photography and its revelation of the country's values and culture. One could argue, however, that the most considered exhibitions were to be found in Europe rather than in the U.S.

The Musée de l'Élysée, Lausanne, Switz., hosted (January 31–April 19) "This Side of Paradise: Los Angeles (1865–2008)," a vast exhibition documenting the history and popular culture of the City of Angels. The show was divided into the themes Garden, Move, Work, Dwell, Play, Clash, and Dream, and it featured the work of more than 100 photographers past and present, including Ansel Adams, Herb Ritts, Edward Weston, Mary Ellen Mark, and Philippe Halsman.

In Berlin, "President Barack Obama: On the Tracks of the Kennedys?" held at the aptly named the Kennedys Museum (May 1–August 2) examined the parallels between the 35th and 44th presidents after Obama's first 100 days in office. More than 50 photographs were displayed, many by White House photographer Pete Souza, including his intimate study of Obama embraced by an elderly Ethel Kennedy, widow of Sen. Robert F. Kennedy.

Elsewhere in Germany a more irreverent subject was the focus at Galerie Bugdahn und Kaimer, Düsseldorf, which staged American photographer William Wegman's "Dogs on Rocks—in the Woods—at the Seaside" (January 10–February 21). Over the years

Wegman had gained a worldwide following for using his Weimaraner dogs as models. His latest offering featured new colour prints taken on the Maine coast in the previous 10 years. A new book, *William Wegman: Dogs on Rocks*, was released to accompany the show.

Other Americans given solo exhibitions in Europe included Bill Owens, Helen Levitt, William Eggleston, and Ralph Gibson. The growth of American suburbia formed the subject of "Bill Owens: America Fast Forward" at Galerie Alex Daniels, Amsterdam (February 28–April 4), while, elsewhere in

Peter Macdiarmid/Getty Images

Polish artist Miroslaw Balka's installation *How It Is*, a massive steel structure encasing a cavernous area in which visitors were invited to walk, was displayed in Turbine Hall at the Tate Modern, London.

Painting and Sculpture Ann Temkin initiated an ambitious rehanging that included the removal of the wooden frames from iconic modern works by Abstract Expressionist painters Jackson Pollock and Willem de Kooning. Temkin explained that the wooden frames, added to the works for exhibition purposes, diminish viewers' perception of the original radical impact of the works. By revealing the paint-splattered edges of the canvas, the paintings now fully assert their "profound break with the past."

(DEBRA N. MANCOFF)

Amsterdam, Kahmann Gallery hosted "Helen Levitt: New York Photographs" (March 6–May 19), a retrospective exhibition of the 95-year-old artist, who lived in and documented the city for more than 70 years. Sadly, the exhibition coincided with her death on March 29. (See OBITUARIES.)

"William Eggleston: Democratic Camera," at Haus der Kunst, Munich (February 20–May 17), displayed more than 160 works by the artist, including video and infrared films, mostly made in Memphis, Tenn., New Orleans, and other locations in the U.S. South from 1961 to 2008. The Paris gallery Photo4 was the venue for "Ralph Gibson: Nudes and Recent Work" (April 3–May 16) and marked the occasion with the publication of a limited-edition book, *Nude*, with 200 of the 1,000 copies, including a numbered silver-gelatin print signed by the photographer.

The young denizens of Austin, Texas, were the subject of "Lise Sarfati: Austin, Texas," exhibited in Rome at Brancolini Grimaldi Arte Contemporanea (May 6–June 14). Sarfati's 26 colour prints in the exhibition were originally published in Magnum Photo's *Fashion Magazine* in 2008.

On the East Coast, the New York Photo Festival (May 13–17)—curated by William A. Ewing, Chris Boot, Jody Quon, and Jon Levy—provided a showcase of historical and contemporary international photography from artists such as Ernst Haas, Edith Maybin, Chris Killip, Stefen Ruiz, Tim Hetherington, and Edward Steichen. The more renowned Les Rencontres Photographie festival at Arles, France, celebrated its 40th anniversary (July 7–September 13) by hosting dozens of exhibitions, workshops, tours, and seminars within a historic backdrop of ancient Roman architecture. The international lineup included exhibitions featuring Nan Goldin, Duane Michals, Martin Parr, and Brian Griffin, and there was a special retrospective by Willy Ronis, who died at age 99, one day before the end of the festival. (See OBITUARIES.)

The great American fashion and still life photographer Irving Penn turned 92 on June 16. Instead of a retrospective exhibition, Galerie Hiltawsky, Berlin, held a group show, "Homage to Irving Penn" (June 16–July 11). A total of 41 young, mostly European, photographers were invited to submit photographs inspired by the work of the master. Penn died later in the year. (See OBITUARIES.)

Bettmann/Corbis

Boy Drawing on a Sidewalk, a photograph made by Helen Levitt c. 1937, reflects her well-known appreciation of children and of urban life.

The annual Paris Photo (November 19–22) at the Carrousel du Louvre brought together 103 exhibitors from 23 countries, displaying images spanning more than 150 years. The 2009 event had a special focus on Arab and Iranian photography, with work from the Arab Image Foundation and emerging work from the region. Iran was also featured at Aeroplastics Contemporary, Brussels, in the exhibition "Shadi Ghadirian: A Photographer from Iran" (February 13–April 4). The artist's work, already known in Europe, confronted from a female perspective the conflict between tradition and modernity. One of her series of works, *Like Every Day*, featured portraits of veiled women, their faces hidden by domestic items, and another, *White Square*, consisted of pictures of individual objects for military use—such as a helmet and a grenade—decorated with red ribbon and placed on a white surface.

The exploration of national identity was the theme of the show "Anastasia Khoroshilova: Russkie" at the Moscow Museum of Modern Art (Dec. 10, 2008–Jan. 4, 2009). Her exhibition comprised more than 100 colour portraits of individuals and family groups chosen to emphasize the ethnic diversity within contemporary Russia.

Following the acclaim of his first exhibition, "On This Earth" in 2005,

British photographer Nick Brandt published the second volume of his planned trilogy of books and exhibitions depicting the wildlife of East Africa in sumptuous black and white. "A Shadow Falls: Photographs from East Africa," at Atlas Gallery, London (September 8–October 3), featured 58 recent images from famous game reserves, including Amboseli, Nakuru, Maasai Mara, and the Serengeti.

Of course, the year would not be complete without a dose of celebrity photography, and in 2009 one of the most sought-after artists of this genre was Zürich-born Michel Comte. His images of celebrities, including Charlotte Rampling, Naomi Campbell, Jeremy Irons, Helena Christensen, Yves Saint Laurent, Catherine Deneuve, and Gisele Bündchen, were part of his "Retrospective" show at NRW-Forum Kultur und Wirtschaft, Düsseldorf, Ger. (February 1–May 10). It traveled to Young Gallery, Brussels (May 29–August 1). Comte's work was also exhibited at Guy Hepner Contemporary, Los Angeles, in the show "Women" (February 17–March 3), where vivid colour portraits of Carla Bruni (wife of French Pres. Nicolas Sarkozy) and actress Pamela Anderson hung alongside artful black-and-white studies of a nude Christensen.

(KEITH WILSON)

Business Overview

The **WORST** economy in a generation **BLIGHTED** many domestic and international businesses in 2009. The American auto industry experienced the **BANKRUPTCIES** of GM and Chrysler, as well as an increased interest in **ELECTRIC CARS** and gas-electric hybrids. In other sectors companies **SLASHED** inventories, costs, and personnel in the hopes of **KEEPING AFLOAT** until the economy revived.

Automobiles. Some observers felt that 2009 would mark the end of the American era of automobile manufacturing, as the year saw the bankruptcies of General Motors Corp. and Chrysler LLC, both of which essentially became wards of the federal government (by the end of the year, the U.S. government was expected to have poured \$50 billion into GM and more than \$12 billion into Chrysler, along with billions more to support suppliers and lenders connected to the auto industry). The CEOs of the Big Three automakers—GM, Ford, and Chrysler—had appeared before Congress in November 2008 to ask for \$25 billion, hoping that the cash infusion would help them weather the developing economic downturn, but in the first few months of 2009, car sales collapsed. In January automakers sold 656,976 cars and light trucks in the U.S., the lowest total since December 1981, and for the first time in history, auto sales in the U.S. were lower than in China, where 790,000 cars were sold in the same period. In August U.S. Pres. Barack Obama announced that \$2.4 billion of his economic stimulus package had been awarded to some 48 automakers or parts manufacturers in an effort to increase production of electric vehicles. (See Special Report on page 188.)

GM's performance in 2007 and 2008 marked the worst-ever years in the company's 100-year history, and the fate of what had been until recently the world's largest automaker seemed unavoidable once GM posted an astonishing \$30.9 billion loss for 2008. In late March 2009 the Obama administration's auto task force imposed strict measures on GM in

exchange for continued federal aid, including the resignation of GM CEO Rick Wagoner and a comprehensive restructuring plan. GM entered Chapter 11 protection on June 1; it emerged about a month later with a new board and the U.S. government holding a roughly 60% stake in the company. Substantial stakes were also held by the Canadian government (12%) and the United Auto Workers (UAW) Voluntary Employee Benefits Association (VEBA) retiree trust fund (17.5%).

The reorganized GM announced plans to shed more than \$79 billion in debt, reduce its dealer network by 40%, shutter 14 factories, and cut at least 21,000 jobs. Under its new CEO, Frederick ("Fritz") Henderson, GM centred its operations on four brands—Chevrolet, Buick, Cadillac, and GMC. GM dropped Pontiac (to be phased out by 2010),

Hummer (sold to China's Sichuan Tengzhong Heavy Industrial Machinery Co.), Saturn (which was to have been sold to Penske Automotive Group until the deal collapsed in September), and Saab (a last-minute offer from Dutch automaker Spyker Cars NV was pending at year's end). In November GM pulled out of a deal to sell a majority stake in its European operations Opel and Vauxhall. GM faced more tumult when Henderson abruptly resigned on December 1 and GM Chairman Ed Whitacre stepped in as interim CEO.

The auto task force nearly voted to let Chrysler collapse by not providing additional financing. President Obama reportedly decided that the loss of as many as 300,000 jobs would be too much for the already-ailing U.S. economy, however, so Chrysler entered Chapter 11 bankruptcy protection on April 30. It emerged after 42 days, infused with \$6.6 billion in exit financing, to enter into an alliance with Italy's Fiat SpA. (A challenge to this plan by some of Chrysler's creditors was defeated in federal court.) Under the agreement, Fiat would hold a 20% stake in the new Chrysler Group LLC, with an option to increase its stake to 35% and eventually to a majority of 51% after taxpayers were fully repaid. (The UAW's VEBA health care trust owned a 55% stake in the new company, while the U.S. government owned 8%.)

Fiat CEO Sergio Marchionne (see BIOGRAPHIES) took over as the new head

Jonathan Ernst—Reuters/Landov

of Chrysler on June 10. The revamped Chrysler continued to be hit by grim sales declines, however—its September U.S. sales were down 42% year-on-year, and its former 11.1% market share had been reduced to 8.4% by year's end. Meanwhile, Fiat posted a 62% drop in quarterly trading profit in the third quarter of 2009, and contrary to earlier statements, officials spoke of possible write-downs due to its partnership with Chrysler.

Ford Motor Co., which only a few years earlier had been considered to be in weaker shape than GM, managed to avoid bankruptcy and government bailouts. Ford increased its overall market share, mainly at its Big Three rivals' expense, and by September Ford's market share in Europe exceeded 10.1%—the company's best performance since September 2001. Boosted by the federal government's cash-for-clunkers plan (in which the government gave consumers up to \$4,500 toward trade-ins of older cars for new, fuel-efficient models), Ford added 10,000 vehicles to its third-quarter production schedule. By year's end new vehicle sales had improved slightly, and Ford had boosted its U.S. market share to 16.1% for the year. Ford, which had been targeting a return to profitability by 2011, surprised analysts with a profit of \$834 million in the first half of the year and a \$1.8 billion profit for the first nine months.

The chaos in American auto manufacturing enabled Japanese carmaker Toyota Motor Corp. to claim the title from GM of the world's largest automaker in late 2008, but the global recession wreaked havoc on Toyota's sales as well. The company in May 2009 posted its first annual loss in 59 years and said that it was also likely to post a loss in its fiscal year ending March 31, 2010. Toyota's vehicle sales declined for much of the year (in September alone, sales fell 13%). Sales of Toyota's popular gas-electric hybrid Prius line remained strong in 2009 compared with Toyota's Lexus (down 30% as of September) and Scion (down 51% in the first eight months of 2009).

Other Asian automakers, while struggling for sales in the collapsed North America market, found some balance in the burgeoning Indian, Chinese, and Pacific Rim markets. Japanese carmaker Honda Motor Co. was expected to post a first-half 2009 operating profit driven mainly by sales in China and Japan, where the governments had introduced tax cuts and subsidies to increase do-

mestic sales. South Korean automakers also prospered; both Hyundai Motor Co. and Kia Motors Corp. reported that profits rose to record highs during the third quarter. They cited the weakness of the South Korean currency as well as government incentives to purchase energy-efficient vehicles.

Many European carmakers faced the same formula—declines in Europe and North America countered by gains in Asia. Sweden's AB Volvo announced a third-quarter net loss of \$423 million, due to a sharp drop in sales in Europe and the U.S. (heavy-duty-truck sales were expected to fall up to 40% in the U.S. from 2008 levels), but the company reported that demand was stabilizing, particularly in Asia. Volkswagen AG's third-quarter earnings were driven by the company's strong sales in China and improved demand in Germany, which was boosted by an equivalent to the U.S. cash-for-clunkers program. In a strange twist of fate, after Porsche had spent a year battling to purchase a majority stake in Volkswagen (it had a 35% share in 2008), it could not raise enough funds, owing to the decline in car sales and a tightening of the credit markets. In turn, Volkswagen in December completed the purchase of a 49.9% stake in Porsche for some €3.9 billion (about \$5.8 billion).

In October China announced that its annual production had exceeded 10 million cars for the first time in history and was expected to top 12 million by year's end. By the summer, when Chinese domestic car sales were up 48% year-on-year, many industry analysts said that China was on pace to become the world's largest car market. Ford especially made a push in late 2009 to boost its presence by introducing the Figo, a low-cost car to be built in India and sold to other Asian-Pacific markets.

Airlines. While much of the automobile sector was in tatters, the American airline industry, which had been battered for much of the previous decade, appeared to stabilize in the second half of 2009. Although the International Air Transport Association predicted that its members would lose \$9 billion in 2009—and the five largest U.S.-based airlines all posted losses in the second quarter—none of the airlines went under or required federal bailouts. One boon for the airline industry was the decline in jet fuel costs for much of the year.

Southwest Airlines Co. and United Airlines' parent UAL Corp. reported narrower losses in the third quarter than in late 2008. Southwest, which

lost \$16 million in third-quarter 2009, compared with \$120 million in third-quarter 2008, increased its ridership by lowering its fares, which reduced passenger revenue yield by 12% in the period. Delta Air Lines Inc. and US Airways Group Inc. also posted losses in the third quarter. AMR Corp., the parent of American Airlines, registered a third-quarter loss of \$359 million, compared with a profit of \$31 million in third-quarter 2008, but the company showed signs of reducing costs and improving productivity; it showed a record-high load factor (the percentage of available seats filled) of 83.9% as of September 30. The low-cost, smaller-volume JetBlue Airways Corp. returned to profitability in late 2009.

International airlines also faced declining ridership and the subsequent need to reduce flights, costs, and staff. Those in the strongest position were low-cost leaders such as Ireland's budget airline Ryanair, which aggressively pursued a strategy of reducing fares while increasing customer charges, such as fees for checked baggage and charges to customers of roughly \$64 to check in at the airport rather than by using Ryanair's Web site. Ryanair was rebuffed in its attempt to purchase Irish rival Aer Lingus, in which it owned a 29% stake.

Meanwhile, Aer Lingus expected to lay off up to 17% of its staff and to impose salary cuts and caps on much of the remainder. British Airways PLC posted its first pretax loss in 22 years, while Air France-KLM's revenue fell by 21%. Germany's Deutsche Lufthansa AG slumped by 19% in the quarter ended June 30, though its purchase of the ailing Austrian Airlines was approved by the EU in August. Japan Airlines Corp., which lost more than \$1 billion in its fiscal quarter ended June 30, said that it would cut 6,800 employees; it also continued in joint-venture talks with both Delta and American. India's low-cost Jet Airways, which in 2003 had controlled nearly half of India's domestic market, saw its market share fall to 25%, and by mid-2009 it was posting losses and cutting staff.

Aircraft. The two largest global aircraft manufacturers had a difficult year, plagued with what seemed to be endless delays in their next-generation aircraft and a great decline in orders. As of Sept. 30, 2009, total orders booked by Airbus and rival Boeing Co. were only 203, compared with the 1,360 orders that the two had booked in the first nine months of 2008.

The 787 Dreamliner, intended to serve as Boeing's next generation of aircraft, was supposed to have entered service in May 2008. Instead it had faced two years of production delays. The aircraft finally made its inaugural test flight on December 15. Company analysts said that Boeing's decision to outsource much of the Dreamliner's manufacturing to save costs had contributed to the bottlenecks in production. Delays in its overhauled 747 program, the 747-8, forced Boeing to record a \$1 billion charge and delay the revamped jet's first flight until early 2010 (a year behind schedule). The 747-8, which was first announced in 2005, was scheduled to start deliveries in the fourth quarter of 2010. Boeing posted a \$1.6 billion loss in third-quarter 2009, compared with a \$695 million profit in the same quarter in 2008. Airbus's next-generation A380s were also two years behind schedule, and Airbus sold only 2 of them in 2009 (it had hoped for at least 10 sales). Despite escalating costs and canceled sales, the Airbus A400M military transport made its long-delayed maiden test flight on December 11.

Petroleum and Natural Gas. Energy producers, after years of record profits due to high oil and natural gas prices, endured a year marked by extreme price volatility not seen since the energy crisis of the late 1970s and by, in many cases, reduced earnings. Oil fell from \$145 a barrel in summer 2008 to \$33 a barrel in December 2008 and then soared again to above \$80 a barrel in late October 2009 before slipping below \$80 at year's end. The price spikes occurred even though energy demand was low and inventories high, which suggested that they were driven more by market fears of inflation and the reduced prospect of new oil discoveries. ExxonMobil, the world's largest private-sector oil company, was expected to report a 63% drop in profit to \$4.94 billion in the third quarter, and Britain's BP PLC posted a 53% decline in profit in second-quarter 2009 alone.

Producers faced challenges on a number of fronts. Royal Dutch Shell PLC's angry shareholders shot down the company's executive-compensation plan in May. ExxonMobil offered to buy a \$4 billion stake in a Ghana oil field, its largest such investment in a decade and one of the biggest new discoveries of

At a "gold party" held in a private home in West Orange, N.J., jewelry and other unwanted gold items are exchanged for cash; such parties, in which the host typically received a commission from the gold dealer attending the event, grew in popularity during the year as the price of gold climbed to more than \$1,000 per ounce.

the decade, only to face potential rival bids by China National Offshore Oil Corp., Total, and BP. In August 2009 Brazil's government announced that its national oil company, Petrobras, would control all future development of Brazil's deep-sea oil fields found in 2007 and considered one of the biggest new oil discoveries in recent years. Venezuela bypassed American and Western European firms for its new development, instead signing a \$16 billion investment deal with China for oil exploration in the Orinoco River region and reaching a similar \$20 billion agreement with Russia.

Chinese energy firms went on a buying binge in 2009. Cnooc Ltd., China's biggest oil and gas producer, and China National Petroleum Corp. (CNPC), the largest state-owned oil firm, proposed a \$17 billion acquisition of Repsol YPF's stake in the Argentine YPF unit. This followed the \$7.2 billion acquisition in June of Switzerland's Addax Petroleum by the Chinese chemical and oil company Sinopec and CNPC's joint \$3.3 billion purchase (with KazMunai-Gas) of a Kazakh oil producer in April.

Metals. By mid-October 2009 gold had risen to more than \$1,000 per ounce. In early December it topped \$1,200 per ounce, though it had dropped to about \$1,095 by year's end. Analysts speculated that gold's inflated prices reflected market wariness of increased government spending and its implications for

long-term inflation (for example, 130 metric tons of gold were purchased in the first quarter of 2009, 50% higher than the decade's average quarterly volume). According to the Commodity Futures Trading Commission, speculative investors in mid-October betting on long-term gold price increases outnumbered short-term speculators by 10 to 1, compared with a 4-1 ratio in late 2008. Silver was up 44% to \$17 per troy ounce as of mid-October 2009, and the price of front-month copper had more than doubled, to \$2.5290 a pound, in July from December 2008, reflecting investor belief that two of the major price drivers for copper—U.S. housing and Chinese industry—were on the rebound.

Aluminum prices, by contrast, slumped in 2009, with prices down 45% year-on-year as of July 2009. Alcoa Inc., which posted a \$454 million loss in the

second quarter and had idled 20% of its production by April 2009, reported a third-quarter profit of \$77 million (down 71% year-on-year) and indicated that most of its major markets, including automobile makers, were showing signs of stabilizing. Alcoa finished a \$750 million construction project on a products factory in Russia and also procured Switzerland-based Noble Corp.'s intellectual property rights on welded-aluminum products.

Steelmakers across the globe contended with bloated inventories, slackened demand, and in some cases heavy losses. European steelmaker inventories were much higher in early 2009 than their American or Chinese counterparts as orders collapsed from automakers and the construction industry (which made up 75% of European steel consumption). ArcelorMittal, the world's largest steelmaker, posted a \$792 million loss in the second quarter but anticipated that the worst of the economic turmoil was over. As in other sectors, demand was recovering faster in India, Russia, China, Brazil, and Eastern Europe than in the U.S. and Western Europe. ArcelorMittal's mills in India were operating at full capacity by mid-year 2009, while only three of its nine American blast furnaces were operating as of July 30. Nippon Steel Corp., ArcelorMittal's biggest rival, also posted net losses in first-half 2009, citing increased raw material costs and flattening demand.

Banking Emerges from the Worldwide Financial Crisis

In 2009 events and conditions in the global banking and financial systems were a direct response to the credit crunch that followed the September 2008 bankruptcy of the American investment bank Lehman Brothers. At the start of the year, the world economy faced the worst recession in modern history, with an increasing number of bankruptcies and rising unemployment. Firms and individuals were having difficulty in accessing operating funds and loans, and there was a dramatic slowdown in global production and trade.

In September 2009 the IMF estimated worldwide toxic debt, or subprime assets, at \$3.4 trillion, down from its April estimate of \$4 trillion. Many banks were close to collapse and were rescued by their respective governments. In the U.S., where 99 banks had been closed down by the end of October, the government's \$700 billion Troubled Asset Relief Program (TARP) fund was used to extend loans to many banks, and toward the end of the year, TARP was expected to divert funds to small community banks to help companies with assets of less than \$1 billion. In Ireland the Anglo Irish Bank—Ireland's third largest bank and Europe's most successful during the housing-price "bubble" years—was nationalized in January. In the U.K., Lloyds Banking Group and the Royal Bank of Scotland were partly and almost completely nationalized, respectively. In continental Europe casualties included the Dutch banking group ING, Fortis in Belgium, and the Hypo Bank in Germany. In Eastern Europe more than \$1.7 trillion had been borrowed, and many banks were in trouble; in 2009 some \$400 billion had to be renewed or repaid, mainly to Western banks that were unable to roll over the debt.

Throughout 2008 central banks around the world had cut interest rates to increase liquidity. Some, led by the U.K. and the U.S. early in 2009, adopted quantitative easing, buying British gilt-edged securities (gilts) and U.S. Treasury bills, respectively, in order to increase lending. Most of the leading industrialized countries adopted such nonconventional measures, with the reluctant European Central Bank following suit in May, at the same time cutting interest rates to a record-low 1%.

The problems facing the banks were reflected in their profits, as reported in the July 2009 issue of *The Banker* magazine in its "Top 1000 World Banks 2009." Total profits for the 1,000 banks on the list fell by 85%, from \$780 billion in the 2008 list to \$115 billion, with the return on capital declining from 20% to less than 2.7%. For the first time in 39 years, the 25 leading banks, which accounted for nearly 40% of bank capital and 45% of total assets, suffered losses, and the top 5 alone lost a combined \$95.8 billion. There were, how-

ever, wide regional and country differences. Western banks endured hefty losses, led by the U.S. with \$91 billion, although three American banks—JPMorgan Chase, Bank of America, and Citigroup—raised enough funds to head *The Banker's* list based on Tier 1 capital. The 27-member European Union (designated as the EU27) sustained a total loss of \$16.1 billion, while the U.K.'s banks lost \$51.2 billion. By contrast, Chinese banks, three of which led the "Top 1000" in overall market capitalization, earned pretax profits of \$84.5 billion, followed by Japan (\$16.5 billion) and Brazil (\$11.7 billion). The bank rankings reflected the growing global importance of Asia (excluding Japan), with the number of Asian banks on the list increasing to 193 from 174 two years earlier, compared with decreases in the U.S. to 159 (from 185) and the EU27 to 258 (from 279).

Bank profits after the first quarter were much better than expected, and 10 American banks in June repaid \$68 billion to the TARP fund, which freed them from adhering to the constraints on salaries and other income that had been introduced by the U.S. Congress. There was growing concern and public anger, however, that the deeply embedded bonus culture persisted, especially in the U.S. and the U.K., where late in the year bank employees—especially those in upper management—were poised to receive huge bonuses. This was in spite of the fact that the \$9 trillion cost of the bank rescues had fallen on the taxpayers. A tacit agreement was reached in September at the Group of 20 (G-20) economic summit in Pittsburgh, where the G-20 representatives pledged that such bonuses should be linked to long-term performance and tapped the Financial Stability Board "to coordinate and monitor progress in strengthening financial regulation."

Meanwhile, central banks and regulatory bodies were formulating measures to prevent another banking crisis. Capitalization requirements were increased, and there was to be greater transparency. In October the U.S. Treasury announced a draft bill that would enable a financial institution to be ordered by the Federal Reserve to sell a risky part of the business or have it seized. In Europe the EU was imposing penalties on all European banks that had been bailed out in the financial crisis, and even more stringent measures were likely. There was ongoing debate on the wisdom and feasibility of dividing banks into a two-tier system of commercial and investment banks in an effort to ensure that the more risky investment bank activities, such as hedge funds and derivatives, never again had so serious an impact on the retail banking sector.

(JANET H. CLARK)

BHP Billiton Ltd., the world's largest mining company, settled iron-ore price negotiations with more than half of its steel industry customers; many customers agreed to rates 33% below 2008 prices, and others agreed on quarterly price negotiations. The more flexible contracts would enable BHP and other miners, such as Anglo-Australian mining giant Rio Tinto Ltd., to respond quickly to spikes in demand and would

also allow steelmakers to cut costs during low-demand periods. BHP failed to break through with Chinese steel-maker clients, who were seeking a 50% discount.

China Minmetals Non-Ferrous Metals Co. bought many of Australia's Oz Minerals Ltd.'s assets, while Sinosteel Corp. purchased iron-ore miner Midwest Corp. in a hostile bid. Aluminum Corp. of China's proposed purchase of an 18%

stake in Rio Tinto fell apart in June, however, when the Anglo-Australian company walked away from the \$19.5 billion proposal, in part owing to shareholder and governmental disapproval. Rio Tinto, still burdened by debt from its 2007 purchase of Alcan, suffered a 65% decline in first-half profit.

In April the American steel industry filed an antidumping suit against China, alleging that Chinese steelmak-

ers had unfairly dumped tubular and pipe steel imports into the domestic market in 2008. Steelmakers, including U.S. Steel Corp., Nucor Corp., and AK Steel Holding Corp., and the United Steelworkers union called on the Obama administration to push for tougher enforcement of trade laws and even to impose extra tariffs against primarily Chinese imports. At the same time, the Chinese government attempted to consolidate its steel industry, which accounted for about 38% of global production but was fragmented into hundreds of small companies. When China attempted to privatize Linzhou Iron and Steel Co., 3,000 steelworkers protested; the government eventually scrapped its plan.

Chemicals. The chemicals sector saw some big-ticket mergers in 2009. Dow Chemical Co. was forced to complete its purchase of rival Rohm & Haas Co. for \$16.3 billion, for which it borrowed \$9.2 billion in short-term loans and nearly saw its credit status downgraded to “junk” because of the increased debt. Dow had tried to cancel or at least delay the deal, but Rohm sued Dow to

close the deal. Faced with a short-term debt burden, Dow undertook layoffs, sold off Rohm & Haas’s Morton Salt unit to Germany’s K&S AG for \$1.7 billion, sold its interest in a Malaysian chemical joint venture for \$660 million, and began consolidating some of its latex, rubber, and plastics businesses into one division for a possible sale.

Pharmaceuticals. Drug manufacturers also offered a string of megamergers during the year. Pfizer Inc. in January paid \$68 billion to acquire its rival Wyeth, the largest pharmaceutical merger since Glaxo Wellcome PLC bought SmithKline Beecham PLC in 2000. Six weeks after the Pfizer deal, Merck & Co. announced that it would buy Schering-Plough Corp. for \$41.1 billion. Merck, with Schering’s patents and new-drug pipeline, could soften the blow from the loss of its patent for the bone drug Fosamax, which had recently become available as a generic. Merck’s patent for the asthma drug Singulair (which had \$4.3 billion in worldwide sales in 2008) was set to expire in 2012, and in August Merck won a patent-infringement suit against Teva

Pharmaceutical Industries Ltd. when the U.S. District Court for the District of New Jersey ruled that Teva was prohibited from marketing a generic version of Singulair prior to the expiration of Merck’s patent. Abbott Laboratories in September acquired the pharmaceutical unit of Belgium’s Solvay SA for \$7 billion in one of several deals undertaken by drugmakers to get rights to new flu vaccines, which the industry considered a growth area.

In September Pfizer agreed to pay \$2.3 billion to settle allegations that it had illegally marketed its withdrawn painkiller drug Bextra and three other drugs—the largest health care fraud settlement and the largest criminal fine in corporate history. A federal case against Merck involving Fosamax ended in a mistrial in September because of a deadlocked jury.

Tobacco. In June 2009 President Obama signed the Family Smoking Prevention and Tobacco Control Act, legislation that gave the FDA regulatory authority over the manufacturing and marketing of cigarettes and other tobacco products, including final approval of new tobacco products, cigarette ingredients, and tobacco industry advertising. The FDA’s first major action in September was to ban flavoured cigarettes, including candy and clove varieties. Tobacco companies, including R.J. Reynolds Tobacco Co. and Lorillard Inc., had filed a federal lawsuit in August to protest the FDA’s new power to impose marketing restrictions, claiming that it violated the companies’ First Amendment rights, but in early November a U.S. District Court judge in Richmond, Va., denied a motion for a preliminary injunction sought by the tobacco companies.

Finance. In 2009 the global economy showed signs that it was emerging from the “Great Recession,” which officially began in December 2007. (See Special Report on page 170.) Although unemployment remained high, even the tarnished banking and finance systems showed improvement. (See Sidebar.) After hitting their lows in the first quarter of 2009, world stock markets rose steadily, with many bourses recording their highest levels at year’s end. In the U.S. the Dow Jones Industrial Average closed at 10,428.05, up 18.8% for the year and 59.3% from the March low but still 26.4% below its all-time high (14,164.53), set on Oct. 9, 2007. (For Selected Major World and U.S. Stock Market Indexes, see Table.)

(CHRISTOPHER O’LEARY)

Selected Major World Stock Market Indexes¹

Country and Index	2009 range ²		Year-end close	Percent change from 12/31/2008

Computers and Information Systems

Despite the worldwide recession, **E-BOOKS**, smartphones, and netbooks were hot consumer devices, while **TWITTER** was the cool Web application, and **CLOUD COMPUTING** gained support in the corporate world. Apple CEO **STEVE JOBS** returned to the company after surgery, and Microsoft introduced **WINDOWS 7** to replace the much-criticized Vista.

The global economic recession made 2009 a difficult year for technology workers and companies. In the first quarter alone, American high-technology firms laid off more than 84,200 workers, according to job-tracking firm Challenger, Gray & Christmas. That was up from the 66,300 laid off in the fourth quarter of 2008. In Japan financially troubled computer-chip manufacturer Toshiba announced plans to lay off 3,900 contract workers over the next year, in addition to the 4,500 temporary workers it had already cut from its workforce.

As the year ended, computer companies hoped that they were seeing the signs of an economic upturn, spurred in part by Microsoft's new Windows 7 operating system (OS), which, it was envisioned, would generate a new round of computer-upgrade purchases. Optimism was based on better-than-expected quarterly earnings reports from several companies, including Google, IBM, and Intel. It was too early to tell whether an uptick in technology purchasing in the U.S., driven largely by consumer electronics, would spread to the corporate market.

Electronic gadgets of all sorts continued to become part of the everyday lives of ordinary citizens. A study of American and Canadian consumers by Forrester Research showed that half of all adults played computer games, just under two-thirds of households had a broadband, or high-speed, Internet connection, three-fourths of households had a cellular telephone, and 8% of the consumers surveyed had a smartphone (essentially a handheld computer integrated with a cell phone).

In the U.S., 44% of households owned a laptop personal computer (PC), and the average family owned two PCs. High-definition (HD) television and home computer networks were among the gadgets most rapidly gaining favour with consumers.

Wireless phone companies continued to invest heavily in smartphones and netbooks (downsized laptops equipped with cellular-network Internet connections) as new ways to sell more data services—which was necessary if they were to offset declining prices for cellular voice service. One cellular company tried to borrow an audio technique from consumer electronics to make voice calls more appealing. France Telecom offered HD cellular audio, which brought to cell phones the digital sound reproduction used with digital TV, music compact discs, and FM radio stations.

E-books. Electronic books, or e-books, caught the eye of publishers as never before in 2009 because of Amazon's Kindle and Sony's Reader, stand-alone devices designed to read the e-books that were sold online by Amazon and Sony, respectively. Google also said that it would begin offering e-book downloads, although it was unclear which equipment it would use. Other e-book providers included iRex, a division of Royal Philips Electronics, and cell phone company China Mobile. Bookstore operator Barnes & Noble inaugurated an e-bookstore on its Web site and offered e-books that could be read on several devices, including PCs, Apple's iPhone and Research in Motion's BlackBerry smartphones, and Barnes & Noble's own newly introduced e-book reader called nook.

Some printed book publishers were compelled to take e-books seriously because e-book sales were growing, while sales of printed books were not. Adding to the appeal of e-books was that they were about as profitable to sell as printed books, even though e-books typically sold for less (about \$10 versus an average of \$26 for a hardcover book). That was because publishers could do away with physical book expenses such as printing, storage, and transportation. E-books also offered multimedia options that printed editions could not, and text could be combined with occasional video snippets and links to Web sites. Book publisher Simon & Schuster released the first four e-books, which it called vooks, that included video; these could be read and watched online or on Apple's iPhone or iPod Touch devices.

It was unclear how many consumers would shift from printed books to e-books; in 2009 the latter accounted for only a few percent of unit book sales. Still, some in the book industry worried about piracy of electronic books via downloads of illegal book copies—similar to what had already happened to the music industry. Such illegal book sharing already existed on a small scale. In addition, book publishers worried that letting libraries offer e-books would make consumers less inclined to buy print versions, because downloading e-books made library use easier. As a result, some book publishers refused to allow their e-books to be offered through libraries.

The Kindle produced the first consumer privacy issue associated with e-books when in July Amazon, realizing that it lacked the rights to sell George Orwell's novels *1984* and *Animal Farm* online, refunded the 99-cent purchase price to customers and remotely deleted copies of the books already downloaded to nearly 2,000 Kindle customers. Amazon was slammed with a barrage of criticism, made more intense because *1984* details how powerful rulers can dominate peoples' lives. A Michigan high-school student whose copy of *1984* was deleted sued Amazon, and in September the case was settled out of court. Amazon agreed to pay \$150,000 (to be donated to charity) and apologized for

deleting the books. As part of the settlement, the company also pledged not to delete e-books from U.S. customers' Kindle units in the future unless the user agreed, the user wanted a refund or failed to make the electronic payment, a court ordered a book deleted, or removing a book was necessary to eliminate malicious software.

Smartphones. Apple's iPhone continued to dominate the market for smartphones. The company introduced the iPhone 3GS (which added voice controls, a digital compass, and the ability to record video to the third-generation wireless-network platform) for \$199–\$299 and, in an effort to broaden iPhone use even further, dropped the price of the previous model, the iPhone 3G, to \$99. Apple's iPod remained the top-selling digital music player, although Microsoft continued to compete with its Zune music player, to which it added the capabilities of playing HD video and receiving HD radio signals with better-quality sound than traditional FM radio.

Cell phone companies AT&T and T-Mobile sought to differentiate their data-using smartphone services by offering customers free Wi-Fi (wireless fidelity) connections when they could not get a cellular network connection. AT&T had faced the bigger problem because its iPhone customers used more data than owners of other smartphones and thus tended to take up more network capacity per user. AT&T also offered the most free Wi-Fi hot spots, about 20,000.

Apple reported that it had sold its two billionth unit of iPhone and iPod Touch application software, or app, from its iTunes online store. Users could choose

from among 100,000 apps in 20 categories, including games, business, and social networking. Hundreds of independent firms wrote apps for the iPhone and iPod, but Apple had to approve the programs before they could be sold online through the App Store portion of iTunes.

For the first time, Apple allowed two of its music competitors, on-demand streaming music services Rhapsody and Spotify, to provide an app that connected iPhone and iPod Touch customers to their services. Apple attracted an inquiry from the Federal Communications Commission (FCC) when it rejected an app for Google Voice, which provided access to cellular-calling, text-messaging, and voice-mail services that competed with those of AT&T, the iPhone's exclusive service provider in the U.S. Apple told the FCC that it was still considering whether to offer the Google Voice app.

A new type of app called "augmented reality" was available for the iPhone and phones using Google's Android OS. This app used the GPS (global positioning system satellite navigation) location chip in the phone to overlay the phone's camera view of a street scene with local tidbits of information, such as the identity of stores, points of interest, or real-estate listings. The reliability of augmented reality was limited by the accuracy of the GPS units that the phones contained, but research firm iSuppli concluded that the GPS capabilities of smartphones were opening up a new area of growth for the devices, particularly the iPhone. One use of GPS was to enable the iPhone to compete with stand-alone GPS navigation systems, but there were still tech-

nical hurdles in placing complex navigation software on cell phones.

Apple won in another controversy over whether Palm Inc.'s Palm Pre smartphone should be allowed to connect to Apple's iTunes software, in competition with the iPhone and the iPod. When Apple blocked the connection, Palm complained to an industry oversight group for USB-port connection standards that Apple's action was improper restraint of trade. The USB Implementers Forum dismissed Palm's claim, however, and said that Palm was in the wrong for making its device appear to be an Apple device.

Computer Games. Sales of video games and the game consoles that played them suffered from poor economic conditions, even though the sector had been expected to be recession-proof—on the theory that the games represented stay-at-home escapist entertainment. Experts attributed the sales decline to both tight consumer budgets—new console games cost about \$60 each—and a lack of new must-have games. As a result, Nintendo dropped the price of its Wii game console by \$50, to \$199, Sony reduced the price of its most-expensive PlayStation 3 model by \$100, to \$399, and Microsoft also cut the price of its most-expensive Xbox 360 model by \$100, to \$299.

In an effort to boost the industry's sales, game companies emphasized new titles with familiar names, such as the space-war game *Halo 3: ODST* and *The Beatles: Rock Band*, in which the music and images of the legendary 1960s band were paired with a play-along game. The gaming industry also began to embrace a new trend, playing casual games on cell phones. The iPhone's App Store had made hundreds of low-cost or free games available to consumers for downloading, and there were concerns that cell-phone games could take attention away from more-expensive games for other portable gaming devices.

Social Networking. A study by Forrester Research showed that half of American adults who spent time online used social networks such as Facebook or LinkedIn, a 46% rise from the previous year. Most of the increased use was among adults aged 35 and older. Another survey, conducted by Common Sense Media, a group that monitored children's issues, demonstrated that while teenagers were big users of social networks, most parents did not understand the extent to which the teens used the networks. The survey showed

A new interactive computer game, entitled The Beatles: Rock Band, was released during the year; it featured the music and images of the legendary 1960s band.

Twitter Takes on the World: 140 Characters at a Time

The question “Do you Twitter?” was asked throughout 2009 by users of the Web’s most popular microblogging service. Whereas a traditional Web log, or blog, might be updated with long entries once or twice a day, a Twitter user might post dozens of short messages of up to 140 characters—called “tweets”—in the same period. In addition to this aspect of the service, which worked in some ways like an Internet or mobile telephone instant messaging client, Twitter incorporated features of traditional social networking Web sites, such as MySpace and Facebook. Twitter users (alternatively called Twitterers, Tweeters, or simply Twits) could elect to receive the tweets of other posters or track specific topics, creating a dialogue of sorts and potentially pushing the number of “followers” in a given Twitter feed into the millions. In April 2009 actor Ashton Kutcher made the news when he became the first Twitterer to collect more than a million followers.

While the service itself made headlines throughout the year, its users made their own, transforming Twitter from something that was regarded as an idle hobby for an increasingly wired world into an up-to-the-second news outlet that transcended political borders. On January 15, commuter ferry passenger Janis Krums broke the story of the successful water landing of U.S. Airways Flight 1549 on the Hudson River when he sent out a tweet stating that his ferry was going to rescue people from the downed plane. Krums’s hastily snapped camera-phone image of passengers disembarking the half-submerged aircraft was uploaded to Twitpic.com, a photo-hosting service for Twitter users; the site promptly crashed as thousands of Twitterers attempted to view it. Twitterers scored another scoop in June when National Basketball Association star Shaquille O’Neal learned of his trade from the Phoenix Suns to the Cleveland Cavaliers via tweet. Although celebrity accounts tended to attract hackers interested in little more than sophisticated pranks, a massive denial-of-service attack in August targeted an economics professor in the republic of Georgia, knocking out the entire site for hours. Millions of users attempted to log into Twitter only to be greeted by the service’s iconic “fail whale”—the image of a cartoon whale being hoisted into the air by a flock of birds, signaling a site outage. In November a NASA “tweetup” saw tweets from 100 lucky Twitterers who were allowed to observe and tweet about the lift-off of the space shuttle *Atlantis* from the John F. Kennedy Space Center at Cape Canaveral, Florida. On hand was astronaut Michael Massimino, who posted the first tweet from space during a shuttle mission in May.

Nowhere was Twitter’s role as an emerging outlet for the dissemination of information more apparent than during the events surrounding the Iranian election in June 2009. As state media sources

reported that Pres. Mahmoud Ahmadinejad had secured an easy victory, supporters of opposition candidate Mir Hossein Mousavi (see BIOGRAPHIES) took to the streets in a series of increasingly violent demonstrations. The topic known as #IranElection became one of the most followed on Twitter as Mousavi supporters coordinated protests and posted live updates of events throughout Tehran. On June 15, three days after the election, Twitter delayed a 90-minute maintenance period at the request of the U.S. State Department, rescheduling it for 1:30 AM Tehran time in order to avoid interfering with the flow of information within and from Iran. The following day foreign journalists were banned from covering opposition rallies, and Twitter, along with other social networking sites, filled the void left by the traditional media. Government security officers tried to stanch the flow of information by blocking the Web site, while opposition supporters urged #IranElection followers to change their profile settings to the Tehran time zone in an attempt to overwhelm government filters. Events reached a fever pitch following the shooting of Neda Agha-Soltan as she was leaving a protest on June 20. A mobile phone video of the young woman’s graphic death was posted on the YouTube video-sharing Web site, and by the following day “Neda” was both the rallying cry of the opposition and one of the top trending topics on Twitter.

The creators of Twitter—social media entrepreneur Evan Williams, social networking expert Christopher Isaac (“Biz”) Stone, and messaging-software engineer Jack Dorsey—did not envision such a paradigm shift when they first designed and launched the service in 2006. (See BIOGRAPHIES.) From its inception, Twitter was primarily a free short messaging service (SMS) with a social networking element. As such, it lacked the clear revenue stream that one could find on sites that derived income from advertising or membership fees. With the number of unique visitors increasing some 1,300% in 2009, it was clear that Twitter was more than a niche curiosity, though it was as yet unclear if Twitter could achieve financial independence from its venture-capital investors (there was speculation that the company might eventually issue public shares). In July the Twitter site was revamped to put a greater emphasis on its expanding role as a source for “what’s happening right now, anywhere in the world.” As Stone publicly acknowledged later in the year, Twitter had “long outgrown the concept of personal status updates.” Meanwhile, Twitter remained focused on the essentials: improving site stability; introducing new features such as search, list, and an optional geolocator tag; and ensuring that its tens of millions of users could continue to live the tweet life.

(MICHAEL RAY)

that 22% of teens checked their social networks more than 10 times daily, but only 4% of parents believed that their children were so heavily involved.

Much of the attention in 2009 was focused on Twitter, a social-networking service that allowed people to exchange short (140-character) messages, or “tweets,” on any topic via computer or

cell phone. (See Sidebar.) On the basis of its popularity, Twitter was able to raise \$100 million in new funding, even though it was a start-up with little or no revenue. Twitter’s founders—entrepreneur Evan Williams, social-networking expert “Biz” Stone, and software engineer Jack Dorsey (see BIOGRAPHIES)—sought to expand the reach of

the service that they had launched in 2006 without a formal business plan.

Overall, text messaging—sending short written messages via bursts of data from one cell phone to another—grew in popularity, but the activity became controversial when more people began driving and texting at the same time. Polls in the U.S. found that more

Peter DaSilva—The New York Times/Redux

Evan Williams (left) and “Biz” Stone, founders of Twitter, use the social-networking service at the company’s headquarters in San Francisco.

than 90% of adults favoured a ban on text messaging while driving. Research into so-called distracted driving found that drivers using cell phones were four times as likely to have a crash as other drivers. U.S. government employees were banned from text messaging while driving government vehicles.

Another problem of cell-phone texting was the transmission of sexual images or messages, which became known as “sexting,” between teenagers. In the U.S. the problem posed new issues for schools and courts. The Iowa state Supreme Court upheld a misdemeanor conviction of an 18-year-old boy who had sent a nude photo of himself to a 14-year-old classmate via text messaging. In Houston, public schools banned sexting. While the extent of the problem was hard to gauge, a survey by the National Campaign to Prevent Teen and Unplanned Pregnancy showed that 20% of young Americans between the ages of 13 and 19 had either texted or posted online partially or completely nude pictures or video of themselves.

New Developments. Microsoft, admitting that users had been disappointed with the Windows Vista OS (introduced in early 2007), launched the next-generation Windows 7 in October 2009. Windows 7 was said to address complaints about Vista—slowness, software crashes, and software incompatibility issues—while keeping the underlying Vista architecture. Windows 7 improvements included more efficient use of memory, which caused a PC to start up faster and run more smoothly. When Vista was announced, its high computing demands meant that it would not run well on many existing

computers. That was expected to be less of a problem with Windows 7, which was said to work on nearly all new computers as well as those that were up to three years old. Satisfactory performance on older PCs was said to vary, although Microsoft’s official system requirements were set fairly low.

In December Microsoft reached an agreement on Windows long-running antitrust issues with the European Union. The EU reacted favourably to Microsoft’s offer to alter the way that it combined its Internet Explorer Web browser with Windows. Users would be given a choice of browsers when setting up the operating system; Internet Explorer could be turned off and another browser downloaded.

Microsoft also won a patent victory when a federal judge in Providence, R.I., overturned a \$388 million penalty against the company, one of the largest amounts ever awarded in a civil patent-infringement lawsuit. Software firm Uniloc USA, Inc., had won damages from Microsoft in an earlier jury trial on the basis of claims that Microsoft had infringed on Uniloc’s security software patents.

Another patent-infringement suit involved Microsoft. A federal court in Texas in May ruled in favour of the Canadian firm i4i, Inc., which claimed in a lawsuit filed in 2007 that Microsoft’s Word software infringed on an i4i patent. (The technology involved XML, or extensible markup language, which was used in electronically encoding documents.) In August the court ruled that Microsoft should pay more than \$290 million in damages and issued an injunction that would prohibit

the company from selling versions of the Word program that contained the patented technology. Microsoft obtained a temporary stay of the court’s order and in September told a federal appeals court that the lower court had erred in interpreting i4i’s patent claim, but i4i told the appeals court that Microsoft had known about i4i’s patent before using the technology and had simply disregarded it. Microsoft lost its appeal and agreed to replace the infringing code in Word 2003 and Word 2007. The court ruling might force the software company to make technical changes to the next version of Word, planned for release in 2010.

Microsoft’s new search engine, Bing, won favourable reviews, but according to Irish Web-traffic-statistics firm Statcounter, Microsoft’s share of the American Web-search market remained under 10% and dwindled slightly in the months after Bing was launched, which left it in third place behind Google and Yahoo! Google’s U.S. market share grew slightly during the same period, to 80%. Worldwide, Google held about 90% of the search market.

Microsoft and Yahoo! formed a 10-year partnership to combat Google, but it was unclear how successful the companies were likely to be, given the market leader’s dominant position. Under the agreement, Microsoft was to provide Bing’s search technology on Yahoo!’s Web sites. The goal was to increase the number of people using the Yahoo! search service in order to boost revenue from the advertising that accompanied the search results. The agreement came about after Microsoft failed in its hostile bid to acquire Yahoo! in 2008 for \$47.5 billion (about \$33 per share). Microsoft eventually withdrew its offer, and Yahoo! replaced its CEO, cofounder Jerry Yang, who had reportedly opposed the acquisition unless Microsoft increased its bid to \$37 a share.

There were more delays in Google’s settlement with authors and publishers in a 2005 copyright-infringement case over scanned library books that were to appear online. Google’s original settlement called for Google to pay \$125 million to compensate authors and publishers of books that were still protected by copyright and to help locate the copyright holders for out-of-print books covered by the law. The U.S. Department of Justice (DOJ) raised legal and antitrust objections to the agreement on the basis of complaints that it gave Google too much power over copyrighted works. Amazon complained

that the settlement would give Google a monopoly over “orphan works,” copyrighted books whose owners could not be found, and would allow authors and publishers to set e-book prices—an extension of their influence in what was a key new business area for Amazon. There were also allegations that the agreement violated French law. The two sides in the copyright case—the defendant, Google, and the plaintiffs, the Authors Guild and the Association of American Publishers—negotiated a replacement agreement, which was awaiting court approval at year’s end.

In a related matter, Google acquired reCAPTCHA, a company that created visual puzzles to ensure that people and not automated bots (short for robots) were signing up for Internet services. Google sought to adapt the technology to improve optical character recognition (OCR) for out-of-copyright books that it scanned and offered for downloading. Some of the one million books that were already available contained errors that were traceable to flaws in OCR.

Personal Computers. The PC industry waited for signals that the recession was over, but the outlook was not good in the first part of the year. Research firm IDC said that worldwide PC shipments were down 2.4% in the second quarter from a year earlier, and the value of PC shipments dropped about 19%, in part because of price discounting. It was hoped that the year-end holiday season would signal the return of better economic times—and there were early indications that could be true. In the third calendar quarter of the year, all PC companies (with the exception of Dell) reported rising sales. Late in the year, according to IDC, PC maker Acer replaced Dell as the second-ranked PC market-share holder, with 14% of the worldwide market. Hewlett-Packard remained number one, with just over 20% of the world PC market. Apple boosted its U.S. market share with record nonholiday sales in the third quarter, but the Macintosh remained a minor player internationally.

Netbooks were the fastest-growing PC category and were seen as bridging the gap between smartphones and laptop computers. Netbooks were small notebook computers with slower processors, smaller screens, shrunken keyboards, and lower-capacity disk drives that nonetheless could handle Internet browsing and routine computing tasks. They were aimed in part at users who were comfortable with using online applications for common productivity

tasks, such as document or spreadsheet creation. There was concern in the computer industry, however, that netbooks simply represented a new, less-expensive product category and that their sales would cut into sales of traditional laptop PCs.

Computer manufacturers experimented with a PC even smaller than a netbook but larger than a smartphone—called a “mobile Internet device” or “smartbook.” Designed to fit in a pocket or purse, it was intended for e-mail or Web browsing via cellular network or Wi-Fi Internet connection.

Google, which already made the Android OS used on some cell phones, declared that it would compete with Microsoft and Apple in the market for PC operating systems. Google planned to challenge the Windows and Mac OS X operating systems, using an extension of its Chrome Web browser technology in a product that it expected to introduce in late 2010. As a result, Google CEO Eric Schmidt resigned in August from Apple’s board of directors.

Companies. Steve Jobs, the charismatic Apple CEO and cofounder who had been given credit for Apple’s dominant position with the iPhone and iPod, returned to his job after having taken a medical leave of absence for much of the year. During that time he had a liver transplant that was needed because he had suffered complications from pancreatic cancer. His return was considered likely to reassure Apple shareholders who were concerned that Jobs was an irreplaceable part of Apple’s financial success. Apple in August introduced an undramatic upgrade to its Macintosh operating system, called Mac OS X Snow Leopard; it incorporated many small improvements rather than high-profile changes.

Oracle continued its ambitious growth plans in the software industry, which had resulted in the purchase of more than 40 companies in four years. Oracle’s plan to acquire Sun Microsystems, a computer hardware and software firm, for \$7.4 billion was announced early in the year. Analysts said that the deal would make Oracle more competitive against IBM in the corporate computing market. Oracle’s plan was delayed when the European Commission decided to extend its investigation of the acquisition’s ramifications. EU officials expressed concern that the acquisition of Sun by Oracle, one of the world’s largest software firms, could reduce competition in the market for database software. The delay was unexpected because the

U.S. DOJ had already approved the transaction. Oracle CEO Larry Ellison said that he was eager to complete the acquisition because, he said, Sun was losing \$100 million a month.

Intel appealed a \$1.45 billion antitrust fine levied against it by European Union regulators, asking that the fine be overturned or reduced. Intel was accused of having provided rebates to some PC makers who were heavy users of Intel chips and of having rewarded them for delaying the production and release of PCs using chips from Intel competitor Advanced Micro Devices (AMD), which filed a related lawsuit in 2005. Intel maintained that AMD was not hurt by Intel’s practices.

Late in the year, Intel agreed to pay \$1.25 billion to settle all antitrust and patent claims made by AMD. AMD in turn agreed to withdraw its worldwide regulatory complaints about Intel’s alleged pressuring of computer makers to use Intel chips instead of those from AMD. The two companies also agreed to a five-year cross-licensing of each other’s patents, a potentially large benefit to AMD. It was unclear how the settlement would affect the ongoing government antitrust actions against Intel in Europe, Asia, and the U.S., although it would end private antitrust cases pending in the U.S. and Japan.

Computer storage firm EMC Corp. paid \$2.4 billion to acquire Data Domain, which had “data deduplication” software that helped corporations to sharply reduce the amount of computer storage they required. The technology altered the practice of storing multiple versions of a file that had only minor variations; instead, a single copy of the file was stored once and the minor changes were stored daily.

Adobe Systems, known for its Photoshop and document-reading software, bought Omniture, a Web-traffic-analysis firm, for about \$1.8 billion. Omniture’s software was designed to facilitate online marketing, while Adobe’s focus was on software to create online and offline content.

Cisco Systems was in the process of acquiring Tandberg, a Norwegian videoconferencing company, for \$3.4 billion after initially having bid \$3 billion. Tandberg sold videoconferencing equipment and software that could make connections between different types of video equipment. Hewlett-Packard said that it would acquire network equipment company 3Com for \$2.7 billion in order to compete more effectively with Cisco, the networking market leader.

Dell acquired Perot Systems for \$3.9 billion in an effort to extend its reach into corporate computer services, an area where it competed with IBM and Hewlett-Packard. Texas-based Perot Systems, which was founded in 1988 by businessman H. Ross Perot, a former U.S. presidential candidate, provided services ranging from data centre management to consulting.

Legal opposition was resolved to allow eBay's \$2 billion sale of the majority interest in Internet phone service Skype to a consortium of investors. Copyright lawsuits had been filed in British and American courts by the Skype founders, who sold Skype to eBay in 2005. The founders accused eBay of having violated copyright by changing and sharing key software code associated with the Skype service, which consisted of free Internet-based voice and video messages between users of Skype software on computers and smartphones and of for-pay calls from Skype software to conventional landline and cell phones. eBay settled the lawsuits filed by the Skype founders by giving the founders a 14% ownership position in Skype and two seats on Skype's board of directors. In return, the founders were to transfer to Skype the intellectual property that was the basis for the lawsuits. Skype was acquired to help eBay connect buyers and sellers via Internet phone service, but analysts said that Skype never fit in with eBay's business.

There was an unexpected new development in a legal issue that had swept through the computer industry over the previous several years: the illegal backdating of stock options that led to regulatory investigations of more than 100 companies and the conviction of some executives on criminal charges. A federal appeals court overturned the 2007 conviction of Gregory Reyes, the former CEO of computer data centre supplier Brocade Communications Systems, citing improper actions by prosecutors. He had been sentenced to 21 months in prison and a \$15 million fine for illegal backdating of stock options to increase employee pay, but in 2009 he faced a new trial. Reyes had resigned from Brocade in 2005 after accounting problems were connected to the stock-option grants. Prior to the investigations, it had been common practice in some corporations to backdate the grant date of stock options to a day when the stock price was low, which presumably would increase the value of the options when they were eventually exercised at a higher price. While not

illegal in itself, the practice required a special accounting treatment to avoid artificially increasing company profits, a rule not always followed.

Some sizable layoffs were announced late in the year. AOL said that it would eliminate 2,500 jobs, or one-third of its workforce, as part of its spin-off from media company Time Warner Inc. The spin-off reversed the highly publicized but largely unsuccessful merger of "old" and "new" media firms nine years earlier. Applied Materials, which made equipment used in the manufacture of semiconductors, disclosed plans to cut 1,300–1,500 jobs, or 10–12% of its total employment. Video-game maker Electronic Arts announced that it would eliminate 1,500 jobs, or about 17% of its workforce.

Security. Computer security experts said that the risks from hackers were changing. There was a decline in attacks on security flaws in the ubiquitous Microsoft Windows OS, which had been made more impervious to attacks. Instead, hackers were shifting to attacks on security holes in other programs found on many PCs, including the Microsoft Office software package, Adobe's Flash Player (used to display video animations), and Apple's QuickTime video player software.

In addition, hackers increased the number of attacks on corporate Web sites, either to steal information or to convert legitimate Web sites into distribution points for malicious software that could take over PCs. The theft of data and intellectual property via Web site break-ins reached a value of more than \$1 trillion in 2008, the security firm McAfee said. Harder to calculate was the damage done by armies of PCs that were secretly taken over and turned into botnets (groups of computers used for other hacker attacks).

A hacker in one of the largest identity-theft cases in U.S. history pleaded guilty in late August and faced up to 25 years in prison. It was a turnabout for Albert Gonzalez of Miami, who had been arrested in 2003 but was not charged because he had become a government informant in the case. Among other charges, Gonzalez and two cohorts in 2009 stood accused of having used a laptop computer to pick up wireless data signals in order to access credit card and debit card numbers for more than 40 million accounts from major retailers, including T.J. Maxx, Barnes & Noble, Sports Authority, and OfficeMax. Just days before his guilty plea, Gonzalez was indicted in another hacking case, the

theft in 2007–08 of more than 130 million credit card and debit card numbers from New Jersey payment processor Heartland Payment Systems and others.

One of the most infamous Internet sources of pirated movies, music, and video games, the file-sharing service the Pirate Bay, was to be converted to a legitimate business after being acquired by the Swedish firm Global Gaming Factory for \$7.75 million. The Pirate Bay had an estimated 20 million users worldwide, but it ran aground in early 2009 when a Swedish court convicted its three founders and one of their investors of copyright law violations. Each was sentenced to a year in prison, and they were collectively fined \$3.6 million in damages. Later the three founders were threatened by a Dutch court with \$9 million in additional fines unless they removed links on the Pirate Bay service to copyrighted material owned by a group of Dutch musicians and filmmakers. The founders claimed that they had no power to do so because they were no longer affiliated with the company, which was now owned by Riversella Ltd. of the Seychelles. Questions remained about how the Pirate Bay could be turned into a legal business without either losing its file-sharing audience or violating copyrights.

Data security was a big issue in negotiations between the U.S. and the EU over sharing banking data across country lines to help fight terrorism. The issue arose when it was announced that the database that enabled the financial tracking was being moved from the U.S. to The Netherlands, which brought into play European data-privacy rules that more tightly controlled the sharing of information about trans-Atlantic financial transactions. An interim one-year data-sharing agreement was in the works, but critics questioned its legality. Meanwhile, U.S. Pres. Barack Obama's administration announced that it would devote more attention to cybersecurity to protect an American computer infrastructure that was vulnerable to foreign attack. Theft, alteration, or destruction of data could reduce public trust in information systems.

Microsoft joined a small number of companies that provided antivirus software free instead of selling it. Observers stated that Microsoft's Security Essentials product was not so much an effort to steal business from for-pay antivirus-software companies as it was an attempt to prevent virus attacks among Windows users who did not take proper

security precautions. Adobe and security firm McAfee said that they would adapt digital-rights-management software—long used to protect digital music from unauthorized use—to protect corporate documents from unauthorized viewing. Access to documents would be controlled by the level of security classification they carried.

Broadband. Broadband speeds improved worldwide. A university study sponsored by Cisco Systems found that the best-performing broadband connections (based on download and upload speeds and the time it took to get an online connection) were in South Korea, Japan, and Sweden. In rankings of both broadband performance and market penetration, the leaders were South Korea, Japan, and Hong Kong. As part of the U.S. government's economic stimulus plan, the Departments of Commerce and Agriculture were to award \$7.2 billion in broadband stimulus grants beginning in 2009.

Broadband adoption also sparked discussion of fair-use policies. The Obama administration's new FCC chairman, Julius Genachowski, claimed that "net neutrality" would be the federal government's policy toward the Internet. Net neutrality, as advocated by Web companies and consumer groups, would require that all data flowing over the Internet be treated equally. That ran counter to the wishes of some cable-television and telephone companies that wanted to provide different priorities for broadband Internet traffic depending on how much was paid to transport the data. Net neutrality also affected the free flow of information, because it was designed to prevent unpopular views from being blocked by data-transmission companies. Genachowski affirmed that wireless data carriers should be held to the same network-neutrality standards as wired carriers, a situation that did not exist currently.

Another federal agency, the Federal Trade Commission, imposed new regulations on bloggers, those who voiced their opinions online on Web logs. Under updated federal rules covering endorsements and testimonials in advertising, bloggers and others who posted product reviews online would be required to disclose whether they were paid for the reviews in money or free merchandise. The rules were updated because advertisers were believed to be using paid endorsements on blogs and social networks to promote their products under the guise of noncompensated personal recommendations.

Technology. The blurring of the distinction between television and Internet services continued. American viewing of TV shows and movies over the Internet—using a process called streaming video that allowed content to be watched but not downloaded intact—more than doubled from 2008, according to a study by market research firm Ipsos. Germany and Britain planned hybrid TV and Internet services. German public broadcasters planned to let viewers catch up on previous episodes of TV shows via computer Internet connections. The British system would go farther by combining digital TV broadcasts with a companion Internet service that included special TV content.

Renting movies online became an alternative to renting movies on DVD. Netflix, Amazon, and Apple all offered online movie rentals, and Google's YouTube offered some older movies free. Google had experimented with video rentals but stopped offering the service after it bought YouTube.

Cloud computing—providing computing power to customers over the Internet—continued to gain traction in the corporate world, despite some embarrassing setbacks. Cloud computing could be used to develop products on someone else's computers (platform as a service), to access software such as e-mail or databases run on others' computers (software as a service), or to use network equipment or data centres operated by others (infrastructure as a service). Some corporations considered cloud computing to be less expensive and easier to scale up than self-run computing operations.

Cloud computing had its problems, however. When a Microsoft-run remote

server for T-Mobile failed, users of T-Mobile Sidekick phones were cut off from Internet services such as e-mail and Web browsing. When Microsoft restored the server, part of the data—phone numbers, photos, calendars, and other information—was inadvertently corrupted. It was unclear how many of the one million users of Sidekick phones were affected.

Google also had cloud problems when a computer error redirected some of its Web traffic through Asia, creating data congestion that slowed or stopped Google online services such as e-mail, calendars, and office-productivity software for some 14% of its users. The significance of the interrupted Google service was that Google accounted for 5% of all Internet traffic. In a separate incident, Google's Gmail suffered an outage that affected the majority of the service's approximately 146 million worldwide users.

China demanded that all new PCs sold in the country be outfitted with Internet-filtering software preinstalled by computer manufacturers. In the face of computer industry opposition and Chinese citizen protests, however, Chinese officials softened the requirement to apply only to PCs in schools and public places such as Internet cafés. The software, called Green Dam-Youth Escort, was ostensibly developed to block pornography and violence on the Internet in an effort to protect children, but it had the capability to block any content that Chinese officials designated as undesirable. PCs would receive automatic downloads of updated lists of prohibited content, and Chinese hackers reported that the lists included political topics. (STEVE ALEXANDER)

The **WHITE HOUSE** released a groundbreaking report on **CLIMATE CHANGE**.

GEOLOGY AND GEOCHEMISTRY

The first Epstein Medal for innovation in geochemistry was awarded to John Eiler at the 2009 Goldschmidt Conference in Davos, Switz. This medal celebrates the pioneering research of the late Samuel Epstein, a geochemist perhaps most famous for his calibration of oxygen isotope distributions between carbonates and water, and thus for initiating the field of deriving paleotemperatures in marine sediments and ice cores. These paleotemperature determinations required the estimation of vanished reservoir information such as the oxygen isotopes of the ocean from which marine organisms grew. Eiler, a geologist from the California Institute of Technology, developed an expanded technique that involved the measurement of “carbonate clumped isotopes,” which considered the distribution of oxygen and carbon isotopes among element sites in carbonate minerals. This distribution is temperature-sensitive and independent of the composition of the host medium, such as seawater. Eiler’s acceptance lecture presented new data extending his previous findings that many carbonates and carbonate-bearing minerals follow a single temperature-dependent calibration of the clumped isotope thermometer. He outlined the technique’s applications to a variety of problems involving crustal rocks down to depths of 10 km (about 6 mi), including geotherms (mapped lines of equal temperature within Earth), fault friction, fossil extremophiles, and the genesis of oil, gas, and coal.

Two papers in 2009 provided geological evidence that could aid in under-

standing the future behaviour of the West Antarctic Ice Sheet (WAIS). For about 30 years, scientists had recognized that this ice sheet was vulnerable to abrupt collapse, which could potentially increase global sea level by up to 7 m (23 ft) and possibly devastate the economies of many megacities. Sediments 600 m (about 2,000 ft) thick in drill cores from the seafloor 850 m (about 2,800 ft) below the floating Ross Ice Shelf revealed the first comprehensive record of the growth and collapse of WAIS during the past five million years. A team of 56 scientists led by sedimentologist Tim Naish of the Antarctic Research Centre in Well-

ton, N.Z., identified 38 sedimentary cycles, each of about 40,000 years’ duration, in good accordance with the same cyclicity recorded in marine-isotope records of global ice volume and mean deep-sea temperatures. A twin paper by earth scientist David Pollard of Pennsylvania State University and Robert M. DeConto of the University of Massachusetts compared the geologic data with a new model designed to simulate the oscillations of the WAIS; the results were in good agreement, which enhanced the prospects for prediction.

Japan’s National Institute for Materials Science (NIMS) continued to explore the geochemical hypothesis put forth by NIMS emeritus fellow Hiro-moto Nakazawa that life on Earth evolved from biomolecules formed by meteorite impacts in early oceans. Recent research about the composition and temperature of Earth’s early atmosphere had refuted the relevance of previous experiments devoted to the generation of organic compounds in gas mixtures that simulate the planet’s early atmosphere. NIMS materials scientist Toshimori Sekine and his colleagues published results of a new approach in 2009. Sekine conducted innovative shock-wave experiments by using a propellant gun that accelerated

US Geological Survey

a stainless-steel disc into a composite sample simulating the components of meteorites, the ocean, and the atmosphere. High-speed impacts generated extremely high pressures and temperatures within the sample for a fraction of a second. Analysis of the shocked samples by chromatography-mass spectrometry established the presence of minute quantities of an amino acid, four types of amines, and six types of carboxylic acid. The experiment confirmed that organic molecules could be generated as proposed by Nakazawa's "big bang" hypothesis for the birth of life.

Meteorites may have been influential in generating life on Earth more than four billion years ago. Since then, however, impacts, such as the one many scientists contend caused the extinction of dinosaurs 65 million years ago, have destroyed life. In 2009 American geoarchaeologist Douglas Kennett of the University of Oregon at Eugene with seven coauthors from several universities published persuasive evidence linking a cosmic impact to megafaunal extinctions and abrupt ecosystem disruptions at the Younger Dryas boundary about 12,900 years ago, a time when Earth was emerging from the last glacial period. The boundary was marked in North America by a widespread layer of black sedimentary rocks covering the bones of many large fauna (including mammoths); such remains were not found above the layer. In addition, the layer contained billions of nanometre-sized diamonds, most of which were encapsulated within carbon spherules. Although some independent experts remained unconvinced that these particles really were diamonds, new evidence indicating that they were shock-induced diamonds appeared definitive. The presence of particulate carbon and grapefruit-sized clusters of soot was consistent with the occurrence of intense wildfires, which were also associated with the asteroid-induced mass extinction of 65 million years ago. These facts supported the conclusion that the Younger Dryas Period began as Earth crossed paths with a swarm of comets.

Ancient sedimentary rocks contain what little evidence there is for the life forms that followed the early synthesis of organic chemicals. In 2009 Nora Noffke of Old Dominion University, Norfolk, Va., supplemented the evidence provided by rare fossil bacteria and stromatolites, which are reeflike

sedimentary structures composed of carbonates precipitated by bacteria. She systematized the criteria for the definition and identification of a distinctive group of textures in sandstones, called "microbially induced sedimentary structures" (MISS), with 17 individual morphologies at scales from 1 mm (0.04 in) to 1 m (about 3 ft). Their formation, established by comparison with the activities of cyanobacteria in modern tidal flats, occurred during periods of calm hydraulic conditions as the bacteria formed an organic meshwork of microbial mat that bound together fine sand grains. MISS were produced by interaction of microbiota with wave and current dynamics, and they suggest the presence of strongly seasonal paleoclimates. Extensive microbial mats grew over large areas of ancient shallow seafloors from at least 3.2 billion years ago until the present, and their fossil remnants promised to supplement the geobiological interpretations from the better-known stromatolites.

The need to monitor active volcanoes in order to provide reliable estimates of renewed activity to ensure safe evacuation procedures was emphasized by the eruption of Mt. St. Helens in 2004, nearly 25 years after the explosive eruptions of 1980. Computer scientist Wen-Zhan Song of Washington State University at Vancouver was the principal investigator for a project funded by NASA that lowered 15 robotic emissaries from a helicopter inside and around the crater of Mt. St. Helens in July 2009. The project (also supported by the Jet Propulsion Laboratory and the U.S. Geological Survey) was expected to provide a blueprint for the installation of sensor networks at other unmonitored active volcanoes. Such a plan could help determine reliable estimates for the evacuations of endangered populations. The battery-operated robots looked like microwave ovens on tripods, and each contained an earthquake-detecting seismometer, a GPS receiver to pinpoint location and ground deformation, an infrared sounder to sense volcanic explosions, and a lightning detector to detect ash-cloud formation. The robots communicated wirelessly with one another and with NASA's Earth Observing Satellites, thus providing a low-cost sensor network that could operate in harsh conditions. Similar sensor webs were also planned for the exploration of other planets with hostile environments.

(PETER J. WYLLIE)

GEOPHYSICS

A damaging earthquake occurred near the Italian village of L'Aquila on April 6, 2009. The earthquake, which had a moment magnitude of 6.3, was felt throughout central Italy, killing nearly 300 persons and leaving more than 40,000 homeless. It was the deadliest Italian earthquake since the 1980 Irpinia event. The main shock was followed by thousands of aftershocks that were detected and located by the Istituto Nazionale di Geofisica e Vulcanologia (INGV), using a portable network of seismometers. The L'Aquila earthquake resulted from normal faulting on the northwest-southeast-trending Paganica Fault. It and several neighbouring faults are related to extensional tectonic forces associated with the opening of the Tyrrhenian Basin to the west.

Earthquakes that occur deeper than about 50 km (30 mi) have long been enigmatic to seismologists. At these depths the lithostatic pressure is large enough to inhibit brittle failure, or rock fracturing. In other words, rock at these and greater depths should undergo ductile, or plastic, flow in response to shear stress, yet earthquakes caused by rock fracturing have been recorded at depths as great as 700 km (435 mi). In January a team of geologists from Norway and Germany led by Torgeir Andersen presented new evidence in favour of a proposed mechanism for generating intermediate-depth earthquakes. They analyzed veins of rock that had been formed by flash heating in a Precambrian terrane in Norway. Known as pseudotachylytes, these rocks often occur near fault zones. In this case, geochemical analysis showed that the pseudotachylytes had initially formed at depths greater than 70 km (44 mi) before being exhumed to the Earth's surface. Using computer modeling, the authors explained their observations by means of a self-localized thermal runaway failure mechanism, a process by which the rocks are softened by released heat. Interestingly, this mechanism does not depend on the existence of free fluid in the pore spaces of rocks and therefore provided a distinct alternative to the dehydration embrittlement hypothesis that was currently favoured as a mechanism for generating intermediate-depth earthquakes.

Scientists from the United States reported the results from a seismic study of a region of the ocean's floor in which "black smokers" vent superheated water

Randy Korotev, Department of Earth and Planetary Sciences, Washington U., St. Louis MO.

Anne Hofmeister of Washington University places a sample of granulite into a laser-flash apparatus. Using the laser-flash analysis technique, her research provided insight into how heat behaves as it is conducted through rock.

enriched with dissolved minerals. Discovered in the late 1970s, these features had been extensively studied because they led to distinct biospheres that did not depend on photosynthesis. In 2003 scientists began monitoring the Endeavour segment of the Juan de Fuca Ridge in the Pacific Ocean off the coast of Oregon and Washington with a network of eight seismometers buried just beneath the seafloor. Using the high-fidelity seismic data, the scientists located several thousand small earthquakes that were associated with an axial magma chamber that drives the hydrothermal, or deep-sea, venting in the region. By modeling the seismic waveforms, the researchers were able to deduce the style of faulting responsible for the earthquakes. They concluded that cracking associated with the recharge of the axial magma chamber was the key mechanism for localizing and maintaining black-smoker vent fields over long periods of time.

Anne M. Hofmeister of Washington University in St. Louis, Mo., and her colleagues Alan G. Whittington and Peter I. Nabelek of the University of Missouri in Columbia announced new measurements of the thermal conductivity of rocks, and their findings had profound implications for crustal dynamics. The scientists used a new technique known as laser-flash analysis to determine the time that it took for heat to diffuse from one end of a rock sample to the other. This technique prop-

erly accounts for biases caused by radiative heat loss and allowed for accurate measurement of the drop in conductivity as the sample was heated. The results of these experiments showed that thermal conductivity was reduced by as much as 50% at the base of the crust compared with previous estimates. This in turn implied that the base of the crust was much hotter than previously thought and that the large amounts of granitic magmas observed in hot mountain belts such as the Himalayas could be generated without the radioactive heat production in the lower crust increasing. Instead, heat generated by the localized deformation of the crust may form the magmas. Another implication was that the positive feedback created by temperature-dependent conductivities may have been integral to the differentiation of the Earth into core, mantle, and crust from its original chondritic (meteorite-derived) composition.

Scientists studying Earth's magnetic field reported new constraints on the structure and dynamics of Earth's core. Bruce A. Buffett of the University of California, Berkeley, Jon Mound of the University of Leeds, and Andrew Jackson of the Institute for Geophysics in Zürich analyzed recently discovered magnetic field fluctuations that have periods on the order of decades. Although the magnetic field fluctuations were observed at the Earth's surface, they reflected processes of fluid dy-

namics that took place in Earth's liquid-iron outer core. The fluctuations were created by torsional oscillations that occurred with a cylindrical geometry. In contrast to the elastic restoring force responsible for seismic waves from earthquakes, a magnetic restoring force creates these hydromagnetic waves. Nevertheless, using methods that seismologists developed to study seismic waves, the scientists modeled the hydromagnetic waves to constrain the structure of the magnetic field in the outer core and the rigidity of the solid inner core. The "core-quakes" that generate the hydromagnetic waves appeared to originate near the equator of the inner core, but their precise source mechanism remained a mystery.

(KEITH D. KOPER)

METEOROLOGY AND CLIMATE

The first stage of the largest and most ambitious tornado field experiment in history ran from May 10 to June 13, 2009, across the U.S. Great Plains. VORTEX2 (Verification of the Origins of Rotation in Tornadoes Experiment 2) involved a roving armada of more than 50 scientists and 40 research vehicles, which included 10 mobile radars. The collaborative project was designed to explore the origins, structure, and evolution of tornadoes by collecting data from portable instruments placed near or inside the violent storms. Understanding how tornadoes form is expected to aid the ongoing improvement of severe weather warnings.

The original VORTEX program operated in 1994–95 in the Great Plains and documented the entire life cycle of a tornado for the first time in history. Applications of the findings from this project contributed to improvements in National Weather Service severe weather warning statistics. VORTEX2 was a \$11.9 million program funded by the National Oceanic and Atmospheric Administration (NOAA) and the National Science Foundation (NSF), 10 universities, and three nonprofit organizations. NOAA's National Severe Storms Laboratory (NSSL) provided leadership and equipment for the program, which was scheduled to operate its second and final field phase from May 1 to June 15, 2010.

Scientists hoped to use the VORTEX2 program to study five tornadic storms in 2009, but the year was a historically quiet one, especially during May. Early June, however, saw a marked increase in severe weather, and several VORTEX2

participants collected data on a significant tornado tracking across southeastern Wyoming on June 5. Researchers believed that this tornado became the best-documented tornado in history, with data collection beginning before the tornado developed and continuing through its lifetime. Mobile Doppler radars estimated winds of the EF2 tornado at about 210 km (130 mi) per hour. In addition to collecting data on the Wyoming tornado, the scientists investigated several supercell thunderstorms that did not spawn tornadoes. Collecting such data was important, because it could help researchers understand why tornadoes develop in some cases and not in others.

In other meteorological developments, the National Aeronautics and Space Administration (NASA) launched NOAA's latest geostationary satellite of the Geostationary Operational Environmental Satellites (GOES) project. GOES-O blasted off on June 27. Renamed GOES-14, it reached its final position in orbit on July 8. Hovering about 36,000 km (22,300 mi) above Earth, GOES-14 carried enhanced instrumentation to capture high-definition images of severe weather patterns and atmospheric conditions. Such images could help meteorologists develop more accurate forecasts and warnings for hurricanes, tornadoes, floods, and disruptive solar disturbances. GOES-14 joined GOES-13 to serve as a backup satellite until one of the operational

satellites (GOES-11 and GOES-12) experiences trouble.

Launched in February, NOAA-19, a polar-orbiting satellite, was part of the Polar Operational Environmental Satellites (POES) project. It orbits the planet at a height of about 870 km (540 mi), much lower than the GOES satellites. The POES project was designed to detect more subtle changes in atmospheric and oceanic conditions, and its satellites could be used for longer-range forecasts as well as research on climate change.

Regarding the impacts of climate change, on June 16 the White House released a landmark study on the effects of climate change on the United States. The 190-page report, entitled "Global Climate Change Impacts in the United States," asserted that climatic changes resulting from the increase in heat-trapping greenhouse gases were already occurring. The report was commissioned in 2007 and was written by a team of 31 climate scientists from the U.S. Global Change Research Program; it outlined climate-related trends and projections for the country, as well as for specific regions.

The report stated that climatic changes already under way in the United States were forecast to increase. Some of the predicted effects of global warming included rising temperature and sea level, retreating glaciers, longer growing seasons, and earlier snowmelt. The report also affirmed that the effects

of climate change would differ by region. For example, water stress from reduced mountain snowpack would continue to intensify, especially in the West and Alaska. Although agriculture was one of the sectors most adaptable to climate change, the report maintained that growing crops and raising livestock would become more difficult. Among other predictions, the report also anticipated that land along the Atlantic and Gulf coasts, Pacific Islands, and parts of Alaska would be at greater risk of sea-level rise and storm surge and that climatic changes would exacerbate other environmental problems and social stresses. Echoing other publications, the study noted that the pace of climate change would ultimately depend on levels of current and future greenhouse gases and particulates released into Earth's atmosphere. To solve this problem, many scientists called for a reduction in greenhouse gas emissions.

From August 31 to September 4, the World Climate Conference-3 (WCC-3) brought more than 2,000 climate scientists and decision makers from more than 150 countries to Geneva to establish a Global Framework for Climate Services. The WCC-3 summary reported that the goal of the conference, which was convened by the World Meteorological Organization (WMO) and its partners, was to ensure that every country was equipped to access and apply the array of climate prediction and information services made possible by recent developments in climate science and technology. The conference concluded that such capabilities fell far short of meeting present and future needs, particularly in less-developed countries.

In November released e-mails hacked from the Climate Research Unit at the University of East Anglia raised questions about the possible manipulation of the temperature related to global warming. Researchers countered stating that the e-mails were taken out of context.

On December 19, the Copenhagen United Nations Climate Change Conference ended with a nonbinding agreement to cap an increase in average global temperatures to below 2 °C (3.6 °F) to avoid the worst effects of climate change. To achieve this goal, industrialized countries would commit to implement economy-wide emissions targets. Developed countries agreed to support a goal of mobilizing \$100 billion annually by 2020 to address the needs of less-developed countries.

(DOUGLAS LE COMTE)

A National Severe Storms Laboratory Field Command Vehicle helps track a nearby tornado as part of the Verification of the Origins of Rotation in Tornadoes Experiment 2 (VORTEX2) in Goshen county, Wyo. The project was designed to examine the evolution of tornadoes in an effort to improve the ability of the National Weather Service to predict severity of these phenomena.

Education

SAFETY and **STANDARDIZATION** topped international concerns in education in 2009. In addition, American students **LAGGED** behind their Asian counterparts **ACADEMICALLY**, India began offering **FREE** elementary **EDUCATION**, China focused on rebuilding **EARTHQUAKE-RAVAGED** schools, and **H1N1 FLU** closed numerous schools worldwide.

PRIMARY AND SECONDARY EDUCATION

Repercussions were felt in 2009 when the results of the 2007 Trends in Math and Science Study (TIMSS)—assessments given to fourth- and eighth-grade students in 59 countries and 8 other jurisdictions—confirmed that students in Asia were at the top of the world in math and science achievement. The assessments, reported in late December 2008, showed that students in Hong Kong and Singapore were the top-performing fourth-grade math students in the world. Students in Taiwan, South Korea, and Singapore were the top eighth-grade math students, followed by students in Hong Kong and Japan. In science, students in Singapore were the top fourth-grade scorers, followed by Taiwan and Hong Kong. Students in Singapore and Taiwan had the highest average science achievement among eighth graders.

The 2007 TIMSS was the fourth international assessment of math and science made since 1995, and it was eagerly studied around the world as a way to gauge what could be expected of students and how to define “world-class standards.” This assessment, the largest gauge of student achievement in the world, was a project of the International Association for the Evaluation of Educational Achievement (IEA), headquartered in Amsterdam, and was administered by the TIMSS & the PIRLS (Progress in International Reading Literacy Study) International Study Center at Boston College.

The results were considered somewhat disheartening in the United States, which once again found itself trailing much smaller and poorer countries,

such as Latvia and Kazakhstan, though it was ranked above the average world performance. Interestingly, fourth and eighth graders in Massachusetts, which was one of only two states that participated in TIMSS as a separate jurisdiction, performed at levels comparable to students in Japan, Taiwan, and Hong Kong. The other state, Minnesota, also performed above the U.S. average.

The TIMSS results helped to spur a new round of American policy makers, including the newly elected U.S. president, Barack Obama, to call for American schools to adopt world-class standards. U.S. Secretary of Education Arne Duncan, the former chief executive officer of Chicago Public Schools, made the establishment of world-class standards and assessments a hallmark of the \$4.35 billion “Race to the Top” ini-

tiative that Obama established as a one-time fund to spur reform. States were encouraged to apply for Race to the Top grants if they aggressively pursued reform in accordance with the American Recovery and Reinvestment Act (ARRA) of 2009. The ARRA pumped money into the economy to stimulate recovery after the near collapse in 2008 of the financial system, which caused a deep recession that threatened to cut funds to schools across the country and severely cut education budgets in some states, notably California. Secretary Duncan urged states and schools “to take advantage of these short-term stimulus funds to invest in strategies that will drive improvements for years to come.”

In order to be eligible for Race to the Top money, states had to affirm that they were working to develop world-class standards and assessments, introduce data systems that would be able to track the progress of individual students and link those students to their teachers, allow the establishment of charter schools, and rehabilitate the country's 5,000 lowest-performing schools. Those were the schools that most observers agreed had been virtually untouched by the reforms ushered in by the 2001 revision and reauthorization of the Elementary and Secondary Education Act (ESEA, 1965) as the No Child Left Behind Act (NCLB). NCLB required that

Five students share a single textbook at a primary school in Harare, Zimb., one of many state schools suffering from severe shortages of educational materials.

Jekesai Njikizana—AFP/Getty Images

all states have standards, assessments, and a transparent reporting system with the aim of increasing student performance via increased accountability for schools, school districts, and states. Although the results of the long-term National Assessment of Educational Progress (also known as the Nation's Report Card), released in April 2009, showed that there had been considerable progress in reading and math for younger students as well as some narrowing of achievement gaps between different groups of students, the relative stagnation of state-by-state math scores on what is known as the "main NAEP," released in October, and the persistence of low-performing schools meant that educators and policy makers continued to search for new ways to spur improvement. Although there had been some discussion of reworking the federal ESEA legislation in 2009, the illness and death of Sen. Edward Kennedy (*see* OBITUARIES), one of the coauthors of the 2001 authorization, was one of many factors that pushed back the legislation to the 2010 legislative schedule.

While the United States struggled to provide its students with a world-class education, many countries still struggled to provide students with any education at all. UNICEF estimated in January that 101 million children—53 million girls and 48 million boys—of primary-school age had not attended school in 2007. Sub-Saharan Africa and South Asia were the regions with the most children out of school.

Following the near collapse of Zimbabwe's schools in 2008, UNICEF announced in September one of the biggest donor programs in five years, stating that Australia, New Zealand, and European countries had donated \$70 million to fund a program to get Zimbabwean students back in school and to provide them with textbooks. As schools opened in 2009, it was estimated that there was only about one textbook for every 10 students in Zimbabwe.

By far the country with the most children chronically out of school was India. A UNESCO 2009 report estimated that 9.6 million boys and 11 million girls in India did not attend school in 2007. Recognizing the scope of the problem, India's parliament passed and the president signed into law the previously controversial Right of Children to Free and Compulsory Education Act, 2009, which guaranteed all children between the ages of 6 and 14 the right to an elementary-school education with no fees. This specifically included children with dis-

abilities and older children who should have received such an education at a younger age. Indian policy makers continued to wrestle with the practicalities of how to make free education available to all children, particularly in rural areas, and agreed to a national-curriculum framework and appropriate training and education for teachers. They also established a higher-education commission to tackle issues of access and quality at the higher-education level.

Schools—particularly those serving girls—continued to be under siege from extremists claiming that Islamic law prohibited girls from being educated. In one particularly vicious attack in July in Afghanistan, a truck bomb killed 25 people, including 13 children on their way to school. By July 2009 it was estimated that more than 640 schools in Afghanistan and more than 350 in Pakistan had been bombed, burned, or shut down by extremists associated with the Taliban and al-Qaeda. Dexter Filkins of the *New York Times* chronicled an acid attack on schoolgirls by men on motorcycles that left one girl's face badly scarred. The story prompted readers to send donations, which Filkins used to buy a school bus to help protect the girls from further attacks. Of Shamsia Husseini, the girl scarred with acid, Filkins wrote: "My parents told me to keep coming to school even if I am killed," Shamsia said. She exhibited a perfect grasp of the situation, both hers and her country's: "The people who did this to me don't want women to be educated. They want us to be stupid things."

In Egypt top Muslim clerics and governmental officials worked to ban in schools the *niqab*—a face veil with only a narrow opening for the eyes that was often worn by women—which the sheikh of al-Azhar, Muhammad Sayyid Tantawi, the nation's top cleric, declared had nothing to do with Islam and was only a custom. There were reports that he planned to bar female students who wore face veils from entering the schools of al-Azhar, Sunni Islam's premier institute of learning.

China continued to deal with the aftermath of the devastating 2008 earthquakes that had destroyed or damaged more than 12,000 schools, leaving more than 5,000 students dead or missing and more than 500 students disabled. In the aftermath it became clear that many schools had been shoddily built in the 1990s following the extension of compulsory education. The central government set aside about \$1.2 billion,

Shah Marai—AFP/Getty Images

An Afghan woman visits Shamsia, who was a victim of an acid attack on schoolgirls by Islamist extremists in Kandahar, Afg., as she recovers from facial injuries in the hospital on Nov. 15, 2008.

according to *China Daily*, to shore up poorly constructed schools and, the newspaper reported, "provincial and city leaders have... been warned of the harsh consequences they face if any incident involving unsafe school structures occurs."

Many countries, particularly Mexico and the United States, struggled with the effects of the pandemic H1N1 flu (*see* Special Report on page 194), which caused the closure of many schools toward the end of the 2008–09 school year and threatened many schools in the fall of 2009. Schools in the United States were instructed to prepare materials for students to continue their lessons in the event that the schools had to close owing to illnesses, and trials for an H1N1 vaccine were quickly put into place in order to make vaccines available in October. Although 11 million doses were available in October, most doses were not available until later in the year.

The World Health Organization (WHO) identified schools as a key link in the spread of pandemics and issued guidelines urging schools to stock soap and other hand-washing supplies and encouraging students and staff to stay home if they felt sick. WHO stopped short of urging schools to close, however, noting that economists had estimated that such closures could result

in the need for as much as 16% of the workforce to stay home to take care of schoolchildren. Because this figure included many doctors and nurses with school-age children, WHO found the decision to close schools under these circumstances difficult. At the beginning of the 2009 school year, colleges and universities in the United States reported that hundreds of students had fallen ill with H1N1 flu. By December 26, it was reported that nearly 1,700 deaths had occurred in the United States. Public health officials said that figure was comparable to the usual number of deaths from the common seasonal flu; however, the H1N1 flu victims were more likely to be young and healthy.

HIGHER EDUCATION

The 2009 Condition of Education, produced by the U.S. Department of Education, reported that higher-education enrollment grew sharply from 2000–07, with total undergraduate enrollment in degree-granting postsecondary institutions increasing from 13.2 million in 2000 to 15.6 million in 2007. This compares with 7.4 million in 1970. As schools opened in the fall of 2009, however, there was widespread concern that the cost of college might cause a decline in enrollment, particularly since the near collapse of the financial system the previous year had caused many private college and university endowments to drop. In addition, cuts in state budgets meant that public colleges and universities cut programs and increased tuitions.

At the same time, many public-university systems began addressing the disparity in graduation rates among students. African American students were found to attain a baccalaureate degree at about half the rate of white students, and Latino students only at about one-third the rate. More than 20 university systems, including California State University, the University System of Maryland, and the State University of New York, pledged to halve the gap in graduation rates by 2013.

U.S. higher-education institutions continued to be a draw for international students, according to the Institute of International Education's report "Open Doors on International Educational Exchange," issued late in 2008. Almost 624,000 international students enrolled in the 2007–08 school year, a 7% increase over the previous year and an indicator that the difficulties of ob-

Facilities of Texas A&M University at the Qatar Foundation's Education City in Doha, Qatar, which housed branch campuses for six American universities.

taining student visas after the terrorist attacks of Sept. 11, 2001, had eased. The majority of international students hailed from India, China, South Korea, Japan, and Canada. This increase was matched by a sharp increase in students from the United States attending institutions abroad, with the United Kingdom, Italy, Spain, France, and China being the most popular destinations for American students.

Meanwhile, in the Middle East, a major effort to establish high-quality higher education continued with the September opening in Saudi Arabia of the King Abdullah University of Science and Technology, offering nine master's and doctoral programs in math, engineering, computer science, and bioscience to about 400 students. In establishing the university, a sprawling campus along the Red Sea, King 'Abd Allah said that he hoped it would "be a beacon of hope and reconciliation and will serve the people of the Kingdom and benefit all the peoples of the world." It was charged with developing the research that would solve problems related to energy production and drew considerable criticism from within Saudi Arabia because women on campus were permitted to drive automobiles and mingle freely with men and were not required to wear veils.

Qatar continued with its own ambitions to reestablish the Arab world as a seat of knowledge development. Sheikh 'Abd Allah ibn 'Ali Al Thani, vice president of education at the Qatar Foundation for education, science, and community development, said that "the leadership is using the country's gas

revenues to equip its people for the challenges of the 21st century." To this end the Qatar Foundation established Education City, an initiative that since 1998 had built and housed branch campuses in Doha for six American universities—Carnegie Mellon, Cornell, Northwestern, Texas A&M, Virginia Commonwealth, the first school at Education City, and Georgetown University's School of Foreign Service—as well as many other educational, technological, and technical institutions. By 2009 some 1,200 students were enrolled in these institutions, and the foundation was in discussion with Imperial College London to establish a branch campus at Education City within a few years. In March the Qatar Foundation also launched the Qatar Science & Technology Park (QSTP) for technological research and development.

International efforts toward standardization in postsecondary education continued in 2009 as part of the Bologna Process, which began as an attempt to create a way for European countries to recognize credits and degrees among European universities but had since grown to become an attempt for worldwide cooperation in higher education. In April a Bologna Policy Forum included not only the 46 participating Bologna Process countries but also many others, including China, Egypt, Israel, Japan, Tunisia, and the United States. The forum addressed such issues as the universal recognition of teacher qualifications; teacher, researcher, and student exchanges; and measures to ensure quality assurance.

(KARIN CHENOWETH)

The Environment

Less-developed and industrialized countries sparred over **EMISSIONS TARGETS** and financial assistance tied to **CLIMATE CHANGE**. Surveys of **EUROPEAN WADING BIRDS** showed that 50% are in decline; **AFGHANISTAN** established its first **NATIONAL PARK**; and the first **FIJI PETRELS** were rediscovered after 25 years.

INTERNATIONAL ACTIVITIES

The decision by EU governments to phase out all incandescent lightbulbs and low-efficiency types of halogen bulbs by 2012 was confirmed on March 18, 2009. From September 1 it became illegal in the EU to manufacture or import 100-W incandescent lightbulbs and all frosted incandescent lightbulbs.

On February 2 a directive came into force under which carbon emissions from all flights arriving at and departing from EU airports would be capped in 2012 at 97% of their 2004–06 levels and at 95% of those levels after 2012. The EU's carbon emissions trading scheme was challenged when on September 23 the European Court of First Instance (part of the European Court of Justice) ruled that the power to set car-

bon emissions limits rested with member states rather than the European Commission (EC). The court also ruled that the EC had exceeded its powers by reducing the caps for Estonia and Poland to levels lower than those the two governments had requested in their National Allocation Plans (NAPs), thereby imposing too heavy a burden on their industries. Six other member states had similar cases before the court.

On January 13 the European Parliament approved a new regime for granting market approval to pesticides and consented to a draft directive guiding their sustainable use. Pesticide application near schools, parks, or hospitals would be forbidden or severely restricted; aerial crop-spraying would be banned; and buffer zones would have to be established to protect aquatic en-

vironments and drinking water. About 22 pesticides would be removed altogether from the EU market—approximately 25% of all pesticides in use.

NATIONAL DEVELOPMENTS

Australia. In December 2008 Prime Minister Kevin Rudd announced a plan to combat climate change under which his country would reduce emissions by between 5% and 15% below 2000 levels by 2020 and would introduce a carbon-trading scheme in 2010. The scheme was strongly criticized by the energy-intensive industries, which claimed that it would reduce their competitiveness, but the climate campaigners and the Green Party thought that the targets were inadequate. In early May Rudd announced that the introduction of the trading scheme would be postponed for one year owing to the poor economic climate; however, the delayed scheme would aim to reduce emissions by up to 25% of 2000 levels. On August 13 the Senate defeated the plan by only 12 votes. The government returned the package to the Senate for a second time, but it was rejected again, in a vote of 41–33, on December 2.

China. In June it was reported that the Environment Ministry had halted construction on two dams in Yunnan province on the Jinsha River, a tributary of the Yangtze River. The projects had commenced without environmental assessments or ministry approval.

In early August 33 persons were admitted to hospitals in Hunan province and hundreds of others were found to have high levels of cadmium in their bodies following a series of leaks from the Changsha Xianghe chemical plant, a producer of zinc sulfate, in the city of Liuyang. One person had died in May and another in June. In the nearby town of Zhentou on July 30, approximately 1,000 people staged protests against the polluting chemical plant, and during the following weekend medical tests were carried out on nearly 3,000 Zhentou residents. The plant was closed in August following the demonstrations. The authorities promised to pay compensation for tainted farm produce and livestock that needed to be destroyed.

It was also reported in August that two environment agency officials in Wugang

On the shelf of an electrical supply store in central London, a sign warns of the approaching ban of incandescent lightbulbs. The ban went into effect across the European Union on September 1.

Leon Neal—AFP/Getty Images

Adult patients and children convalesce in a hospital after having become poisoned by emissions released from a lead smelter. The incident took place in August near the city of Xi'an in south central Shaanxi province, China.

City, Hunan province, were being investigated for suspected dereliction of duty over an incident in which 1,354 children suffered lead poisoning, evidently from a metal smelter. Two executives of the Wugang Manganese Smelting Plant had earlier been arrested and the smelter shut down. Earlier in August another smelter in Shaanxi province had been closed after more than 850 children fell sick with lead poisoning. On August 27 the Standing Committee of the National People's Congress announced its approval of a resolution calling for new laws to target energy savings and emissions reductions.

United Kingdom. On July 15 the government published a white paper outlining its plan to reduce U.K. greenhouse gas emissions by generating 40% of electricity from low-carbon sources by 2020. Renewables would account for 30% of total generating capacity, and nuclear and clean coal would make up the remaining 10%.

United States. In March John Holdren was confirmed by the Senate to be Pres. Barack Obama's science adviser and director of the White House Office of Science and Technology Policy. Holdren, originally a Harvard physicist, was the Teresa and John Heinz Professor of Environmental Policy at the John F. Kennedy School of Government at Harvard University and director of the Woods Hole Research Center in Falmouth, Mass.

In April the Environmental Protection Agency (EPA) said that it planned to declare that carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride

emissions contributed to air pollution that endangered public health and welfare. On June 23 the U.S. Chamber of Commerce filed a petition for a formal hearing on the decision. It filed a 21-page petition on August 25 asking for the EPA and environmental and business groups to undertake a credible weighing of the scientific evidence that global warming endangered human health. Not all members of the Chamber of Commerce agreed. Pacific Gas and Electric Co., Exelon, and the Public Service Co. of New Mexico resigned from the chamber in protest.

On June 26 the House of Representatives passed the American Clean Energy and Security Act by a margin of seven votes. The law, sponsored by Henry Waxman, a Democratic representative from California, and Edward Markey, a Democratic representative from Massachusetts, committed the U.S. to adopting clean energy sources and reducing emissions of greenhouse gases to 17% below 2005 levels by 2020 and to 83% below 2005 levels by 2050 through a cap-and-trade mechanism. The law would also require utilities to generate 20% of electricity from renewables by 2020, although they could meet one-quarter of the target through improved energy efficiency. Democratic Senators John Kerry (Massachusetts) and Barbara Boxer (California) drafted a Senate bill that was published at the end of September. It set a target of reducing carbon emissions by 20% below the 2005 level by 2020. The act allowed the U.S. to impose penalties on imports from countries that did not take steps to reduce emissions.

ENVIRONMENTAL ISSUES

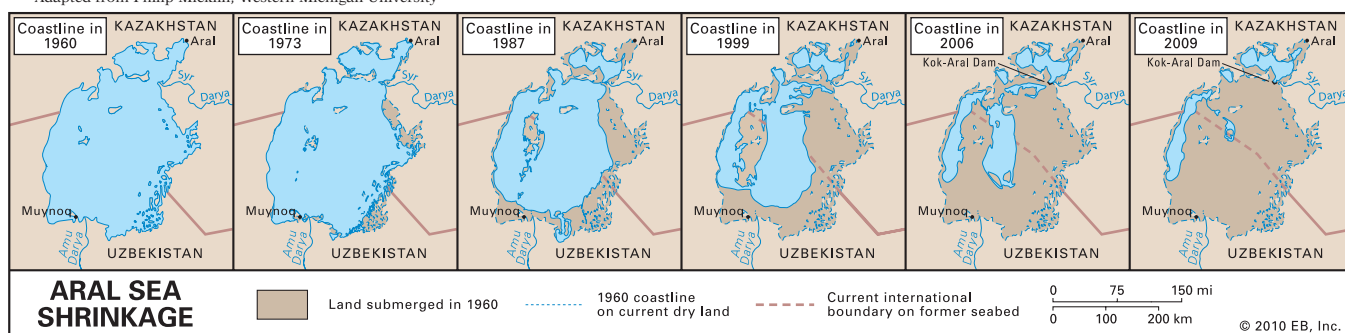

Climate Change. The first formal round of the UN Framework Convention on Climate Change (UNFCCC) discussions to prepare for the 15th Conference of the Parties in Copenhagen took place in Bonn, Ger., from March 29 to April 8, 2009. Delegates from 175 countries attended the discussions. LDCs called on industrialized countries to reduce their greenhouse gas emissions substantially and commit 0.5–2% of their GDP to fund mitigation and adaptation measures in LDCs. On March 31 Su Wei, leader of the Chinese delegation, said that success at the December Copenhagen meeting depended on whether developed countries were prepared to provide substantial funds and transfer climate-friendly technologies to LDCs.

A second round of talks was held in Bonn in June. India, supported by about half of the Group of 77 LDCs, proposed an amendment to the Kyoto Protocol that would require developed countries to reduce their emissions to 40% below 1990 levels by 2020, with indicative targets for each developed country. China and India, supported by the Group of 77, defeated an attempt by industrialized countries to offer curbed reductions while seeking solid commitments from LDCs. Subsequent rounds of talks were held in Bonn in August, in Bangkok in September and October, and in Barcelona in November; little progress was made, however, toward reconciling the differences between industrialized countries and LDCs.

The secretary-general's Summit on Climate Change took place in September at the UN in New York City. More than 100 government leaders attended and recorded their firm political will to reach a comprehensive agreement at Copenhagen, although they set no targets or deadlines. Chinese Pres. Hu Jintao said that his country would try to limit its emissions by a notable margin by 2020 by improving energy efficiency, but he set no target.

The first of three meetings of the Major Economies Forum on Energy and Climate, made up of the 17 countries with the largest greenhouse gas emissions, was held in Washington, D.C., on April 27–28. Delegates agreed that the meeting had been constructive but made no specific recommendations. The second meeting took place in July at L'Aquila, Italy, alongside a Group of Eight (G8) summit. On June 30, ahead of the meeting, India's environment and forests minister, Jairam Ramesh,

Adapted from Philip Micklin, Western Michigan University

Since 1960 the areal extent of the Aral Sea, once the world's fourth largest lake, has shrunk by over 74%. The shrinkage of the lake was caused by irrigation projects along the valleys of two of the lake's tributaries. Over the course of 50 years, these projects caused the loss of more than 90% of the lake's volume.

relied his country's determination not to commit to making any quantifiable reductions in greenhouse gases. Delegates agreed that the global average temperature should not be permitted to rise by more than 2 °C (3.6 °F), and G8 leaders pledged to reduce their greenhouse gas emissions by 80% by 2050. Russia immediately rejected that target. Arkady Dvorkovich, an economic aide accompanying Russian Pres. Dmitry Medvedev to the summit, said that for Russia the figure "is unacceptable and likely unattainable." He also stressed that Russia would not threaten its economic growth by agreeing to emissions cuts. The U.S. and the EU also urged LDCs to commit to a 50% cut in emissions by 2050, but the LDCs rejected this proposal. At the third meeting, held in Washington, D.C., in September, the U.S. and other industrialized countries said that they wished to abandon the Kyoto Protocol in favour of an Australian proposal. This proposal, which was strongly opposed by India, demanded that all countries, regardless of their level of development, commit themselves to timetables for reducing emissions by stated amounts and that reductions begin by 2020.

On June 10 Japanese Prime Minister Taro Aso announced that by 2020 Japan would cut emissions to 15% below 2005 levels, amounting to a reduction to 8% below 1990 levels. Following the August election victory of the Democratic Party of Japan, the new prime minister, Yukio Hatoyama, said that Japan would instead aim for a 25% reduction below 1990 levels by 2020, provided there was an international agreement that included India and China.

During the year several cost estimates for adapting to climate change were published. In 2007 the UNFCCC had calculated an annual cost of \$49 billion to \$171 billion. A study published on

Aug. 27, 2009, by the London-based International Institute for Environment and Development and the Grantham Institute for Climate Change at Imperial College London estimated that when the effects on various key economic sectors were taken into account, the total might be two to three times higher. On September 1 a UN report from the World Economic and Social Survey said LDCs would need \$500 billion–\$600 billion annually from industrialized countries, or about 1% of their GDP. In contrast, the preliminary findings from a World Bank study suggested that the cost to the LDCs might amount to \$75 billion–\$100 billion annually from 2010. On September 2 the Department of Environmental Economics and Management at Renmin (People's) University of China in Beijing reported that the cost of reducing China's emissions would reach about \$438 billion per year within 20 years. The report also said that developed countries would have to bear much of that cost.

A significant number of scientists expressed their disagreement with the appraisal of global climate given by the Intergovernmental Panel on Climate Change (IPCC). On Dec. 11, 2008, during the Poznan meeting, the U.S. Senate Committee on Environment and Public Works published a minority report in which more than 650 scientists disagreed with the IPCC assessment of climate change. On Feb. 12, 2009, the Committee of Geological Sciences of the Polish Academy of Sciences issued a statement saying that recent global climate change was part of an entirely natural climate cycle. They agreed, however, that the increase in the atmospheric carbon dioxide concentrations was partly due to human activity and that these emissions should be reduced while sustainable economic

progress is maintained. The 2009 International Conference on Climate Change, sponsored by the Heartland Institute and occurring March 8–10 in New York City, was attended by about 800 scientists, economists, legislators, policy activists, and journalists. Keynote speakers included Vaclav Klaus, president of the Czech Republic and of the EU, American astronaut Jack Schmitt, and Arthur Robinson, curator of a petition rejecting the assertion that global warming is caused primarily by human activity and constitutes a crisis. The petition was signed by more than 34,000 American scientists, more than 10,000 of whom had doctorate degrees.

In late November and early December, news organizations reported that the Climatic Research Unit (CRU) of the University of East Anglia (Norwich, Eng.) suffered an electronic break-in that resulted in the release of numerous private e-mail messages related to global warming research. Many skeptics of human-induced climate change maintained that some messages provided evidence that climate data were deliberately manipulated and exaggerated and dissenting research suppressed to serve an alarmist agenda. Many climate scientists answered these allegations by stating that the messages were taken out of context.

On December 7 the 15th Conference of the Parties was convened in Copenhagen. The goal of the conference was to develop a binding global agreement on greenhouse gas emissions that would replace the Kyoto Protocol. What was produced after two weeks of frenetic and heated negotiation was the recognition by the 193 attending countries of a nonbinding agreement to keep the rise in global average temperatures under 2 °C (3.6 °F). Attendees also agreed to provide \$30 billion in

short-term aid to less-developed countries until 2012.

Marine Pollution. In October 2008 a meeting of the International Maritime Organization (IMO) in London formally approved amendments to the UN MARPOL convention on ship-source pollution, confirming new global limits on the sulfur content of marine fuels. Sulfur in fuels would be reduced from 4.5% to 3.5% in 2012 and to 0.5% in 2020, subject to a review in 2018. The revised limits would come into force in July 2010. The meeting also produced tougher emission standards for nitrogen oxides for new marine engines and the final draft text of a new IMO convention on ship recycling. Under the convention, ships would have to hold inventories of all hazardous materials on board, and certain substances would be banned outright.

A HELCOM report published on August 24 stated that 210 illegal discharges of oil were detected in 2008, a 10% decrease from 2007. The improvement was attributed to increased surveillance and tighter rules.

Toxic Waste. It was reported in July that Brazilian police were investigating the discovery of 99 containers of hazardous waste in the port of Santos, near São Paulo, and at two other ports in the state of Rio Grande do Sul. The containers held approximately 1,400 tons of dangerous material from the U.K., but they were labeled as recyclable plastic. The Brazilian authorities named two Swindon, Eng.-based companies, Worldwide Biorecyclables and U.K. Multiplas Recycling, as the sources of the waste. U.K. Environment Agency officials arrested three men, who were later released on bail. Brazil formally accused the U.K. of having breached the international law forbidding the export of toxic materials. Liz Parkes, head of waste at the U.K. Environment Agency, said that the U.K. authorities were working with the Brazilians to arrange the return of the material. It was shipped back to the U.K. in August.

In September a report unveiled that Italian authorities were investigating a claim made by a member of the Calabrian mafia that the mafia had deliberately sunk ships carrying toxic wastes to evade laws on waste disposal. One wreck was located 30 km (about 19 mi) southwest of Italy, and images from a robot camera revealed yellow barrels with toxic warning labels.

At the end of the trial over the 2006 dumping of toxic wastes in Abidjan,

Côte d'Ivoire, Nigerian Salomon Ugborugbo, head of Tommy, a local company contracted to handle the waste, was sentenced to 20 years' imprisonment. Esoin Kouao, the shipping agent from Abidjan who recommended Tommy to Trafigura, the Dutch-Swiss commodities company that chartered *Probo Koala*, the ship carrying the waste, was sentenced to five years in prison. Trafigura and the captain of the *Probo Koala* were also facing criminal charges in The Netherlands for having illegally exported the waste. In September Trafigura agreed to pay more than \$46 million in compensation to people made ill by the waste, and each of the 30,000 victims would receive \$1,546. This payment was in addition to the \$200 million Trafigura had paid in 2007 to the Ivorian government.

Awards. The Asahi Glass Foundation awarded its 2009 Blue Planet Prize to Hirofumi Uzawa of Japan and Nicholas Stern of the U.K. Uzawa was honoured for his advocacy of the concept of social common capital as a theoretical framework for confronting environmental issues. Lord Stern was recognized for his report "The Economics of Climate Change," which he prepared for the U.K. government.

The seven 2009 Goldman Environmental Prizes were presented in April at a ceremony in San Francisco. Marc Ona Essangui of Gabon halted large-

scale deforestation and mining in the Congo basin rainforest; Syeda Rizwana Hasan of Bangladesh won legal battles to regulate the ship-breaking industry; Olga Speranskaya of Russia helped identify toxic stockpiles in the former U.S.S.R.; Yuyun Ismawati of Indonesia helped poor urban communities develop sustainable waste-management schemes; Maria Gunnoe of the U.S. halted environmentally damaging mountaintop mining in Appalachia; and Wanze Eduards and Hugo Jabini of Suriname shared the prize for helping tribal peoples secure the right to protect their lands. (MICAEL ALLABY)

WILDLIFE CONSERVATION

The intricate relationships between biodiversity conservation, ecosystem services, human livelihoods, and sustainable—or unsustainable—exploitation of wild resources were highlighted in the news in 2009. Perhaps no event was more visceral than a series of bushfires that began on February 7 in the Australian state of Victoria. The fires, thought to be deliberate acts of arson, were amplified by dry conditions of a seven-year drought to become the worst in Australia's history. They took a devastating toll on local wildlife and killed 173 people. (See Sidebar on page 367.)

A warning was issued in February through an assessment of the vulnera-

A koala receives a drink from Country Fire Authority firefighter David Tree amid the wildfires that ravaged Victoria, Australia, in February. The burning of more than 1,500 sq mi (3,900 sq km) of drought-affected land was thought to be the result of arson.

Mark Pardew/AP

bility of 132 national economies to the effects of climate change on their fisheries. Fourteen of the 20 most-at-risk countries were in Africa, along with Peru, Colombia, Bangladesh, Cambodia, Pakistan, and Yemen. The vulnerability indicator for each country was influenced by the results of predicted warming models, the importance of fisheries to economies and diets, and the country's limited capacity to adapt to potential impacts.

A study published in February concerning the shortfin mako shark (*Isurus oxyrinchus*) in the South Pacific Ocean revealed a "sexual line in the sea." Nearly all shortfin mako sharks caught east of 120° W by commercial fishing boats were female, whereas most caught west of this line were male. The western part was fished more heavily, and thus a disproportionate number of males may have been caught. Despite being classified as Vulnerable by the International Union for Conservation of Nature (IUCN), many individuals fell victim to accidental capture in drifting gill nets.

In April, Afghanistan's first national park was created at Band-e-Amir, a region of blue lakes separated by dams of travertine mineral deposits. Although much of the area's wildlife had been lost, some species remained—including the urial (*Ovis vignei*), the ibex (*Capra sibirica*), the wolf (*Canis lupus*), and the Afghan snow finch (*Montifringilla theresae*), the country's only endemic bird species.

Another April report revealed the reappearance of the blue whale (*Balaenoptera musculus*) in the North Pacific Ocean. It was thought that whaling activities up to 1965 had eliminated this population. An analysis of sightings that had occurred since 1997 near the coast of British Columbia and in the Gulf of Alaska, however, revealed that blue whales in these areas were part of an extant Californian population, which suggested that the migration pattern of an eastern North Pacific population may have resumed. These observations also suggested that the Californian population and the population historically inhabiting the area around the Gulf of Alaska could be one and the same.

In addition, a June report showed that the global whale watching industry had burgeoned over the past 10 years. Thirteen million people took part in whale watching in 119 countries and territories in 2008, generating a total expenditure of \$2.1 billion. The industry had grown at an annual rate of

Larry Wagner/AP

Researchers are dwarfed by the carcass of a blue whale that washed up on the coast of northern California near Ft. Bragg on October 20. The 21-m (70-ft) female was believed to have been struck by an ocean survey vessel a few kilometres from shore the previous night.

3.7%. It was estimated that 3,300 boat operators and other tourism officials offered whale watching and employed an estimated 13,200 people around the globe. The report affirmed that protecting whales had generated significant economic benefits to communities worldwide.

Two communities in Tanzania obtained the first Forest Stewardship Council certification for African forests in April. They developed a plan to harvest and sell African blackwood (*Dalbergia melanoxylon*), or mpingo, which was used to manufacture clarinets, oboes, and bagpipes, to international markets. The wood could fetch £13 (about \$19) per log—a considerable increase over the 5 pence (about 7 cents) previously received. Under a system of Participatory Forest Management, a number of Tanzanian communities took ownership of their forests. Provided that the forests were managed sustainably, these communities should profit from timber sales.

An expedition to Fiji in May rediscovered one of the world's most elusive birds. The Fiji petrel (*Pseudobulweria macgillivrayi*), classified by the IUCN as Critically Endangered, was formerly known from one specimen collected in 1855 on Gau Island. In 1984 a single adult was caught on Gau Island, photographed, and released. The expedition baited the sea 25 nautical miles south of Gau with a special food made from finely cut fish offal and fish oil. When cast into the sea, the mixture created a pungent oil slick that attracted the petrels. The expedition team saw eight individual Fiji petrels in 11 days.

Another study published in May revealed that 50% of the populations of wading birds in Europe, western Asia, and Africa had declined, and the pace

of falloff had accelerated. Their decline was linked to inadequate protection of key sites on their migratory routes. While wading birds used a network of protected areas in Europe, key sites elsewhere were not adequately protected. Wetlands along Africa's west coast, for example, had been affected by the construction of dams that drain wetlands and irrigation schemes that affect water flow.

Research published in September reported that a three-year search for the giant Chinese paddlefish (*Psephurus gladius*) failed to sight a single individual while conducting surveys over 300 mi (about 489 km). The IUCN classified the species, endemic to China's Yangtze River system, as Critically Endangered, and the last confirmed sighting occurred in 2003. Individuals born in the late 1980s and early 1990s may survive in the wild because the Yangtze River system has complicated habitats where paddlefish could hide. The upper Yangtze is probably one of the last places that the fish may survive.

Many Asian vulture species have been decimated by consuming the remains of livestock laden with diclofenac, an anti-inflammatory drug used to treat cattle. In September, however, about 200 bearded vultures (*Gypaetus barbatus*), or Lammergeiers, were seen in India in a remote part of Himachal Pradesh. Lammergeiers had previously been seen on India's border with China but not in such a large group or at so high an altitude. Lammergeiers were known for dropping the bones of the animals they consumed onto rocks in order to smash them open and access the marrow. Although Lammergeiers were not badly affected by diclofenac, their numbers had significantly dwindled in India.

(MARTIN FISHER)

Fashions

Trends such as **FAST FASHION**, high-low dressing, **POP-UP** shops, and the **TOSSED-OUT LOOK** were widely in evidence owing to the **RECESSION-BATTERED** global economy.

All sectors of the fashion industry were affected in the year 2009 by the recession as the prolonged global economic downturn dramatically curbed consumer spending on fashion and luxury products. Rather than shop, consumers worried about their finances. Conspicuous consumption, once perceived as “retail therapy”—or an entertaining distraction from daily life—became viewed as superfluous in the straitened economic times. A lengthy front-page *Women’s Wear Daily* (WWD) story published in January outlined the host of factors that had a negative effect on retail sales, including the dramatic rise in unemployment rates, as well as the “volatile stock market, food inflation, and the yo-yoing price of oil.”

For the fall 2009 collections staged (February 13–20) at Mercedes-Benz Fashion Week in New York City, attending fashion buyers representing upscale department stores reduced their order budgets by 20%, citing the “double-digit sales declines” that they had experienced the previous autumn. As WWD noted, “Depressing economic news . . . raised further concerns over whether consumers would even be shopping for clothes come fall.”

To support London Fashion Week (February 20–25), Boris Johnson, mayor of the city, joined forces with the London Development Agency in the allocation of £40,000 (about \$57,500) to fund the cost of airline tickets and hotel accommodations for 30 Middle Eastern buyers. The gesture was made in recognition of their “significant” and “growing” purchasing power.

By the summer, department stores and specialty stores were offering discounts earlier than expected owing to the “dismal sales.” According to the BBC, by autumn American retail sales had risen “by more than expected,” and Bloomberg reported that the retailer Saks Fifth Avenue—by reducing inven-

tories to “counter a sales decline”—announced an “unexpected” profit of one cent a share in the quarter ended October 31—“its first in more than a year.”

In Great Britain a Local Data survey revealed that during the first nine months of the year, 18% of women’s and children’s shops closed across the country. In the U.S. a number of established upscale boutiques went out of business, including the one on Park Avenue run by New York directional designer Linda Dresner; the store closed in December 2008. Luxury brands also reported steep sales declines. Compag-

Teenager Tavi Gevinson, whose blog Style Rookie became a popular destination for fashion tips, secured a front-row spot at the Mercedes-Benz Fashion Week in September.

Astrid Stawiarz/Getty Images

nie Financière Richemont SA—the Swiss luxury-goods company and owner of Cartier, Alfred Dunhill, and Chloé, among other premium labels—reported that fiscal first-half sales were down by 15% from the same period in 2008, and Burberry revealed that during that same March–September period, it experienced a 19% drop in profit. Ralph Lauren divulged that fiscal second-quarter sales were down 4% year-on-year “amid lower wholesale and retail sales.”

In October, LVMH Moët Hennessey–Louis Vuitton—the parent company of a host of brands that included Christian Dior, Louis Vuitton, and Fendi—released news that revenues over a nine-month period in 2009 had suffered a 6% fall year-on-year. Massimo Ferretti, executive chairman of Aeffe SpA, the esteemed Italian fashion group that operated Alberta Ferretti, Moschino, and Pollini, noted a 23.9% drop in first-half sales due to a “general decline in consumption.” Dolce & Gabbana announced its decision to reduce the price of fashion and accessories by 10–20%. This was achieved by working in a more cost-effective way with suppliers and manufacturers as well as by streamlining the “selection of hundreds of fabrics” to “dozens . . . in a more far-ranging palette.”

A legion of respected designers also declared bankruptcy. Italy’s IT Holding SpA—proprietor of Gianfranco Ferré and Malo knitwear—went into receivership, as did Christian Lacroix’s Paris couture house after 22 years of operation. On May 28 it was announced that cutting-edge 35-year-old Belgian designer Veronique Branquinho would close her company; she had already accepted a new role as creative director of Delvaux, the venerable Brussels leather-goods label. Besides numerous nonpayments for her spring-summer line, she experienced a “sharp drop” in orders for her autumn-winter collection; in 2008 she had staged a celebratory 10-year retrospective at the ModeMuseum (MoMu) for fashion in Antwerp, Belg. Yohji Yamamoto, the “elder statesman” of Japanese fashion, who founded his label in 1972, filed for bankruptcy protection on October 9, although an investor was in place to restructure the brand. On November 9, the same day that Luella Bartley celebrated master-

minding the decoration of London's Liberty department store's Christmas windows, she announced that her eponymous label would cease trading; though it was perceived that Bartley's label was thriving, her financial backer, Club 21, withdrew its investment. In 2008 she had reported a £9 million (about \$16.5 million) turnover and received the British Fashion Council's coveted Designer of the Year award.

Models' fees plummeted as designers cut back their budgets for once-lavish fashion advertising campaigns, and editorial opportunities lessened as the pagination of fashion magazines dramatically diminished because of "staggering" advertising cutbacks. Leading Condé Nast titles laid off staff, and quarterly magazines *InStyle Weddings* and *Time Style and Design*, devoted to chronicling the luxury market, halted publication.

Ultimately, fashion was about change, and financial hardship ushered in a new era of pragmatism. Rather than purchase monthly magazines, hundreds of thousands of readers logged on to style Weblogs, such as *The Sartorialist*, a chic street-fashion blog maintained by photographer Scott Schuman. Visited daily by 225,000 viewers, *The Sartorialist*, Schuman claimed, was popular because it afforded a "very authentic point of view." Its images provided visitors with "inspiration and ways to reinterpret the clothing they already have" or prompted them to "shop in their own closet," a phrase that became popular as the fashionable turned to their own wardrobes for style inspiration instead of buying new items. *The Sartorialist*'s visibility further increased after the publication in August of a 512-page best-selling Penguin paperback book entitled *The Sartorialist*, which showcased the blog's best images. Equally popular was Tavi Gevinson, a quirkily styled 13-year-old girl from Illinois, who daily flaunted and chronicled her favourite clothes on her *Style Rookie* blog. Gevinson was sought after by the paparazzi as she covered the spring-summer 2010 ready-to-wear collections at New York's Mercedes-Benz Fashion Week in September. She had just appeared in "Blog Off"—a four-page profile in issue two of *Love*, a new Condé Nast biannual fashion magazine—and on the autumn-winter cover of *Pop*, another biannual glossy. In February *Pop* publisher Bauer Media appointed Dasha Zhukova as its editor in chief. The attractive 27-year-old girlfriend of Russian oligarch Roman

Designer Beth Ditto favoured bold designs in the quirky collection she created for the full-figured woman.

Dave Benett/Getty Images

Abramovich also owned a Moscow contemporary art gallery and the Kova & T fashion label.

Fast fashion—inexpensive briskly produced merchandise that copies or interprets runway trends—became even more popular because of its accessible price and celebrity endorsements. On April 2 the British fashion chain Topshop opened its first flagship store outside the United Kingdom, in New York City. To celebrate the opening of the four-story, 2,323-sq-m (25,000-sq-ft) retail space, Sir Philip Green, the flamboyant proprietor of Topshop's parent company, the Arcadia Group, flew in Kate Moss to open the store. (The supermodel produced an eponymous Topshop line.) Green also hosted three lavish parties, including two at the restaurant Balthazar, in New York City's SoHo neighbourhood; performing there were singer-actress Jennifer Hudson, disc jockey Mark Ronson, and comedian Jimmy Fallon. The celebrities in attendance included actress Jennifer Lopez, designer Marc Jacobs, and Georgina Chapman, designer of the Marchesa fashion line.

In June, Beth Ditto, the feisty lead singer of the electro-pop group the Gossip, launched an eponymous line of designs for the plus-size British high-street brand Evans. Upon its debut, Ditto proclaimed to be "28 in age and dress size." For the 22-piece collection,

Ditto specifically created items that curvaceous women usually avoided, including dresses with thigh-grazing hemlines as well as those embellished with sequins and featuring polka dots. Doing so, Ditto prompted a debate about why more stylish clothes were not readily available for the generously sized figure.

Leading designers continued to cause retail sensations by producing low-priced limited-edition collections for high-street retailers. Within hours of the November 14 retail debut of Jimmy Choo's collaboration with the retail giant H&M, several styles of high heels—including suede shoe boots and gladiator heels—were sold out and were later bought on eBay for double their original price. The Choo multifaceted line—conceived by Tamara Mellon, the company's glamorous president—marked the shoe and accessories brand's first foray into clothing. The line included 1980s-inspired women's wear and slick menswear staples, including jeans and T-shirts as well as a slim-fit black suit.

U.S. *Vogue*'s June issue debuted Steal of the Month—a new section featuring fashion that retailed for under \$500. This reflected the plethora of quality fast fashion along with the demand for affordable clothes and also *high-low dressing*—mixing upscale clothes with chain-store merchandise to create an ensemble. The high-profile advocate of this method of dress was Michelle Obama. (See BIOGRAPHIES.) Unquestionably, the U.S. first lady proved the year's most influential fashion force, appearing in March on the covers of *New York*, *The New Yorker*, *People*, and *Vogue* magazines, in April on the cover of *O, the Oprah Magazine*, and in December on the cover of *Glamour* (the only first lady to earn that distinction), while her white one-shoulder inauguration ball gown by Jason Wu (see BIOGRAPHIES) influenced the shade and style of a number of gowns flaunted in February at the Academy Awards ceremony. Obama alternated pricey designer fashion—most often produced by designers who, because of their independently financed operations, were unable to generate costly advertising campaigns—with ensembles that mixed designer ready-to-wear with affordable clothes, notably Talbots dresses, Gap T-shirts, and cardigans by Liz Claiborne and J. Crew. Flaunting an array of cardigans with great flair during the Group of 20 London summit, Obama made the knitwear staple a "must-have" for spring. Her influence was demonstrated when the J. Crew cream "crystal constellation"

cardigan she wore in London during a visit on April 1 to Maggie's Cancer Caring Centre sold out on J. Crew's Web site, merely hours after she appeared in it. Several weeks later, however, the first lady's appearance at a Washington, D.C., food bank in a "high-low" combination of a J. Crew cardigan and casual capris paired with sneakers produced by the French fashion house Lanvin prompted objections when it was revealed that the footwear retailed for \$540.

Another fad resulting from the economic downturn was the proliferation of "pop-up shops." These fashion boutiques opened spontaneously in every major fashion capital as designers negotiated short-term leases, temporarily occupying storefronts vacated by bankrupt retailers. Affordable straw panama hats—which first appeared on the Gucci men's and women's ready-to-wear runways—became a ubiquitous street fashion trend.

Feisty prints and bright "feel-good hues" dominated the designer ready-to-wear collections and were introduced, it seemed, in an effort to spur purchases. Striking variations of leopard print conceived in bold shades proved to be the standout items on the runway of Christopher Kane, who produced his pattern upon Scottish cashmere

sweaters in yellow, orange, and baby pink; a "mad blue" one-shoulder dress featuring fuchsia-tipped black spots was noted by Style.com's Sarah Mower as a highlight in the Lanvin collection.

"Bazooka" pink, "Crayola-bright" lemon yellow, and kelly green dominated the 1980s-inspired autumn-winter collection of Jacobs, while "acid green" and "caution orange" defined Michael Kors's shredded fox winter jackets. Balmain's Christophe Decarnin debuted Swarovski-crystal-embellished peak-sleeved minidresses, a zipped miniskirt, and a bow-bedecked blouse in an arresting petrol blue. Conversely, a soft pastel green, one of Chanel's few deviations from black and white in its autumn-winter ready-to-wear line, was described by *Allure* magazine as the "color of the moment." That hue also appeared in Sublime Deco, an Art Deco-inspired Chanel costume-jewelry collection, and when it was reproduced as Jade—a limited-edition Le Vernis nail polish—the shade sold out.

A new grunge-era look also took hold. It was typified by the "tossed-out look" of sloppy-elegant separates conceived by New York-based Alexander Wang—who received the Swiss Textiles Award in November—and the tomboyish casual flair of MTV host Alexa Chung as she sported penny loafers with evening dresses.

A trio of fashion films also proved popular box-office attractions, includ-

Alexander Wang reinterpreted the grunge look for the 21st century at the spring 2010 Fashion Week in September.

ing *Coco avant Chanel* (*Coco Before Chanel*), a lushly costumed feature charting the early life and rise to fame of pioneering couturiere Gabrielle ("Coco") Chanel, as well as the documentaries *The September Issue*, which followed American *Vogue's* editor in chief, Anna Wintour, as she produced the September 2007 edition of the magazine, and *Valentino: The Last Emperor*. The latter chronicled the relationship of Valentino Garavani and his business partner, Giancarlo Giammetti. Though *Project Runway* had a yearlong absence from the airwaves—due to legal wrangling as it moved cable channels from Bravo to Lifetime—the show experienced a peak in its popularity, drawing a record-setting 4.2 million viewers. The hit hour-long weekly reality TV show was hosted by Heidi Klum (see BIOGRAPHIES), who set challenges for contestants in the quest to discover the next top designer.

Selma Weiser, the owner of Manhattan's Charivari fashion boutiques (which closed in 1999), passed away in June. She was also known for having taken pioneering steps to sell the designs of important Japanese and Belgian designers; at one time she employed a teenage Marc Jacobs as a stock boy. (BRONWYN COSGRAVE)

Health and Disease

Elucidation of the **HIV GENOME** structure revealed information about the virus's infectious nature. Government officials in The Sudan strengthened efforts to eradicate **POLIO**, while health ministries worldwide pledged their commitment to halting the spread of **TUBERCULOSIS**. Medical advances included the first-ever attempt to repair heart attack damage by using a patient's own heart **STEM CELLS**.

HIV and AIDS. In 2009 American scientists made significant progress in their understanding of how HIV infects humans. In August researchers at the University of North Carolina at Chapel Hill reported having decoded the structure of a complete HIV genome. Their analysis of the architecture of the virus's genome found that its RNA structure plays a key role in its infection cycle. The lead researcher said that the findings could help reveal how RNA genomes influence the behaviour of not only HIV but also other viruses. Prior to this, scientists had charted only small areas of the HIV RNA genome. The breakthrough could lead to the development of new

antiviral drugs, and the researchers were hopeful that their findings would also help to identify other functions of RNA in HIV.

An experimental vaccine thought to stop HIV from causing AIDS was mired in controversy after researchers revealed that their results were not as significant as they first reported. In September AIDS researchers released results from a six-year trial in Thailand of a vaccine that they said showed some promise. But anonymous researchers who were given confidential access to the results criticized those findings. At issue was a group of study participants that had been inappropriately counted in the results. The study's authors cited results for two groups,

one of which did not remain with the trial until its end. In their initial conclusion, the researchers reported that the vaccine appeared to be 31% more effective than a placebo. Others who saw the research believed that further analysis would show that the results were not statistically significant for the group that had received all six doses of the vaccine and remained in the study until its conclusion.

In a more encouraging development, access to HIV treatment continued to improve around the globe, particularly in parts of Africa. A report released in 2009 by the World Health Organization (WHO), the United Nations Children's Fund (UNICEF), and the Joint United Nations Programme on HIV/AIDS (UNAIDS) stated that the number of people receiving antiretroviral treatment in low- and middle-income countries in 2008 was 36% higher compared with the previous year. It also concluded that more than four million people were receiving the therapy, which represented an increase of 10 times the number of people who were using the medications just five years earlier. Much of the progress was reported in sub-Saharan Africa.

The discovery of a species of African chimpanzee susceptible to an AIDS-like illness could help scientists better understand how HIV attacks humans. In July scientists reported that the species developed the illness after being infected with a version of HIV unique to simians. In addition, in August scientists in Europe reported the discovery of a new strain of HIV-1, which was closely related to a strain of virus occurring in gorillas. The transmission of a simian immunodeficiency virus from gorillas to humans had not before been documented. The researchers believed that the jump to humans occurred as a result of people's having been in direct contact with infected ape blood, which was most likely to have happened while butchering apes or eating them. The three known and characterized strains of HIV-1 had previously been linked to chimpanzees, but their association with gorillas represented a groundbreaking discovery in HIV/AIDS research.

Polio. The government of The Sudan called for emergency measures in 2009 to stop a polio outbreak that was spreading across the Horn of Africa.

In August scientists at the University of North Carolina at Chapel Hill reported having decoded the structure of a complete HIV genome.

Joseph Watts and Kevin Weeks, UNC—Reuters/Landov

The outbreak had expanded to northern Sudan, Kenya, and Uganda, having been earlier limited to the western region of Ethiopia and to southern Sudan. The International Federation of Red Cross and Red Crescent Societies also sought emergency funding to battle the outbreak.

Officials said that eradication efforts fell short in stopping the spread of two strains of polio from the northern regions of India and Nigeria. The *New York Times* reported that many Muslims in those countries had refused to be vaccinated because of rumours that the vaccine, having been distributed by Western countries, was deliberately being used to make them sterile. Polio also reached Port Sudan, which was a cause for concern because many people had to pass through the area in their travels to Mecca. Persons going to Mecca were suspected of having caused the spread of the disease from Port Sudan to Saudi Arabia, Somalia, Yemen, and Indonesia between 2004 and 2006. Despite continued efforts, the disease still had not been eradicated in Nigeria, India, Pakistan, and Afghanistan. Officials also reported that polio appeared to be reemerging in Angola, Chad, Niger, The Sudan, and the Democratic Republic of the Congo. Rotary International and the Bill and Melinda Gates Foundation committed \$355 million to strengthening eradication efforts. Other significant funding came from Germany and the United Kingdom. Globally, the number of new polio cases in 2009 that had been reported by late December was 1,517, compared with 1,651 the previous year.

Ebola. In January the government of the Philippines reported what may have been the first known case of the Ebola virus's being transmitted from a pig to a human. A farmer thought to have come in contact with infected pigs tested positive for antibodies to Ebola-Reston virus. Later the government reported that four other people, including farmers and a slaughterhouse worker, had also tested positive for Ebola-Reston antibodies. The Philippine Department of Health said that the people who tested positive appeared healthy. Officials believed that direct contact with infected pigs was the underlying cause for the presence of Reston antibodies in all five individuals. Ebola-Reston was one of five known species of the Ebola virus. Studies of the Reston strain had shown that the virus can be passed to healthy humans with-

out resulting in illness. Its effects in other populations, including the elderly and women who are pregnant, were not known. To prevent the potential spread of the virus, the Philippine government ordered the slaughter of 6,000 pigs at a farm north of Manila.

Other Infectious Diseases. Health ministers from countries where drug-resistant tuberculosis (TB) was most prevalent agreed in April to increase efforts to fight the disease. At the centre of these agreements was their promise to invest \$15 billion to support TB-elimination efforts over the course of the following six years. WHO reported that the number of high-burden countries, in which at least 4,000 new cases of drug-resistant disease arose annually or in which one-tenth of the total number of new cases were drug resistant, reached 27 in 2009. These countries were affected in particular by extensively drug-resistant tuberculosis (XDR-TB). WHO's director general, Margaret Chan, said that the problem had become "too great." She explained that a united, global effort in fighting the epidemic was of utmost importance and required consideration on a political level.

The emergence at the border between Thailand and Cambodia of parasites resistant to the antimalarial drug artemisinin caused concern that global malaria-control efforts could face a

major setback. In a report released by WHO in February, agencies monitoring antimalarial drug efficacy said that artemisinin-resistant parasites were found along the Thai-Cambodia border. Combination therapies using artemisinin were considered extremely effective, with more than 90% of infected persons being treated successfully. The malaria drug resistance seen along the border, which was likely to have been fueled largely by the continued use of artemisinin alone rather than in combination therapy, endangered the progress against the disease that had been made in previous years. Better news was reported in Zambia, where officials said that malaria deaths had declined by 66%. Malaria-control efforts implemented in Zambia included the widespread distribution of insecticide-treated nets, as well as the distribution of combination treatments based on artemisinin.

Cancer. Two studies released in September found that using a double dose of a cancer drug increased the chance of disease remission for patients with a common form of leukemia. The studies examined the treatment of patients with acute myeloid leukemia, a cancer of the bone marrow and the blood and one of the most common acute forms of the cancer that occurs in adults. The studies, which appeared in *The New England Journal of Medicine*, examined

A man with tuberculosis awaits free treatment outside a medical facility in Siliguri, a city in northeastern India.

Rupak De Chowdhuri—Reuters/Landov

cancer status and rate of survival in patients given an amount of the chemotherapeutic agent daunorubicin that was twice the dose typically prescribed. In one study, of those who took the higher dose, some 71% experienced remission of their disease, whereas of those patients receiving the normal amount of drug, about 57% entered remission. The results also showed that more chemotherapy was associated with improved survival length, with those receiving the larger dose surviving 24 months and those receiving the smaller dose surviving just 16 months. The second study examined patients aged 60 to 83 and found that more than two-thirds of patients had remission of their cancers when given a dose of chemotherapy that was twice the standard amount. This was in contrast to remission in about 54% of patients treated with the regular dose of daunorubicin. Although survival rates showed no difference between the groups, the researchers did note that those who fared the best appeared to be persons under age 65 who received the increased dose. Researchers said that their work could produce a shift in the treatment of adults under 65. The elderly, however, who were at an increased risk of developing acute myeloid leukemia, were not predicted to see any change in the current approach to the treatment of the disease.

In an effort to better address cancer in Hispanic populations, the United States National Cancer Institute (NCI) created partnerships with the governments of Argentina, Brazil, Mexico, and Uruguay. These partnerships, which also included Chile, formed the basis of the United States–Latin America Cancer Research Network (US-LA CRN). The network's mission was to develop a comprehensive understanding of cancer among Hispanics in Latin America and the United States as well as to improve cancer research and care in those regions.

Cardiovascular Disease. In 2009, for the first time, a person's own heart stem cells were used to help repair tissue damage after a heart attack. In June a team of doctors performed the procedure on a 39-year-old male patient at Cedars-Sinai Heart Institute in Los Angeles. Doctors first removed a small amount of heart tissue from the patient. The tissue was then taken to a lab, where it was cultured, giving rise to heart stem cells. Millions of cells were grown in order to ensure that

there was an adequate supply for the treatment. Using a catheter, doctors were able to deliver the stem cells to the patient's heart via the coronary arteries. The procedure was part of a Phase 1 clinical trial in which 15 other patients were scheduled to undergo the same treatment. The developer of the technique, cardiologist Eduardo Marbán, said that he hoped that the "procedure could be widely available in a few years and could be more broadly applied to cardiac patients."

A study published in March in the *Journal of the American College of Cardiology* concluded that if doctors broadened statin-prescribing criteria to include C-reactive protein (CRP) levels, an indicator of inflammation, that might enable them to prevent thousands of heart attacks, strokes, and deaths each year. The study was conducted by doctors from the Johns Hopkins University School of Medicine, Baltimore, Md. Their report indicated that 6.5 million older adults with low cholesterol but high CRP levels might benefit from statins. Previous studies had shown that statins can prevent additional heart attacks and strokes in patients who had already suffered from one or the other. Statins were also known to help those who were at increased risk for cardiovascular disease but may not have had a heart attack or stroke. About 50% of adverse cardiovascular events, such as heart attack or stroke, occurred in persons who had normal cholesterol levels. Some 20% of these events occurred in persons who had no evidence of cardiovascular disease risk factors.

The incidence of heart attacks had decreased significantly in places in North America and Europe where smoking bans had been passed. These places reported a reduction of 17% in the incidence of heart attacks one year after passing the bans, relative to communities that had not taken steps to reduce smoking in public and work areas. In addition, the number of heart attacks appeared to be continuing to decrease with time, and researchers believed that part of the decline was due to less exposure of nonsmokers to secondhand smoke. The report, which was published in September in *Circulation: Journal of the American Heart Association*, was the result of a comprehensive analysis of more than a dozen studies in which researchers tracked the prevalence of heart attacks in communities where smoking bans had been successfully enforced.

Other Disorders. Researchers were hopeful that a new drug tested in 2009 could stamp out river blindness, or onchocerciasis, a disease that occurred primarily in Central and South America and in sub-Saharan Africa. (The common name of the disease, river blindness, comes from the fact that the black fly, which transmits the disease-causing parasite, breeds in rivers and from the eventual result of parasite infection in humans—the loss of vision.) The drug, known as ivermectin, was investigated as part of a clinical trial involving three African countries. Africa was the region of the world most affected by river blindness; more than 37 million people worldwide were infected with the causative parasite, *Onchocerca volvulus*, and many of these individuals lived in poor rural African communities. The study was focused mainly on determining ivermectin's activity against the adult worms of *O. volvulus*. The drug was developed as part of a collaboration administered by WHO and Wyeth Pharmaceuticals known as the Special Programme for Research and Training in Tropical Diseases. The director of the African Programme for Onchocerciasis Control (APOC), Nigerian biologist and public health scientist Uche Amazigo, said that more than "100 million people are at risk of infection with onchocerciasis in Africa and a few small areas in the Americas and Yemen."

In a related development, a study suggested that eliminating onchocerciasis through ivermectin treatment may be possible. The study, released in July in the journal *PLoS Neglected Tropical Diseases*, stated that ivermectin treatment had stopped infections and further transmissions in three African regions. Because ivermectin kills the larvae but not the adult worms of *O. volvulus*, annual or biannual treatments would be necessary to prevent resurgence.

Vaccines. Promising results were reported in a study examining a new vaccine for advanced melanoma, a deadly form of skin cancer. In a Phase 3 clinical trial, researchers at the University of Texas M.D. Anderson Cancer Center in Houston found better response and survival outcomes among patients who received a peptide vaccine combined with interleukin-2, an agent that stimulates the body's immune cells to attack cancer cells. Typically, patients with localized melanoma had a five-year survival rate of 65%, whereas persons with melanoma that had spread (metastasized, or metastatic melanoma) had a

five-year survival rate of just 16%. Among those given the vaccine, 22.1% of patients responded, and for nearly three months, the treated patients' cancers did not progress. Those who were not treated with the vaccine, however, experienced an average of about 1.6 months of progression-free survival. The average overall survival time for patients treated with the vaccine was 17.6 months. In contrast, patients not treated with the vaccine survived only an average of 12.8 months. The vaccine was also the first to have demonstrated, in a Phase 3 clinical trial, beneficial effects in patients with melanoma.

New hope for cocaine addicts may be on the horizon after an experimental vaccine showed positive results in helping treat their addiction. Vaccination with the anticocaine agent reduced cocaine use in 38% of treated patients. The clinical trial, which included patients who were being treated for methadone addiction, received backing from the U.S. National Institute on Drug Abuse. The results were published in October in the journal *Archives of General Psychiatry*. The vaccine works by triggering antibody production by the immune system, similar to the way in which other vaccines work against infectious diseases. In the presence of the anticocaine vaccine, antibodies are produced that bind specifically to cocaine in the blood. This stops the drug from moving through the blood-brain barrier and thereby prevents the "high" that it normally causes.

The vaccine Gardasil, widely used to help prevent cervical cancer in women, found a use among men. In September U.S. drug advisers recommended that Gardasil be used for the prevention of genital warts in men. Genital warts are caused by the human papillomavirus, the same virus that can cause cervical cancer in women. A committee associated with the U.S. Food and Drug Administration (FDA) voted to support the extension of Gardasil uses to include the vaccination of males aged 9 to 26. The vaccine binds to the papillomavirus, rendering it incapable of infecting the cells of the genital tract. The virus can, in rare instances, cause penile and anal cancer in men. Gardasil was approved in

2006 for use in females aged 9 to 26 to aid in the prevention of cervical cancer.

Pharmaceuticals. In September Pfizer Inc., one of the world's largest pharmaceutical companies, along with one of its partner entities, settled an agreement to pay \$2.3 billion for having illegally encouraged the medical use of several drugs that were known, by company officials, to have potential health

tion painkillers Vicodin and Percocet because of their potential for causing liver damage. Those drugs combine acetaminophen with an opiate narcotic. Acetaminophen is an aspirin alternative used in over-the-counter pain relievers, such as Tylenol and Excedrin. High doses of acetaminophen can cause liver damage. Patients who need to take Percocet or Vicodin for long periods of time often require periodic increases in dosage for the drugs

to remain effective. This means that more acetaminophen enters their bodies, creating a higher risk for liver damage. The panel also recommended lowering the maximum dose of over-the-counter painkillers with acetaminophen. The recommendations followed an FDA report showing that severe liver damage, and even death, can result from a lack of consumer awareness that acetaminophen carries such risks. Many patients take acetaminophen because it is easier on the stomach than aspirin and ibuprofen.

Alzheimer Disease. In September information published in the 2009 World Alzheimer Report indicated that some 35 million people worldwide were living with some form of dementia, such as Alzheimer disease. The figure was much higher than scientists had previously thought. The newly

published data were the result of an extraordinarily comprehensive investigation aimed primarily at assessing the prevalence of the illness. The number surprised scientists because it was about 10% higher than what they had anticipated according to assessments that had been completed several years earlier. The previous studies had not fully estimated the extent of the impact that Alzheimer disease would have in less-developed countries. The report also indicated that the number of persons with dementia would continue to increase substantially every year, so that by 2050 Alzheimer disease could affect more than 115.4 million people. This rise was attributed in part to increased life expectancy in developed countries. Daisy Acosta, the head of Alzheimer's Disease International, which released the report, said that "we are facing an emergency." Whereas the United Kingdom and several other countries had in place long-term pro-

risks. The U.S. Department of Justice described the case as being a landmark health care settlement and one of the largest of its kind in the country's history. The drugs at the centre of the case included the painkiller Bextra, which had been withdrawn from the market several years earlier. Bextra was known as a COX-2 inhibitor, the name given to a class of pain-relieving drugs that inhibit the cyclooxygenase-2 enzyme, which is involved in inflammation. Pfizer pulled Bextra from the market when it was revealed that the drug posed potential risks to heart health in some patients. The government charged that Pfizer officials engaged in schemes to illegally market Bextra and other drugs, including the antibiotic agent Zyvox and an agent known as Lyrica, which was used to treat nerve pain.

Other prescription drugs came under fire as well in 2009. An FDA panel urged a ban on the popular prescrip-

Mark Wilson/Getty Images

grams to deal with the anticipated impact of Alzheimer disease, the U.S. did not. In fact, in the U.S. Alzheimer disease, compared with other diseases, had received much less attention and federal support.

Other Developments. A government advisory group in the United States sparked a heated debate in November after recommending that women begin screening for breast cancer at age 50 rather than 40. The panel also said that women should have mammograms only every other year rather than annually. The recommendations by the U.S. Preventive Services Task Force prompted fiery disagreement among breast cancer researchers, oncologists, and doctors, many of whom had long recommended that all women begin screening in their 40s and have mammograms every year. U.S. Health and Human Services Secretary Kathleen Sebelius said that women should continue to have regular mammograms starting at age 40 and reminded the public that the task force did not set federal policy and was only an advisory group. The guidelines were described as “a step backward” by officials at the American College of Radiology. The same group also said that the new recommendations could potentially harm the health of women. The American Cancer Society also strongly objected to the new recommendations. The task force’s decision to recommend later and less-frequent screening was based on research into the benefits and risks of mammography. It took into account whether screening actually led to reductions in the number of deaths from breast cancer, and it assessed the number of false-positive instances and unnecessary treatments that occurred as a result of the procedure. The report said that mammograms may help reduce the breast cancer death rate by 15%. It also said, however, that the potential harms, such as unnecessary biopsies and treatment of non-life-threatening slow-growing cancers, needed to be taken into consideration. The new screening guidelines did not include women who may be at greater risk for breast cancer and recommended that women 40 and older still consult with their doctors about when to undergo testing. Secretary Sebelius said that mammograms remain “an important life-saving tool in the fight against breast cancer.”

In early 2009, after 8 people had died and more than 500 had fallen ill from

U.S. Rep. Greg Walden hoists a jar of peanut products tied with cautionary tape at a House Energy and Commerce Committee hearing in Washington, D.C., in February. The president of Peanut Corp. of America, Stewart Parnell, refused to answer questions concerning the salmonella outbreak that was linked to the company's Georgia plant.

salmonella poisoning, U.S. health officials announced a countrywide recall for all peanut products made during the previous two years at a Georgia plant that was linked to the outbreak. Peanut Corp. of America, which initiated the recall, produced various peanut products, including peanut butter and peanut paste. The FDA subsequently issued public warnings against eating any products made with peanut butter or paste, such as crackers and cookies. The warnings did not include peanut butter sold in jars at retail stores. U.S. cereal maker Kellogg voluntarily recalled 16 products containing peanut butter, including some 7,000,000 cases of crackers and 33,000 cases of cookies.

In March U.S. Pres. Barack Obama lifted the ban on human embryonic stem cell research in the United States, opening the door to new avenues of scientific study that had previously been closed. The ban had been imposed in 2001 by former president George W. Bush, who, among many others, objected to the research because studying embryonic stem cells required the destruction of a human embryo. Obama's order removed the restrictions on federal funding for such research. He also acknowledged, however, that this issue was deeply divisive. Obama said that it was important that federal dollars be permitted to

support research employing embryonic stem cells because “medical miracles do not happen simply by accident.” A separate legislative ban on federal funds to pay for the development of stem cell lines was not part of the president's order.

Deaths from unsafe abortions, particularly in poor countries of Africa, remained a serious problem worldwide in 2009. Each year an estimated 70,000 women died from unsafe abortions, and many more women were seriously injured or crippled when the procedure was performed improperly, according to a report compiled by the Guttmacher Institute in New York. The data further indicated that of the 41.6 million abortions reported in 2003, nearly 20 million were unsafe and many were carried out by women themselves. The report noted that sub-Saharan Africa was particularly affected, with more than half the deaths from unsafe abortions occurring in this region of the world. The region also was reported to have had an exceptionally high occurrence of unintended pregnancies. This was likely associated with the fact that very few people there used contraceptives. Worldwide, however, more people were taking advantage of contraceptives, which contributed to a decline in the overall number of abortions performed globally in recent years.

Life Sciences

Researchers identified one of the earliest societies to domesticate **HORSES**, described **CORAL** thousands of years old, characterized **GENES** that enable **RICE** plants to survive floods, discovered the largest-known **SNAKE** (a 60-million-year-old specimen from Colombia), and uncovered information about microbial communities of the **HUMAN MICROBIOME**.

ZOOLOGY

The year 2009 marked the sesquicentennial of the publication of Charles Darwin's *On the Origin of Species* and the bicentennial of his birth. Among Darwin's many other outstanding accomplishments were his book *The Variation of Animals and Plants Under Domestication* (1868) and his less-well-known discourses on coral reefs.

Alan K. Outram, an archaeologist from the University of Exeter, Eng., and colleagues addressed the question of when horses were first domesticated. They concluded that one of the earliest societies to domesticate the ancestors of modern domestic horses (*Equus caballus*) was the Botai Culture of Kazakhstan on the Eurasian Steppe about 3500 BCE (5500 BP). One of three separate lines of evidence was based on a comparative analysis of bones of domesticated horses from the Bronze Age and those of wild specimens from older Paleolithic sites. Skeletal material revealed Botai horses to be slenderer and more similar to Bronze Age domestic horses than to wild horses from the older sites, providing evidence of domestication. In addition, a third of the mandibles of horses that were examined showed signs that they had held bits in their mouths and possibly carried riders. Furthermore, isotopic analyses of fat residues in Botai pottery fragments revealed that the pots had once held horse milk. Mares in the region were still being milked.

Arne Ludwig of the Leibniz Institute for Zoo and Wildlife Research in Berlin and Michael Hofreiter of the Max Planck Institute for Evolutionary Anthropology in Leipzig, Ger., along with several of their colleagues, examined bones of fossil horses and used DNA se-

quence polymorphisms (genetic variations) to determine coat colour. Horses from the Pleistocene Epoch of Siberia and Europe did not vary in colour and were presumed to have been bay (reddish brown) or bay dun (yellowish tan). Wild horses from the Iberian Peninsula dating to the Early Holocene, however, carried both black and bay genes thousands of years before horses were domesticated anywhere. Black colour expressions in wild horses are presumed to have been a consequence of natural selection associated with dense forests

following glaciation. New coat colours and patterns, including chestnut and spotting, however, became evident in Siberia and Eastern Europe around the time of the Bronze Age, 5000 BP. The investigators concluded that selective breeding of domestic stock is the most parsimonious explanation for the observed changes in horse coat coloration in the Eurasian Steppe.

Since the deep ocean is one of the least-explored parts of the planet, the myriad interactions and associations between species there—as well as the trophic dynamics occurring within biological communities—are not well understood. Among the population traits that can be critical to the persistence of some communities is the longevity of a keystone species upon which other species depend. (Keystone species are those with a disproportionately large influence over a community's structure.) Several species of deep-sea coral occupy continental shelf areas at depths up to three kilometres (two miles) and provide vital habitat for numerous species of marine invertebrates

Long-lived corals, such as this gold coral (Gerardia) found at a depth of 400 m (about 1,300 ft) near Hawaii, provide reliable living space for many generations of marine creatures. Fishing and other harvesting activities that destroy such deep-ocean corals were thought to disrupt the fragile ecological balance of deep-sea communities.

Hawaii Undersea Research Laboratory (HURL), Terry Kerby and Maximilian Cremer

and fish. Texas A&M University oceanographer E. Brendan Roark and colleagues used a submersible to collect samples of two corals, *Gerardia* species and *Leiopathes* species in Hawaiian waters at depths of 400 to 500 m (1,300 to 1,600 ft). Using a combination of stable isotope techniques and radiocarbon analyses, the researchers examined living coral tissues to estimate coral ages. They found that some individual colonies were several thousand years old. The oldest *Gerardia* species specimens were more than 2,700 years old, and those of *Leiopathes* species had longevities of more than 4,200 years. Many scientists maintain that the destruction of deep-sea coral eliminates critical living space and other ecosystem services for many members of the biological community. Bottom trawling, other fishing activities, and harvesting for the coral jewelry trade have been identified as the cause of long-lasting damage to deep-sea coral beds in many regions. Such activities are not compatible with maintaining ecosystem integrity in fragile deep-sea communities dependent on long-lived coral.

Researchers studying animal behaviour continued to discover patterns that shed light on the ecology and evolution of species. Evan A. Eskew, from Davidson (N.C.) College, and J.D. Willson and Christopher T. Winne, from the University of Georgia's Savannah River

Ecology Laboratory in Aiken, S.C., examined how a semiaquatic pit viper, the eastern cottonmouth (*Agkistrodon piscivorus*), of the southeastern U.S. changed foraging habits from juvenile to adult. The researchers characterized the animal's foraging strategy in a freshwater wetland by measuring various microhabitat characteristics where 51 cottonmouths were located during systematic visual surveys at night. They also measured the microhabitats of 225 randomly selected sites within the wetland study area. Using a statistical technique called principal components analysis, the investigators determined that choice of foraging microhabitats by juvenile cottonmouths was not random. In contrast, adults were randomly scattered throughout a diversity of microhabitats. Young cottonmouths were found on land alongside the wetland, typically in a tight coil, in a sit-and-wait foraging posture for ambushing prey. Juveniles also occurred in locations hidden from predators, whereas adults were generally discovered outstretched and actively foraging throughout the wetland. Juvenile snakes, which have yellow tails, were able to use caudal luring (tail wagging) to attract salamanders and small frogs. The findings underscored how developmental changes in coloration and the behaviours that affect an animal's risk of becoming prey can influence foraging

strategy and the choice of microhabitat within a predatory species.

Many social animals gain ecological benefits from living in groups, and two that are commonly accepted by behavioral ecologists are (1) more effective predator avoidance and (2) an increase in foraging success, or prey capture. A third recently identified advantage to larger groups is the development of more effective problem-solving skills in novel situations. András Liker and Veronika Bókonyi of the University of Pannonia, Hung., tested common house sparrows (*Passer domesticus*) to determine whether groups of two or six birds differed in ability to open a feeding station with which all birds were familiar but to which access had been blocked by a transparent lid. Groups of six were found to be as much as 4 times more successful than groups of two at solving the problem of removing the lid and 11 times faster at gaining access to the food. A clear conclusion was that larger group size resulted in more rapid problem solving. One explanation for the higher success rate of larger groups was that certain individuals may have had experience in solving similar problems or simply have an aptitude for doing so.

Research in 2009 also focused on questions related to how animals may respond to shifts in climate. Two generally accepted responses of animal populations and communities to global warming are latitudinal or elevational shifts in geographic distribution and changes in the seasonal timing of critical biological events, such as reproduction, migration, or emergence from hibernation. Two independent research projects identified components of higher environmental temperatures that affect the body size of animals. Martin Daufresne, Kathrin Lengfellner, and Ulrich Sommer of the Leibniz-Institut für Meereswissenschaften in Kiel, Ger., tested the hypothesis that decreased body size among ectothermic, or cold-blooded, aquatic animals will generally become more prevalent with continued global warming. They provided evidence from fish sampled in the Baltic Sea and rivers in France and from published data about the North Sea. The investigators found that in rivers with more than two decades of gradual increases in water temperature, average fish size decreased and species with smaller body sizes became significantly more prevalent. The latter observation was also true for North Sea fish communities where warming trends had occurred. In some fish the

This specimen of smooth black coral (Leiopathes), which lives in deep water near Hawaii, lived for approximately 4,000 years.

Hawaii Undersea Research Laboratory (HURL), Terry Kerby and Maximilian Cremer

reduction in body size was related to juveniles' making up an increased proportion of the population. Among the overall findings, it was revealed that increased water temperature resulted in changes in species composition, individual growth rates, and reproductive patterns of fish and other aquatic ectotherms. Similar patterns were found in lab experiments in which a warming environment decreased the size of zooplankton, phytoplankton, and bacteria.

Arpat Ozgul and Tim Coulson of the Imperial College London and colleagues examined the causes of decreasing body size among a free-living population of Soay sheep (*Ovis aries*) on Hirta, an island in the Saint Kilda archipelago of Scotland. They concluded that the shift in size was primarily a consequence of ecological responses to climate change that produced milder winters over the previous two decades. The researchers analyzed age-specific growth rates of individual sheep and found that the growth of lambs was strongly influenced by the winter climate. Although seemingly counterintuitive, the explanation was that more sheep survived milder winters, resulting in greater population densities that led to grazing competition and slower growth rates overall. The results from the studies of body size of both fish and sheep, which changed in under three decades, suggested that rapid changes in a trait as biologically important as body size can be induced by climate change.

(J. WHITFIELD GIBBONS)

BOTANY

Important breakthroughs were made in 2009 by using genetic engineering to raise the productivity of crop plants. Most rice plants die if they are completely submerged in floodwaters for more than a few days, and this problem afflicts up to 40% of rice crops in Asia and Africa during their rainy seasons. Some rice varieties, however, can survive flooding by rapidly growing their stems upward, in some cases reaching 4 m (about 13 ft) in height. Such plants are typically far less productive than high-yield varieties. A team of Japanese scientists led by Motoyuki Ashikari at Nagoya University identified two genes, appropriately dubbed *snorkel 1* and *snorkel 2*, that made the flood-tolerant plants elongate their stems. As the stems grow, they form hollow structures inside that allow gas exchange with the atmosphere

and thus prevent the plant from water-logging. When these genes were introduced into common rice plants, their stems rapidly elongated in deep water and withstood flooding. The researchers planned to breed high-yielding rice varieties that can tolerate floods, potentially saving billions of dollars in lost crops and feeding millions of additional people.

In another study a team led by Shuichi Fukuoka at the National Institute of Agrobiological Sciences in Tsukuba, Japan, identified a gene that helps some types of wild rice fend off rice blast disease, a fungal infection caused by *Magnaporthe grisea* that destroys up to 30% of world rice production. Previous attempts to breed cultivated rice with resistance to the fungus produced poor-tasting, low-quality rice. The fungus also quickly evolved to overcome the resistance in as little as two years. The new work successfully used genetic sequencing to isolate the blast-resistant gene, *Pi21*, from a linked stretch of DNA responsible for the bad flavour of the wild varieties of rice. The gene also increased the plant's defenses against infection in general, making it harder for the blast fungus to take hold. The researchers planned to breed *Pi21* into cultivated varieties of rice to give long-lasting resistance to rice blast disease without impairing the quality of the rice grain.

Scientists from Germany, Switzerland, and the U.S. used another form of plant defense to genetically engineer corn (maize) plants to fight off a serious root pest. Larvae from a beetle known as the western corn rootworm (*Diabrotica virgifera*), which had become the most destructive corn pest in the U.S., burrow into the plants' roots. *D. virgifera* and other corn pests are largely controlled with insecticides; some varieties of corn, however, fight off *D. virgifera* by releasing a chemical messenger called (E)-beta-caryophyllene. The chemical attracts protective soil-living nematode worms, which attack and kill the beetle larvae. After decades of breeding, most North American corn varieties no longer emitted (E)-beta-caryophyllene and thus had lost the ability to recruit protective nematodes. When the gene for the chemical was introduced into the genomes of ordinary corn plants, the plants became far less vulnerable to beetle attacks.

Plant scientists took a major step forward in their plans to "barcode" every plant species in the world by using DNA analysis. The selection of the most

appropriate gene for barcoding animals had been achieved several years earlier, but a botanical equivalent proved troublesome. A team of 52 scientists working in 10 countries spent four years discussing which DNA barcode to use. They eventually selected portions of two chloroplast genes—*rbcL* and *matK*—where variations in the DNA give a characteristic signature for plant species. The researchers tested the technique on 907 plant samples. In 72% of the cases, they immediately determined the correct species of plant. For the remaining specimens, they were able to place each plant within a group of related species. Peter Hollingsworth, head of genetics and conservation at the Royal Botanic Garden in Edinburgh, explained the significance of his team's findings: "Identification is important. . . It is not possible to know if a plant is common or rare, poisonous or edible, being traded legally or illegally, etc., unless it can be identified."

Researchers in the U.S. and Belgium identified two species of microbes growing on the inside of roots of poplar trees (genus *Populus*) that boost the trees' productivity on barren or contaminated soils. *Enterobacter* species 638 and *Burkholderia cepacia* BU72 produced the greatest increase in biomass production and growth rates in the trees. Genetic analysis of the two bacterial species revealed that they produce growth-promoting plant hormones, which could stimulate the trees' growth. With fertile farmland in short supply, the notion of adding bacteria to poplar trees to help them grow on marginal land was particularly attractive. Such trees could be used as feedstock for the production of biofuels and to help sequester carbon from the atmosphere.

Another study revealed a fascinating symbiosis between bacteria and the giant cardon cactus, *Pachycereus pringlei*, that allowed the plant to grow on barren rocks in Mexico. When the cactus seeds germinated, bacteria contained within the seeds dissolved the rock and released minerals that the seedling roots could absorb. Once the cactus was established, its roots grew into the rock and, with the help of the bacteria, eventually produced soil. In return for supplying the minerals, the bacteria were fed carbon and nitrogen compounds by the cactus.

Many orchids lure insects to pollinate their flowers by imitating the insects' sex pheromones. A unique type of mimicry was discovered in *Dendrobium sinense*, an orchid that grows in China. Instead

Jennifer Brodmann

*The orchid *Dendrobium sinense*, which inhabits the Chinese island of Hainan, produces a chemical that mimics the alarm signal of honeybees in order to lure hornets of the species *Vespa bicolor* to its flower.*

of landing and pausing on the petals like most insect pollinators, hornets were observed to attack the flower of *D. sinense*. A team of Chinese and German scientists discovered that the orchid produces a chemical that exactly imitates the honeybees' alarm pheromone Z-11-eicosen-1-ol, a chemical previously unknown in plants and rarely identified even in the insect world. Hornets typically home in on this pheromone to catch honeybees for food. The hornets are so fooled by the orchid's scent that they pounce on it and thus pollinate the flower.

(PAUL SIMONS)

MOLECULAR BIOLOGY AND GENETICS

The Role of the Human Microbiome. Every human is host to a microorganism community—a veritable ecosystem of a diverse array of microbes that outnumber the more than 75 trillion cells of the human body by at least 10 to 1. What is perhaps most striking is that the majority of microbial populations that inhabit the skin, nose, mouth, gut, urogenital tract, and other tissues are not simply opportunistic parasites; they are true symbionts vital to human health, and they exert previously unappreciated influence on the ability of humans to resist disease. One reason that many of these microbes have remained unknown until recently is that they do not grow well outside of their normal habitat, meaning they cannot be cultured in the laboratory. In addition, available

samples of human secretions or tissues contain such a complex array of different species as to be refractory to analysis by traditional means. The application of modern molecular techniques, including PCR (polymerase chain reaction) and improved DNA sequencing methods, however, have begun to overcome these roadblocks, revealing the diversity of microbial species that call the human body “home.”

In 2009 scientists made great strides in improving their understanding of the identities and roles of these microbes. These research efforts were spearheaded in part by the Human Microbiome Project (HMP), an undertaking sponsored by the National Institutes of Health in the United States. Launched in December 2007, the HMP pursued stated goals that included identifying and sequencing the genomes of those microbial species that inhabit the healthy human body, exploring similarities and differences in the microbial populations that inhabit different individuals or different groups of people, developing new tools to facilitate the stated goals, and addressing the social and ethical implications of human microbiome research.

One of the first members of the human microbiome to be recognized as beneficial to human health was *E. coli*, which inhabits the large intestine. It became clear, however, that the community of microbes inhabiting the gut is startlingly diverse. DNA sequence analysis of the gene *16S rRNA* (riboso-

mal small subunit RNA), which is unique to each species of microorganism, enabled scientists to identify various microbes in the human gut. From this they estimated the total number of microbial genes; indeed, the bacteria, archaea, and fungi that inhabit the human gut demonstrate a collective gene count estimated at 100 times that of the human genome. Studies of the microbial communities in healthy humans and laboratory animals implicate microbial variation as a factor influencing everything from nutrient extraction during digestion, to defense against invading pathogens, to the ability to inactivate environmental toxins. The composition of commensal microbial communities can vary from person to person, within a single person over time or in response to subtle environmental changes, and even from location to location on the body; for example, the forearm skin microbiome, which is estimated to include more than 180 different species, is different from that found inches away at the crease of the elbow.

One of the most compelling connections reported between gut microbes and health deals with obesity. Researchers exploring the distal gut microbes of obese and lean laboratory mice, and also of obese and lean human volunteers, noted striking differences between these groups in terms of

*The bacteria *Enterococcus faecalis*, found in the human gut, is a member of the diverse community of microbial species that constitute the human microbiome.*

Human Microbiome Project/National Institutes of Health

the relative abundance of two dominant bacterial divisions: the Bacteroidetes and the Firmicutes. What was most striking, however, was that the trait was transferable; germ-free mice intentionally colonized with “lean” gut microbes accumulated significantly less total body fat through the course of the experiment than did their counterparts colonized with “obese” gut microbes. Of note, the “obese” gut microbes also demonstrated an increased ability to extract energy from the diet. While circumstantial, these data clearly implicate the “obese” gut microbes as a contributing factor in human obesity and may also suggest novel routes of intervention in the battle against this health epidemic.

One of the least-well-understood aspects of the human microbiome deals with the question of initial colonization of an infant. A newborn emerges sterile from the womb, and over the course of the next days to months, he or she must acquire a full complement of “good” microbes. How does this process occur? One can only wonder whether the most ingrained and natural of all behaviours—that of human parents to nuzzle and kiss their baby, or of a mother mouse to lick her pups—derives from the need to share not only love but also microbes.

The Genetics of Autism. Classic autism, the most common autism spectrum disorder (ASD), is a neurodevelopmental disorder that is evident by age three and that affects four times as many males as females. Before 1985 the incidence of autism was reported to be between 2 and 5 in every 10,000 children; after 2000, reports cited an incidence of close to 6 in every 1,000. Whether this apparent “epidemic” of autism reflects a true rise in incidence or is due to changes in diagnostic criteria and ascertainment is a point of some contention, though most experts in the field attribute at least a majority of the apparent increase to ascertainment.

ASDs are complex traits. The heritability has been estimated at greater than 90%, but even monozygotic (“identical”) twins do not show 100% concordance; sometimes one twin is affected and the other twin is not. Further, even when both twins are affected, the level of severity can differ. The sibling risk is 5–10%, which is 10 times higher than the population risk. Together these data confirm that ASDs result from a combination of both genetic and environmental factors. Further, neuroanatomical and neuroimaging

studies suggest that affected individuals may experience abnormal neurodevelopment in utero, beginning as early as the first or second trimester of gestation. The key environmental influences, therefore, may be prenatal as well as postnatal.

Autism became perhaps best known in 2009 for the resolution of a series of high-profile, though misguided, legal actions resulting from a 1998 article that claimed the existence of an association between autism and childhood vaccination for measles, mumps, and rubella (MMR). The article, published by British physician Andrew Wakefield and colleagues in the journal *The Lancet*—though later retracted by a majority of the coauthors—caused a wave of fear among parents and health care providers, so much so that immunization rates in the U.K. fell by more than 10%, and in 2006 the country saw its first death from measles in 14 years. Numerous subsequent studies by other researchers found no link between autism and MMR vaccination or the vaccine preservative thiomersal (also called thimerosal in the U.S.). In February 2009 the Omnibus Autism Proceeding in the U.S. Court of Federal Claims ruled against the plaintiffs in three test cases, thereby closing this sad chapter in medical legal history.

ASD research made a series of impressive strides forward in 2009. For example, a mouse was engineered to carry a duplication of genes corresponding to a region of chromosome 15, the location of the most frequently observed chromosomal abnormality in ASD. The mouse demonstrated a variety of social and behavioral characteristics reminiscent of the disorder, providing further evidence of a causal relationship between the chromosomal abnormality in patients and their clinical symptoms. Other data suggested that some of the features of ASD may respond to fever and may result from impaired regulation of neurons in a region of the brain stem called the locus coeruleus. These advances offered hope that the cause of autism would soon be understood, which may enable future generations to prevent or reverse its course. (See also Special Report on page 196.)

(JUDITH FRIDOVICH-KEIL)

PALEONTOLOGY

In October 2009 a number of reports documenting the discovery of a new early hominid were published in the journal *Science*. This species, named

Ardipithecus ramidus, was dated to 4.4 million years ago and appeared to be far more primitive than *Australopithecus*. (See Special Report on page 190.)

In the spring of the year, a study reported on the analysis of preserved soft tissues and collagen sequences extracted from the femur of an 80-million-year-old hadrosaur (duck-billed dinosaur). The hadrosaur sequences were determined to have more in common with those of birds than those of other reptiles, confirming the close relationship between birds and dinosaurs.

The family Heterodontosauridae represents a very basal group of ornithomimid, or “bird-hipped,” dinosaurs. They were small bipedal animals known mainly from the Early Jurassic Period of Africa. A report published in March 2009 described the first known Early Cretaceous heterodontosaur from the Chinese province of Liaoning. In addition to extending the temporal range of the heterodontosaurs, the new species, *Tianyulong confuciusi*, extended their geographic range into Asia.

A new Jurassic ceratosaur from China shed light on the origin of the reduced number of digits in birds. Previous studies suggested that the reduction to three digits in theropod dinosaurs occurred by the loss of digits four and five. Birds, however, appeared to have lost digits five and one—leaving the three expanded central digits to support the wing. In the new Chinese ceratosaur, the metacarpal region (an area made up of the bones of the hand proper) shows similarities to digits two, three, and four, while the phalangeal region (the outer portion of the hand) shows more affinity to digits one, two, and three. The authors indicated that this phalangeal anatomy in other theropods may be the reason for the idea that they retain digits 1–3. The authors suggested, however, that it made more sense to assume that the reduced number of fingers in theropods actually represents digits 2–4, given the avian affinities to the theropods combined with the hand anatomy of the new ceratosaur.

A study published in 2008, comparing the clutch volumes of the dinosaurs *Troodon*, *Oviraptor*, and *Citipati*, supported a bird-paternal-care model for the dinosaurs, indicating that the male parent cared for the young. In contrast, living archosaurs, such as the crocodilians, follow the maternal behaviour model, in which the young are cared for by the female. This finding strengthened the idea that the predominant avian parental-care system

evolved before the first appearance of birds. Another 2008 report on *Epidexipteryx hui*, a new avian from the Jurassic of Inner Mongolia, showed a surprising mixture of characteristics from several different theropod groups, unlike other early bird species that seem more aligned with a particular type of coelurosaurian.

An analysis of pterosaur limb strength indicated that, unlike birds, pterosaurs may have launched into flight by using all four limbs. The research compared bone strength of three pterosaur species with that of 20 bird species. In heavier birds the leg becomes much thicker than the humerus of the wing, which creates more leg strength for takeoff. In pterosaurs, however, the forelimbs are much stronger, which suggests that pterosaurs may have used them to aid in takeoff.

The postcranial skeleton of a 255-million-year-old therapsid (mammal-like reptile), *Suminia getmanovi*, exhibits very long hands, feet that represent 40% of the length of the limb, and digits that were designed for grasping. These features suggest that the animal lived in trees, making it the oldest-known tree-dwelling vertebrate in the fossil record.

The Late Cretaceous North American crocodile, *Deinosuchus*, had a body length of more than 10 m (about 33 ft) and a skull length of 1.5 m (5 ft). A biometric study published in 2008

compared the bending force of the jaw of this animal with that of the American alligator and estimated that *Deinosuchus* had a bite 13 times as powerful as the alligator. It was likely one of the top predators of coastal environments, capable of easily taking down a sizable dinosaur.

An online report of three new Australian dinosaurs was published in August. The three were the first to be named from Queensland in 28 years, and two of the new genera, *Diamantinasauros* and *Wintonotitan*, represented the first new sauropods from Australia in 75 years. The third dinosaur, a large carnivorous theropod, was assigned to the newly created genus *Australovenator*. All three dinosaurs lived during the Cretaceous Period approximately 98 million years ago.

With a body length of 13 m (about 43 ft) and an estimated weight of 1,135 kg (2,500 lb), *Titanoboa cerrejonensis*, a newly described 60-million-year-old boid from northeastern Colombia, represents the largest-known snake of any age. Since the maximum size of poikilothermic, or “cold-blooded,” animals is restricted by metabolic rate, average temperatures must have been relatively high to support the snake’s growth. The authors pointed out that the mean annual temperature during the Paleocene in this part of South America must have been 30–34 °C (86–93 °F) in order

for a snake of such size to survive. This interpretation supports the hypothesis of very hot Paleocene climates in the neotropics based on high concentrations of carbon dioxide predicted by climate models.

Fossil evidence has indicated that it took 14 million years for whales to sequence from a terrestrial animal to a fully aquatic one. A 47-million-year-old specimen of *Maiacetus inuus*, a semi-aquatic ancestor of the whales, was reported with a fossilized fetus in the skeleton. The size and position of the fetus indicates that the young were delivered headfirst, similar to terrestrial mammals. Since marine mammals deliver the fetus tail first, the new specimen suggests that this ancestral whale still gave birth on land.

An unusually well-preserved Silurian fish specimen discovered from the Devonian Period of Yunnan province, China, may represent the oldest near-complete specimen of a gnathostome (jawed vertebrate). While some features of the postcranial skeleton are similar to those found in nonosteichthyan gnathostomes (that is, gnathostomes that are not bony fish), it also shows some features typical of basal sarcopterygians (lobe-finned bony fish). The authors suggested that this new specimen places the minimum date for the divergence of the actinopterygians (ray-finned bony fish) and sarcopterygians at 419 million years ago.

A study of trilete spores from Late Ordovician rocks of Saudi Arabia showed that vascular land plants evolved about 450 million years ago. Trilete spores in the fossil record indicate the presence of vascular plant lineages. During the Ordovician, Saudi Arabia was part of a large southern landmass known as Gondwana. The paper hypothesized that vascular plants originated and diversified in Gondwana and then migrated elsewhere.

The group known as the “great appendage” arthropods, so named because of large clawed limbs at the front of the head, has been known only from Cambrian deposits such as the Burgess Shale and occurs near the base of the arthropod family tree. The discovery of a “great appendage” arthropod from the Hunsrück Slate in Germany confirmed their presence in the fossil record about 100 million years after the Middle Cambrian. The rarity of great appendage arthropods in the fossil record was probably due to a scarcity of the types of sites needed for their preservation. (WILLIAM R. HAMMER)

This image provides a side-by-side comparison of the vertebrae belonging (left) to the present-day anaconda (Eunectes) and (right) to that of Titanoboa cerrejonensis, an extinct boid from the Paleocene Epoch that is considered the world's largest-known snake.

Literature

The literary scene **ABOUNDED** with books chronicling the **ECONOMIC CRISIS** and the **GREED** associated with it, and a number of titles were devoted to Charles **DARWIN**, whose **BICENTENARY** birth anniversary was celebrated in 2009. Online publishing figured prominently, especially in China, where the growth of **INTERNET LITERATURE** overshadowed the production of print products. While Russia announced a **RECORD** number of literary deaths, major novelists elsewhere—including Americans John **UPDIKE** and Frank **MCCOURT** and Brazilian Augusto **BOAL**—also departed.

ENGLISH

United Kingdom. In the non-fiction realm, 2009 was a vintage year for books that examined the death of unbridled capitalism. In these books one could see the authors analyzing, defining, and coming to terms with the end of an era. The BBC economics editor, Paul Mason, explored the neoliberal orthodoxy's culpability in the ongoing global financial crisis in *Meltdown: The End of the Age of Greed*. Financial journalist Gillian Tett's *Fool's Gold* similarly attributed the recession to unfettered greed. HSBC chairman Stephen Green's book *Good Value* identified the "casino capitalism" behind the "manifest failure of market fundamentalism." Many of these books looked forward optimistically toward a kinder, greener business climate. The well-received book *The Storm* by Vince Cable, treasury spokesman for the Liberal Democrats, argued for a return to safe, regulated banking, and Zac Goldsmith's *The Constant Economy* sketched out a new society, in tune with the limits of the Earth. As one commentator noted, these books marked the end of an era of "mass hallucination."

Links between capitalism, consumption, and the fate of the planet were likewise explored in Tristram Stuart's *Waste: Uncovering the Global Food Scandal* and Neal Lawson's *All Consuming*. The effects of the prioritization of economic growth over equality were analyzed by Richard Wilkinson and

Kate Pickett in *The Spirit Level: Why More Equal Societies Almost Always Do Better*, which identified inequality as the cause of isolation, depression, and the drive to consume. Anna Minton's *Ground Control: Fear and Happiness in the Twenty-first Century City* assessed the privatization of the British city and the cost of championing investors' needs over those of residents in terms of human happiness.

The short list of the Man Booker Prize for fiction was dominated by what one commentator called "costume dramas," with little overt interest in the 21st century. A.S. Byatt's *The Children's Book* described the English fin de siècle, from its William Morris wallpaper to Fabianism to Russian exiles, including all the social, political, and artistic convulsions of the era. In Sarah Waters's *The Little Stranger*, readers entered a post-World War II landscape of decay, austerity, and class envy. Simon Mawer's *The Glass Room* was a historical novel set in 1930s Czechoslovakia. Adam Foulds based his novel *The Quickening Maze* on a moment in the late 1830s when "peasant poet" John Clare and future poet laureate Alfred Lord Tennyson shared a home in High Beach Asylum. Stylistic methods mirrored the eras evoked: *The Children's Book* was likened to the compendious late Victorian novel; *The Little Stranger*, with its "cool pacing" and magnificent set pieces, was reminiscent of the films of the 1940s; the symmetry and detached beauty of *The Glass Room* were compared to the modernist archi-

tectural masterpiece in its title. The winner of the Man Booker, however, was Hilary Mantel's astonishing *Wolf Hall*, which fleshed out the life of Thomas Cromwell, adviser to Henry VIII, in a period when England was divided over the interests of Catherine of Aragon and Anne Boleyn. Full of verbal jousting, rich historical detail from tapestries to heretic burnings, and human insight, Mantel's novel was described as a "Tudor spellbinder"; it was historical revisionism at its best.

Despite the prevalence of historical subjects, as Robert McCrum pointed out in *The Observer* newspaper, the Booker short list was still a nod to the present, reflecting publishers' recession-induced timorousness about backing newer authors or "difficult" writing. Short-listed authors Byatt, Waters, J.M. Coetzee (for *Summertime*), and Mantel all occupied the highest echelons of the literary hierarchy, and the youngest contender, Foulds, was already a seasoned award winner. Furthermore, for an award often maligned for championing "unreadable" novels, the short list was full of commercially viable "cracking good" reads. The fact that the long list was made up of all white nominees and was peopled almost exclu-

British writer Hilary Mantel won the Man Booker Prize for her novel Wolf Hall, a retelling of the life of Henry VIII adviser Thomas Cromwell.

Alastair Grant/AP

sively by British and Irish writers (with the exception of Coetzee) also marked a departure from recent years in which Indian and Asian-British themes and writers had predominated.

In contrast to the Man Booker Prize, which excluded American writers, the Orange Prize for Fiction (open to all women novelists writing in English) short-listed only one British author. This was newcomer Samantha Harvey, who surprised critics when she was nominated over Nobel Prize-winning American writer Toni Morrison. Harvey's first novel, *The Wilderness*, traced the descent of an aging architect into dementia as he loses grasp of his own memories and consequently his identity. A reviewer in *The Observer* called it "an incredibly moving look at the sword of Damocles that hangs over us all." The winner of the Orange Prize was American writer Marilynne Robinson for *Home* (2008), another book in which the characters attempt to come to terms with their personal and family histories. As with many novels honoured in the U.K. in 2009, *Home* was appreciated for both its technique and its humanity.

If the narrator of *The Wilderness* could be described as unreliable, so too could the main characters of a number of other well-received novels. Neo-Gothic novelist Patrick McGrath's *Trauma* (nominated for the 2008 Costa Novel Award) was written in the voice of Charlie, a New York City psychiatrist who treats Vietnam War veterans suffering from post-traumatic stress disorder yet is in need of help himself. Charlie calls into question his own attempts to order the chaos of his life, "This falsification of memory—the adjustment, abbreviation, invention, even omission of experience—is common to us all, it is the business of psychic life," and the reader is left searching for the truth between the lines. As one reviewer remarked, "One of the disheartening contributions psychiatry makes to literary understanding is the insistence that we are all of us unreliable narrators." The limitations of memory were also a theme in Irish writer Sebastian Barry's *The Secret Scripture* (2008), winner of the 2008 Costa Book of the Year award. Barry's protagonist, Roseanne McNulty, an almost 100-year-old resident of a mental hospital, tries to reconstruct her life in a "testimony of herself." Yet she becomes aware of the impossibility of her task. "No one has the monopoly on truth," she points out. "Not even myself, and that is a vexing and worrying thought."

Whether they be historical novels with a political edge, cosmic adventures, or dystopian fantasies, central to all the books nominated for the CILIP Carnegie Medal for children's books was the transition from childhood to adulthood. Set in 1980s Ireland, the winning entry, *Bog Child* (2008), by the late children's author Siobhan Dowd, combined the stories of Fergus, an Ulster teenager with a brother half dead in the Maze prison on a hunger strike, and Mel, the Iron Age girl whose body Fergus finds preserved in a bog. Dealing with teenage sexuality and the difficulties of disentangling politics from immediate human relations, Dowd showed an empathetic understanding of the confusing terrain of adolescence. Another notable nonfantasy book for adolescents was the 703-page *Just Henry* (2008), Michelle Magorian's first novel in a decade and winner of the 2008 Costa Children's Book Award. Set in postwar Britain, it promoted the timeless values of tolerance and friendship by telling the story of Henry, a boy forced to work on a photography project with two classmates stigmatized by the prejudices of the age.

Unusually, poetry captured front-page headlines twice within three weeks in May. Carol Ann Duffy (see BIOGRAPHIES) became the first woman to be appointed poet laureate since the post was created in 1668. Duffy's hard-hitting first poem in her new role was a departure from the topics expected of a poet laureate. As one commentator described it, *Politics* was an "almost speechless with rage" attack against the effect of politics on the politician; the poem was seen to have topical resonance in a year brimming with politicians' expense scandals. Poetry again stole headlines when Derek Walcott, frontrunner for the post of professor of poetry at the University of Oxford, dropped out of the race after becoming the target of a smear campaign. The scandal continued apace when Ruth Padel, who won the election, admitted to her part in disseminating sexual-harassment allegations against Walcott to the press. Padel, who would have been Oxford's first woman professor of poetry, subsequently resigned.

William Sieghart, founder of the Forward Prize for Poetry, said that the sheer volume of the year's entries testified to "the rude health of the U.K.'s contemporary poetry scene." Josephine Hart, the judges' chair, also spoke of a "renaissance in poetry" as the prize boasted its strongest short list in years. The winner in the best collection cate-

gory was Scottish poet Don Paterson for his fourth collection, *Rain*, described as "a kind of Platonic inquiry into the self and its relation to the physical world." Paterson attributed a philosophical shift in his poetry toward "hardcore" materialism, to time "reading popular science, and thinking about the basis of stuff." Other contenders included the 80-year-old establishment poet Peter Porter and Christopher Reid. Reid's collection *A Scattering* was a "moving, unsentimental record of loss," dedicated to his wife, who died in 2005.

Fifty years after physicist and novelist C.P. Snow gave his famous Rede Lecture at the University of Cambridge positing two cultures—humanities and the sciences—in opposition to one another, the Wellcome Trust inaugurated a new international prize to honour books, whether they be fiction or non-fiction, that integrated art and medicine or biomedical science. Short-listed books for the £25,000 (about \$35,000) Wellcome Trust Book Prize included Havi Carel's *Illness: The Cry of the Flesh* (2008), which blended philosophy with phenomenology to reflect on the social effects of illness on the sufferer, and was based on the author's own experience of living with a rare and fatal lung disease. The effects of disease were likewise explored from a personal perspective in Andrea Gillies's *Keeper: Living with Nancy*. Gillies, who looked after her mother-in-law with Alzheimer disease, provided "a painfully honest account of . . . a monstrous disease that strips people of their dignity and life savings." Brian Dillon's *Tormented Hope: Nine Hypochondriac Lives*, also short-listed, drew links between hypochondria and creativity, examining such historical figures as Charlotte Brontë, Marcel Proust, Charles Darwin, and Glenn Gould.

Given the Wellcome Trust's urge to bridge the disciplines of science and art, it was perhaps timely that the winner of the Royal Society Prize for Science Books was the result of a 10-year quest to prove the connection between science and poetry in the Romantic period. *The Age of Wonder: How the Romantic Generation Discovered the Beauty and Terror of Science*, by literary biographer Richard Holmes, looked at radical science before Darwin and its impact on great writers such as Shelley, Coleridge, Byron, and Keats. Sir Tim Hunt, chair of the judges, said that it "[wore] its science lightly while placing it within a much wider cultural context." Holmes said, "I believe that we
(continued on page 258)

WORLD LITERARY PRIZES 2009

All prizes are annual and were awarded in 2009 unless otherwise stated. Currency equivalents as of July 1, 2009, were as follows: €1 = \$1.409; £1 = \$1.657; Can\$1 = \$0.864; ¥1 = \$0.146; SKr 1 = \$0.130; DKr 1 = \$0.189; and 1 Russian ruble = \$0.032.

Nobel Prize for Literature

Awarded since 1901; included in the behest of Alfred Nobel, who specified a prize for those who "shall have produced in the field of literature the most outstanding work in an ideal direction." The prizewinners are selected in October by the Swedish Academy and receive the award on December 10 in Stockholm. Prize: a gold medal and an award that varies from year to year; in 2009 the award was SKr 10 million.

Herta Müller (Germany)

International IMPAC Dublin Literary Award

First awarded in 1996; this is the largest international literary prize and is open to books written in any language. The award is a joint initiative of Dublin City Council, the Municipal Government of Dublin City, and the productivity-improvement company IMPAC. It is administered by Dublin City Public Libraries. Prize: €100,000, of which 25% goes to the translator if the book was not written in English, and a Waterford crystal trophy. The awards are given at Dublin Castle in May or June.

Man Gone Down by Michael Thomas (U.S.)

Neustadt International Prize for Literature

Established in 1969 and awarded biennially by the University of Oklahoma and *World Literature Today*. Novelists, poets, and dramatists are equally eligible. Prize: \$50,000, a replica of an eagle feather cast in silver, and a certificate.

Patricia Grace (New Zealand), awarded in 2008

Man Booker International Prize

This prize is awarded every other year (beginning in 2005) to a living author of fiction of any nationality who writes in English or whose work is widely translated into English for the body of his work. The prize is supported by the Man Group PLC. Winners are announced in midyear. Prize: £60,000.

Alice Munro (Canada), awarded in 2009

Astrid Lindgren Memorial Award for Literature

This award, first bestowed in 2003 by the government of Sweden, is given annually to one or more living authors who, in the words of the organizers, "in their writing have produced literature for children and young people of absolutely the highest artistic quality and in the humanistic spirit associated with Astrid Lindgren." Organizations that contribute to the literary welfare of children and young people are also eligible. Prize: SKr 5 million.

Tamer Institute for Community Education (Israeli-occupied West Bank and Gaza Strip)

Commonwealth Writers' Prize

Established in 1987 by the Commonwealth Foundation. In 2009 there was one award of £10,000 for the best book submitted, as well as an award of £5,000 for the best first book. In each of the four regions of the Commonwealth, two prizes of £1,000 are awarded: one for the best book and one for the best first book.

Best Book *The Slap* by Christos Tsiolkas (Australia)

Best First Book *A Case of Exploding Mangoes* by Mohammed Hanif (Pakistan)

Regional winners—Best Book

Africa *The Lost Colours of the Chameleon* by Mandla Langa (South Africa)

Caribbean & Canada *Good to a Fault* by Marina Endicott (Canada)

Europe & South Asia *Unaccustomed Earth* by Jhumpa Lahiri (U.K.)

Southeast Asia & South Pacific *The Slap* by Christos Tsiolkas (Australia)

Man Booker Prize

Established in 1969, sponsored by Booker McConnell Ltd. and, beginning in 2002, the Man Group; administered by the National Book League in the U.K. Awarded to the best full-length novel written by a citizen of the Commonwealth or the Republic of Ireland and published in the U.K. during the 12 months ended September 30. Prize: £50,000.

Wolf Hall by Hilary Mantel

Costa Book of the Year

Established in 1971 as the Whitbread Literary Awards (from 1985 Whitbread Book of the Year); Costa Coffee assumed sponsorship in 2006. The winners of the Costa Book Awards for Poetry, Biography, Novel, and First Novel as well as the Costa Children's Book of the Year each receive £5,000, and the winner of the Costa Book of the Year prize receives an additional £25,000. Winners are announced early in the year following the award.

The Secret Scripture by Sebastian Barry (2008 award)

Orange Broadband Prize for Fiction

Established in 1996. Awarded to a work of published fiction written by a woman in English and published in the U.K. during the 12 months ended March 31. Prize: £30,000 and a bronze figurine called the "Bessie."

Home by Marilynne Robinson (U.S.)

Frank O'Connor International Short Story Award

The prize was first awarded in 2005 and recognizes a collection of short stories in English by a living author and published in the previous 12 months. The award is organized by the Munster Literature Centre in Ireland and Cork and underwritten by the Cork City Council in association with the *Irish Times*. Prize: €35,000, shared by the writer and the translators (if any).

Love Begins in Winter by Simon Van Booy (U.K./U.S.)

Bollingen Prize in Poetry

Established in 1949 by Paul Mellon. It is awarded to an American poet every two years by the Yale University Library. Prize: \$100,000.

Allen Grossman (2009 prize)

PEN/Nabokov Award

With this award, in even-numbered years the PEN American Center recognizes a living author for his or her body of work in a variety of genres written in, or translated into, English. The award, named for Vladimir Nabokov and supported by the Vladimir Nabokov Foundation, was first presented in 2000. Prize: \$20,000.

Cynthia Ozick (2008 award)

PEN/Faulkner Award

The PEN/Faulkner Foundation each year recognizes the best published works of fiction by contemporary American writers. The award, named for William Faulkner, was founded by writers in 1980 to honour their peers. Prize: \$15,000.

Netherland by Joseph O'Neill

Pulitzer Prizes in Letters and Drama

Begun in 1917. Awarded by Columbia University, New York City, on the recommendation of the Pulitzer Prize Board for books published in the previous year. Five categories in Letters are honoured: Fiction, Biography, and General Non-Fiction (authors of works in these categories must be American citizens); History (the subject must be American history); and Poetry (for original verse by an American author). The Drama prize is for "a distinguished play by an American author, preferably original in its source and dealing with American life." Prize: \$10,000 for each award.

Fiction *Olive Kitteridge* by Elizabeth Strout

Drama *Ruined* by Lynn Nottage

History *The Hemingses of Monticello: An American Family* by Annette Gordon-Reed

Poetry *The Shadow of Sirius* by W.S. Merwin

Biography *American Lion: Andrew Jackson in the White House* by Jon Meacham

General Non-Fiction *Slavery by Another Name: The Re-Enslavement of Black Americans from the Civil War to World War II* by Douglas A. Blackmon

National Book Awards

Awarded since 1950 by the National Book Foundation, a consortium of American publishing groups. Categories have varied, beginning with 3—Fiction, Nonfiction, and Poetry—swelling to 22 awards in 1983, and returning to the following 4 in 2001. Prize: \$10,000 and a crystal sculpture in each category.

Fiction *Let the Great World Spin* by Colum McCann

Nonfiction *The First Tycoon: The Epic Life of Cornelius Vanderbilt* by T.J. Stiles

Poetry *Transcendental Studies: A Trilogy* by Keith Waldrop

Young People's Literature *Claudette Colvin: Twice Toward Justice* by Phillip Hoose

Frost Medal

Awarded annually since 1930 by the Poetry Society of America for distinguished lifetime service to American poetry.

X.J. Kennedy

WORLD LITERARY PRIZES 2009 (continued)

Association for Library Service to Children (ALSC) Awards

The ALSC, a branch of the American Library Association (ALA), presents a series of awards each year for excellence in children's literature. The two best-established and best-known are the following:

The **Newbery Medal**, first bestowed in 1922 (the oldest award in the world for children's literature), honours the author of the most distinguished contribution in English to American literature for children. The award consists of a bronze medal.

Neil Gaiman, for *The Graveyard Book*

The **Caldecott Medal**, first bestowed in 1938, is awarded to the artist of the most distinguished picture book for children. The award consists of a bronze medal.

Beth Krommes, for *The House in the Night*, by Susan Marie Swanson

Governor General's Literary Awards

Canada's premier literary awards. Prizes are given in 14 categories altogether: Fiction, Poetry, Drama, Translation, Nonfiction, and Children's Literature (Text and Illustration), each in English and French. Established in 1937. Prize: Can\$25,000.

Fiction (English) *The Mistress of Nothing* by Kate Pullinger

Fiction (French) *Le Discours sur la tombe de l'idiot* by Julie Mazzieri

Poetry (English) *The Fly in Autumn* by David Zieroth

Poetry (French) *Thérèse pour joie et orchestre* by Hélène Monette

Griffin Poetry Prize

Established in 2001 and administered by the Griffin Trust for Excellence in Poetry. The award honours first-edition books of poetry published during the preceding year. Prize: Can\$50,000 each for the two awards.

Canadian Award *The Sentinel* by A.F. Moritz

International Award *Rising, Falling, Hovering* by C.D. Wright (U.S.)

Büchner Prize

Georg-Büchner-Preis. Awarded for a body of literary work in the German language. First awarded in 1923; now administered by the German Academy for Language and Literature. Prize: €40,000.

Walter Kappacher (Austria)

Hoof Prize

P.C. Hoofprijis. The Dutch national prize for literature, established in 1947. Prize: €60,000.

Hans Verhagen

Nordic Council Literature Prize

Established in 1961. Selections are made by a 10-member jury from among original works first published in Danish, Norwegian, or Swedish during the previous two years or in other Nordic languages (Finnish, Faroese, Sami, etc.) during the previous four years. Prize: Dkr 350,000.

Jeg forbanner tidens elv by Per Petterson (Norway)

Prix Goncourt

Prix de l'Académie Goncourt. First awarded in 1903 from the estate of French literary figure Edmond Huot de Goncourt, to memorialize him and his brother, Jules. Prize: €10.

Trois femmes puissantes by Marie NDiaye

Prix Femina

Established in 1904. The awards for works "of imagination" are announced by an all-women jury in the categories of French fiction, fiction in translation, and nonfiction. Announced in November together with the Prix Médicis. Prize: not stated.

French Fiction *Personne* by Gwenaëlle Aubry

Strega Prize

Premio Strega. Awarded annually since 1947 for the best work of prose (fiction or nonfiction) by an Italian author in the previous year. The prize is supported by the beverage company Liquore Strega and Telecom Italia. Prize: not stated.

Stabat mater by Tiziano Scarpa

Cervantes Prize for Hispanic Literature

Premio Cervantes. Established in 1976 and awarded by the Spanish Ministry of Culture for a body of work in the Spanish language. Announced in November or December and awarded the following April. Prize: €125,000. José Emilio Pacheco (Mexico)

Planeta Prize

Premio Planeta de Novela. Established in 1951 by the Planeta Publishing House for the best unpublished original novel in Spanish. Awarded in Barcelona in October. Prize: €601,000 and publication by Planeta.

Contra el viento by Ángeles Caso

Camões Prize

Prémio Camões. Established in 1988 by the governments of Portugal and Brazil to honour a "representative" author writing in the Portuguese language. Prize: €100,000.

Arménio Vieira (Cape Verde)

Russian Booker Prize

Awarded since 1992; the Russian Booker Prize has sometimes carried the names of various sponsors—e.g., Smirnov in 1997–2001. In 2004 it was underwritten by the Open Russia Charitable Organization and called the Booker/Open Russia Literary Prize. Awards: \$15,000 for the winner, \$1,000 for each finalist.

Vremya zhenshchin ("Time of Women") by Yelena Chizhova

Big Book Prize

Premiya Bolshaya Kniga. First given out in 2006; it is sponsored by the government of Russia and underwritten by a number of prominent businessmen, who also serve as the jury. Awards: 3 million rubles for first prize, 1.5 million for second, and 1 million for third.

Leonid Yuzefovich for his novel *Zhuravli i karliki* ("Cranes and Dwarfs")

Naguib Mahfouz Medal for Literature

Established in 1996 and awarded for the best contemporary novel published in Arabic. Prize: \$1,000 and a silver medal. The winning work is translated into English and published in Cairo, London, and New York.

Warrak Al-Hub ("The Scribe of Love") by Khalil Sweileh (Syria)

Caine Prize for African Writing

The Caine Prize for African Writing is awarded annually for a short story written by an African writer and published in English. The prize is named for Sir Michael Caine, longtime chairman of Booker PLC, the publishing company, and chairman of the Booker Prize management committee for 25 years. The Caine Prize was first given out in 2000. Award: £10,000 plus a travel allowance.

E.C. Osondu (Nigeria) for "Waiting"

Man Asian Literary Prize

Established in autumn 2007; this prize is awarded annually for an Asian novel unpublished in English. The prize is underwritten by the Man Group PLC and the Hong Kong International Literary Festival Ltd. Prize: \$10,000 for the author and \$3,000 for the translator, plus publication and distribution of the work if other arrangements have not been made.

The Boat to Redemption by Su Tong (China)

Jun'ichirō Tanizaki Prize

Tanizaki Jun'ichirō Shō. Established in 1965 to honour the memory of novelist Jun'ichirō Tanizaki. Awarded annually to a Japanese author for an exemplary literary work. Prize: ¥1,000,000 and a trophy. The prize was not awarded in 2009.

Ryūnosuke Akutagawa Prize

Akutagawa Ryūnosuke Shō. Established in 1935 and now sponsored by the Association for the Promotion of Japanese Literature; the prize is awarded in January and June for the best serious work of fiction by a promising new Japanese writer published in a magazine or journal. Prize: ¥1,000,000 and a commemorative gift.

"Potosuraimu no fune" ("The Lime Pothos Boat") by Kikuko Tsumura (140th prize, second half of 2008)

Tsui no sumika ("The Final Home") by Ken'ichirō Isozaki (141st prize, first half of 2009)

Mao Dun Literary Award

Established in 1981 to honour contemporary Chinese novels and named after novelist Shen Yanbing (1896–1981), whose nom de plume was Mao Dun; awarded every three years. The latest awards were given on Oct. 25, 2008.

Qinqiang ("Qin Opera") by Jia Pingwa

Ergun He you an ("The Right Bank of the Argun River") by Chi Zijian

Hu guang shan se ("The Scenery of Lakes and Mountains") by Zhou Daxin

An suan ("Plotting") by Mai Jia

(continued from page 255)

are now in a great age of popular science writing. . . . So I like to think the notion of two cultures will soon become entirely extinct, like the dinosaurs."

Certainly, science's impact on culture was a topic raised in the armfuls of histories, primers, and collections published to mark the bicentenary of Darwin's birth and the 150th anniversary of his *On the Origin of Species*. (See Special Report on page 182.) Rated at the top of the list by the *New Scientist* magazine, *Darwin's Sacred Cause*, by Darwin biographers Adrian Desmond and James Moore, controversially located Darwin's motivation for his theory of evolution in his repugnance for the slave trade and his desire to show the ancestral brotherhood of all men. The beautifully written *Darwin's Island*, by Steve Jones, reminded readers of the huge influence that Great Britain had on the naturalist's work, focusing on the numerous books he wrote on topics as diverse as "dogs, barnacles, insect-eating plants, orchids, earthworms, apes, and human emotion." *Darwin's Lost World* was described by its author, University of Oxford scientist Martin Brasier, as a "scientific thriller," a "detective story" crossing much of the world in search of the answer to "Darwin's Dilemma," or why the fossil record suddenly and mysteriously stops prior to the Cambrian Period. The most universally acclaimed contribution to Darwin's legend, however, was the poetical biography *Darwin: A Life in Poems*, by Ruth Padel, his great-great-granddaughter. Borrowing from letters, notebooks, and the Bible and providing marginalia to fill in the poems' historical contexts, Padel was said by a reviewer in *The Economist* magazine to have "caught the quintessence of the man's character, as if in a butterfly net." The *Irish Times* newspaper lauded the volume as "a landmark achievement" worthy of T.S. Eliot. (CAROL PEAKER)

United States. American publishers were assaulted on a number of fronts in 2009, including by the down-trending economy, flat or sagging book sales, the distractions of the Internet, and the now seemingly ever-present ascent of the electronic book. Many readers looked to escapist literature, especially those who flocked to the works of such best-selling authors as James Patterson, Dan Brown, Nicholas Sparks, and Nora Roberts. (See BIOGRAPHIES.) Nevertheless, it was a silver year, if not a golden one, for readers who enjoyed good fiction, poetry, and nonfiction narrative.

Novelist E.L. Doctorow, who had mined American history a number of times—using such templates for his work as the Western frontier, the Julius and Ethel Rosenberg spy case, and the Civil War—chronicled the lives of two famous New York City hoarders in his 2009 novel *Homer and Langley*. Doctorow built on, changed a bit, and transformed the lives of the Collyer brothers into a stately, beautiful performance with great resonance within the narrow range of their housebound lives.

The National Book Award fiction finalist *Lark and Termite* by Jayne Anne Phillips showcased the writer working at the top of her powers. Her first novel in nearly a decade was a dense, sharply rhythmic work of fractured narrative about a nearly broken West Virginia family. The book shifts back and forth over a nine-year period, between South Korea's North Chungchong province in late July 1950, where an American corporal named Robert Leavitt and a band of South Korean war refugees are assaulted by friendly fire, and a West Virginia hamlet in 1959, where Leavitt's mentally challenged son (nicknamed Termite by his family) and the boy's half sister Lark find themselves besieged by rising floodwaters and apparent threats from the local social service agency about the care of young Termite. In this section of the novel, narrated by Lark: "A car horn blares in the alley. Termite blares too then, trying to sound like the horn. 'Elise is here,' Nonie says. 'Don't forget to wash the dishes, and wipe off his hands.' She's already walking off across the grass, but Termite is outside so he doesn't mind her going. Elise waves at me from inside her Ford. She's a little shape in the shine of glare on the window, then the gravel crunches and they're moving off fast, like they're going somewhere important. 'Termite,' I say to him, and he says it back to me. He always gets the notes right, without saying the words. His sounds are like a one-toned song, and the day is still and flat. It's seven in the morning and here and there a little bit of air moves, in pieces, like a tease, like things are getting full so slow no one notices."

Other major writers produced work of serious amplitude and effect. *Little Bird of Heaven*, the title of Joyce Carol Oates's 55th novel, was borrowed from an actual country song (attributed in the novel to an upstate New York woman named Zoe Kruller), but the book, with the murder of the singer at

the centre of it, becomes an American writer's communion with Fyodor Dostoyevsky's *Crime and Punishment*, that soul-searing and soul-wrestling story out of Russia. Murder was also at the centre of John Irving's latest opus, *Last Night in Twisted River*, a novel that carries the reader from a remote New Hampshire logging camp in the mid-1950s to a freezing lake house near Toronto early in the new century. In his latest novel, *Inherent Vice*, Thomas Pynchon, author of whale-sized masterpieces, wrote in under 400 pages a deliciously composed dark comedy—a pastiche of the noir detective novel—about Southern California in the late 1960s and early '70s. Less successful were Philip Roth's latest short novel, *The Humbling*, about an aging actor who tries to cure his stage fright with sexual addiction, and the book-length work by gifted storyteller Lorrie Moore, *A Gate at the Stairs*; though widely praised, the work unaccountably read like a first novel that was some decades into revision.

Well-regarded and enterprising work by writers with smaller followings also gained considerable attention. Irish-born novelist Colum McCann looked at his adopted New York City in *Let the Great World Spin*, which won the National Book Award for fiction. The story begins with a depiction of the real August 1974 illicit high-wire feat of French tightrope walker Philippe Petit, who strung cables between the twin towers of the World Trade Center, stepping out to begin his epic walk. McCann wrote, "He entered the noise of the city, the concrete and glass made a racket, the thrup of the traffic. The pedestrians moving like water around him. He felt like an ancient immigrant. He had stepped onto new shores." The action also follows the stories of a priest, prostitutes, a judge, and an heiress. Mexican American Luis Alberto Urrea's novel *Into the Beautiful North* drew a lot of praise for its lyrical narrative, wedded to a plot similar to Akira Kurosawa's film *Seven Samurai*. "Riverbeds and streambeds looked like long lines of baby powder. . . . Nayeli watched the cattle become more emaciated and spindly. They stood in the sun as if they'd already been slaughtered. . . . Their ribs showed—the farther north the bus drove, the more pronounced the cages. Soon the cows looked like old rugs thrown over wood piles."

Several fine books by even lesser-known writers made it onto the finalist list of the National Book Award for fic-

tion. Bonnie Jo Campbell's short-story collection *American Salvage* offered a look at cold, lonely, methamphetamine-drenched modern working-class life in small-town Michigan. One reviewer found a roughness and even beauty that now and then reached something akin to the rude sublimity of a D.H. Lawrence story. Few of the stories ended with a resolution, but because of their despairing feel and their shape and form, they felt all too real. Probably the best new English-language story writer lived in Pakistan. Daniyal Mueenuddin, the author of another fiction finalist, *In Other Rooms, Other Wonders*, was educated in Pakistan and the U.S., where he attended Dartmouth College, Hanover, N.H., and Yale Law School. As do a number of his characters in these sharp and insightful stories, he lived in the Punjab, which he offered as the centre of the world. Beginning with the opening story, a large cast of characters, ranging from wealthy landowners to servants, pass through his pages, providing a wonderful sense of the strata of contemporary Pakistan—and a great corrective to the cartoonlike representation in current-day newspapers; the latter frequently depicted the country as teeming with fanatics and terrorists but explored nothing about ordinary day-to-day life. The fifth nominee for the National Book Award lived even less of his life in the United States than had

Pakistani American author Daniyal Mueenuddin's debut collection of short stories, In Other Rooms, Other Wonders, was a finalist for the National Book Award for fiction.

Nahal Toosi/AP

Mueenuddin. Marcel Theroux, son of novelist Paul Theroux, was born in Uganda and resided in the United Kingdom. His novel *Far North* offered a dystopic look at the future, with Americans living in encampments along the Russian tundra.

Two new novels of note, *The Way Through Doors* and *Lowboy*, by two young male writers, Jesse Ball and John Wray, respectively, both featured major characters who were rather odd young men. T.C. Boyle nobly attempted an affecting portrait of American architect Frank Lloyd Wright in *The Women*. South African expatriate Lynn Freed focused once again on her native ground in *The Servants' Quarters*. Michael Malone took readers onto his North Carolina turf and into the air above it in *The Four Corners of the Sky*. Valerie Martin explored the psyche of a struggling New York City actor in *The Confessions of Edward Day*, and Jonathan Lethem chimed in with *Chronic City*, a collection of interesting portraits of Manhattanites. Achy Obejas, author of *Memory Mambo* (1996) and *Days of Awe* (2001), chose Havana for the setting of her third novel, the appealing *Ruins*. Brian Kiteley focused on his hometown of Northampton, Mass., in his novel *The River Gods*, taking its title from the popular name for the group of powerful men, the offspring of marriages between the families of ministers and merchants, who ruled this part of New England for about 100 years from the late 17th century into the 18th century; he edged his novel toward meditation, celebration, an investigation, and elegy. Jean Thompson's latest collection of short fiction, *Do Not Deny Me*, won some praise, as did Joanna Scott's novel *Follow Me* and Robert Cohen's *Amateur Barbarians*.

A number of special editions were published. The Library of America published the *Collected Stories* of Raymond Carver—1,000 pages of Carver's work, including variant versions of his most famous short fiction. Another compelling collection of posthumous work was William Styron's Marine Corps sketches titled *Suicide Run*. In addition, Michael Crichton's last fully completed novel, *Pirate Latitudes*, lit up the fall title list.

While the fiction of 2009 shot off sparks and sometimes fireworks, the nonfiction books, whether memoir, criticism, history, or a blend of the above, smoldered rather than exploded. Nick Reding's *Methland: The Death and Life of an American Small Town* offered

a worrisome piece of book-length reportage of a methamphetamine-saturated American heartland. Pulitzer Prize winner Michael Chabon came out with his collected magazine essays titled *Manhood for Amateurs*, on "the pleasures and regrets of a husband, father, and son." Eula Biss published a collection of eccentric and well-composed personal essays on race in American life and various other subjects in *Notes from No Man's Land*. Novelist Jane Vandenburgh's memoir, *A Pocket History of Sex in the Twentieth Century*, was built on a wonderful fusion of insight and eccentricity of vision. The posthumous *The Essays of Leonard Michaels* (edited by Katherine Ogden Michaels) showed off the brilliance of the late story writer in nonfiction prose. Critic Elaine Showalter produced a long-awaited compendium in *A Jury of Her Peers: American Women Writers from Anne Bradstreet to Annie Proulx*. A massive project edited by writer Greil Marcus and Harvard professor Werner Sollors, *A New Literary History of America*, approached American history and culture from a number of sharp angles, with a roster of contributors ranging from historian John Diggins (on John Adams) to Ishmael Reed (on Mark Twain) to Michael Lesy (on *Life* magazine) to the editors (on Hurricane Katrina). Morris Dickstein signed in with *Dancing in the Dark: A Cultural History of the Great Depression*. Alan Cheuse published *A Trance After Breakfast*, a collection of travel essays that ranged in subject from his native New Jersey to the islands of Bali, Indonesia, and New Zealand.

Narrative played a role even among poets. Former poet laureate Rita Dove signed in with *Sonata Mulattica*, a collection of poems about a young African European composer who first won Beethoven's approval and then earned his anger. Campbell McGrath turned his attention to the figure of young George Shannon, the Pennsylvania-born teenage boy who was the youngest member of the Lewis and Clark expedition. In *Shannon* he dramatized George's 16 days of wandering alone across the Great American Desert after becoming separated from the main group of explorers. Novelist Richard Bausch went mostly in the direction of lyric in his book *These Extremes*, which featured prose to his relatives as well as verse based on historical and literary figures.

Hilda Raz shone her light on the natural world around her in *What Happens:*

In Springfield, Nebraska
on the central flyway
in March, the geese
at sunset make such a ruckus as
you can hear for miles
either side of Highway 14

Pamela Uschuk's *Crazy Love* employed the same approach. Marilyn Kallet, longtime resident of Tennessee, brought out *Packing Light*. Miguel Algarin, founder of the Nuyorican Poets Café, produced essays and poems in *Survival Supervivencia*. On the lighter side of brilliance, the Library of America offered *Ira Gershwin: Selected Lyrics*, edited by Robert Kimball.

Among the literary figures who died during the year were John Updike, Hortense Calisher, Marilyn French, Jim Carroll, Elmer Kelton, W.D. Snodgrass, James Purdy, Harold Norse, Frank McCourt, and William Safire. (See OBITUARIES.) Other losses included James D. Houston, whose novels featured California themes; Deborah Digges, an award-winning poet and English professor at Tufts University, Medford, Mass.; Morton Marcus, a celebrated Santa Cruz (Calif.) poet whose verse appeared in numerous journals and books; and Raymond Federman, a French American who specialized in creating works in the experimental style that was best exemplified in his book *Double or Nothing* (1971).

(ALAN CHEUSE)

Canada. Humour and disaster were often uneasy companions in Canadian novels in 2009. Margaret Atwood's *The Year of the Flood* was an inventively witty but bleak account of life on Earth after a long-predicted worldwide disaster has occurred, while Douglas Coupland's darkly comic *Generation A* was set in a future in which bees were nearly extinct and only storytelling—or lies—survived. Tall tales also informed Michael Crummey's *Galore*, set in a remote Newfoundland outpost. The true and tragic capsizing of the oil rig *Ocean Ranger* in 1982 formed the backdrop for Lisa Moore's novel *February*, the story of a family surviving the loss of husband, father, and breadwinner.

Other settings were as various as ancient Macedonia, where Aristotle tutors the future conqueror Alexander; in Annabel Lyon's *The Golden Mean*; a World War II-era factory, where four

women investigate the mystery of malfunctioning aircraft in Jeanette Lynes's quirky *The Factory Voice*; and post-Khmer Rouge Cambodia, where a young woman searches for the lover who disappeared there a decade earlier in Kim Echlin's *The Disappeared*. Anne Michaels's compelling love story *The Winter Vault* took both Egypt and Canada as its setting while also interweaving flashbacks of historical events in post-World War II Poland and England. Barry Callaghan also played with time, present and past, in *Beside Still Waters*, a peripatetic search for a lost love. In contrast, Bonnie Burnard's *Suddenly* was placed squarely in the centre of a cancer patient's family and friends.

The rewriting of real women's lives occupied two novelists. Kate Pullinger, in *The Mistress of Nothing*, reworked the story of a rebellious housemaid and her famous employer, Lucie Duff Gordon, an unconventional, not to say eccentric, literary figure; and Claire Holden Rothman was not too closely bound by the facts in *The Heart Specialist*, an account of the life and career of Maude Abbott, one of Canada's first female doctors.

The pitfalls of expediency and morality were examined in Linden MacIntyre's *The Bishop's Man*, in which a priest is sorely tested when confronted with the

consequences of his cover-ups and self-suppression; by Colin McAdam in *Fall*, a portrait of privileged male adolescents at an Ottawa boarding school; and by Martha Baillie in *The Incident Report*, a fantastic romp of literary references, allusions, and illusions, based loosely on Giuseppe Verdi's opera *Rigoletto*.

Short stories also included the rewriting of real lives, as in Alice Munro's latest collection, *Too Much Happiness*, in which the title story told the tale of the final journey of Sofya Kovalevskaya, a famous 19th-century Russian mathematician. In other collections, Ali Smith demonstrated the versatility of the short-story form in *The First Person, and Other Stories*, as did Deborah Willis in *Vanishing, and Other Stories*, while Mavis Gallant once more utilized her talents for observation in *Going Ashore*. The stories in Alexandra Leggat's *Animal* plumbed the often unrecognized affinities of animals and humans. Two very different world views were offered in *Curry Is Thicker than Water* by Jasmine D'Costa, a deftly witty excursion into tales set in the heart of India, and in George Bowering's *The Box*, a playful riff on Vancouver in the 1960s.

A common theme in many books of poetry was the differences that both separate and unite individuals. Adeena Karasick's *Amuse Bouche* served up a word salad of phrases, concepts, metaphor, and wit in wild and tasty juxtapositions. Marguerite Pigeon's *Inventory* examined the interface between subject and object, where the observer and the observed begin and end; Fred Wah considered the relations between word and thing in *Is a Door*; and Jeanette Lynes contrasted Canadian places and pastimes in *The New Blue Distance*. Douglas Lochhead stayed put and studied his own backyard in *Looking into Trees*. Barry Dempster reveled in the contrasting vagaries of the human heart in *Love Outlandish*.

The charm of departure beguiled many poets during the year. David Zieroth meditated on escaping from oneself in *The Fly in Autumn*, while Carmine Starnino in *This Way Out* looked for exits from modernity, and Sina Queyras's *Expressway* was a direct route into the heart of other times and places. Poetic milestones were marked by Robert Bringhurst's *Selected Poems* and Susan Musgrave's *When*

Canadian author Margaret Atwood attends a photocall in London for a theatrical performance of her novel *The Year of the Flood*.

the World Is Not Our Home: Selected Poems, 1985–2000. Margaret Avison's final meditations were published posthumously in her last collection, *Listening: The Last Poems*.

(ELIZABETH RHETT WOODS)

Other Literature in English. Important works written in English by authors from sub-Saharan Africa, Australia, and New Zealand made a strong showing among other noteworthy and award-winning books published in 2009. Much to the delight of readers and critics alike, new releases by several of South Africa's preeminent writers hit bookstores. J.M. Coetzee, the 2003 Nobel Prize-winning laureate in literature, brought out *Summertime*, the final volume in his trilogy of fictionalized memoirs; compatriot André Brink also released an autobiographical volume, *A Fork in the Road*. Poet, author, painter, and activist Breyten Breytenbach offered a vast array of aesthetic, social, and cultural commentary in two of the year's most memorable books, *Intimate Stranger* and *Notes from the Middle World*. Drawing from the 1996 testimony presented to South Africa's Truth and Reconciliation Commission of a mother who lost her son in a massacre, authors Antjie Krog, Nosisi Mpolweni, and Kopano Ratele released their investigative collaboration *There Was This Goat*, illuminating South Africa's racial and cultural misunderstandings. Relative newcomer Damon Galgut confirmed his status as one of South Africa's finest young literary voices with ongoing accolades for his novel *The Imposter* (2008); in June 2009 it was named winner of the 2008 University of Johannesburg Prize.

Elsewhere, Nigerian fiction writer Chimamanda Ngozi Adichie continued her remarkable success with the publication of her debut collection of short stories, *The Thing Around Your Neck*. Emerging author Uwem Akpan made an impressive debut in capturing both the 2009 Commonwealth Writers' Prize for Best First Book (Africa region) and a 2009 PEN/Beyond Margins Award for *Say You're One of Them* (2008), a compilation of stories about children and hope in Africa whose texts often contained a mix of languages. Compatriot and Booker Prize winner Ben Okri employed stylistic innovations of his own in *Tales of Freedom*, creating what he termed *stokus*, a hybrid of short story and haiku.

Australians heralded the publication of David Malouf's novel *Ransom*, his first to appear in more than a decade. The work revisited Homer's *Iliad* and gained widespread praise for its spare,

elegant prose and imaginative rendering of ancient Greece. Colleen McCullough, well known for her prodigious Masters of Rome historical novel sequence, extended her foray into the mystery-suspense genre with *Too Many Murders*, her second novel in the Carmine Delmonico series. Two other Australians, Tim Winton (*Breath*, 2008) and Christos Tsiolkas (*The Slap*, 2008) garnered international attention in receiving the Miles Franklin Literary Award and the Commonwealth Writers' Award (overall winner), respectively.

Highlights of the winners of the annual Montana New Zealand Book Awards for 2009 included *About My Wife* (2008), by Emily Perkins (fiction category); *The Rocky Shore* (2008), by Jenny Bornholdt (poetry); and *Collected Poems 1951–2006* (2008), by C.K. Stead (reference and anthology). Award-winning Aboriginal author Alexis Wright, whose talents became best known with her breakthrough best seller *Carpentaria* (2006), reached an even wider readership with the publication of the novel in the U.S. in 2009. On a sad note, Wilton G.S. Sankawulo, Sr., Liberian political leader, short-story writer, novelist, essayist, and translator, died in February. (DAVID DRAPER CLARK)

GERMAN

The authors of a number of the major German-language works of 2009 were born in the communist part of Europe during the Cold War. The German-speaking literary world was caught off guard on October 8 when the Swedish Academy announced that Herta Müller was the winner of the Nobel Prize for Literature. (See NOBEL PRIZES.) Müller, who came from a German-speaking village in the historic region of Banat, Rom., had moved to West Germany in 1987 in order to escape repression and censorship under the dictatorship of Nicolae Ceausescu. The Ceausescu regime discriminated against ethnic minorities, persecuted political dissidents, and engaged in an ecologically devastating program of destroying villages ostensibly to create more arable land, and living through the ordeal greatly contributed to Müller's primary literary theme: the toll taken on the human soul by dictatorships. Müller's novel *Atemschaukel*, published in August, told the story of a young German-speaking Romanian at the end of World War II and his experiences in a Soviet labour camp.

The winner of the 2009 German Book Prize, announced on October 12 at the

Romanian-born German writer Herta Müller won the 2009 Nobel Prize for Literature; her novel *Atemschaukel* was published in August.

beginning of the Frankfurt Book Fair, was Kathrin Schmidt for her novel *Du stirbst nicht*. The novel was about a woman who, like the author herself, loses the ability to speak after a stroke and has to relearn language. Schmidt had published several well-received books in the decade before 2002, when a cerebral hemorrhage forced her to go through that very experience. *Du stirbst nicht* dealt with the way that language and identity are interwoven, and since the novel's protagonist was, like its author, born in East Germany, it also addressed the final years of the East German dictatorship and German reunification.

Hungarian-born Terézia Mora, who had moved to Berlin at the beginning of the 1990s, published *Der einzige Mann auf dem Kontinent*, an exploration of life in the contemporary international business world and what it does to the human personality. The novel's protagonist, Darius Kopp, lives in a synthetic world of computers and office buildings that is no longer connected to the natural world and its rhythms. Written by an author who grew up in the brittle world of socialism in Hungary, the novel explored the fragility of contemporary capitalism and the personality structures associated with it.

Rainer Merkel's novel *Lichtjahre entfernt* dealt with contemporary sexual relationships. Its protagonist was a Munich-based psychotherapist who travels

to New York, meets his girlfriend, and, shortly before his flight back to Germany, ruminates on the reasons why his relationship with her has come to an end. Norbert Scheuer's novel *Überm Rauschen* was also an introspective exploration of personal relationships, this time between two brothers and their father, who is dead. This novel, unlike the novels of Mora and Merkel, showed the interrelationship between humans and nature; the primary activity of its protagonist, Leo Arimond, as well as of his brother and father, is fishing in a country river near his hometown, a village in rural North Rhine-Westphalia. Stephan Thome's novel *Grenzgang* also told a provincial story about life in a small village with its rituals, problems, and interactions with city people.

Swiss novelist Urs Widmer published *Herr Adamson*, a novel about death and its relationship to life. When the novel's protagonist is eight years old, he meets a man named Adamson; it turns out that Adamson emerged from the world of the dead, having died at the precise moment when the novel's protagonist was born. Adamson can be seen only by the novel's protagonist, and he can be released completely into the land of the dead only when the protagonist himself dies. Thus, the living and the dead are united by bonds that are separable only by death, and all of life is a preparation for dying. Logically, the novel is narrated on the day of the protagonist's death.

Jens Petersen was awarded the Ingeborg Bachmann prize in June for his unfinished novel *Bis dass der Tod*. Like *Herr Adamson*, this work also explored issues of life and death; the novel's protagonist, Alex, who cares for his terminally ill and comatose girlfriend, considers the possibility of suicide. Similarly, Judith Hermann's short-story collection *Alice* addressed the prominence of death in life. The five stories in the book revolve around one main figure (the eponymous Alice), various men in her life, and her attempts to deal with their deaths.

On a lighter note, Brigitte Kronauer's novel *Zwei schwarze Jäger* (2008) was a playful self-referential exploration of literature and the way it reflects and enriches life. Its protagonist was the writer Rita Palka, who, over the course of the novel, encounters a number of people with unusual histories. Finally, Lutz Seiler's sombre short-story collection *Die Zeitwaage* returned to the problem of life in socialist East Germany and its negative impact on human life. (STEPHEN M. BROCKMANN)

FRENCH

France. The year 2009 showed a marked decrease in the number of works of autobiographical fiction, or "autofiction," a genre in which authors novelize their lives and which had reigned over the past decade of French literature. Indeed, the title of one of 2009's best-selling works, Emmanuel Carrère's *D'autres vies que la mienne* ("Other Lives than My Own"), could be viewed as the year's literary rallying cry. In this nonfictional work, Carrère explicitly turned his back on the autofiction of his last work, *Un Roman russe* (2007), to tell the stories of others: of his girlfriend's sister Juliette, who died of cancer in 2005, and of a family still reeling from their young daughter's death in the Sri Lankan tsunami of 2004.

The prizewinning author Alain Fleischer subverted autofiction in *Moi, Sándor F.* by treating biography as autobiography. Through the literary legerdemain of channeling his uncle, who had been killed by the Nazis during deportation—the man after whom he had been named and whose personality, by all accounts, he had inherited—Fleischer opened a new literary frontier where novel, biography, and autobiography meet and one man's past elucidates another's present. This process was closely mirrored in another homage to a dead relative, Agnès Desarthe's *Le Remplaçant*, in which the author described the man whom her grandmother had married after her first husband's death at Auschwitz and from whom the author believed herself to have inherited her understanding of storytelling as a weapon against resignation and forgetting.

The decline of autofiction was matched by a resurgence of traditional fiction, particularly in works exploring the close setting of the family. In *Paris-Brest*, Tanguy Viel offered the spectacle of a dysfunctional family in which the narrator, Louis, is trapped between his disgraced, bankrupt father, his domineering mother, and his oppressive grandmother, who has unexpectedly inherited a fortune that Louis hopes to gain for himself. Wielding two weapons, a novel he has written to expose his family's foibles and his friendship for a young hoodlum whom his family despises, Louis attempts a rebellion that is doomed from the outset, in a novel that intertwines humour and despair.

In a similar vein, the celebrated novelist Philippe Djian published *Impardonnables*, in which a has-been writer who lost his wife and one daughter in

a car accident sees his world crumble again when his other daughter disappears. As his quest to find her estranges him from his new family, he begins to worry whether destiny has chosen him as its special victim and whether forgiveness of oneself can ever be anything but an illusion.

One subgenre of fiction, historical fiction, also saw a particular revival in the vacuum left by autofiction. In *Des hommes*, Laurent Mauvignier described the ramifications of the Algerian War on a group of French men who, once drafted, witnessed unspeakable horrors. The novel begins 40 years after the war, with the men suffering from psychological problems, and culminates in a moving flashback describing their experiences in the Algeria of 1960.

Pierre Lartigue completed a historical novel just days before his death. In *Des fous de qualité*, he portrayed the loss of idealism of soldiers who believed in the military virtues of honour, courage, and meritocracy under Napoleon only to return home after Napoleon's defeat to a France where the restoration of the embittered monarchy, eager to bury Napoleon's memory, has replaced honour with the cynical omnipotence of money.

Jean-Marie Laclavetine had the similarly ambitious project of painting a fresco of an entire era in his *Nous voilà*, but the era he examined was his own.

French author Marie NDiaye was awarded the 2009 Prix Goncourt for her novel Trois femmes puissantes.

Martin Bureau—AFP/Getty Images

In 1973 former fascists still faithful to Marshal Philippe Pétain steal his coffin in order to rebury it more honourably among patriotic heroes of World War I. When their plot is exposed, Pétain's body passes from hand to hand over the following three decades, to members of both extremes of France's political spectrum.

Ironically, in a year marked by pure fiction's triumph over autofiction, three of the four main literary prizes were awarded to autofictions. The Prix Médicis went to Haitian Canadian Dany Laferrière's *L'Énigme du retour*, in which the author described his homecoming, after decades of political exile, to his native Haiti, a country for which he had longed but to which he had become hopelessly foreign. In the winner of the Prix Renaudot, *Un Roman français*, Frédéric Beigbeder took the opportunity afforded by his infamous 2008 drug bust to reminisce upon the troubled childhood that shaped the hell-bent man he later became. Gwenaëlle Aubry won the Prix Femina for *Personne*, her portrait in 26 chapters, one for each letter of the alphabet, of her father, a lifelong manic-depressive who in the end died homeless.

The Prix Goncourt was awarded to the year's one true literary sensation, Marie NDiaye's *Trois femmes puissantes*, set in three vividly dysfunctional families. Three Senegalese women are trapped by their families: the first, Norah, believes she has escaped her abusive father until years later when she is called back to Senegal to face the debris he has become. The second, Fanta, is living in France with her failure of a husband, who envies her and suspects her of having an affair with his boss. The third, Khady, is a young widow at the mercy of her in-laws, who hate her for not having given her husband a child before his premature death. Though subjected to the worst humiliations as she attempts to reach France, Khady remains poignantly true to herself in a triumph of the human spirit over adversity. (VINCENT AURORA)

Canada. Two fiction titles dominated the literary scene in French Canada in 2009. Haitian-born writer and filmmaker Dany Laferrière matched literary quality with popular success with his novel *L'Énigme du retour*, a story of a man who, after his father's funeral, returns to Haiti to recover what remains of his family. The book won not only the Grand Prix du Livre de Montréal but also France's Prix Médicis. (Recognition from outside Canada always helps local

Miguel Medina—AFP/Getty Images

Haitian-born Dany Laferrière's novel *L'Énigme du retour* won both the Grand Prix du Livre de Montréal and France's Prix Médicis.

authors; this was also the case for Togo-born Edem Awumey, whose novel *Les Pieds sales* was included on the long list for France's Prix Goncourt.) The other dominant title was *Le Ciel de Bay City* (2008) by Catherine Mavrikakis, which in 2009 picked up the booksellers' prize (the Prix des Libraires du Québec) and the increasingly influential Prix Littéraire des Collégiens, an award conferred by secondary-school students. This was Mavrikakis's breakout book—though, like her earlier works, it featured a dark and brooding atmosphere. In competition for the Grand Prix du Livre de Montréal was a graphic novel, *Paul à Québec* by Michel Rabagliati. This was the first time that such a work had been considered for a major prize. The year saw the continued flowering of the Aurélie Laflamme phenomenon; the character was the creation of writer India Desjardins, who understood the need for a local series of novels for teen and preteen girls. The sixth volume in the series, *Ça déménage!*, was published in 2009. An all-but-overlooked novel, Julie Mazzieri's *Le Discours sur la tombe de l'idiot* (2008), won the Governor General's Literary Award for French-language fiction for a story that depicted a society falling apart after the village idiot is killed. The winner for French-language poetry was Hélène Monette's *Thérèse pour joie et orchestre*; the award provided overdue recognition of her long career. In nonfiction, *La Renarde et*

le mal peigné, a collection of letters, looked back on Quebec's recent past by resurrecting the romantic relationship between two important cultural figures, Pauline Julien (a singer) and Géraud Godin (a poet and politician). The suicide of novelist Nelly Arcan (see OBITUARIES) at age 36 shocked Quebec society. Sadly, she did not live to see the publication later in the year of her book *Paradis, clef en main*, ironically a novel that ultimately argued against suicide.

(DAVID HOMEL)

ITALIAN

Tiziano Scarpa's novel *Stabat mater* (2008), recipient of the 2009 Strega Prize, focuses on the impact of Antonio Vivaldi's innovative music on his contemporaries. Abandoned at birth, 16-year-old Cecilia spends her nights writing letters to her unknown mother and conversing with a personification of her own death. For Cecilia, Vivaldi's most talented pupil at the Ospedale della Pietà in Venice, music is only a mechanical activity until she gets to play the Red Priest's unconventional scores. Shocked at first, she gradually perceives the revolutionary power of music. In her journey of discovery, writing and music eventually coincide and lead her to pursue her freedom.

In Edith Bruck's *Quanta stella c'è nel cielo*, recipient of the Viareggio-Rèpaci Prize for fiction, the protagonist, Anita, who is also 16 years old, summons the strength to escape from an oppressive reality. After surviving the Auschwitz concentration camp, she finds herself in Czechoslovakia, treated as an object by members of her own family, who, like her, are Jewish, living in a precarious condition, in perpetual wait to leave for Palestine. Maternity makes her regain control of herself and her body and gives her the courage to rebel and begin a journey to reach the Promised Land. Elena Lowenthal's *Conta le stelle, se puoi* (2008) is a family saga told in a "counterhistorical" perspective. The author, a Hebrew studies scholar, imagines that Mussolini died in 1924 of a stroke and that 1938, instead of being the annus horribilis of racial laws in Italy, was the annus mirabilis of the birth of the state of Israel. Antonia Arslan, a pioneer of Italian women's studies, published *La strada di Smirne*, the sequel to her successful first novel, *La masseria delle allodole* (2004; *Skylark Farm*, 2006). After leaving behind the horror of the Armenian genocide, in which the men of the family were killed,

Gustau Nacarino—Reuters/Landov

Shushanig and her children land in northern Italy, where a relative and his family live a bourgeois lifestyle. Their hopes to find their own “promised land” seem to burn along with Smyrna (now Izmir, Tur.) during the terrible fire that devastated that city in 1922.

Through a fast-paced, humorous, captivating narration, *Almeno il cappello* by Andrea Vitali brings to life the small intrigues, lies, mysteries, quarrels, and reversals of destiny that animate Bellano, a small town on Lake Como, in Fascist-era Italy. The creation of a brass band in the town exposes the protagonists of this endeavour to petty power games between the podesta and the parish.

Cesarina Vighy's *L'ultima estate*, winner of the Campiello Prize for a first novel, is a caustic coming-of-age narrative told partially by an internal narrator, who coincides with the author, and partially by an omniscient narrator, who is intermittently present to disseminate a sense of ironic detachment in what is announced as a painful inner excavation. Shadows from the internal narrator's past populate the limited physical and sensorial space in which she has been confined by illness, and these shadows urge her to make them live through her. She will tell their stories but warns that “This is not going to be a watercolour painting, but an autopsy.”

Antonio Scurati's *Il bambino che sognava la fine del mondo* tells a story inspired by the case of alleged pedophilia at a school in Rignano Flaminio, which received enormous media attention in 2007. Through a complex interplay of fiction and nonfiction, autobiographical fiction and autobiography, the author—a media and communications specialist—reflected on the manner in which the media often amplify collective fears, thereby making the distinction between illusion and reality very thin. After publishing *Gomorra* (2006; Eng. trans., 2007), Roberto Saviano continued to write as an act of resistance, in the obstinate belief that truth “exists in spite of everything” and is to be found in the proliferation of accounts of “microstories” that are often neglected by the media. *La bellezza e l'inferno*, a collection of essays that he had written and in part published between 2004 and 2009, was his second book.

Space and time cross and overlap in two significant works published during the year. In Daniele Del Giudice's *Orizzonte mobile*, accounts of his expedition to the Antarctic in 1990 and of an imag-

Continuing to attract attention was Italian writer Roberto Saviano, who followed up his 2006 novel *Gomorra* with *La bellezza e l'inferno*, a collection of essays.

inary journey to the same lands set in 2007 alternate with excerpts from two notebooks by 19th-century explorers Giacomo Bove and Adrien de Gerlache de Gomery. By switching continuously between different times and perspectives, the author re-creates the “moving horizon” referenced in the title. Eraldo Affinati's *Berlin* is an homage to that city 20 years after the fall of the Berlin Wall. Seven chapters, each with a different narrator, render the multifaceted image of a city that still carries the marks and wounds of 20th-century history, along with the signs of the promise of a multiethnic, productive future.

Fernanda Pivano, whose work as a translator and essayist was pivotal in the diffusion of 20th-century American literature in Italy, died in August. Another loss to Italian letters was that of Alda Merini, one of the country's most important contemporary poets.

SPANISH

Spain. Many of the novels published in Spain in 2009 had a generational content and a tendency to refer to past times in order to explain the present. Many also featured determined and persevering characters.

Set in the political transition of the 1970s and reissued 30 years after its original publication, *Crónica del des-*

amor (1979) by Rosa Montero explored the worries of the post-Franco generation of women and gay men that felt powerful and disoriented at the same time and their uncertainty about how to manage personal freedom. In Arturo Pérez-Reverte's *Ojos azules*, the Aztecs prepare for their next revenge while the Spaniards are hurrying away, leaving behind the gold for which they crossed the Atlantic—all but one: a blue-eyed soldier who is determined to keep a sack of gold, knowing that it could lead to his capture. Pérez-Reverte presented a violent story about ambition and miscegenation; his novel depicted the most dramatic night in Mexico's conquest.

In his first short-story collection, *Tres vidas de santos*, Eduardo Mendoza presented pseudosaintly characters who are willing to give up everything in the pursuit of an idea. Ángeles Caso won the Planeta Prize with *Contra el viento*, the story of a young Cape Verdean woman who seeks a better life on the Iberian Peninsula but discovers that life is still harsh and challenging. *La sombra de lo que fuimos*, by Chilean Luis Sepúlveda, was awarded the Primavera Prize. It was a generational novel about a group of Chileans who recall their youth, their relationship with the Communist Party, Augusto Pinochet's coup, and their exile and eventual return to a democratic Chile. Kirmen Uribe won the National Prize

Spanish journalist and novelist Rosa Montero observed the 30th anniversary of the publication of her first work of fiction, *Crónica del desamor*.

for Narrative with *Bilbao–New York–Bilbao* (2008), which was written in Basque and had not yet been translated into Spanish.

Pandora al Congo (2005; in Catalan), reissued in 2009 as *Pandora en el Congo*, by Albert Sánchez Piñol, was the story of a ghostwriter who is given a strange and ambitious assignment: to write the story of Marcus Garvey—awaiting trial in Africa for the murder of the two sons of a duke—with the intent of saving Garvey and establishing the truth. Luis Leante's *La luna roja* was a novel of secrecy and passion, about the love for books and storytelling. It narrated the parallel lives of a writer and his translator and the ruthless woman between them.

The Nadal Prize was awarded to Maruja Torres for her novel *Esperadme en el cielo*, a novel about friendship and “ghosts.” After dying, the protagonist is reunited with two of her friends in heaven, where they look back at their lives in Barcelona during the 1960s and their childhood in postwar Spain.

The Alfaguara Prize was awarded to Argentine-born Andrés Neuman for *El viajero del siglo*, an ambitious experiment in which he looked back at the 19th century from a 21st-century perspective, analyzing issues such as immigration, multiculturalism, and the transformation of gender roles.

The highest distinction in Spanish letters, the Cervantes Prize, went to Mexican poet, short-story writer, and novelist José Emilio Pacheco. Among the writers who died in 2009 was the winner of the 1991 prize, Spanish novelist Francisco Ayala. (See OBITUARIES.)

(VERÓNICA ESTEBAN)

Latin America. One of the best surprises of 2009 was the novel *El viajero del siglo*, which was awarded the Alfaguara Prize. Its author, Andrés Neuman, was born in Argentina and lived in Spain. Set in an imaginary German town at the beginning of the 19th century, this beautifully written novel was a love story as well as a novel about ideas, literary criticism, philosophy, and politics, with multiple levels of meaning.

La muñeca rusa, by the Argentine Alicia Dujovne Ortiz, provided a fictional account of the life of África de las Heras, one of the wives of the Uruguayan writer Felisberto Hernández, who never suspected that she was a Russian spy. Another Argentine author, Claudia Piñeiro, published *Las grietas de Jara*, a thriller with elements of the psychological and the existentialist novel. The protagonist, a weak man

who is submissive to his boss and his wife, finally breaks free of the humiliation and submission he suffers.

Todos los hombres son mentirosos (2008), by the Argentine Alberto Manguel, a resident of France, was a novel that could be read, in part, as a continuation of the author's essays on the art of writing and reading. It not only was a meditation on the art of narration and a tale about Argentina's recent past but also represented for Manguel a nostalgic, sometimes funny, sometimes desperate, return to Latin America, its language, and its realities.

The Guatemalan Rodrigo Rey Rosa published *El material humano*, about the Guatemalan civil wars. Using documents recently discovered in the police archives in Guatemala, Rey Rosa created a journal-like narrative in which historical reality, fiction, and autobiographical elements alternate. The result was an exploration of the capacity of fiction to depict the ugly reality of repression. The Chilean Luis Sepúlveda used the techniques of the grotesque in *La sombra de lo que fuimos* (winner of the 2009 Primavera Prize) in order to convey the disenchantment of a generation of old political activists who return to Chile after years of forced exile.

Both *El material humano* and *La sombra de lo que fuimos* were in part autobiographical novels, and the same was true of *Demasiados héroes*, by the Colombian author Laura Restrepo, who fictionalized her revolutionary activities in the Argentina of the 1970s. The book questioned memory, authenticity, the limits of heroism, and the search for personal identity.

Memorias de una dama, by the Peruvian Santiago Roncagliolo, was a tragicomic novel about the Mafia, Caribbean dictators, and the relationship between the upper classes and political power in Latin America. The novel also wittily satirized literary circles.

The Mexican Jorge Volpi published *Oscuro bosque oscuro*, a novel in free verse that examined the horrors of Nazi brutality during World War II. It was, according to the author, a “moral fable”: it showed how ordinary people can participate in horrible massacres. It also represented Volpi's further exploration of the genre of the poetic narrative, which began with *El jardín devastado* (2008), a novel about the Iraq War.

La isla bajo el mar, by the Chilean American Isabel Allende, was the story of Haitian slaves told through a well-built narrative populated with charac-

Quim Llenas—Cover/Getty Images

Peruvian author Santiago Roncagliolo earned praise for his tragicomic novel *Memorias de una dama*.

ters of diverse races and nationalities. It focused on one of the slaves, Zarité, and her masters, large landowners who had escaped to New Orleans after their slaves rebelled and their plantation was burned. After being humiliated repeatedly and after having children by her master, Zarité achieves her freedom.

Santiago Gamboa, a Colombian author residing in New Delhi, chose, as in his previous novels, an international setting for *Necrópolis*. In it, a series of persons of different origins and professions attend a conference in Jerusalem, where a homicide occurs, and the narrator contrasts various versions of the same story.

Israel was the setting in another novel, *Aquarium*, by the Argentine Marcelo Figueras. The novel told a love story: a man and a woman fall in love, but they speak different languages and are unable to understand each other. This lack of communication was intended as a metaphor for the ongoing Israeli-Palestinian conflict.

Argentine Carlos María Domínguez, a resident of Uruguay, published *La costa ciega*, a short experimental novel in which different voices were superimposed and confused. *La alemana*, a

short, playful novel by the Uruguayan Gustavo Escanlar, centred on an iconoclast narrator who presents picturesque characters from marginal neighbourhoods in Montevideo, using their colloquial language.

At the end of 2008, William Ospina, from Colombia, received the Rómulo Gallegos Prize for *El país de la canela*, the second novel of a trilogy based on the *crónicas*, or chronicles, written during the exploration and colonization of Latin America.

A new book by the Argentine novelist and short-story writer Julio Cortázar, who died in 1984, appeared: *Papeles inesperados*, a collection of previously unpublished works and texts discarded by the author but retained in his archives. Among those writers who died in 2009 was the Uruguayan Mario Benedetti. (See OBITUARIES.) (LEDA SCHIAVO)

PORTUGUESE

Portugal. The most important trophy of Portuguese-language literatures, the Camões Prize, was awarded in June 2009 to Cape Verdean poet, fiction writer, and journalist Arménio Vieira. Vieira had engaged in Portuguese anti-colonial politics in the 1960s and '70s; he published *Poemas* (1981), the novella *O eleito do sol* (1990), the novel *No inferno* (1999), and the poetry collections *Mitografias* (2006) and *O poema, a viagem, o sonho* (2009). Although he wrote in opposition to the colonial and postcolonial political authorities and the established literary canons, Vieira's poetry was rooted in the tradition of the foundational Cape Verdean literary movement *Claridade* and glorified Western classics such as Homer.

The second-ever Leya Prize, a prominent literary honour awarded to unpublished works, sponsored by the powerful recently founded Portuguese publisher Leya (which acquired several iconic independent publishing houses), went to the novel *O olho de Hertzog* by Portuguese-born Mozambican historian and fiction writer João Paulo Borges Coelho. The story centred on European colonial rivalries in Africa and depicted Mozambique and its neighbours as proto-independent countries in the period around World War I. Among Coelho's previous fictional works were *As duas sombras do rio* (2003), *As visitas do Dr. Valdez* (2004), *Crónica da rua 513.2* (2006), and *Hinyambaan* (2007).

The Portuguese literary scene was agitated in 2009 by the publication of No-

Portuguese writer António Lobo Antunes released his 24th novel, *Que cavalos são aqueles que fazem sombra no mar?*, which chronicled the lives of members of a dysfunctional family.

bel Prize winner José Saramago's novel *Caim*. The polemic against *Caim* by Roman Catholic leaders recalled the one provoked years earlier by Saramago's *O evangelho segundo Jesus Cristo* (1991; *The Gospel According to Jesus Christ*, 1991), when Catholic authorities responded impetuously to his deconstruction of the divine origin of Christ. In *Caim* he revisited the Bible, this time the Old Testament story of Cain and Abel, with an anticlerical perspective that subverted the traditional relationship between an envious and resentful God and the suffering Man. Another internationally recognized Portuguese novelist, Saramago's literary rival António Lobo Antunes, celebrated the 30th anniversary of his prolific literary career—his first novel, *Memória de elefante*, had been published in 1979—with the release of his 24th novel, *Que cavalos são aqueles que fazem sombra no mar?* The latter book narrated the lives of members of a dysfunctional family in seven chapters named after the formal moves of traditional bullfighting in the family's native province of Ribatejo. In his own words, Antunes “wanted to write a novel in the classic manner that would destroy all novels written in the classic manner.” (VICTOR K. MENDES)

Brazil. Among new works of Brazilian fiction in 2009 was a family saga, Chico Buarque's novel *Leite derramado*,

which narrated in parallel fashion the evolution of a Brazilian family and the transformation of Brazilian society over the past two centuries. In Tatiana Salem Levy's first novel, *A chave de casa* (2007), awarded the 2008 São Paulo Prize for first works of literature, the protagonist travels to Turkey, her family's homeland, as she discovered what it means to be a Jewish-Brazilian descendant of immigrants. Also of interest was Alberto Mussa's *Meu destino é ser onça*, a work of fiction bordering on an essay about the origins of Brazil and the meaning of “being Brazilian.” The very short stories in Mario Sabino's collection *A boca da verdade* highlighted unhappiness as a key element of life.

The poet Rosa Lia Dinelle published *Enquanto os sinos plangem*, a collection of poems with a wide variety of forms and styles, from classical stanzas to popular Brazilian national forms with contemporary ecological themes. Carlos Newton Júnior's essay on Lampião, a legendary *cangaceiro* (backlands bandit), introduced his anthology *O cangaço na poesia brasileira*, which offered an original viewpoint on the importance of popular poetry (*trovas, literatura de cordel*) within Brazilian literature.

Among new works of literary criticism were the outstanding English-language biography of Clarice Lispector, *Why This World*, by Benjamin Moser; Rita Olivieri-Godet's study of the works of João Ubaldo Ribeiro; a collected volume of essays, *Nas tramas da ficção*, on the relationship between Brazilian literature and Brazilian history, which was edited by Clóvis Gruner and Cláudio DeNipoti; and a volume of literary essays by Susana Vernieri, *Vozes da estante*. Nélida Piñon published a memoir, *Coração andarilho*.

Throughout 2009 there were celebrations of the centenary of the death of Euclides da Cunha, author of *Os sertões* (1902; *Rebellion in the Backlands*, 1944), a classic narrative of life in the backlands. Salim Miguel was awarded the Machado de Assis Prize by the Brazilian Academy of Letters for his body of literary works.

The death of Augusto Boal in May 2009 merited particular note. (See OBITUARIES.) During the harshest years of the military dictatorship, Boal founded and led the Teatro do Oprimido (“Theatre of the Oppressed”) and was arrested, tortured, and sent into exile by the regime. His decades-long influence on Brazilian and international theatre was profound. (IRWIN STERN)

RUSSIAN

In purely creative terms, 2009 was not particularly eventful in Russian literature, especially with regard to new prose writing. Among the works that garnered the most attention was Mariya Galina's *Malaya Glusha* ("Little Glusha"). Galina, who was also a talented poet, wrote science fiction that she tried to raise to the level of "serious literature." In her latest work she used provincial life in a Soviet-era city as the setting for a voyage to the land of the dead. Another writer working on the border between the real and the fantastic was Leonid Yuzefovich. The protagonists of his novel, *Zhuravli i karliki* (2008; "Cranes and Dwarfs"), were the real-life 17th-century adventurer Timofey Ankudinov and a fictional contemporary researcher working on a biography of Ankudinov. The novel's climax takes place in a Buddhist monastery in Mongolia; it won the 2009 Big Book Award.

A second trend in contemporary Russian prose could be distinguished in Roman Senchin's novel *Yeltyshevy* ("The Yeltyshevs"), a dark, naturalistic saga of contemporary peasant life that was stylistically reminiscent of the "country prose" of the late Soviet period. Andrey Gelasimov's novel *Stepnyye bogi* (2008; "Gods of the Steppe") and Aleksandr Terekhov's *Kamenny most* ("The Stone Bridge") occupied an intermediate zone in that landscape. *Stepnyye bogi* combined a heartfelt realistic description of life in the Baikal countryside in 1945 with elements of a mystical thriller, while *Kamenny most*, a taut psychological thriller, was based on the true story of a double murder committed in 1943. Gelasimov's novel received the National Best Seller award for 2009. The novels of Yuzefovich, Terekhov, and Senchin were nominated for the Russian Booker Prize. Also on that list were the novels *Vremya zhenshchin* ("Time of Women") by Yelena Chizhova, who won the prize, *Zhili-byli starik so starukhoy* (2006; "Once There Lived an Old Man and His Wife") by Yelena Katishonok, and *Vcherashnyaya vechnost* (2008; "Yesterday's Eternity") by the venerable former Russian dissident Boris Khazanov.

Another notable work, *Asan* (2008; "Asan"), Vladimir Makanin's novel about the Chechen war that won the Big Book Award in 2008, continued to be vigorously discussed by critics in 2009. The novel *Okolonolya* ("Almost Zero") provoked something of a sensation as much because of its author as because of its content. The work, a satiric look at circles close to govern-

ment power, was signed by the pseudonymous author Natan Dubovitsky. Most suspected its real author to be none other than Vladislav Surkov, one of the most influential figures in the current Russian government.

In September a heated discussion about the state of Russian publishing broke out when the poet Olga Martynova published a brief article—in German—in a German newspaper. Soon after, the article was anonymously translated into Russian and posted on the very influential Russian Web site Openspace. The article, which she agreed to expand and write in Russian, argued that Russia's dominant publishers (including, among others, Eksmo, Ad Marginem, and Limbus Press) had decided to ignore aesthetically and intellectually complex works in favour of a kind of mishmash of mass market and "serious" literature that was reminiscent of Soviet literary norms. Martynova criticized a number of Russia's best-known and most popular writers, including Lyudmila Ulitskaya, Dmitry Bykov, Zakhar Prilepin, and Vladimir Sorokin.

The situation in poetry was considerably more favourable. The year saw the publication of new books by Igor Bulatovsky, Ilya Kucherov, Dmitry Grigoryev, Natalya Chernykh, Aleksey Porvin, Boris Khersonsky, Aleksandr Mironov, Gali-Dana Zinger, and Vadim Mesyats. Although most of the authors in this list were representatives of the Petersburg School, their publishers were Moscow-based, which signaled a healthy openness. Another highlight of the year was the entry into literature of several young poets whose reputation was based exclusively on Internet publication and who had not yet attempted printed publication. This group included the 20-year-old poets Vera Polozkova and Alya Kudryashova. Although neither had yet produced a masterpiece, their work showed promise, and its level of professionalism was considerably higher than that of the "Web poets" of previous years.

Many writers died during the year, including acclaimed popular prose writer Vasily Aksyonov and 96-year-old Sergey Mikhalkov, the very official author of both the Soviet national anthem and the new Russian national anthem. (See OBITUARIES.) Other literary lights extinguished were literary critic Vladimir Glotser; poet Vsevolod Nekrasov, founder of Russian concrete poetry and precursor of Russian Conceptualism; Lev Losev, poet and member of the Leningrad philological school who

spent the latter part of his life in the United States; philosopher, essayist, and prose writer Aleksandr Pyatigorsky; Yevgeny Saburov, poet and playwright who turned successful politician in the 1990s; Aleksey Parshchikov, a major figure of the "metarealist" school of Russian poets of the 1970s and '80s; Mikhail Gendeleev, poet and prose writer and an unofficial leader of Russian-language culture in Israel; cultural critic and literary historian Aleksey Peskov, who also wrote popular fiction under the pseudonym Alex Sandow; Aleksandr Mezhirov, the last major poet of the so-called war (World War II) generation; poets Mikhail Pozdnyayev, Olga Rozhanskaya, and Natalya Khatkina; and prose writers Mikhail Kononov and Yegor Radov. Not since the end of World War II and Joseph Stalin's terror had Russian literature lost so many writers in a single year. (VALERY SHUBINSKY)

PERSIAN

Literary production in Iran continued to suffer from restrictive government measures and was eclipsed in the latter part of 2009 by the political turmoil that followed the disputed June presidential election. The year also saw governmental efforts to revive the 1980s cultural policy of sponsoring propaganda packaged as literature and an increase in literary scholarship directed toward the medieval heritage of Persian literature.

State politicization of literature and literary production was visible at the 22nd Tehran International Book Fair, held in May. The few notable independently published works of fiction were led by Amir Hassan Cheheltan's *Akhlāq-e mardom-e khiyābān-e Enqelāb* ("The Morals of the People of Revolution Avenue"; published in German as *Teheran Revolutionsstrasse*). *Herfeh-ye man khavāb didan ast* ("My Profession Is Dreaming"), a collection of short stories by Fatimah Zari'i, was among the year's most innovative works of short fiction.

Attention to the classics of Persian poetry was manifested in the publication of *Gozideh-ye Ghazaliyat-e Shams* (2008, edited by Mohammad Reza Shafi'i Kadkani), which contained extensive annotated selections from Rūmī's *Divān-e Shams-e Tabrizī* ("The Collected Poems of Shams of Tabriz"). *Censoring an Iranian Love Story*, based on an unpublished original Persian manuscript by Shahriar Mandanipour, addressed the issue of censorship in a novel way and led an impressive array of literary translations from Persian.

Sheida Mohamadi, a Los Angeles-based poet and fiction writer, rose to prominence during the year. Her works—including *Afsānah-ye Bābā Laylā* (“The Legend of Baba Layla”), a poetic novel published in a heavily censored version in Tehran in 2006, and ‘*Aks-e fowri-ye ‘eshq-bāzi*’ (“A Snapshot of Love-Making”), a collection of poems published by the author in Los Angeles in 2007—attracted much attention after they were posted on the author’s Web site.

Two literary events ranked among the most noteworthy. The Courrier International’s literary prize was awarded to Zoya Pirzad for Christophe Balaÿ’s French translation of her collection of short stories, titled *Le Goût âpre des kakis* (“The Bitter Taste of Persimmon”), and novelist Isma‘il Fasiḥ—whose notable works included *Sorayyā dar eghmā* (“Sorayya in a Coma”) and *Zemestān-e 62* (“Winter of ‘62”)—died in Tehran. (AHMAD KARIMI-HAKKAK)

ARABIC

There was concern among Arab publishers in 2009 about the continuing impact of the global financial crisis that had begun the previous year. The situation, though alarming to many, offered one positive result: cheaper paper. That in turn translated into lower book prices and thus made books more affordable for the general public. New writers, however, who traditionally published their first work at their own expense, could not afford to do so.

Arab writers were generally dissatisfied with aspects of the cultural life in their countries. Complaints abounded about censorship, weak distribution of their works, biased award systems, and what many felt was the undue recognition of writers with strong connections to government publishing houses. Arab writers also showed a growing interest in translation, with some questioning both the quality of the books selected by national translation organizations and the intentions of Western publishers.

Among those writers whose work echoed the most pressing problems of the region was Iraqi writer In‘ām Kajajī. In *Al-Ḥafīdah al-amrīkiyyah* (2008; “The American Granddaughter”), Zaynah, the protagonist, is an American Iraqi who faces her multiple identities while working as an interpreter with the U.S. Army in Iraq. By exploring the contempt Iraqis feel for their Americanized compatriots, whom they consider traitors, the novel re-

vealed the harsh reality in Iraq, where sectarian and religious divisions destroyed a society that prided itself on religious tolerance.

Mourid Barghouti’s second memoir, *Wulidtu hunāk, wulidtu hunā* (“I Was Born There, I Was Born Here”), celebrated his Egyptian-born son Tamim’s first visit to the West Bank and the affirmation of his Palestinian identity. The book provided an account of the hardships of the Palestinians and praised those who battle Israeli restrictions and find creative strategies for overcoming hurdles on a daily basis. But Barghouti, a Palestinian, was also critical of his own society. He denounced religious intolerance, divisions between various political factions, and abuses of power.

Sahar Khalifeh remained close to her Palestinian heritage in the novel *Aṣl wa faṣl* (“Of Lineage and Class”). Narrating the story of the Qahtan family from the Ottoman era to the period of the British mandate, the book denounced Britain’s role in Palestine, revealed the weaknesses of the early Palestinian liberation movement, and provided insight into Palestinian traditions in marriage and discrimination against women.

Wāsinī al-A‘raj moved beyond his native Algeria and placed the action of his novel *Sūnātā li-ashbāḥ al-Quds* (“Sonata for the Ghosts of Jerusalem”) in the wider world of the Palestinian diaspora, through the story of a female painter and her famous musician son in New York City. In Syria Fawwāz Ḥaddād defied censorship with ‘*Azf munfarid ‘alā al-biyānū*’ (“Solo Piano Playing”). Depicting various Islamic groups as being manipulated by the state, the novel paints an atmosphere of fear and secrecy in which the characters are pawns, secretly maneuvered and manipulated.

In the short-story collection *Fī hijā’ al-bashar wa-madiḥ al-bahā’im wa al-ḥasharāt* (“Scoffing at Human Beings and Praising Animals and Insects”), Libyan writer Aḥmad Ibrāhīm al-Faqīh explored human interactions and found strong compassion on the part of animals and insects toward humans and an absence of compassion in humans’ relationships among themselves. Muḥammad al-Bisāṭī remained close to his society’s problems with his novel *Aswār* (“Walls”), about life in Egypt being akin to life in a prison.

In his novel *Fi kull usbu‘—yawm Jum‘ah* (“On Friday of Every Week”), Ibrāhīm ‘Abd al-Majīd moved into territory that was relatively new for Arab

*Mourid Barghouti released a second memoir during the year, *Wulidtu hunāk, wulidtu hunā*, which chronicled the hardships faced by Palestinians.*

writers: the Internet. The story revolves around a chat room that becomes accessible to new members every Friday and that gives young people in particular the opportunity to discuss their problems freely and anonymously.

Despite awards for poetry, such as those presented by the Foundation of Abdul Aziz al-Babtain, which are among the most prestigious in the Arab world, poetry continued to lose readers to fiction, especially the novel. The staunchest critic of weakening interest in verse, the Egyptian poet and literary critic ‘Abd al-Mu‘ī Hījāzī, continued to defend the genre tirelessly. He attributed its loss of popularity in Egypt to a poor educational system that failed to provide students with a solid knowledge of classical Arabic. The death in 2008 of Palestinian Maḥmūd Darwīsh, one of the most prominent and popular Arab poets, perhaps contributed to poetry’s waning popularity. His last collection of poems, *Lā urīdu li-hādhī al-qaṣīdah an tantahī* (“I Do Not Want This Poem to End”), was published posthumously and was well received.

‘*Azāzīl*’ (“Beelzebub”) by the Egyptian novelist Yūsuf Zaydān won the International Prize for Arabic Fiction (sometimes called the Arabic Booker) for 2009. The novel did not attract much attention when it first appeared, in 2008, but it later became the subject of strong criticism from the Coptic Orthodox Church.

The Arab world mourned the deaths of Sudanese novelist al-Ṭayyib Ṣāliḥ and Francophone Moroccan writer and sociologist Abdelkebir Khatibi. (See OBITUARIES.) (AIDA A. BAMIA)

CHINESE

Of some 3,000 new Chinese novels published in print in 2009, few found favour with the critics. One of the few exceptions was *Yi ju ding yiwan ju* ("One Sentence Tops Ten Thousand") by well-known writer Liu Zhenyun, though it too had a few detractors. Composed of 400,000 Chinese characters, the novel told the story of a peasant, Yang Baishun, who leaves his home in Yanjin (also Liu's home village) after the death of his adopted daughter in search of someone who can fill her place in his life. Decades later the daughter's son, Niu Jianguo, who had left the village, returns to it with the same strong desire for personal connection. Using a fine, delicate narrative style, the author probingly examined the concept of *friendlessness*—which differs from what in English is called *loneliness*—and attempted to redefine the meaning of *friend*.

Perhaps the most notable literary trend of the year was the continuing growth of *wangluo wenxue* (Internet literature). Since 1997, when the first literary Web site in mainland China (www.rongshuxia.com) was established, digital publishing had developed rapidly. In 2009 it seemed to reach an explosive point: an online call for new literary works, presented as *Quanqiu xiezuo da zhan* (global writing exhibition), accepted submissions from March 3 to November 15. Organizers reported that during that period more than 70,000 new works, including fiction, essays, and plays, were submitted online. Votes cast via cell phone and through selected Web sites would determine the top 100 entries of each category. The work of the winners would be published on *Qidian Zhongwen wang* (Starting Point Chinese Web [SPCW]), www.qidian.com, the official Web site of the project. (Qidian's target audience was young men.)

This project was organized by Shengda Literature Ltd. (SDL), the leading Web-based interactive entertainment media company in China. SDL owned the three biggest Chinese literary Web sites, including *Jinjiang yuanchuang wang* (Jinjiang Web of Original Creation), www.jjwxc.net, which was believed to be the largest literary Web site in the world devoted to

female writers, and *Hongxiu tianxiang xiaoshuo wang* (Hongxiu tianxiang Fiction Web), www.hongxiu.com, in addition to Qidian. Hou Xiaoqiang, the chief executive officer of SDL, declared that his company would use copyright as a core tool to seek a new shape for the literary industry.

Two Chinese-born nonagenarians died in 2009—Nien Cheng, whose 1986 memoir *Life and Death in Shanghai* recounted her tribulations during the Cultural Revolution, and Yang Xianyi, the most noteworthy Chinese translator of the 20th century. (See OBITUARIES.)

(WANG XIAOMING)

JAPANESE

The most notable event in 2009 for Japanese literature was undeniably the publication of Haruki Murakami's *1Q84*. So many people preordered the two-volume novel that it appeared on best-selling lists as soon as it was released in late May. Public interest in *1Q84* was only increased by the silence Murakami and his publisher—and the Japanese media broadly—maintained about the content of the book prior to its publication. It immediately sold out at many bookstores the day it was released.

1Q84 consisted of two parallel worlds, described in a third-person narrative, that have at their centres Aomame and Tengo. Aomame, a 30-year-old woman who works for a secret agent whose aim is to kill those who hurt others, is driven by a strong memory of Tengo, a childhood friend, and seeks him out. Tengo, who teaches school but aspires

Ken'ichirō Iozaki

Sankei/Getty Images

to be a novelist, in turn seeks her. One day he receives a ghostwriting job from a publisher that had rejected his work, and it is that job that brings him close to Aomame. The novel's title, according to Murakami, is intended as a play on that of George Orwell's dystopian *1984*—the English letter Q and the Japanese word for the number 9 are pronounced identically.

Murakami also stirred some controversy by accepting the Jerusalem Prize for the Freedom of the Individual in Society in early 2009, just after the cessation of hostilities between Hamas and Israel in the Gaza Strip. Resisting calls by pro-Palestinian groups, Murakami insisted that it would be better to attend the ceremony and deliver his speech (about the role of novelists in the world) than to keep silent.

One of the other best-selling books of 2009 was Ken'ichirō Iozaki's *Tsui no sumika* ("The Final Home"), a short novel—first published in the literary magazine *Shincho*—that won the year's first Akutagawa Prize, normally awarded twice a year to promising Japanese writers. Iozaki's stylish sentences were highly praised. The selection committee declined to award the year's second Akutagawa Prize.

Among other remarkable works of the year were Teru Miyamoto's *Gaikotsu biru no niwa* ("The Garden of the Skeleton Building"), Noboru Tsujihara's *Yurusarezaru mono* ("Unforgiven"), and Naoyuki Ii's story about an imaginary animal, *Poketto no naka no rewaniwa* ("The Rewaniwa in My Pocket").

Shirin Nezamafi won the Bungakukai New Writer's Prize with *Shiroi kami* ("White Paper"), becoming only the second non-Japanese winner of the prize. Nezamafi was born in Iran and had lived in Japan since 1999. Sō Kurokawa's *Kamome no hi* (2008; "The Day of the Seagull") received the Yomiuri Prize for Literature. The Yasunari Kawabata Prize, given to the year's most accomplished short story, went to Nanae Aoyama's "Kakera" ("A Fragment"), first published in the November 2008 issue of *Shincho*. The Kenzaburō Ōe Prize was awarded to *Hikari no mandara* ("The Mandala of Lights"), an essay on Japanese literature, by the literary critic Reiji Andō.

Deaths in 2009 included Kaoru Kurimoto, who wrote science fiction (most notably the *Guin Saga*); she also wrote literary criticism under the name Azusa Nakajima. Novelist and short-story writer Junzō Shōno also died.

(YOSHIHIKO KAZAMARU)

Military Affairs

The long **CIVIL WAR** in Sri Lanka ended, as did the conflict in Darfur. But **WAR INTENSIFIED** in Afghanistan, where the U.S. and NATO prepared to send more troops, and in Pakistan, where the government launched new offensives.

The 26-year rebellion waged by the Liberation Tigers of Tamil Eelam (Tamil Tigers) to establish an independent homeland in Sri Lanka was crushed in 2009 by government forces, who overran the last area of rebel-held territory in May. During the final battle Tiger leader Velupillai Prabhakaran was killed. (See OBITUARIES.)

WMD, ARMS CONTROL, AND DISARMAMENT

The UN Security Council unanimously adopted Resolution 1874, tightening an existing arms embargo against North Korea. The action occurred after Pyongyang conducted its second-ever underground nuclear explosion in May.

A treaty establishing Africa as a nuclear-weapon-free zone (NWFZ) came into force in July after Burundi became the 28th African country to ratify it. The Treaty of Pelindaba prohibited the possession, development, manufacture, testing, or deployment of nuclear weapons on the African continent.

Russian Pres. Dmitry Medvedev and U.S. Pres. Barack Obama announced the launch of bilateral talks to succeed the 1991 Strategic Arms Reduction Talks treaty. START I expired in December 2009 without agreement on a successor even though diplomats had been negotiating a new treaty since April. Talks were set to resume in January 2010.

CONFLICTS

Africa. Except for sporadic violence and banditry, the six-year war between The Sudan's pro-government forces and rebels in Darfur effectively ended, according to the UN's military commander in the region. Since fighting began, an estimated 300,000 people had died in Darfur and a further 2.7 million had been displaced.

The Democratic Republic of the Congo (DRC) continued to be plagued by insecurity and violence. More than 1,000 civilians were killed in the east of the country during joint DRC army–UN operations against the Democratic Forces for the Liberation of Rwanda (FDLR), a Rwandan rebel group linked to the Hutu extremists responsible for the genocide of Rwandan Tutsis in 1994. Forces from the Ugandan Lord's Resistance Army (LRA) continued to operate in the DRC's northeast, but a joint offensive by Congolese and Ugandan troops forced most of them into neighbouring Central African Republic.

Islamist groups and warlords fought for control of much of southern Somalia. After Ethiopia pulled its troops out of the country in January 2009, the extremist Islamic group al-Shabaab, thought to have links with the terrorist group al-Qaeda, began to dominate the struggle. There had been no effective government in Somalia since 1991, and the transitional government, backed by the UN and the African Union, controlled only small parts of the capital, Mogadishu. Only about half of the 8,000 troops authorized for the UN-backed African Union Mission to Somalia (AMISOM) had been deployed by the end of 2009.

The Americas. The president of Honduras, Manuel Zelaya, was removed from office by the military and forced into exile in June. Zelaya managed to secure the support of the Organization of American States (OAS) and to have himself smuggled into the Brazilian embassy in Tegucigalpa, but neither his supporters nor the OAS was able to prevent an interim government from holding elections to decide on Zelaya's successor.

Mexico deployed thousands of troops along the country's northern border to stem violence between gangs supplying illegal drugs to the United States. Such

violence in Ciudad Juarez, a city of 1.5 million people, for example, resulted in nearly 2,000 drug-related murders in the first 10 months of 2009. (See Special Report on page 176.)

Middle East. Violence in Iraq fell to its lowest level since the U.S.-led invasion in 2003. Iraqi forces took control of security in Baghdad's fortified Green Zone and assumed more authority over foreign troops based in the country. U.S. troops withdrew from many towns and cities across the country, and British combat operations officially ended in April.

Saudi Arabian forces and Shi'ite Yemeni rebels clashed along the border between the two countries in November and December. During 2009 sporadic fighting between Yemeni security forces and the rebels resulted in hundreds of casualties and an estimated 150,000 internal refugees.

South and Central Asia. In April Russia declared its nearly decade-old "counterterrorism operation" against separatist rebels in Chechnya to be over. However, violence in the region continued throughout the year. In November a Muslim group from the Caucasus set off a bomb that derailed an express passenger train between St. Petersburg and Moscow, killing 26 people.

The war in Afghanistan grew in intensity and spread to the country's north, which had been relatively peaceful since the Taliban were overthrown in 2001. At the end of 2009, there were approximately 71,000 troops (about half from the U.S.) from 43 countries contributing to the NATO-led International Security Assistance Force (ISAF) supporting the Afghan government. An additional 36,000 U.S. troops not part of ISAF were also in the country. In December U.S. Pres. Barack Obama announced that more than 30,000 additional troops would be sent to the country, and NATO Secretary-General Anders Rasmussen announced that European members would contribute another 7,000. Among the approximately 500 foreign troops killed during the year, about 60% of the deaths resulted from improvised explosive devices (IEDs).

The government of Pakistan launched several offensives during 2009 to wrest control from the Taliban and other militants in northwestern tribal districts bordering Afghanistan. Pakistan

claimed that hundreds of militants were killed as well as dozens of security force personnel, but independent verification was impossible. The militants responded with attacks on government and civilian targets across Pakistan.

MILITARY TECHNOLOGY

The Ion Tiger, a small unmanned aerial vehicle (UAV) developed by the U.S. Naval Research Laboratory, flew for more than 26 hours in November. The UAV set an unofficial endurance record for fuel-cell powered flight. (See Special Report on page 186.)

The U.S. Navy commissioned the amphibious assault ship *Makin Island*. It was the first navy ship to use a combination of gas-turbine engines and electric drive for propulsion to reduce fuel usage and maintenance costs.

The U.S. Air Force Research Laboratory in 2009 test-fired two new laser weapons in flight for the first time. The Advanced Tactical Laser, designed to destroy ground targets up to 20 km (12 mi) away, was fired from an NC-130H Hercules aircraft. The much larger Airborne Laser (ABL), designed to shoot down ballistic missiles, was fired from a converted Boeing 747.

The U.K.'s Ministry of Defence announced that it was fielding a new generation of lightweight textile-based armour designed to protect vehicles against rocket-propelled grenades. Named TARIAN (Welsh for "shield"), the new armour was deployed on heavy trucks serving with the British army in Afghanistan.

India launched its first nuclear-powered submarine in July. The 6,000-metric-ton *INS Arihant* would be capable of launching missiles at targets 700 km (435 mi) away. India thus became the sixth country capable of building its own nuclear-powered submarines, joining China, France, Russia, the U.K., and the U.S.

ARMED FORCES AND POLITICS

France rejoined NATO's military command in March after having left it in 1966. Albania and Croatia officially joined the alliance in April.

Russia announced plans to set up an Arctic Group of Forces to protect its interests in the far north. Establishment of the new command was influenced by the growing importance of oil and gas reserves in the region. The group would coordinate activities of the armed forces, border guard, and coast guard.

The seven-member Collective Security Treaty Organization (CSTO), comprising Armenia, Belarus, Kazakhstan, Kyrgyzstan, Russia, Tajikistan, and Uzbekistan, agreed to establish a rapid-reaction force to defend member states against foreign military aggression, terrorism, and drug trafficking. The force would also offer assistance in recovery from natural disasters.

In October Turkey banned Israel from participating in a planned NATO military exercise. In the same month, Israel and the U.S. held their largest-ever joint exercise, simulating the defense of Israel against a ballistic-missile attack.

MILITARY AND SOCIETY

To combat piracy around the Horn of Africa, approximately 30 ships plus aircraft from 17 countries began operating together in January as Combined Task Force 151. The International Maritime Bureau reported an "unprecedented increase" in activity by Somali pirates in the first nine months of 2009, identifying 147 incidents in the Gulf of Aden and in Somali coastal waters, compared with 63 for the same period the previous year.

Turkey enacted new legislation to give civilian courts the authority to try military personnel who threaten national security. The law also prohibited military courts from prosecuting civilians during peacetime.

By a vote of 25–6, the UN Human Rights Council backed a report that accused both Israel's armed forces and Palestinian militants of war crimes that occurred during the 2008–09 Israeli offensive in Gaza. An estimated 1,300 Palestinians and 10 Israeli soldiers were killed during the fighting. Three

Israeli civilians died in Palestinian rocket attacks.

A Rwandan man convicted of war crimes committed in 1994 was jailed for life by a Canadian court in October. Désiré Munyaneza, 42, was found guilty in May in the first court case brought under Canada's Crimes Against Humanity and War Crimes Act.

In August the U.S. Air Force established its first numbered air force dedicated to fighting in cyberspace. The 24th Air Force, based in Texas, comprised the 688th Information Operations Wing and the 67th Network Warfare Wing.

The Japanese government relaxed its long-standing self-imposed ban on arms exports to allow more joint development and production of weapons with other countries. Exports to countries that sponsor terrorism, violate human rights, or have inadequate controls over arms sales continued to be outlawed.

In the first 10 months of 2009, an estimated 140 active-duty U.S. Army personnel died of self-inflicted wounds, compared with 140 in all of 2008 and 115 in 2007. The number of suicides in 2009 was set to make it the fifth straight year that such deaths had set a record within the U.S. armed forces.

U.S. Secretary of Defense Robert Gates ordered a high-level review of military policies after army psychiatrist Maj. Nidal Malik Hasan shot dead 13 people and wounded at least 29 more at Ft. Hood, Texas, in November. A separate review of the way in which intelligence agencies handled information about Hasan before the killings was ordered by President Obama. For years before the shootings, Hasan, a devout Muslim, had expressed misgivings to colleagues about the wars in Iraq and Afghanistan. (PETER SARACINO)

British Royal Marines intercept a Somali pirate vessel in the Gulf of Aden on June 2.

Performing Arts

Rising young musical stars in 2009 included symphony conductor **ALAN GILBERT** and singer-songwriter **TAYLOR SWIFT**. The dance world celebrated the **100TH ANNIVERSARY** of Serge Diaghilev's **BALLETS RUSSES**. A spate of musicals **BOOSTED** theatre attendance on Broadway, while **3-D FILMS** thrilled moviegoers.

MUSIC

Classical. It was a frigid day in Washington, D.C., on Jan. 20, 2009, when classical music, literally, took centre stage at the inauguration of U.S. Pres. Barack Obama. As part of the festivities, cellist Yo-Yo Ma, violinist Itzhak Perlman, clarinetist Anthony McGill, and pianist Gabriela Montero performed the debut of *Air and Simple Gifts*, composed for the event by John Williams. The performance went off without a hitch—not surprisingly, given that it had actually been prerecorded and was mimed at the event by the illustrious musicians.

When the deception was revealed days later, a controversy began to stir. The media made references to Milli Vanilli, the infamous lip-syncing pop duo. The furor subsided quickly, however, when it was reported that the cold had prevented a “live” performance because of the effect low temperatures have on musical instruments. In fact, Ma and Perlman had put soap on their bows to dull the sound of their instruments so as not to intrude on the recording, which had been made the previous Sunday at a Marine barracks in Washington. (The piece was subsequently given its concert debut January 23 by the Pittsburgh Symphony Orchestra.) It was that sort of year in classical music, when the controversies surrounding the music tended at times to obscure the music itself.

Earlier in January, Argentine-born Israeli conductor Daniel Barenboim canceled performances in Doha, Qatar, and in Cairo because of security concerns related to the ongoing fighting between Israeli forces and Hamas. The concerts were part of the 10th anniversary tour of Barenboim's West-Eastern Divan Or-

chestra, which was composed of young musicians from Israel, Palestine, and Arab countries.

In March a West Bank children's orchestra, the Strings of Freedom, was shuttered by local residents after it performed a concert for Holocaust survivors in Israel. An official of the Jenin refugee camp accused the orchestra's leader of having exploited the children for political purposes in what was billed as a Good Deeds Day event organized by an Israeli billionaire.

Polish pianist Krystian Zimerman created a stir of his own when in April he announced during a performance at the Walt Disney Concert Hall, Los Angeles, that because of his objection to U.S. foreign policy, he would no longer perform in the United States. “Get your hands off my country,” he told stunned concertgoers.

During the summer the New York Philharmonic made political waves when it announced that it was considering performing in Havana. When continuing U.S. restrictions on travel to Cuba ultimately forced the concerts to be canceled, the Cuban government proclaimed its outrage and blamed the fracas on the U.S. government.

Meanwhile, two opera stars who had previously announced their retirement changed their minds. In May, Spanish tenor José Carreras, 62, announced that “my [opera] career is done.” In August, New Zealand soprano Dame Kiri Te Kanawa, 65, said that her opera career was coming to an end as well. While neither singer had ruled out future recital appearances, they both subsequently withdrew any plans to quit the world of opera. Meanwhile, Plácido Domingo, 68—no longer able to hit the high notes that made him one of the most illustrious tenors of his genera-

tion—drew a standing ovation when in October he made his debut appearance in a baritone role in a production of Giuseppe Verdi's *Simon Boccanegra* at the Staatsoper in Berlin.

Oddly, given its role as a perennial source of familial (soap) opera, the 2009 edition of Germany's Bayreuth Festival opened with a children's version of Richard Wagner's *The Flying Dutchman*. Children were even encouraged to participate in the newly conceived truncated version of the opera, which was the brainchild of new festival co-directors, Eva Wagner-Pasquier and Katharina Wagner. The half sisters, both great-granddaughters of the composer, took over the reins of the annual Wagner festival from their father, Wolfgang, who had ruled the festival roost for more than half a century. Katharina Wagner told the press that “it is a matter of the heart for me to bring opera to the people.” As part of that effort, the new directors also announced a deal with London's Royal Opera House's Opus Arte production company to release the festival's productions on DVD, and on August 9 they offered the festival's performance of *Tristan und Isolde* live on the Internet.

As it had often in recent years, the world of classical music continued to embrace the Internet as a way of extending its outreach and influence. In June the New York Philharmonic announced that it was creating an online archive of concert data reaching back to its first performance on Dec. 7, 1842. The service offered online users the ability to search its database by composer, artist, and individual concert programs.

The Berlin Philharmonic Orchestra pursued a more commercial course with its online “digital concert hall,” in which performances were made available either live or via reruns on the Internet. The fee for a single concert was €9.90, and the cost of a season ticket was €149 (1€ = about \$1.40). Sir Simon Rattle kicked off the online offerings in January with a performance of Brahms's *Symphony No. 1*.

In July, Classical TV, an online streaming video service, was launched, offering both free and pay-per-view opera, ballet, and theatre performances. In addition to more than a dozen productions from New York's

Metropolitan Opera (the Met), Classical TV also presented broadcasts by the English National Opera, the Royal Shakespeare Company, the Zürich Opera, and others. The price of an on-line viewing was set at \$4.99 or \$9.99 per performance.

Twitter, the online social network phenomenon, was the star of the show in September at London's Royal Opera House. The company presented *The Twitter Opera*, with music by composer Helen Porter and a libretto made up of the site's signature short messages submitted by the public via the ROH's @youropera Twitter feed. Twitter was also the focus of a concert by the National Symphony Orchestra in July. During the orchestra's performance of Beethoven's *Sixth (Pastoral) Symphony*, concertgoers could follow the music with 50 "tweets" about the score that were sent to their Web-enabled mobile devices from the conductor, who had prewritten such helpful tweetful insights as "In my score Beethoven has printed Nightingale=flute Quail=oboe Cuckoo=clarinet—a mini concerto for woodwind/birds." (See also COMPUTERS AND INFORMATION SYSTEMS: Sidebar.)

Not to be outdone, another Internet site entered the action when on April 15 the YouTube Symphony Orchestra made its debut at New York City's Carnegie Hall. The orchestra was made up of 93 musicians who had been selected from some 3,000 audition videos that had been submitted to the Web site from more than 70 countries. Fifteen million online visitors voted on the winners, who were led in the debut performance by conductor Michael Tilson Thomas. The U.K.'s *Gramophone* magazine hailed the orchestra "for democratising classical music on a global scale, making it truly all-inclusive."

Even as the classical world embraced the future, it was confronted by the disturbing economic realities of the present. While the nonprofit group Americans for the Arts estimated that the ongoing recession in 2009 would force as many as 10,000 arts organizations out of business, classical orchestras and opera and ballet companies tried to weather the economic storm. Both the Met and the Los Angeles Opera cut productions from their seasons and cut salaries; the Los Angeles Opera laid off 17 people in the process. The Connecticut Opera closed after 67 seasons, as did the Opera Pacific, Santa Ana, Calif., and the Baltimore (Md.) Opera declared bankruptcy. Budgetary problems caused the San Francisco Opera

Stan Honda—AFP/Getty Images

Conductor Michael Tilson Thomas (right) applauds the YouTube Symphony Orchestra during its debut performance at New York City's Carnegie Hall on April 15; the orchestra's musicians were selected entirely through online auditions.

to cancel a production of Benjamin Britten's *Peter Grimes* and a revival of Puccini's *La Bohème*.

Financial difficulties were not confined to the U.S. Russia's Bolshoi Theatre was forced to cancel a tour of Mexico and the premiere of its new production of Verdi's *Otello*. Italy's Maggio Musicale Fiorentino called off productions of Verdi's *Macbeth* and Britten's *Billy Budd* that were to have been featured at the Florence festival. South Korea particularly felt the impact when tours to that country by the Radio France Philharmonic Orchestra, the Vienna Symphony, and the Cincinnati (Ohio) Symphony were called off for reasons of belt-tightening.

After a career that spanned 45 years, the legendary Guarneri String Quartet called it quits in 2009. Three of the group's members had founded the ensemble at Vermont's Marlboro Music Festival in 1963 and were in their 70s.

As some books were closed, new chapters for others were opened. In an October program at the Hollywood Bowl, entitled "Bienvenido Gustavo," 28-year-old Venezuelan conductor Gustavo Dudamel made his debut as music director of the Los Angeles Philharmonic. In June Lorin Maazel led his last performance as music director of the New York Philharmonic with a concert at Avery Fisher Hall before being succeeded in the post in September by Alan Gilbert. (See BIOGRAPHIES.) In October Rattle reaffirmed his commit-

ment to the Berlin Philharmonic when he signed a contract to continue as the artistic director through 2018.

Throughout the year orchestras in the U.S. and Europe marked the 200th anniversary of the birth of composer Felix Mendelssohn with performances of his works. In one of the most notable events, 13 of the German composer's long-lost works were performed in January at New York's Museum of Jewish Heritage. Two previously unknown works by Mozart were heard for the first time in August when the International Mozarteum Foundation, based in Salzburg, Austria, unveiled them in a performance by pianist Florian Birsak, who played the pieces on the composer's own fortepiano. In October the sound of Frederick the Great's flute was heard for the first time in more than 200 years when the instrument was played at the Usedom Music Festival on the eponymous Baltic island.

An opera by popular singer-songwriter Rufus Wainwright debuted in July at the Manchester (Eng.) International Festival. The work, *Prima Donna*, was originally commissioned by the Met, but the company withdrew when Wainwright decided to write the libretto in French. Canadian playwright-director John Murrell's English libretto for composer Leos Janacek's opera *The Cunning Little Vixen* received its premiere in August at the Banff (Alta.) Centre. In February the New York Philharmonic performed the debut of an

orchestral work, *Laboratory*, by 13-year-old George Frankle of Scarsdale, N.Y., during a School Day Concert.

In one of the more glittering events of the year, the Met presented its 125th Anniversary Gala in March. The four-hour performance included appearances by Roberto Alagna, Angela Gheorghiu, Domingo, Renée Fleming, Dmitry Hvorostovsky, Natalie Dessay, and a host of others in selections from 23 operas, some featuring re-creations of sets and costumes from fabled productions of the company's past.

The 50th anniversary of New York City's Lincoln Center was celebrated in May with a performance in the centre's recently renovated Alice Tully Hall. The New York Philharmonic re-created conductor Leonard Bernstein's performance of Aaron Copland's *Fanfare for the Common Man*, which Bernstein had led at the centre's groundbreaking in 1959.

In May the New York Philharmonic's principal clarinetist, Stanley Drucker, went onstage at the last moment to fill in for a missing first clarinetist in a performance of Dmitry Shostakovich's *Violin Concerto No. 1*. Drucker, 80, who was not scheduled to play that night and who had not performed the piece since the 1950s, reportedly did not drop a note. It was a delightful and unexpected coda to a career that ended with his retirement in 2009 after 60 years with the orchestra.

The classical world was saddened during the year by the passing of several of its most beloved performers, including sopranos Hildegard Behrens of Germany and Elisabeth Söderström of Sweden and conductor Erich Kunzel, Jr., who helmed the Cincinnati Pops Orchestra for more than 30 years. (See OBITUARIES.) Other losses included those of soprano Lois Hunt, one of the champions of the American musical theatre, who passed away on July 26 at age 84 in New York City, and classical music critic, author, educator, and program annotator Michael Steinberg, who left a lasting legacy when he died, July 26, near Minneapolis, Minn., at age 80. (HARRY SUMRALL)

Jazz. According to the Survey of Public Participation in the Arts released in June by the National Endowment for the Arts (NEA), the audience for live jazz events slipped to 7.8% of American adults in 2008, reversing a two-decade growth trend. Moreover, the median age of jazz listeners rose to 46, and the number of young jazz musicians declined.

The NEA's survey inflamed disputes in the jazz community. Was it accurate?

Did it over- or underestimate the size of the jazz audience? Most of all, what did it mean for the future of jazz? Even though classical audiences were older than jazz audiences and had experienced a comparable decline in their total numbers, the jazz community was especially sensitive to public perceptions of the art form. Jazz, a fundamentally African American music, was a comparatively young art without the weight of centuries of tradition; it had been generally accepted as a legitimate art form only since the mid-20th century. There were few significant jazz institutions with resources equal to those of major-city art museums, symphony orchestras, and opera companies. In a year when the top recording companies had largely abandoned jazz and two of the major living jazz artists, Ornette Coleman and Sonny Rollins, turned 79, the NEA survey reinforced fear that jazz was a gradually disappearing art.

Moreover, the premier jazz festival in New York City, the historic centre of jazz, vanished. The JVC Jazz Festival, to have been held in June, was canceled by its producer, Festival Network, which had bought it in 2007 from founder George Wein. Earlier in 2009, Wein, who founded the Newport Jazz Festival in 1954, had rescued that and the Newport Folk Festival for 2009 after Rhode Island had canceled Festival Network's license to operate those two events. After the JVC festival debacle, Wein agreed to come out of retirement and produce New York City's 2010 jazz festival, with a new name and new corporate sponsor, the medical technology company CareFusion, which already sponsored festivals in Chicago and in Monterey, Calif. To its readers' relief, *Jazz Times* magazine did not disappear. The 39-year-old monthly did suspend activity in June, but a new owner resumed publication with the old editorial staff in July.

In contrast to the bad news was the activity of the dynamic Wynton Marsalis, who since the mid-1980s had fostered appreciation of jazz as a fine art. On Martin Luther King, Jr., Day, January 19, one day before the inauguration of U.S. Pres. Barack Obama, Marsalis led his Jazz at Lincoln Center (JALC) Orchestra in an all-star "Let Freedom Swing" concert at the Kennedy Center for the Performing Arts, Washington, D.C. On his album released in March, the trumpeter-composer alternated music by his quintet with the recitation of his original poem "He and She," which was also the title of the album. Marsalis spoke before a U.S. House of Representa-

tatives appropriations committee to urge increased funding for the NEA. In June, in the East Room of the White House, 150 young jazz students received music lessons from Wynton, his father, Ellis (piano), his brothers Branford (saxophone), Delfeayo (trombone), and Jason (drums) Marsalis, and members of the JALC Orchestra. First lady Michelle Obama, hostess of the event, told the crowd that "there's probably no better example of democracy than a jazz ensemble."

The Living Theatre, which had ignited controversy in 1959 with its jazz- and drug-themed Off-Broadway production of Jack Gelber's *The Connection*, revived the play for its 50th anniversary. This time saxophonist Renè McLean led the onstage band; his father, Jackie McLean, was the saxophonist during the play's original run. A highlight of the Chicago Jazz Festival was the triumphant lyric duets by clarinetist Buddy DeFranco and pianist Johnny O'Neal. New York City's Vision Festival, the leading free-jazz festival in the U.S., featured a tribute to veteran saxophonist Marshall Allen, leader of the Sun Ra Arkestra since Ra's death in 1993.

Notable new releases included singer Madeleine Peyroux's *Bare Bones*, for which she composed or cocomposed all the songs, and piano-bass-drums trio the Bad Plus's *For All I Care*, with interpretations of music by Wilco, Nirvana, the Bee Gees, György Ligeti, Milton Babbitt, and Igor Stravinsky. Younger brass improvisers, including cornetist Josh Berman (*Old Idea*), trumpeter Darren Johnston (*The Edge of the Forest*), and trumpeter Peter Evans (*Nature/Culture*), also released impressive albums. Pianist Satoko Fujii continued to perform in Japan and the U.S., issuing *Sanrei* with her Orchestra Nagoya, *Summer Suite* with her Orchestra New York, *Chun*, duets with her trumpeter-husband, Natsuki Tamura, and *Under the Water*, duets with fellow pianist Myra Melford. Charles Tyler's *Saga of the Outlaws*, Bobby Bradford's *With John Stevens and the Spontaneous Music Ensemble*, Lester Bowie's *All the Numbers*, and an eight-CD boxed set of Anthony Braxton's *Complete Arista Recordings* (1974–80) led the year's parade of reissues. Among other releases by the prolific Braxton were *Creative Orchestra (Bolzano)* 2007 with the Italian Instabile Orchestra, *Creative Orchestra (Guelph)* 2007 with the AIMToronto Orchestra, and *Quartet (Moscow)* 2008.

An airplane crash took the lives of saxophonist Gerry Niewood and gui-

tarist Coleman Mellett, of the Chuck Mangione band, as they were flying to a concert in Buffalo. The year's other deaths included those of drummer Rashied Ali, singers Chris Connor and Blossom Dearie, composer George Russell, saxophone partners Hank Crawford and David Newman, drummer Louie Bellson, saxophonists Bud Shank (see OBITUARIES) and Charlie Mariano, and percussionist Manny Oquendo.

(JOHN LITWEILER)

Popular. *International.* The year 2009 was dominated by music from unexpected areas. In the United Kingdom unknown Scottish vocalist Susan Boyle (see BIOGRAPHIES) exploded onto the global stage with breathtaking performances on the television show *Britain's Got Talent*. A video clip of her rendition of "I Dreamed a Dream" from *Les Misérables* made her a YouTube sensation and led to one of the year's top-selling albums. Achieving celebrity on the other side of the globe was Geoffrey Gurrumul Yunupingu, a blind Aboriginal singer-songwriter from Australia's Arnhem Land. He accompanied himself on acoustic guitar and sang in the Gumatj dialect for his debut effort, simply titled *Gurrumul* (2008). It was recorded for an independent label in Darwin, Australia, but became a surprise success across the country and then in Britain, where it topped the World Music album charts. Gurrumul's songs attracted an international audience, thanks to his thoughtful and soulful vocals and melodies that echoed Western gospel and folk themes. Aus-

Blind Aboriginal singer-songwriter Geoffrey Gurrumul Yunupingu performs during the Indigenous Music Awards on August 21, in Darwin, Australia.

Peter Eve/Getty Images

tralian music was also buoyed by the Black Arm Band, a collective of Aboriginal and white performers whose multimedia revue highlighted the "two worlds of Australia" with stories of Aboriginal suffering and survival matched against music that included rock, reggae, and the Aboriginal didgeridoo.

From Africa there were also unexpected newcomers who moved from poverty and obscurity to playing in major concert halls. Staff Benda Bilili, a group of paraplegic polio victims and abandoned children who lived on the grounds surrounding the zoo in Kinshasa, Democratic Republic of the Congo, survived by performing on the streets. They came to the attention of Western musicians who were appearing in Kinshasa and rightly won praise for their debut album, *Très très fort*, which matched rumba Congolese influences and funk with some extraordinary solos by Roger Landu on an instrument that he called the *satonge*, which he constructed from a tin can, a piece of wood, and one guitar string.

Elsewhere in Africa, Mali's Bassekou Kouyate, the virtuoso exponent of the ancient West African lute, the *ngoni*, released *I Speak Fula*, a further demonstration of his rapid-fire improvised playing that featured veteran singer Kasse Mady Diabate and kora star Toumani Diabaté. In Senegal there was a further display of African innovation with the first studio album in eight years by Baaba Maal, in which he was joined by New York-based electro-dance exponents the Brazilian Girls. Maal was the first artist signed by Palm Pictures, a label run by Island Records founder Chris Blackwell, and he made a dramatic appearance at the London festival celebrating Island's 50th anniversary. Maal was joined onstage by U2 for a memorable set of songs that included "One Love" written by reggae legend and Blackwell discovery Bob Marley.

From Latin America there were further reminders that world music artists were becoming increasingly keen to collaborate and experiment. RadioKijada, a band that set out to create "new sounds from black Peru," was a

Michael Loccisano/Getty Images

Senegalese pop star Baaba Maal sings at the Mandela Day concert at Radio City Music Hall in New York City on July 18.

collaboration between Peruvian composer and percussionist Rodolfo Muñoz and Christoph H. Muller, the Swiss electronica artist who reimagined tango with the best-selling Gotan Project. On the album *Nuevos sonidos afro peruanos*, their aim was to transform Afro-Peruvian styles, making use of rhythm instruments invented by African slaves whose drums had been banned.

The growing success of global fusion styles was also demonstrated by American producer Mark Johnson with his *Playing for Change* album, *Songs Around the World*. Johnson traveled around the world, recording both street musicians and celebrities playing soul standards and then mixed the results together. The resulting album was a Top 10 hit in the U.S., and videos of individual recordings generated more than 15 million hits on YouTube.

Sri Lankan rapper M.I.A. (see BIOGRAPHIES), whose infectious dance-floor-friendly world beats had been club favorites for years, scored a surprising crossover hit with the single "Paper Planes." It earned her a Grammy Award nomination for record of the year and featured prominently on the sound track of Danny Boyle's (see BIOGRAPHIES) hit film *Slumdog Millionaire*.

One of the tragedies during the year was the death of Tlahoun Gessesse at age 68. Gessesse, Ethiopia's best-loved singer, first came to fame in the era of Emperor Haile Selassie singing with the Imperial Bodyguard Band.

(ROBIN DENSELOW)

United States. The death of iconic pop star Michael Jackson (see OBITUARIES) and the remarkable success of 19-year-old singer-songwriter Taylor Swift (see BIOGRAPHIES) were the top stories of the American popular music year in 2009.

Jackson died of drug-induced cardiac arrest on June 25, and American television networks devoted hundreds of hours to remembering and celebrating his legacy. In the two and a half weeks following his death, consumers purchased 2.3 million Jackson albums, guaranteeing that the late "King of Pop" would be one of the year's biggest-selling artists.

Swift's album *Fearless* (2008), named best album at the Academy of Country Music Awards in April 2009, overtook Jackson's compilation *Number Ones* as the year's best-selling album, with Jackson further pushed into third place by the debut album of Scottish singer Susan Boyle. (See BIOGRAPHIES.) Swift saw her song "Love Story" top charts internationally, and she sold out Madison Square Garden in one minute. She also became the object of much public sympathy in September when rapper Kanye West grabbed the microphone from her at the MTV Video Music Awards as she was attempting to accept an award for Best Female Video. "But Beyoncé had one of the best videos of all time," West protested in front a largely confused industry audience that soon stood and cheered for Swift. She capped the year with an impressive showing at the Country Music Association (CMA) awards in November, sweeping all four categories in which she was nominated and becoming the CMA's youngest-ever entertainer of the year.

Sales of physical CDs, digital CDs, and what Nielsen SoundScan termed "track-equivalent albums" (10 tracks sold from a particular album equaled one album sale) in the first half of 2009 declined 8.9% from the first half of 2008, and digital sales slowed from a 30% increase in growth in 2008 to a 13% increase in 2009. Despite some aberrations—a sales spike in the wake of Jackson's death and better-than-expected sales of remastered Beatles albums—the pop-music market was in free fall for much of the year.

Rapper Kanye West brazenly interrupts singer-songwriter Taylor Swift's acceptance speech for Best Female Video at the MTV Video Music Awards on September 13.

In January Bruce Springsteen performed on the steps of the Lincoln Memorial in Washington, D.C., singing through the winter chill at the kick-off concert in honour of the inauguration of U.S. Pres. Barack Obama. Springsteen called 89-year-old folk singer Pete Seeger, a former communist who had been demonized by conservatives in the 1950s, to the stage with him to lead an emotional rendition of "This Land Is Your Land." In August rock historians marked the 40th anniversary of the Woodstock Music and Art Fair. (See Special Report on page 184.)

Former Led Zeppelin front man Robert Plant and bluegrass thrush Alison Krauss seemed an unlikely pairing on paper, but the duo's *Raising Sand* (2007), helmed by all-star producer T Bone Burnett (see BIOGRAPHIES), won album of the year honours at the 51st Annual Grammy Awards on February 8. Plant and Krauss were the night's biggest winners, also notching four other Grammy trophies. Lil Wayne, who planned a late-2009 release for his *Rebirth* album, won four awards, including best rap album. Backstage, Plant talked about his pleasure in being associated with the Americana genre after so many years of being labeled a rock and roller. "It's great to be considered to be part of the movement that is healthy and has some discrimination," Plant said. Later in 2009 Americana was given its own Grammy Awards category.

In independent music critical praise and crossover success greeted Pacific Northwest-based rockers the Decemberists and hyperliterate multi-instrumentalist Andrew Bird. (See BIOGRAPHIES.) Experimental pop ensemble Animal Collective, introspective singer-songwriter Bon Iver, and alt-country chanteuse Neko Case were also lauded.

New members inducted into the Rock and Roll Hall of Fame included Metallica, Run-DMC, Jeff Beck, Bobby Womack, Little Anthony and the Imperials, Spooner Oldham, D.J. Fontana, and Bill Black. Rockabilly singer Wanda Jackson was inducted in the Early Influence category.

In country music Darius Rucker ended 2008 as the first African American solo artist to have scored a number one country single since Charley Pride in 1983. In November Rucker was named best new artist at the CMA awards, becoming the first African American performer to win in a major individual category since 1972.

Musician and guitar innovator Les Paul died at age 94. (See OBITUARIES.) Other losses included Memphis-based producer, musician, and singer Jim Dickinson, California roots music luminaries Duane Jarvis and Amy Farris, songwriter and musician Stephen Bruton, Nashville producer Aubrey Mayhew, former Grand Ole Opry manager Hal Durham, and country singer Vern ("the Voice") Gosdin.

(PETER COOPER)

DANCE

North America. The centenary of Russian-born arts patron and impresario Serge Diaghilev's founding of the renowned Ballets Russes dance company gave the year 2009 cause for focus and reflection. Major events held to mark the occasion and document the 20-year run of Diaghilev's Ballets Russes included the symposium "Diaghilev's Ballets Russes, 1909–1929: Twenty Years that Changed the World of Art," which was held in April at the Harvard Theatre Collection. The exhibition "Diaghilev's Theater of Marvels: The Ballets Russes and Its Aftermath" opened in June at the New York Library for the Performing Arts.

Various companies around the U.S. as well as around the world acknowledged Diaghilev's legacy by presenting works from his era and by commissioning works to reflect the innovative thrust of the Ballets Russes. Boston Ballet commissioned from its resident choreographer, Jorma Elo, a new work inspired by Igor Stravinsky's *The Rite of Spring*, whose ballet's notorious 1913 premiere caused a riotous stir with its unexpected modernist aspects, both musical and choreographic.

New York City's (NYC's) now annual Fall for Dance season, with all seats priced at \$10, featured a number of offerings related to the Ballets Russes and to its aftermath. These included a performance by Ballet West (Salt Lake City, Utah) of Bronislava Nijinska's *Les Biches* (1924) and a production of Belgian choreographer Stijn Celis's recent "contemporary response to Nijinska's *Les Noces*" by Les Grands Ballets Canadiens de Montréal.

American Ballet Theatre (ABT) offered its annual spring season at NYC's Metropolitan Opera House (MOH). The all-Prokofiev program included *The Prodigal Son*, George Balanchine's 1929 creation for Diaghilev, as well as an original effort by ABT's newly installed artist in residence, Aleksey Ratmanský: *On the Dnieper*, a world premiere using a Prokofiev score that was dedicated to Diaghilev.

New York City Ballet (NYCB) began the year with a salute to mark the 75th anniversary of the company's affiliate academy, the School of American Ballet. During its spring season, NYCB was part of the festivities celebrating the 50th anniversary of the cultural institution of which it was part, Lincoln Center (LC). A "Live from Lincoln Center" national telecast was given of *Romeo + Juliet*, in the 2007 staging by NYCB's

ballet master in chief, Peter Martins. Later in the year NYCB launched its next phase of LC celebrations by presenting the premiere of Martins's latest work, set to John Adams's *Naïve and Sentimental Music*, in LC's newly renovated David H. Koch Theater (formerly the New York State Theater).

At year's end NYCB played the Kennedy Center (KC) with seven performances of mixed repertory. Among KC's foreign offerings was a visit by Moscow's Bolshoi Ballet with its production of *Le Corsaire*, a landmark work of 19th-century ballet theatre, historically researched by Ratmanský and his team when he was Bolshoi Ballet director.

ABT gave a much-shortened NYC fall season, spanning only four days, at LC's Avery Fisher Hall, where Ratmanský presented *Seven Sonatas*, his latest ABT premiere. Newly prominent at ABT was Cory Stearns, who in March won the eighth international competition for the Erik Bruhn Prize from the National Ballet of Canada. Much-admired Julie Kent returned for the fall season from maternity leave. At the end of the spring MOH season, veteran ABT guest artist Nina Ananiashvili gave a series of farewell performances, marking in June her very last appearance with the company as Odette/Odile in *Swan Lake*.

Longtime San Francisco Ballet (SFB) ballerina Tina LeBlanc was likewise celebrated at her farewell from the

company in May. Part of SFB's year included the presentation of a new production of *Swan Lake*, in a staging by SFB artistic director Helgi Tomasson. Because it was less difficult to ship, the new staging substituted for Tomasson's 1988 production on SFB's three-city, 12-day fall tour to China. Also on the touring circuit to China was ABT, which played a 4-day season in Beijing in November.

Prior to the death in July of legendary modern dance choreographer Merce Cunningham (see OBITUARIES), the Brooklyn Academy of Music (BAM) marked his 90th birthday in April with a presentation of his grand new work, *Nearly Ninety*. Not long afterward, Cunningham's foundation announced the launch of a plan that would oversee the dissemination of his work after his death, including the disbanding of the Merce Cunningham Dance Company itself after a two-year world tour.

Pacific Northwest Ballet (Seattle) showed the dances of former Cunningham dancer Ulysses Dove, who died in 1996, on an all-Dove bill the company took to the Jacob's Pillow Dance Festival. Among the festival's other offerings was a program of hip-hop works by Rennie Harris Puremovement and a program by the Canadian choreographer Crystal Pite.

Former Cunningham dancer Karole Armitage made her presence felt early in the year when her own company,

Dancers of the Paul Taylor Dance Company perform in New York City at the dress rehearsal for Paul Taylor's Beloved Renegade on February 25.

Bill Perlman—Star Ledger/Corbis

Armitage Gone! Dance, gave “Think Punk!”—a retrospective of her dances inspired by punk-rock music—at the Kitchen in New York City. Near the end of the year, the company presented the U.S. premiere of *Itutu* as part of BAM’s Next Wave Festival. Paul Taylor, a Cunningham dancer before leading his own world-renowned troupe, the Paul Taylor Dance Company, arranged a jam-packed season at New York City’s City Center (CC) with an almost breathless rotation of 19 Taylor works over 18 programs. Among other works, the program included *Changes* (to recordings of the 1960s folk-rock group the Mamas and the Papas), *Beloved Renegade* (to the music of Francis Poulenc), and one rare reconstruction from 1963, the dark and compelling *Scudorama* (with artful designs by Alex Katz and music by Clarence Jackson).

The Martha Graham Dance Company (MGDC) played a brief NYC season following a successful run in Paris. Graham’s nowadays little-seen multiact *Clytemnestra* was the season’s most prominent offering, in a staging by MGDC artistic director Janet Eilber, who was especially concerned with returning the work to its full breadth.

Other prominent multiact dances included the Houston Ballet’s (HB’s) premiere of *Marie*, a Marie-Antoinette-inspired ballet by HB artistic director Stanton Welch to the music of Shostakovich. Additionally, the Joffrey Ballet of Chicago presented its first performance of Lar Lubovitch’s *Othello*. The Mark Morris Dance Group played LC with *Romeo and Juliet*, on *Motifs of Shakespeare*, Morris’s 2008 modern-dance rendering of Prokofiev’s score. Later at LC’s Mostly Mozart Festival, Morris showed two new dances: *Empire Garden* (to the music of Charles Ives) and *Visitation* (to the music of Beethoven). The Bill T. Jones/Arnie Zane Dance Company presented Jones’s *Fondly Do We Hope . . . Fervently Do We Pray: A Dance Theater Tribute to [Abraham] Lincoln* at the Ravinia Festival near Chicago and on tour, while his *Fela!* made it to Broadway.

The Alvin Ailey American Dance Theater rounded out its 50th anniversary at BAM in June. The company’s December season at CC offered a retrospective look at the legacy of Judith Jamison, who would be leaving the troupe’s directorship in 2011.

Lucinda Childs, an experimentalist from the 1960s, gained prominence after a number of years of low-key pres-

ence in the dance world by overseeing a reconstruction of *Dance*, her 1979 collaborative work with composer Philip Glass and visual artist Sol LeWitt. It was presented at Bard Summerscape and then went on a national tour to select cities. Experimental choreographer Stephen Petronio marked the 25th anniversary of his own troupe and repertory, with a special season at NYC’s Joyce Theater.

The bicontinental British-born choreographer Christopher Wheeldon had his work shown at the Vail (Colo.) International Dance Festival, where his Morphoses company had been launched three years earlier. At CC he offered two programs of his own works alongside those of choreographers Tim Harbourn, Lightfoot León, and Ratmansky.

The National Ballet of Canada (NBC) offered a bill called “Innovation,” which featured works by Sabrina Matthews (*Dextris*), Peter Quanz (*In Colour*), and Pite (*Emergence*). Pite’s work won four Dora Mavor Moore awards for NBC. In May ballerina Chan Hon Goh retired from her career with NBC in the title role of the troupe’s production of *Giselle*. Ballet British Columbia saw the departure of its longtime artistic director John Alleyne and the appointment of Emily Molnar as interim artistic director. Eduardo Vilaro was named artistic director of Ballet Hispanico in NYC, replacing founding director Tina Ramirez, who left in June.

Deaths, besides that of Cunningham, included those of dancers Eva Evdokimova, Pearl Lang, Frankie Manning, and Georgina Parkinson and dancer-turned-actor Patrick Swayze. (See OBITUARIES.) Dancers Haynes Owens, Marjorie Mussman, George Zoritch, Nora Kovach, Carolyn George d’Amboise, Bruce Bain, Dick Beard, and Lola MacLaughlin and dance teachers Gage Englund Bush, Gerald E. Myers, and Fernando Schaffenburg were other notable losses. (ROBERT GRESKOVIC)

Europe. The centenary of the first performances of Serge Diaghilev’s Ballets Russes provided the central theme of the European ballet world in 2009, inspiring several new works as well as commemorative galas, exhibitions, and film shows. In Paris the Théâtre du Châtelet—where it all began—contented itself with two evenings of documentary films, but the Théâtre des Champs-Élysées hosted a season by the Kremlin Ballet from Moscow, with guest appearances by leading dancers from the Bolshoi and Mariinsky companies. The program followed a pattern

also seen in other cities, combining revivals of original ballets by Diaghilev’s great choreographers—Michel Fokine and Bronislava Nijinska in this case—with a contemporary reworking of Fokine’s *Thamar*, choreographed by Jurius Smoriginas. The Paris Opéra Ballet waited until December to show a program of works by Leonide Massine and Vaslav Nijinsky as well as two works by Fokine.

A weeklong Diaghilev festival held in St. Petersburg in October included major exhibitions, an international gala, and an evening presentation by John Neumeier’s Hamburg Ballet, which included Neumeier’s ballet about Nijinsky, *Vaslav*, as well as his own version of *Le Pavillon d’Armide*. With its original choreography by Fokine, *Le Pavillon d’Armide* had formed part of the historic debut of Ballets Russes on May 18, 1909. The Hamburg company had already shown a tribute program in its home theatre, as had the Bavarian State Ballet in Munich, the Rome Opera Ballet, and many others. In London the Royal Ballet introduced *Sensorium*, a new piece by house choreographer Alastair Marriott, into a program otherwise by Fokine. Meanwhile, the English National Ballet (ENB), with *Faun(e)*, and the Scottish Ballet showed reworkings of Nijinsky’s *L’Après-midi d’un faune* and Fokine’s *Petrushka* by David Dawson and Ian Spink, respectively. ENB’s two Ballets Russes programs brought them some very respectful reviews, despite the gossip-column publicity given to a new costume design by Karl Lagerfeld for Fokine’s *The Dying Swan*.

Celebrating the present rather than the past, there was new work to be seen in many European theatres. The prolific Neumeier choreographed a version of *Orpheus* for his own company, and England saw a spate of science-inspired works: David Bintley created *E=mc²* for the Birmingham Royal Ballet, while Mark Baldwin of the Rambert Dance Company choreographed *The Comedy of Change* in honour of Charles Darwin and his evolutionary theory. The Royal Ballet used its smaller theatre for a new work based on Bach’s *Goldberg Variations*, choreographed by Kim Brandstrup in close collaboration with his principal dancer, Tamara Rojo.

The major revival of the Royal Ballet’s season was a cut-down version of Kenneth MacMillan’s 1981 two-act ballet, *Isadora*, based on the life of dancer Isadora Duncan. MacMillan’s widow, who did the adaptation, dropped several episodes that were peripheral to

the story and used film to establish the historical background to Duncan's life and work. The result, however, was no more popular with the critics than the original had been. In July the company made its first-ever visit to Cuba, fulfilling the dream of guest artist Carlos Acosta, whose enthusiasm and hard work were well rewarded by the responsive and welcoming local audiences.

Elsewhere in the U.K., two companies celebrated their 40th anniversaries. Northern Ballet Theatre (NBT) toured with a special program, including a revival of one of its home-grown classics, Gillian Lynne's *A Simple Man* (originally made for television in 1987), based on the life and work of the painter L.S. Lowry. The ballet's return to the repertoire was especially welcome for the memories it evoked of the former company director Christopher Gable, who had created the leading role. Scottish Ballet continued its rise in public and critical estimation in its 40th year of existence by introducing Frederick Ashton's *Scènes de Ballet* and William Forsythe's *Workwithinwork* to its repertoire.

In France the Paris Opéra Ballet gave its first performances of John Cranko's *Onegin*, a piece widely performed elsewhere in Europe. After the first performance, Isabelle Ciaravola and Mathias Heymann—who danced Tatyana and Lensky, respectively—were both promoted to *étoile* (principal dancer).

The Royal Danish Ballet's (RDB's) year included a visit to Japan, a Jerome Robbins evening featuring the company premieres of *Dances at a Gathering* and *West Side Story Suite*, and a Balanchine triple bill including another first for the RDB, the *Symphony in Three Movements*. Ballet master Sorella Englund and artistic director Nikolaj Hübbe collaborated on a controversial new production of one of the company's treasures, August Bournonville's *Napoli*, setting it in the rough environment of Naples in the 1950s and replacing the lost second act with completely new choreography to a commissioned score. The National Ballet of Finland showed a program of works by Jiří Kylián and David Dawson, while Kylián's former company, Nederlands Dans Theater, celebrated its 50th anniversary and showed a number of retrospective pro-

Luke MacGregor—Reuters/Landov

Dancers of the English National Ballet rehearse Apollo as part of the Ballets Russes programs at Sadler's Wells Theatre in London in June.

grams as well as new work by Johan Inger, Lightfoot León, and Kylián himself.

At the beginning of the year, Yuri Burlaka succeeded Aleksey Ratmansky as director of the Bolshoi Ballet. Burlaka started and ended the year with revivals of two big 19th-century works (one of his special interests). In March, Maria Aleksandrova and Ruslan Skvortsov danced the leading roles on the first night of Sergey Vikharev's reconstruction of *Coppélia*, and in December, Burlaka programmed his own new production of *La Esmeralda*. In between, the company toured the U.S. and Spain, while at home the rebuilding project at the Bolshoi Theatre was disrupted by yet more delays. The theatre had closed in 2005 and was due to reopen in 2009, but the expected date was pushed back to 2013 amid reports that the original budget had been seriously overspent.

The Mariinsky Ballet also toured the U.S., and in August the company was in London for two weeks, selling well at the Royal Opera House despite some complaints about the unadventurous repertoire. Opening night was devoted to Leonid Lavrovsky's 1940 version of *Romeo and Juliet*, with Alina Somova making her debut in the leading role; neither she nor the ballet was to the taste of most of the London critics, but the young Romeo, Vladimir Shklyarov, had a big success. At home in St. Petersburg, the annual White Nights Fes-

tival included a revival of Leonid Yakobson's Tatar-inspired *Shurale*. Leading the cast were Yevgeniya Obraztsova, Aleksandr Sergeyev, and Denis Matvienko.

Several of Europe's leading dancers made their farewells during the year: Manuel Legris at the Paris Opéra, Silja Schandorff at the RDB, and Thomas Edur and Agnes Oaks at ENB. Legris was chosen to take over as artistic director of the Vienna State Opera Ballet in 2010; Schandorff moved into a backstage role in Copenhagen; and Edur and Oaks returned to their native Estonia, where Edur took over as artistic director of the National Ballet.

More tragically, the year was marked by the sudden death of the German choreographer Pina Bausch (see OBITUARIES), one of the giants of the dance-theatre movement. Her company, Tanztheater Wuppertal, continued with the touring schedule that it had already planned, but there was no announcement about the company's long-term future. Other losses during the year included those of Danish dancer, director, and choreographer Flemming Flindt, ballerinas Ekaterina Maximova and Eva Evdokimova (see OBITUARIES), and two leading male dancers, André Prokovsky and David Ashmole.

(JANE SIMPSON)

THEATRE

Great Britain and Ireland. In spite of the economic recession, which started to bite hard into the pockets and lives of most British citizens in 2009, figures from the Society of London Theatre showed that total attendances in the West End had risen by 2.5%. Box office receipts increased by 3.5% compared with 2008.

Money itself, and the collapse of the world markets, became the hot theatre topic of the year in plays by 10 new writers at the small Soho Theatre under the group title *Everything Must Go*. Second-time playwright Lucy Prebble and director Rupert Goold offered *Enron*, an epic satiric drama of that company's demise, produced by Goold's touring company, Headlong, at the Chichester Festival Theatre and the Royal Court Theatre. *Enron* aroused comparisons with Caryl Churchill's *Serious Money*, a zippy 1987 satire on the

Joel Ryan/AP

Big Bang (the radical deregulation of the London Stock Exchange in 1986), but the play seemed even more timely in its skillful anatomization of the financial shenanigans in the fantasy world of projected profits and phantom companies, with Samuel West's outstanding portrayal of Enron's disgraced president, Jeffrey Skilling, assuming the tragic heft of a Shakespearean hero.

The financial crisis was explored more broadly in David Hare's *The Power of Yes* at the National Theatre (NT) in an attempt, said the playwright, to break through the protective attitude of the bankers. Hare spent an intense period of research on his play, and it attracted enormous interest, not least for his view that in rescuing the banks the British government was replacing capitalism with a socialism that bailed out the rich alone.

The theatre seemed to be catching the mood of the country all year as big, important plays appeared in rapid succession across the London stages. The comparatively unknown playwright Steve Waters produced a stunning double-header on climate change, *The Contingency Plan*, at the little Bush Theatre; the two plays—*Resilience* and *On the Beach*—painted an apocalyptic scenario of Britain disappearing beneath rising sea levels while politicians wrangled over minor details following a Conservative Party election victory in 2010. Jez Butterworth returned to the theatre after a long absence with two new plays—*Parlour Song* and *Jerusalem*. They were both directed by Ian Rickson and suggested that nature would take revenge on suburban town dwellers and that the process of disintegration had already begun. Butterworth's *Parlour Song* at the Almeida Theatre (first seen in New York City in 2008) proved to be, however, a mere curtain-raiser (with very funny scenes) to his magnum opus *Jerusalem* at the Royal Court. This was a dystopian hymn to hippie values down in the forest on St. George's Day, with Johnny Byron—the Pied Piper of the drunk, disenfranchised, and disaffected—leading the dance against the incursions of the authorities who wanted to wipe out his mobile home. Byron, as played by Mark Rylance in a performance of Falstaffian swagger and humanity, was a modern Lord of Misrule summoning the mysteries of Stonehenge and the legends of old Albion. The play was destined for a West End transfer after Rylance—having garnered uniformly rave reviews and selling out at the box office—completed an engage-

British performer Ricko Baird plays the role of Michael Jackson in *Thriller Live* at the Lyric Theatre in London on January 8.

ment in Simon McBurney's revival of Samuel Beckett's *Endgame* in late 2009.

The other big play of the year was Simon Stephens's *Punk Rock* at the Lyric Hammersmith, a scintillating comedy of high-school classroom anxieties and friendship culminating in a terrible tragedy in the school library. The echoes of the 1999 Columbine High School massacre (Littleton, Colo.) were the least of the play's strengths, which also covered ground similar to *Spring Awakening* and many British plays such as Julian Mitchell's *Another Country* and Alan Bennett's *The History Boys*. Nevertheless, Stephens was a unique and increasingly powerful voice on the British stage, and the vigour and perceptiveness of his dialogue as well as the brilliance of the acting in a cast of mostly unknowns—Tom Sturridge (a new Ben Whishaw, possibly), Jessica Raine, Henry Lloyd-Hughes, and Nicholas Banks were all outstanding—ensured against cliché and banality.

Punk Rock marked a new era at the Lyric, one of London's leading outer-ring theatres, under the artistic directorship of Sean Holmes, who was making a point of building his policy around a youth theatre scheme, much

as Dominic Cooke had channeled the Royal Court's young writers onto the main stage. Polly Stenham followed her remarkable 2007 debut play, *That Face*, with *Tusk Tusk*, a similar almost-anthropological account of young teenagers left to fend for themselves in a middle-class limbo without adults; their mother had gone missing on a drink-and-drugs binge.

The Royal Court also celebrated its historic collaboration with New York City playwright Wallace Shawn (see BIOGRAPHIES) in a season in which three of his plays were staged. The productions included two revivals, *The Fever* (in which the self-lacerating monologist was played by Clare Higgins) and *Aunt Dan and Lemon*, and the world premiere of *Grasses of a Thousand Colours*, in which Shawn, directed by his old friend and colleague André Gregory and abetted by Miranda Richardson as his feline wife and Jennifer Tilly as his lubricious mistress, played a self-satisfied scientist who rhapsodizes on his sexual obsessions in a fantastical memoir.

Grasses was a genuinely controversial play, but it struck a firm chord in a year that also saw several fine West End revivals. Bennett's one-time flop *Enjoy*, was restored, in performances by Alison Steadman and David Troughton, as a plangent and bitter comedy of old age with more than a touch of both Joe Orton and Beckett. Other notable revivals were Alan Ayckbourn's remarkable *Woman in Mind*, with Janie Dee fantasizing an alternative life in her own back garden; Tom Stoppard's *Arcadia*, an almost indecently enjoyable comedy of conflicting time periods, biography, mathematics, and gardening; Richard Greenberg's *Three Days of Rain*, starring James McAvoy; and Arthur Miller's *A View from the Bridge*, with Ken Stott easily the best British Eddie Carbone since Michael Gambon.

The Donmar Warehouse's season in the West End at Wyndham's Theatre wrapped with Dame Judi Dench leading an extravagantly costumed cast in Yukio Mishima's tiresome *Madame de Sade*, which not even Michael Grandage's classy but stilted direction could save from critical odium, and Grandage's production of Jude Law's *Hamlet*. It was Law's performance, however, that flattered to deceive in its monotonous anger and conspicuous lack of wit; it was not apparent that Hamlet was actually a very funny character.

Back at base, the Donmar reeled off some more excellent revivals, just about deflecting suspicions that the

house style (black brick wall, flagstones, dry ice, great sound tracks, quick acting) was wearing thin. Jonathan Pryce breathed fresh life into Athol Fugard's *Dimetos*, while Gillian Anderson and Toby Stephens played a compelling duet in Henrik Ibsen's *A Doll's House* (updated to resonate with more financial scandal). Rachel Weisz scored a personal success as Blanche DuBois in an overrated *A Streetcar Named Desire* (directed by choreographer Rob Ashford), and Dominic West returned from television (*The Wire*) to lead a new look at Pedro Calderón de la Barca's classic *Life Is a Dream*.

The West End smash hits, apart from Law's *Hamlet*, were Sir Ian McKellen and soon-to-be-Sir Patrick Stewart in *Waiting for Godot* at the Theatre Royal Haymarket, both in top form and very funny, and a bevy of discreetly naked respectable actresses, including Sian Phillips and Patricia Hodge, in the stage version of the sentimental film *Calendar Girls*. More film titles boosting the box office included *The Shawshank Redemption* and *Breakfast at Tiffany's*, the latter starring Anna Friel, with both adaptations claiming to bypass the movies and reanimate the darker heart of the original novellas by Stephen King and Truman Capote, respectively.

At the NT the temperature rose with two scorching presentations: Peter Flannery's skillful stage version of the Russian movie *Burnt by the Sun*, which featured knockout performances by Ciaran Hinds, Michelle Dockery, and Rory Kinnear and direction by Howard Davies; and Helen Mirren as the tragically smitten queen in Jean Racine's *Phèdre*. The latter, which used the old Ted Hughes translation, was directed by Nicholas Hytner and set the action on a sunbaked Mediterranean design by Bob Crowley. At year's end, Hytner (with Stewart) was awarded a Knighthood in the New Year's honours list.

Phèdre was the first NT production to be screened live, as performed onstage, in Britain and abroad; it was the latest move by Hytner, the NT's artistic director, to sustain as wide a public interest as possible in the work. His own production of Richard Bean's *England People Very Nice* was a cartoon résumé of immigration to Britain, flaring in a public row over the Muslim section when antiracism campaigners led the first onstage demonstration of the NT's history, which disrupted a preperformance discussion. The theatre stood firm in its commitment to the play, and the furor soon abated. Bennett's latest

play, also directed by Hytner, *The Habit of Art*, centred on a fictional meeting between the poet W.H. Auden and the composer Benjamin Britten (portrayed, respectively, by Richard Griffiths and Alex Jennings) and played entertainingly with more high-brow, less controversial concerns.

The rare sightings of the Royal Shakespeare Company (RSC) in London were eclipsed anyway by Marianne Elliott's fairy-tale production of *All's Well That Ends Well* at the National and the consistent standards at Shakespeare's Globe, where Naomi Frederick was a truly delightful Rosalind in *As You Like It*. In the temporary Courtyard Theatre in Stratford-upon-Avon, the RSC offered tepid revivals of *As You Like It* and *The Winter's Tale* but a more interesting *Julius Caesar*, with a "virtual" crowd on film that railed against the conspirators in the Forum and then took a bow—and waved to the audience. Director Lucy Bailey and designer William Dudley thus scored a first. Greg Hicks was superb as both Leontes and Caesar.

The Chichester Festival Theatre offered Joseph Fiennes in *Cyrano de Bergerac*, directed by Trevor Nunn, and Diana Rigg as Judith Bliss in a poor revival of Noël Coward's *Hay Fever*. Nunn popped up again at the Old Vic to direct Kevin Spacey and David Troughton in a barnstorming revival of the old Broadway Darwinian warhorse *Inherit the Wind*. Spacey's Old Vic also celebrated the 80th birthday of Ireland's greatest living dramatist, Brian Friel, with a gorgeous in-the-round production of *Dancing at Lughnasa*, and Friel was further represented at the Edinburgh International Festival in a trilogy of plays from the Gate Theatre in Dublin.

Other Irish playwrights with new work at the Dublin Theatre Festival included Sebastian Barry, Enda Walsh, and Conor McPherson, who continued the screen-to-stage craze with *The Birds*. Though McPherson returned to Daphne du Maurier's short story, the publicity material included a reference to the 1963 Alfred Hitchcock movie, a ploy to boost ticket sales.

Another highlight of the Edinburgh Festival was an orgiastic version of Goethe's *Faust* by Romanian director Silviu Purcarete in a huge out-of-town warehouse arena, while Edinburgh's Traverse Theatre participated with Rona Munro's *The Last Witch*, based on accounts of the last woman to be burned for witchcraft in Scotland, in

1727. The Traverse also ran a full program of new work on the fringe at their home base next to the Usher Hall, notably *Midsummer* (*A Play with Songs*) by David Greig and Gordon McIntyre; the searing *Orphans*, yet another look at the dysfunctional-family front line, by the talented Dennis Kelly; and the enchanting reminiscences of a politicized drag queen, *A Life in Three Acts*. The latter, which perhaps owed something to Harvey Fierstein's *Torch Song Trilogy*, was written and performed by Bette Bourne and Mark Ravenhill.

Those who departed the stage for good in 2009 included the playwrights Hugh Leonard and Keith Waterhouse, the actors Natasha Richardson and Anna Manahan, and the barrister and writer Sir John Mortimer (see OBITUARIES). Other losses were the actors Dilys Laye, Edward Judd, Harry Towb, and Iain Cuthbertson and the playwrights Tom McGrath and Mike Stott.

(MICHAEL COVENEY)

U.S. and Canada. It was the best of times and the worst of times for theatre in the U.S. in 2009 as Broadway racked up record profits while nonprofit regional theatres coped with shrinking resources, cutbacks, and even closures. An all-time-high average paid admission of \$84.60 for all shows accounted for some of the New York commercial theatre's gain, as did the presence on the Rialto of 19 tourist-friendly musicals, including high-grossers *Billy Elliot*, *Mary Poppins*, *Wicked*, *Jersey Boys*, and (still prowling, after 12 years) *The Lion King*. Some arts pundits speculated that hard times fueled the impulse for escapist entertainment—as was the case during the Great Depression—and the bottom-line success of these musicals gave some credence to their thesis. Broadway's sheen was enhanced as well by an eye-catching sales installation, the \$19 million TKTS Discount Booth that opened in late 2008 on the triangular patch of Times Square where Broadway and Seventh Avenue intersect. The booth's ruby-red, 27-stair glass-step design won awards and approbation from the ticket-buying public.

Across the country, though, the mood was less sanguine. Theatre organizations both large and small watched donations from foundations and corporations shrink or run dry, and all-important individual contributions dwindled as well. Some major companies cut staffs and shortened seasons to make ends meet. The 55-year-old North Shore Music Theatre of Beverly, Mass., unable to contend with a \$10 million

debt, was one of several closures (though late in the year a potential investor raised hopes that the company, known for its lavish musicals staged in the round, would reopen).

Paradoxically, despite hard times, a spate of newly created and innovatively improved theatre spaces sprang up in the U.S. during the year. Two of the most prominent were in Dallas, where the venerable Dallas Theater Center moved out of its longtime home designed by Frank Lloyd Wright into a new \$354 million performing-arts complex downtown, and in Washington, D.C., where the historic Ford's Theatre and Museum sported a glistening renovation.

Probably the most-honoured play of the year was Lynn Nottage's *Ruined*, a humanist exposé about the brutalization of women in the decade of conflict in the Democratic Republic of the Congo, which was co-produced by the Manhattan Theatre Club and Chicago's Goodman Theatre. In addition to winning the Pulitzer Prize for drama, *Ruined* racked up Drama Desk, Outer Critics Circle, Obie, New York Drama Critics' Circle, and Lucille Lortel awards for best play. Other notable new works included 29-year-old Tarell Alvin McCraney's *Brother/Sister Plays*, an award-winning trilogy of poetic dramas that meld tales of African-American life in the Louisiana bayous with esoteric Yoruban myth; the plays were elegantly mounted by the McCarter Theatre Center of Princeton, N.J., and New York City's Public Theater. *Coming Home* and *Have You Seen Us?*, a pair of new works by 77-year-old South Africa playwright and activist Athol Fugard were both mounted during 2009 by director Gordon Edelstein at New Haven, Conn.'s Long Wharf Theatre. Up-and-comer Sarah Ruhl's *In the Next Room (or the vibrator play)*, a sly meditation on Victorian-era relationships and gadgets for "women's health," moved to Broadway from California's Berkeley Repertory Theatre.

The Berkeley company, under the savvy artistic leadership of Tony Taccone, was also the source of a much-talked-about musical, *American Idiot*, adapted from a 2004 multiplatinum album by the superstar pop-punk trio Green Day. The unusual project, despite mixed critical response, was likely to

have a rich future life on American stages. The year's most widely performed plays (as tabulated by the national theatre service organization Theatre Communications Group) were *boom*, Peter Sinn Nachtrieb's self-described "explosive comedy about the end of the world," followed by Irish playwright Conor McPherson's *The Seafarer* and Stephen Karam's *Speech & Debate*.

Experimental work by small ensembles continued to break fresh ground. One of the most distinctive was Nature

ager Michael Ross, who jointly took the reins of Connecticut's stalwart Westport Country Playhouse, and *Angels in America* director George C. Wolfe, who was hired to help design a museum in Atlanta, slated to open in 2012 as the Center for Civil & Human Rights. Director Bartlett Sher, at the top of his game thanks to such successes as Lincoln Center Theater's long-running *South Pacific* revival, announced that Kate Whoriskey (who helmed *Ruined*) would succeed him as artistic director of Seattle's Intiman Theatre in 2011. Two other women of prominence, Kate Warner (formerly of Dad's Garage Theatre Company in Atlanta) and Raelle Myrick-Hodges (the founder of Philadelphia's Azuka Theatre), took over Massachusetts's New Repertory Theatre and San Francisco's feminist-oriented Brava Theater Center, respectively.

Statistics indicating that 83% of all produced plays were written by men and that women were wildly underrepresented in the field generated a series of town-hall-style gatherings (following in the footsteps of a conference of the Black Women Playwrights' Group held in September 2008 at Loyola University in Chicago) at New York City's New Dramatists and at Princeton University. Princeton English and theatre professor Jill Dolan, who organized the latter convocation, declared that "We need to agitate continually

about women's place in the field." Playwright Marsha Norman, who also taught dramatic writing at the Juilliard School, took up the torch of gender equality in a sharply worded essay in the November issue of *American Theatre* magazine that sparked a flurry of debate in the arts blogosphere.

The impact of a bleak economy was felt north of the border as well, as Canada's legitimate theatre scene attempted to hold itself together in the face of canceled shows, soft sales, and slashed prices. In a typical move, Toronto's Buddies in Bad Times, a 30-year-old nonprofit devoted to gay themes and artists, scotched its final mainstage show of the 2008-09 season. At the same city's largest theatre, the Canadian Stage Company—which won kudos for its 20th-anniversary production of *7 Stories*, a breakthrough sur-

Sara Krulwich—The New York Times/Redux

Actresses Laura Benanti (left) and Maria Dizzia share a laugh during a scene from *In the Next Room (or the vibrator play)*, Sarah Ruhl's Victorian-era comedy that opened on Broadway at the Lyceum Theatre.

Theater of Oklahoma, a troupe based in New York City (despite its moniker, lifted from a passage in Franz Kafka's novel *Amerika*) and devoted to unearthing the theatrical in the quotidian and the mundane. *Poetics: a ballet brut*, which Nature Theater performed at the Public in New York and on tour, was a whimsical wordless work that began with the simplest of everyday gestures and developed into an epic dance extravaganza. Philadelphia's versatile Pig Iron Theatre Company also made its mark with such shows as *Chekhov Lizardbrain*, a heady deconstruction of the Russian master's mind-set, and *Welcome to Yuba City*, a genial and exuberant send-up of the American West, with 7 actors playing some 40 characters.

Among the major theatre figures moving into new jobs in 2009 were high-profile director Mark Lamos and man-

Twentieth Century-Fox Film Corporation/The Kobal Collection

realist comedy by Morris Panych—reports leaked out that total sales amounted to only about a third of the seating capacity. Even highly publicized commercial musicals were belt-tightening—David Mirvish's *Dirty Dancing* and the Queen songfest *We Will Rock You* were hawking reduced-price seats, as was Dancap's hit production of *Jersey Boys*. Even the Stratford Shakespeare and Shaw festivals suffered from stalled tourism, though strong reviews and a government marketing initiative helped to avert big losses.

Noteworthy theatre figures who died during 2009 included playwright and screenwriter Horton Foote (whose acclaimed *Orphan Home Cycle* premiered posthumously); the lighting designer Tharon Musser; Brazilian dramatist Augusto Boal; and actors Karl Malden, Harve Presnell, and Zakes Mokae. (See OBITUARIES.) Other losses included playwright Lynne Alvarez, designer Ursula Belden, historian and poet Stefan Brecht, and iconoclastic director Tom O'Horgan.

(JIM O'QUINN)

MOTION PICTURES

United States. In 2009, 3-D films, a brief fashion of the 1950s, roared back as a significant theatrical attraction. The biggest spectacle was James Cameron's *Avatar*, the director's first feature since *Titanic* (1997). This ecologically minded science-fiction parable about earthlings and humanoids on the planet Pandora took cinema fantasy to new levels of realistic detail, thanks to developments in 3-D photography, 2,500 special-effects shots, and an apocalyptic production cost of more than \$230 million. Other films available in the format included Disney's *A Christmas Carol* (Robert Zemeckis), *Cloudy with a Chance of Meatballs* (Phil Lord, Christopher Miller), Henry Selick's fancifully ghoulish stop-motion animation *Coraline*, and the year's best animated achievement, *Up* (Pete Docter), Pixar's captivating film about a balloon seller, a boy explorer, and old dreams fulfilled.

The year's family films also included the digitally enhanced *Where the Wild Things Are*, Spike Jonze's gradually disappointing take on Maurice Sendak's classic children's picture book about a neglected boy's flights of fancy. Disney returned to traditional hand-drawn animation for *The Princess and the Frog* (Ron Clements, John Musker), derivative in style and ingredients but blessed with a marketable lead character in the African American Tiana.

Sam Worthington stars as Jake Sully and Zoe Saldana portrays the character Neytiri in the 3-D science-fiction film *Avatar*, directed by James Cameron.

Old-fashioned human star power was not forgotten. George Clooney's subtle acting and physical charisma lit up the screen in *Up in the Air* (Jason Reitman), a lightly thoughtful diversion about a corporate hired gun addicted to business-class life. He also appeared as a crazed "psychic spy" in Grant Heslov's brilliant satire *The Men Who Stare at Goats*. Clooney served as the voice of the title character in *Fantastic Mr. Fox*, Wes Anderson's uneven stop-motion puppet adaptation of Roald Dahl's children's book. Jeff Bridges drew renewed acclaim as a broken-down country singer in *Crazy Heart* (Scott Cooper), while Colin Firth was touching as a gay man dealing with personal loss in *A Single Man*, an atmospheric first attempt at directing by fashion designer Tom Ford.

Star directors were also evident. Quentin Tarantino offered his deliberately misspelled *Inglourious Basterds*, a violent and violently absurd war film that reshaped the facts of World War II. Christoph Waltz's ripe performance as the fictional Jew-hating Col. Hans Landa won him the Cannes Festival's best actor award. Sobriety and sensitivity characterized *Invictus*, Clint Eastwood's even-handed drama about Nelson Mandela, South African unity, and rugby football. Joel and Ethan Coen also showed their strengths in *A Serious Man*, a wryly comic account of divine fate at work among a Jewish family in Midwestern suburbia in the 1960s.

New films were added to several popular franchises. Increased reality entered the mix for the technically sumptuous *Harry Potter and the Half-Blood*

Prince (David Yates), made in England. Followers of Stephenie Meyer's *Twilight* series of vampire novels flocked to its second and darker movie installment, *New Moon* (Chris Weitz). J.J. Abrams's *Star Trek* reinvigorated its veteran franchise with a fresh cast and a fast-paced, witty "prequel" narrative. Following *The Da Vinci Code* (2006), Ron Howard and lead actor Tom Hanks teamed up again in the moderately improved *Angels & Demons*, adapted from an earlier Dan Brown novel of ponderous religious intrigue. Roland Emmerich, specialist in science-fiction bonanzas, returned with the doomsday drama *2012*, visually spectacular but dramatically laughable.

Proper comedies were frequent, though mostly unremarkable. Charting the adventures of a flamboyantly gay Austrian fashionista, *Brüno*, from the *Borat* team of Sacha Baron Cohen and director Larry Charles, followed the earlier film's mock-documentary technique, but its mean spirit dampened some audience laughter. *Night at the Museum: Battle of the Smithsonian* (Shawn Levy) continued the popular adventures of Ben Stiller's former museum security guard.

Films agonizing over U.S. fields of military conflict were less conspicuous. Kathryn Bigelow's *The Hurt Locker*, concerning the activities of an elite U.S. bomb squad in Iraq, easily stood out for its physical intensity and claustrophobia. Nora Ephron kept to the domestic sphere in *Julie & Julia*, an agreeable confection based on Julie Powell's book about testing the published recipes of television cook Julia Child (winningly played by Meryl Streep) and on Child's

memoir *My Life in France*. Julia Roberts returned to star prominence in *Duplicity* (Tony Gilroy), a sophisticated romantic thriller about the convoluted activities of two corporate spies. Among independent filmmakers, Todd Solondz in *Life During Wartime* rigidly stuck to his standard topic, the misfortunes of social misfits, but new blood pulsed through Cary Fukunaga's *Sin nombre* (*Without Name*), an exceptionally strong debut film about the efforts of Central American immigrants struggling to reach the American border. Lee Daniels's *Precious: Based on the Novel "Push" by Sapphire* also attracted much attention for its unsparing yet tender story of a pregnant Harlem teenager, an abject victim of parental abuse.

British Isles. The realist tradition in British cinema continued to bear fruit with Andrea Arnold's *Fish Tank*, a gripping drama about bleak lives on a housing estate, told observantly and tautly, without moralizing judgments. Nonprofessional Katie Jarvis was mesmerizing as the surly unloved teenager at the plot's centre. Lone Scherfig's *An Education* painted a vibrant portrait of an English teenage girl's dubious romance with an older man. Realist stalwart Ken Loach drifted slightly awkwardly into fantasy-tinged romantic comedy with *Looking for Eric*, about a postal worker obsessed with association football (soccer) who receives visitations and advice from the philosophical footballer Eric Cantona. Soccer also provided material for *The Damned United* (Tom Hooper), a bouncy film about the 1970s soccer manager Brian Clough. Another popular hero, John Lennon, received unusually conventional attention in *Nowhere Boy*, cautiously directed by the conceptual artist Sam Taylor-Wood. Jane Campion's *Bright Star*, produced with Australia and France, stood out for its tender, detailed depiction of the last years of the poet John Keats, viewed through the eyes of his lover and betrothed, Fanny Brawne.

Terry Gilliam's exuberantly fantastic *The Imaginarium of Doctor Parnassus*, completed with some ingenuity following actor Heath Ledger's 2008 death during filming, stirred much curiosity, though its convoluted tale about a traveling-sideshow operator trying to wriggle free of his pact with the Devil appealed most to the director's die-hard fans. A cooler stylistic temperature prevailed in the American co-production *Moon*, a cerebral science-fiction drama from feature film neophyte Duncan Jones (son of David Bowie). In Ireland, Neil Jordan pitted fairy-tale myths

against the grating modern world in the esoteric *Ondine*. Wider tastes were catered to in Conor McPherson's emotional drama *The Eclipse* and in John and Kieran Carney's *Zonad*, a lunatic comedy about a drunk in a red vinyl suit mistaken for a superior life form.

Canada, Australia, and New Zealand. Canadian cinema was relatively dormant, though 20-year-old Xavier Dolan stirred much interest with his semiautobiographical *J'ai tué ma mère* (*I Killed My Mother*), a biting, at times funny account of a 16-year-old homosexual's turbulent relationship with his mother. Dolan wrote, produced, directed, and played the lead role. From Australia, Sarah Watt pondered on the travails of a Melbourne mother recovering from a serious illness in the funny and affecting *My Year Without Sex*. The low-budget *Samson & Delilah*, directed, written, and photographed by Warwick Thornton, attracted much praise for its sensitive treatment of the messy lives of two Aboriginal teenagers in the outback, while troubled teenagers and their anxious mothers in suburban Melbourne absorbed Ana Kokkinos's attention in the raw and compassionate *Blessed*. In *The Boys Are Back* (Scott Hicks), a sportswriter unaccustomed to home responsibilities struggles with being a single parent following his wife's tragic death, a situation explored without maudlin sentiment. New Zealand's biggest filmmaker, Peter Jackson, lent his weight as producer to *District 9* (Neill Blomkamp), an original, gritty science-fiction drama about a slum ghetto of extraterrestrials in South Africa.

Western Europe. The European film that stirred most controversy was the maverick Danish director Lars von Trier's *Antichrist*. Shot in gloomily hued images, von Trier's two-character drama imprisoned its audience in the sadomasochistic aftermath of a domestic tragedy (the death of a couple's young child). In other Danish films, Martin Pieter Zandvliet's *Applaus* (*Applause*) packed some biting wit into its tale of a prickly alcoholic actress endeavouring to get her life in order, while Nicolo Donato made an impressive directing debut with *Broderskab* (*Brotherhood*), a solidly packaged account of a gay relationship between members of a neo-Nazi organization. The film took the top prize at the Rome Film Festival.

Veterans of the French New Wave (Nouvelle Vague) movement of the 1950s and '60s continued in business. Alain Resnais, at 86, offered another playfully artificial diversion, *Les Herbes*

folles (*Wild Grass*), while 81-year-old Jacques Rivette tickled a select few with the cerebral and talkative *36 vues du Pic Saint-Loup* (*Around a Small Mountain*). Claude Chabrol, 78, reached a wider audience with *Bellamy*, an enjoyably old-fashioned and witty *policier*, with Gérard Depardieu as a police inspector cast in the friendly domestic mold of Georges Simenon's famous character Maigret.

The films with most audience appeal and the hottest fire, however, came from the younger generations. Director Jacques Audiard cemented his stature with *Un Prophète* (*A Prophet*), a tough and absorbing drama about the thriving life of a young Arab French petty criminal. Tahar Rahim grabbed all eyes with the detail and intense physicality of his lead performance; the film won the Grand Prix at Cannes. In a lighter vein, Anne Fontaine's *Coco avant Chanel* (*Coco Before Chanel*) pleased wide audiences with its prettily mounted portrait of the early years of the fashion designer Coco Chanel, disarmingly impersonated by Audrey Tautou. Bruno Dumont continued his austere examinations of community life with *Hadewijch*, concerning a devout young woman's extreme crisis of faith. Jean-Pierre Jeunet pursued a livelier path in *Micmacs à tire-larigot* (*Micmacs*), a broad hyperactive tale about Paris misfits banding against arms dealers, featuring the comic Dany Boon. Closer to reality, Jean-Paul Lilienfeld's provocative *La Journée de la jupe* (*Skirt Day*) was overloaded with social issues but brought Isabelle Adjani back into the limelight as a teacher in a suburban school driven to take her pupils hostage. André Téchiné took a more sophisticated view of social malaise in *La Fille du RER* (*The Girl on the Train*), a kaleidoscopic drama based on the true story of a woman train passenger who falsely declared herself the victim of a racist attack. Disillusion and deceptions among spies formed the material of Christian Carion's intelligent and riveting *L'Affaire Farewell* (*Farewell*). Across the border two Belgian films about family life stood out: Felix Van Groeningen's visually boisterous *De helaasheid der dingen* (*The Misfortunates*) and *Un Ange à la mer* (*Angel at Sea*), a striking feature debut by director Frédéric Dumont, about a family struggling to cope with a suicidal father.

Germany generated one of the most powerful and visually refined films of the year in *Das weiße Band* (*The White Ribbon*), Michael Haneke's brooding drama about malicious and mysterious

events unfolding in a German rural village prior to World War I. With its cruel view of human behaviour, this was a film to admire rather than love, though Haneke's craft, the detailed performances, and beautiful black-and-white photography still made for a significant achievement. Warmth radiated from Fatih Akin's *Soul Kitchen*, a friendly portrait of multicultural Germany seen through the microcosm of a Hamburg restaurant. Heinrich Breloer's adaptation of Thomas Mann's novel *Buddenbrooks* settled too easily for surface melodrama, though the noteworthy cast, headed by Armin Müller-Stahl, injected some dignity. Shot in English, *The Last Station* (Michael Hoffman), co-produced with Russia and the U.K., conjured solid middlebrow entertainment from the tempestuous last year of Tolstoy's life. Livelier commercial fare was offered by Alain Gsponer's *Lila, Lila*, a neatly turned romantic comedy about a waiter (Daniel Brühl, a rising star) who passes off an unpublished manuscript as his own work.

Spain's output was dominated by Pedro Almodóvar's *Los abrazos rotos* (*Broken Embraces*), a labyrinthine tale about obsessive love, revenge, and cinema, circling around the travails of a former film director blinded in a car crash. Almodóvar's medley of styles and genres ensured continual interest, as did the presence of Penélope Cruz (see BIOGRAPHIES), though the film remained a clever exercise rather than a drama from the heart. Serious attention was also paid to *La teta asustada* (*The Milk of Sorrow*), Claudia Llosa's sober but vividly realized drama about a Peruvian housemaid so afraid of being raped that she blocks access to her vagina with a potato. The film took the top prize at the Berlin International Film Festival. The most spectacular Spanish film was Alejandro Amenábar's *Agora* (*Mists of Time*), an emotionally cool but visually succulent epic about love and conflicting beliefs in 4th-century Alexandria. In Portugal, Manoel de Oliveira entered the record books by completing a film at the age of 100: *Singularidades de uma rapariga loura* (*Eccentricities of a Blonde-Haired Girl*), a brief, mannered story of misguided love.

Giuseppe Tornatore's *Baaria*, sentimental and vacuous, opened the Venice Film Festival with a blast of hot air. There was meaty Italian matter elsewhere, however. Marco Risi's *Fortapàsc*, about the last months of a Neapolitan journalist killed by the Mafia, painted a precise and grungy picture of the

Neapolitan scene. *Vincere*, directed by Marco Bellocchio with operatic panache, related the story of Mussolini's cruelly discarded first wife and son. Luca Guadagnino's *Io sono l'amore* (*I Am Love*), featuring Tilda Swinton, explored the world of a wealthy Milanese family with vigour, detail, and psychological penetration. In Greece, Giorgos Lanthimos contributed *Kynodontas* (*Dogtooth*), the weirdly absorbing tale of three children trapped in an alternate universe created by their cruel parents on their isolated country estate.

From Scandinavia, Norway offered *Nord* (*North*), Rune Denstad Langlo's agreeably quirky comic drama about a dejected man who gradually warms up on a long Arctic journey. Swedish director Lukas Moodysson made his first international production, *Mammoth*, a three-pronged drama about parents, children, and global capitalism, smoothly made but not quite the equal of its ambitions.

Eastern Europe. Romania's recent cinema renaissance continued with the episodic film *Amintiri din epoca de aur* (*Tales from the Golden Age*), a patchy but watchable panorama of the absurdities of life under communist rule, conceived, written, and partly directed by Cristian Mungiu. Episodes (directed by five separate filmmakers) ranged in tone from sharp light comedy to black irony. Another leading Romanian talent, Corneliu Porumboiu, returned with *Politist, adj.* (*Police, Adjective*), a thoughtful drama about a policeman's unwilling surveillance of a teenager suspected of selling marijuana. Turkey made a small mark with *Mommo* (*The Bogeyman*), Atalay Tasdiken's heart-tugging, limpidly filmed debut feature about two young siblings from an Anatolian village who are threatened with separation. Slovenia's *Slovenka* (*Slovenian Girl*), directed by Damjan Kozole, told of an amoral student led into prostitution by dreams of riches; the film was strengthened by the lead performance of stage actress Nina Ivanisin. Andrzej Wajda, Poland's greatest veteran director, offered the well-meaning but unsatisfying *Tatarak* (*Sweet Rush*)—at heart a mournful tale about a middle-aged woman lured by an attractive young man, but the tale goes astray with the interweaving of personal monologues from Krystyna Janda, Wajda's lead actress. Stronger dramatic fare was provided by *Rewers* (*Reverse*), a promising dramatic debut by documentary maker Borys Lankosz, tracing the effect of an encounter with com-

munist Poland's secret police on three generations of women.

Latin America. Latin American filmmakers continued to flourish. In Mexico, Rigoberto Pérezcano's *Norteados* (*Northless*) gave unhackneyed treatment to the familiar topic of immigrants struggling to enter the United States. Chile secured international attention with *La nana* (*The Maid*), Sebastián Silva's tensely wrought drama about an obsessive, gloomy, territorial maid. Veteran Chilean director Miguel Littin showed his muscles in *Dawson Isla 10*, a harrowing drama about the treatment of political prisoners by the regime of Augusto Pinochet, while Alejandro Fernández Almendras trod more gently in *Huacho*, a touching family saga following 24 hours in the life of a poor provincial family. Productions from Uruguay, though small in number, continued to reveal talent. Adrián Biniez's *Gigante* tenderly pursued the comic fortunes of a shy supermarket security guard, nervously in love with one of the store's janitors. Argentina enjoyed a big local success with Juan José Campanella's *El secreto de sus ojos* (*The Secret in Their Eyes*), a complex but gripping romantic thriller. In Brazil, Esmir Filho impressed with his *Os famosos e os duendes da morte* (*The Famous and the Dead*), the delicately surreal tale of a Bob Dylan fan whose main connection with the world is through the Internet.

Middle East. Israeli filmmakers proved the most prolific and successful in exploring the region's conflicts. Samuel Maoz's *Lebanon*, winner of the Golden Lion prize at Venice, placed the viewer inside an Israeli tank on the first day of the 1982 invasion of Lebanon. Visceral camera work gave the film a claustrophobic power, though characterizations stayed relatively drab. *Ajami*, co-directed by Israeli Yaron Shani and Palestinian Scandar Copti, focused sharply on a revenge killing in Jaffa and its tragic repercussions. The mood stayed intense in *Einaym Pkuhot* (*Eyes Wide Open*), Haim Tabakman's courageous film about a married male butcher in Jerusalem, a strict Orthodox Jew, in love with a seductive male student. Political restrictions pressed down on Iranian filmmakers, but Abdolreza Kahani managed a touching portrait of working-class life in *Bist* (*Twenty*), an ensemble drama about the staff of a Tehran reception hall faced with closure. More provocatively, Bahman Ghobadi's *Kasi az gorbehaye irani* (continued on page 288)

INTERNATIONAL FILM AWARDS 2009

Golden Globes, awarded in Beverly Hills, California, in January 2009

Best drama	<i>Slumdog Millionaire</i> (U.K.; director, Danny Boyle)
Best musical or comedy	<i>Vicky Cristina Barcelona</i> (Spain/U.S.; director, Woody Allen)
Best director	Danny Boyle (<i>Slumdog Millionaire</i> , U.K.)
Best actress, drama	Kate Winslet (<i>Revolutionary Road</i> , U.S./U.K.)
Best actor, drama	Mickey Rourke (<i>The Wrestler</i> , U.S./France)
Best actress, musical or comedy	Sally Hawkins (<i>Happy-Go-Lucky</i> , U.K.)
Best actor, musical or comedy	Colin Farrell (<i>In Bruges</i> , U.K./U.S.)
Best foreign-language film	<i>Vals im Bashir</i> (<i>Waltz with Bashir</i>) (Israel/Germany/France/U.S./Finland/Switzerland/Belgium/Australia; director, Ari Folman)

Sundance Film Festival, awarded in Park City, Utah, in January 2009

Grand Jury Prize, dramatic film	<i>Push: Based on the Novel by Sapphire</i> (<i>Precious: Based on the Novel "Push" by Sapphire</i>) (U.S.; director, Lee Daniels)
Grand Jury Prize, documentary	<i>We Live in Public</i> (U.S.; director, Ondi Timoner)
Audience Award, dramatic film	<i>Push: Based on the Novel by Sapphire</i> (<i>Precious: Based on the Novel "Push" by Sapphire</i>) (U.S.; director, Lee Daniels)
Audience Award, documentary	<i>The Cove</i> (U.S.; director, Louie Psihoyos)
World Cinema Jury Prize, dramatic film	<i>La nana</i> (<i>The Maid</i>) (Chile; director, Sebastián Silva)
World Cinema Jury Prize, documentary	<i>Rough Aunties</i> (U.K.; director, Kim Longinotto)
U.S. directing award, dramatic film	Cary Fukunaga (<i>Sin nombre</i> [<i>Without Name</i>], Mexico/U.S.)
U.S. directing award, documentary	Natalia Almada (<i>El general</i> [<i>The General</i>], Mexico/U.S.)

British Academy of Film and Television Arts, awarded in London in February 2009

Best film	<i>Slumdog Millionaire</i> (U.K.; director, Danny Boyle)
Best director	Danny Boyle (<i>Slumdog Millionaire</i> , U.K.)
Best actress	Kate Winslet (<i>The Reader</i> , U.S./Germany)
Best actor	Mickey Rourke (<i>The Wrestler</i> , U.S./France)
Best supporting actress	Penélope Cruz (<i>Vicky Cristina Barcelona</i> , Spain/U.S.)
Best supporting actor	Heath Ledger (<i>The Dark Knight</i> , U.S./U.K.)
Best foreign-language film	<i>Il y a longtemps que je t'aime</i> (<i>I've Loved You So Long</i>) (France/Germany; director, Philippe Claudel)

Berlin International Film Festival, awarded in February 2009

Golden Bear	<i>La teta asustada</i> (<i>The Milk of Sorrow</i>) (Spain/Peru; director, Claudia Llosa)
Silver Bear, Jury Grand Prix	<i>Alle anderen</i> (<i>Everyone Else</i>) (Germany; director, Maren Ade); <i>Gigante</i> (Uruguay/Argentina/Germany/Spain; director, Adrián Biniez)
Silver Bear, best director	Asghar Farhadi (<i>Darbareye Elly</i> [<i>About Elly</i>], Iran)
Silver Bear, best actress	Birgit Minichmayr (<i>Alle anderen</i> [<i>Everyone Else</i>], Germany)
Silver Bear, best actor	Sotigui Kouyaté (<i>London River</i> , U.K./France/Algeria)

Academy of Motion Picture Arts and Sciences (Oscars; U.S.), awarded in Los Angeles in February 2009

Best film	<i>Slumdog Millionaire</i> (U.K.; director, Danny Boyle)
Best director	Danny Boyle (<i>Slumdog Millionaire</i> , U.K.)
Best actress	Kate Winslet (<i>The Reader</i> , U.S./Germany)
Best actor	Sean Penn (<i>Milk</i> , U.S.)
Best supporting actress	Penélope Cruz (<i>Vicky Cristina Barcelona</i> , Spain/U.S.)
Best supporting actor	Heath Ledger (<i>The Dark Knight</i> , U.S./U.K.)
Best foreign-language film	<i>Okuribito</i> (<i>Departures</i>) (Japan; director, Yojiro Takita)
Best animated feature	<i>WALL•E</i> (U.S.; director, Andrew Stanton)

Césars (France), awarded in Paris in February 2009

Best film	<i>Séraphine</i> (France/Belgium; director, Martin Provost)
Best director	Jean-François Richet (<i>Mesrine</i> , France/Canada)
Best actress	Yolande Moreau (<i>Séraphine</i> , France/Belgium)
Best actor	Vincent Cassel (<i>Mesrine</i> , France/Canada)
Most promising actor	Marc-André Grondin (<i>Le Premier Jour du reste de ta vie</i> [<i>The First Day of the Rest of Your Life</i>], France)
Most promising actress	Déborah François (<i>Le Premier Jour du reste de ta vie</i> [<i>The First Day of the Rest of Your Life</i>], France)

Cannes Festival, France, awarded in May 2009

Palme d'Or	<i>Das weisse Band</i> (<i>The White Ribbon</i>) (Austria/Germany/France/Italy; director, Michael Haneke)
Grand Prix	<i>Un Prophète</i> (<i>A Prophet</i>) (France/Italy; director, Jacques Audiard)
Jury Prize	<i>Fish Tank</i> (U.K.; director, Andrea Arnold); <i>Bakjwi</i> (<i>Thirst</i>) (South Korea; director, Park Chan-Wook)
Best director	Brillante Mendoza (<i>Kinatay</i> [<i>The Execution of P</i>], Philippines/France)
Best actress	Charlotte Gainsbourg (<i>Antichrist</i> , Denmark/Germany/France/Sweden/Italy/Poland)
Best actor	Christoph Waltz (<i>Inglourious Basterds</i> , U.S./Germany)
Caméra d'Or	<i>Samson and Delilah</i> (Australia; director, Warwick Thornton)

INTERNATIONAL FILM AWARDS 2009 (continued)

Locarno International Film Festival, Switzerland, awarded in August 2009

Golden Leopard	<i>She, a Chinese</i> (U.K./France/Germany; director, Xiaolu Guo)
Special Jury Prize	<i>Buben, baraban</i> (Russia; director, Aleksey Mizgirev)
Best actress	Lotte Verbeek (<i>Nothing Personal</i> , Ireland/Netherlands)
Best actor	Antonis Kafetzopoulos (<i>Akadimia Platonos [Plato's Academy]</i> , Germany/Greece)

Montreal World Film Festival, awarded in September 2009

Grand Prix of the Americas (best film)	<i>Korkoro (Freedom)</i> (France; director, Tony Gatlif)
Best actress	Marie Leuenberger (<i>Die Standesbeamtin [Will You Marry Us?]</i> , Switzerland)
Best actor	Cyron Bjørn Melville (<i>Vanvittig forelsket [Love and Rage]</i> , Denmark)
Best director	Kichitaro Negishi (<i>Viyon no tsuma [Villon's Wife]</i> , Japan)
Special Grand Prix of the Jury	<i>Fang zhi gu niang (Weaving Girl)</i> (China; director, Quanan Wang)
Best screenplay	<i>Je suis heureux que ma mère soit vivante (I'm Glad that My Mother Is Alive)</i> (France; screenplay by Alain Le Henry)
International film critics award	<i>Fang zhi gu niang (Weaving Girl)</i> (China; director, Quanan Wang)

Venice Film Festival, awarded in September 2009

Golden Lion	<i>Lebanon</i> (Germany/Israel/France/Lebanon; director, Samuel Maoz)
Special Jury Prize	<i>Soul Kitchen</i> (Germany; director, Fatih Akin)
Volpi Cup, best actress	Kseniya Rappoport (<i>La doppia ora [The Double Hour]</i> , Italy)
Volpi Cup, best actor	Colin Firth (<i>A Single Man</i> , U.S.)
Silver Lion, best director	Shirin Neshat (<i>Zanan-e bedun-e mardan [Women Without Men]</i> , Germany/Austria/France)
Marcello Mastroianni Award (best new young actor or actress)	Jasmine Trinca (<i>Il grande sogno [The Big Dream]</i> , Italy/France)
Luigi De Laurentiis Award (best first film)	<i>Engkwentro (Clash)</i> (Philippines; director, Pepe Diokno)

Toronto International Film Festival, awarded in September 2009

Best Canadian feature film	<i>Cairo Time</i> (director, Ruba Nadda)
Best Canadian first feature	<i>The Wild Hunt</i> (director, Alexandre Franchi)
Best Canadian short film	<i>Danse macabre</i> (director, Pedro Pires)
International film critics award	<i>Paltadacho munis (The Man Beyond the Bridge)</i> (India; director, Laxmikant Shetgaonkar); <i>Hadewijch</i> (France; director, Bruno Dumont)
People's Choice Award	<i>Precious: Based on the Novel "Push" by Sapphire</i> (U.S.; director, Lee Daniels)

San Sebastián International Film Festival, Spain, awarded in September 2009

Best film	<i>Nanjing! Nanjing! (City of Life and Death)</i> (China/Hong Kong; director, Lu Chuan)
Special Jury Prize	<i>Le Refuge (The Refuge)</i> (France; director, François Ozon)
Best director	Javier Rebollo (<i>La mujer sin piano [Woman Without Piano]</i> , Spain)
Best actress	Lola Dueñas (<i>Yo, también [Me Too]</i> , Spain)
Best actor	Pablo Pineda (<i>Yo, también [Me Too]</i> , Spain)
Best cinematography	Yu Cao (<i>Nanjing! Nanjing! [City of Life and Death]</i> , China/Hong Kong)
New directors prize	Philippe Van Leeuw (<i>Le Jour où Dieu est parti en voyage [The Day God Walked Away]</i> , France/Belgium)
International film critics award	<i>Los condenados (The Condemned)</i> (Spain; director, Isaki Lacuesta)

Vancouver International Film Festival, awarded in October 2009

Most Popular Canadian Film Award	<i>65_RedRoses</i> (directors, Philip Lyall and Nimisha Mukerji)
People's Choice Award	<i>Soundtrack for a Revolution</i> (U.S./France/U.K.; directors, Bill Guttentag and Dan Sturman)
National Film Board Most Popular Canadian Documentary Award	<i>65_RedRoses</i> (directors, Philip Lyall and Nimisha Mukerji)
Canwest Award for Best Canadian Feature Film	<i>J'ai tué ma mère (I Killed My Mother)</i> (director, Xavier Dolan)
Environmental Film Audience Award	<i>At the Edge of the World</i> (U.S.; director, Dan Stone)
Dragons and Tigers Award for Young Cinema	<i>Hwioribaram (Eighteen)</i> (South Korea; director, Jang Kun-Jae)

Chicago International Film Festival, awarded in October 2009

Gold Hugo, best film	<i>Mississippi Damned</i> (U.S.; director, Tina Mabry)
Gold Hugo, best documentary	<i>Cooking History</i> (Slovakia/Czech Republic/Austria/Finland; director, Péter Kerekes)
Silver Hugo, Special Jury Award	<i>Fish Tank</i> (U.K.; director, Andrea Arnold)

European Film Awards, awarded in December 2009

Best European film	<i>Das weiße Band (The White Ribbon)</i> (Austria/Germany/France/Italy; director, Michael Haneke)
Best actress	Kate Winslet (<i>The Reader</i> , U.S./Germany)
Best actor	Tahar Rahim (<i>Un Prophète [A Prophet]</i> ; France/Italy)

(continued from page 285)

khahar nadareh (*No One Knows About Persian Cats*) burrowed into Tehran's underground music scene for an uneven quasi-documentary blend of limp narrative and fiery music. Moroccan cinema continued to brighten. A new director, Nour-Eddine Lakhmari, won popular success with *Casanegra*, an energetic dark-hued tale about two small-time hustlers in Casablanca.

South Asia. In a barren year artistically, Bangladeshi director Mostofa Sarwar Farooki made a mark with *Third Person Singular Number*, a stylistically polished and striking drama about a single Muslim's woman's struggle for an independent life. Bollywood product continued to proliferate with boisterous concoctions, such as Anurag Singh's *Dil bole hadippa!* (*My Heart Goes Hadippa*), the absurd tale of a cricket-crazy Punjabi girl who joins an international cricket team in disguise, and the romantic comedy *What's Your Raashee?* (Ashutosh Gorawiker). Dev Benegal's lightly likable *Road, Movie*, following the cross-country trek of a disaffected young man, paid greater heed to international tastes.

East and Southeast Asia. China marked the 60th anniversary of communist rule with *Jian guo da ye* (*The Founding of a Republic*; Han Sanping, Huang Jianxin), a lavish depiction of the post-World War II battles between communists and nationalists. Within a month of its release, it had become China's biggest-grossing film. Lu Chuan's *Nanjing! Nanjing!* (*City of Life and Death*) viewed history with more sophistication, exploring the 1937–38 Nanjing (Nanking) Massacre with a convincing blend of realistic action and thoughtful reverie. Hong Kong's commercial cinema offered a sprawling new vehicle for action star Jackie Chan, *San suk si gin* (*Shinjuku Incident*; Tung-Shing Yee). Subtler tastes were satisfied with *Tin shui wai dik ye yu mo* (*Night and Fog*), Ann Hui's vividly acted drama about domestic violence.

South Korea sold plenty of popcorn with *Haeundae* (Yun Je-Gyun), a rousing disaster movie about a popular beach resort struck by a tsunami. Life was taken more seriously in *Yeo-haeng-ja* (*A Brand New Life*), Ounie Lecomte's absorbing drama based on her own experiences as an orphan sheltered by nuns. *Kwasok scandale* (*Speed Scandal*; Kang Hyeong-Cheol) spun popular comedy around the clever tale of a self-obsessed radio host whose life spins out of control. Those hunting for the offbeat found

In a scene from director Lu Chuan's film *Nanjing! Nanjing!* (*City of Life and Death*), Chinese women are blindfolded before being taken to Japanese soldiers as prostitutes during the 1937–38 Nanjing Massacre.

National Geographic Entertainment/Everett Collection

some pleasure with Park Chan-Wook's *Bakjwi* (*Thirst*), the outlandish result of fusing vampire comedy with elements from Émile Zola's novel *Thérèse Raquin*.

Hirokazu Koreeda, one of the most idiosyncratic of Japanese directors, continued his musings on lost souls and love in *Kuki ningyo* (*Air Doll*), a fragile modern fairy tale about a waiter and his favourite partner, an inflatable doll. Working in the popular register, Yukihiro Tsutsumi pleased many with the final two episodes of his manga-based adventure trilogy *20-seiki shonen* (*20th Century Boys*). In the Philippines, in *Kinatay* (*The Execution of P*), Brilante Mendoza's directorial skills barely salvaged his coarse narrative about a police trainee losing his innocence in Manila's urban hell. The theme of imperiled innocence was also found in the attractively mounted Malaysian film *Sham moh* (*At the End of Daybreak*; Ho Yuhang).

Africa. Local filmmaking on the continent remained sparse. The veteran Malian director Souleymane Cissé produced his first film in 14 years with *Min Ye* (*Tell Me Who You Are*), a talkative tale of infidelity and polygamy among Mali's upper classes. (GEOFF BROWN)

Documentary Films. Environmental issues continued to have a major presence in the documentary arena during 2009. In *The Cove*—an Audience Award winner at the Sundance, Hot Docs, and Silverdocs film festivals—veteran *National Geographic* still photographer Louie Psihoyos probed abuses suffered by commercially exploitable dolphins in Japan. His crew included Richard O'Barry, the former dolphin trainer of *Flipper* TV-series fame. Robert Kenner's *Food, Inc.* scrutinized the history of the world food chain and the ramifications

of its current control by multinational corporations. Joe Berlinger's *Crude* reported the effects of oil drilling on communities along the Amazon River in Ecuador. The irrepressible Michael Moore returned with *Capitalism: A Love Story*. The film was highly critical of the U.S.'s handling of the recent economic crisis and its bailouts of corporations and banks.

Other prominent documentaries explored issues in less-developed countries. A Grierson Award winner, *Burma VJ* by Anders Østergaard, followed the efforts of reporters in Myanmar (Burma) who, armed with video cameras, risked their lives to expose political and social repression in their country. British director Havana Marking's *Afghan Star*, winner of two awards at Sundance, explored Afghanistan's version of the TV show *American Idol*, the program's open voting system, and its implications for the country's democratic process. Screened at numerous festivals internationally, Hamid Rahmanian's *The Glass House* looked at the plight of four young Iranian women striving to break free from repression and exploitation with support from a rehabilitation centre in Tehran.

Winner of the International Documentary Association's award for best feature documentary, British director Sacha Gervasi's *Anvil! The Story of Anvil* examined the Canadian rock group's unique career. In the United States, Peter Esmonde's *Trimpin* was a portrait of a truly original composer who used unorthodox instruments. Aviva Kempner's *Yoo-Hoo, Mrs. Goldberg* celebrated Gertrude Berg's extraordinary contributions to radio and television, including the innovation of the character-driven situation comedy. (BEN LEVIN)

Physical Sciences

Chemists made advances in the synthesis and use of **GRAPHENE** and improved techniques involving **NUCLEAR MAGNETIC RESONANCE** to study proteins in living cells. Physicists observed the chemical structure of a **SINGLE MOLECULE** and came closer to the development of an **OPTICAL MICROCHIP**. Scientists **DISCOVERED** significant amounts of **WATER** on the **MOON** and evidence that stars had formed not very long after the big bang. Future plans for manned missions to the **MOON** and **MARS** were reevaluated, and the Kepler satellite began searching for **EARTH-SIZE PLANETS**.

CHEMISTRY

Materials Chemistry. In 2009 there was a notable surge in research on graphene—an atom-thick layer of carbon atoms tightly arranged in a honeycomb structure. The exceptional mechanical, structural, and electronic properties of graphene had propelled this form of carbon to the forefront of academic and commercial materials research. Graphene had great strength and stiffness, and at room temperature it conducted electrons faster than any other material. Conceptually, graphene was not new. Crystals of the form of carbon known as graphite had long been described as being composed of multiple layers of graphene, and carbon nanotubes and buckyballs were seen essentially as rolled-up forms and spherical enclosures of graphene, respectively. Single free-standing graphene sheets had first been isolated only a few years earlier, in work carried out by Andre K. Geim and Kostya S. Novoselov of the University of Manchester, Eng. The team had succeeded in isolating graphene by turning to a rudimentary method—they stuck small specks of graphite onto adhesive tape. Then by folding the sticky sides of the tape against each other and repeatedly pulling them apart, the researchers eventually cleaved some of the flakes to a single-atom thickness. In 2009 scientists reported many advances in graphene synthesis, including methods

of forming graphene strips by “unzipping” carbon nanotubes chemically and physically, using surfactant-guided molecular self assembly, and deoxygenating graphite oxide (an inexpensive precursor) photothermally by means of a camera flash. They also reported advances in the development of graphene applications, including electrically conductive coatings and polymer composites, ultracapacitors, nanoscale field-effect transistors, and ultrafast photodetectors.

Nuclear Chemistry. In June 2009 the International Union of Pure and Applied Chemistry (IUPAC) officially recognized a group of scientists led by Sigurd Hofmann of the Institute for Heavy Ion Research (GSI) in Darmstadt, Ger., as the first to have produced nuclei of element 112. GSI had reported producing element 112 in experiments conducted in 1996 in which a target containing atoms of lead was bombarded with high-velocity ions of zinc. As a result of the IUPAC action, GSI was entitled to name the element. The research group chose the name copernicium and symbol Cp in honour of Polish astronomer Nicolaus Copernicus, and the IUPAC was expected to approve the new name and symbol in early 2010.

In September researchers working at Lawrence Berkeley National Laboratory at the University of California, Berkeley, independently confirmed the results of an experiment that had been conducted a decade earlier by scientists at the Joint Institute for Nuclear Research in Dubna, Russia, who claimed

that they had synthesized nuclei of element 114. The Lawrence Berkeley group used high-velocity ions of calcium to bombard a target containing plutonium. The probability that a target nucleus and a projectile nucleus would fuse into a single massive particle was extremely low, and only two nuclei of element 114 were observed in a week's worth of bombardment. Such unfavourable statistics made it especially challenging, yet critically important, to independently confirm heavy-element synthesis results.

Organic Chemistry. According to the classic textbook formulation of electrophilic aromatic substitution reactions, the presence of substituents on aromatic rings such as benzene guides incoming substituents to specific ring positions. Amines and other electron-donating groups, for example, direct newly arriving reactants to the ortho and para positions (one and three carbon atoms away from the amine group, respectively) on the ring. Nitro and other electron-withdrawing groups guide the reactants to the meta position (two carbon atoms away). It appeared that these time-honoured organic-chemistry rules might need to be qualified, however. Matthew J. Gaunt and Robert J. Phipps of the University of Cambridge showed that the presence of a copper catalyst caused unexpected aromatic substitution reactions in which acyl amines yielded meta-substituted products. The unconventional reaction might lead to new syntheses for valuable products such as pharmaceuticals.

Biochemistry. The study of proteins inside their native cellular environment could provide key insights into the biological mechanisms of diseases. An analytic technique known as in-cell nuclear magnetic resonance (NMR) spectroscopy held promise for carrying out detailed intracellular studies of proteins, but the method's application had been limited mainly to probing in-cell protein conformations, dynamic motions, and binding interactions. Working independently, two teams of researchers in Japan showed that the reach of the NMR technique extended well beyond the range demonstrated previously. Yutaka Ito at Tokyo Metropolitan University and colleagues succeeded for the first time in ascertaining a three-dimensional protein structure

Photo courtesy of David J. Willock, Cardiff University

exclusively from NMR spectroscopy data from living cells. The group reported subtle differences between the structure of the metal-binding protein TTHA1718 found in bacterial cells and the structure of the protein *in vitro*. The other team, formed by researchers at Kyoto University, demonstrated for the first time that the in-cell NMR technique could be used successfully to analyze proteins in living mammalian somatic (eukaryotic) cells. The method had previously been limited to the study of prokaryotic cells that had been customized to express isotope-labeled proteins at elevated levels for NMR analysis.

Physical Chemistry. Researchers boosted the time resolution of electron energy loss spectroscopy (EELS) by a factor of 10 billion and also pushed the spatial resolution of the technique to the single-atom limit. EELS, often used in conjunction with transmission electron microscopy (TEM), could be used to reveal the chemical identity of a specimen by measuring element-specific decreases in beam energy caused by interactions between an electron beam and atoms in the sample. Ahmed H. Zewail and co-workers at the California Institute of Technology developed a laser-driven TEM method that enabled EELS signals, which were typically recorded on the millisecond scale, to be measured with femtosecond (10^{-15} -sec) resolution—the time scale on which chemical reactions occur. To more fully demonstrate the methodology, the group mapped changes in real time in the chemical bonding and electron distribution of a graphite crystal as it was momentarily compressed by a laser pulse into the structure of a diamond crystal. In another study a team headed by Kazu Suenaga of Japan's National Institute of Advanced Industrial Science and Technology showed that by finely focusing a TEM beam with devices known as aberration correctors, they were able to pinpoint the location and chemical identity (including oxidation state) of single impurity atoms of calcium and cerium inside carbon nanotubes.

Applied Chemistry. Converting the chemical building blocks of plant matter into fuels and other useful substances could help alleviate the problems of a dwindling supply of available petroleum resources and of the envi-

Nanoparticles of an alloy of gold (yellow) and palladium (blue) on an acid-treated carbon support directly catalyze hydrogen-peroxide formation from hydrogen (white) and oxygen (red) and block hydrogen-peroxide decomposition.

ronmental consequences that resulted from their use. Such chemical transformations presented a challenge, however, because plant-derived biomass is a physically tough and chemically complex mixture consisting largely of lignocellulose (cellulose, hemicellulose, and lignin). Major research efforts into this area of green chemistry had largely focused on producing ethanol and other liquid transportation fuels. Some researchers, however, were working on techniques for converting cellulosic biomass into versatile intermediate chemical compounds such as 5-hydroxymethylfurfural (HMF). Referred to as a platform chemical, HMF could readily be transformed into various products typically made from petroleum, including solvents, fuels, and monomers for polymer production. Although methods for converting raw lignocellulose to HMF or other finished chemical products had not yet been demonstrated, research in the biomass field was moving in that direction. In the early part of the year, Z. Conrad Zhang and co-workers at Pacific Northwest National Laboratory (PNNL), Richland, Wash., reported devising a single-step method of making HMF directly from cellulose. The conversion was driven by a combination of copper chloride and chromium chloride dissolved in an imidazolium ionic liquid. The catalytic mixture op-

erated under mild conditions and rapidly depolymerized cellulose—the main bottleneck in the development of a commercial process for the conversion of cellulosic biomass.

Industrial Chemistry. The production of millions of tons of hydrogen peroxide (an oxidizer used as a disinfectant and bleach) each year depended on an indirect chemical process that was based on the sequential hydrogenation and oxidation of organic compounds called anthraquinones. The direct synthesis of hydrogen peroxide from hydrogen and oxygen would be simpler and potentially less expensive, but it was not employed for the production of bulk quantities of the oxidizer because the catalysts known to drive such a reaction also catalyzed the decomposition of hydrogen peroxide. Graham J. Hutchings of Cardiff (Wales) University and colleagues, however, devised a way to sidestep that problem.

The group showed that a gold-palladium alloy catalyst supported on a carbon film pretreated with acid avoided the unwanted decomposition. The team explained that their preparation method formed catalyst particles that were very small (less than 10 nanometres in diameter) and well dispersed. As a result, the particles guided hydrogen peroxide synthesis selectively and shut down the decomposition pathway. (MITCH JACOBY)

PHYSICS

Condensed Matter Physics. Recognizing that a new generation of logic circuits would be needed for the next generation of computer systems, physicists focused much work in 2009 on “quantum dots,” tiny collections of atoms that function together as a single atom. For example, the spin of a single electron trapped inside a quantum dot can act as a binary digit to store information. The information is unfortunately degraded by interactions with the nuclear spins of the atoms that make up the surrounding lattice. Xiaodong Xu and co-workers at the University of Michigan at Ann Arbor reported a means of suppressing nuclear spin fluctuations that enables the information to be preserved much longer.

A team led by Robert Wolkow at the National Institute for Nanotechnology,

Edmonton, Alta., created single atom quantum dots using single silicon atoms—the smallest quantum dots ever created. These assemblies can work at room temperature and use very little energy.

If electronic systems are going to be built that are nanometres (10^{-9} m) in size, the pieces of those systems will be the size of molecules. Switching was reported with atoms being used as the contacts. Junctions that use a single molecule are more flexible in that the states in which the molecular switch conducts electricity can be “tuned.” Previously, switching in single-molecule junctions was produced by changing the shape or the charge of the molecule. Su Ying Quek and co-workers at Lawrence Berkeley National Laboratory, Berkeley, Calif., demonstrated switching in a single-molecule junction by merely stretching and compressing the molecule.

The way in which electrons are transported in semiconductors is determined by the gap between the valence and the conduction energy bands. If this bandgap could be tuned, particularly with an external electric field, the design of devices with semiconductors would be much easier. Using infrared microspectroscopy, Yuanbo Zhang and colleagues at the University of California, Berkeley, demonstrated a continuously tunable bandgap in bilayer graphene, a material consisting of two one-atom-thick layers of carbon atoms.

Photonics. Microchips that use light instead of electrons could outperform their electronic counterparts. To develop an optical microchip, the light flow must be controlled. Photonic crystals are periodically arranged structures designed to confine light on sub-wavelength scales; they could also provide a way to guide light through an optical microchip without losing any of the light's energy. The introduction of the optical microchip came closer when Kenji Ishizaki and Susumu Noda at Kyoto (Japan) University controlled light at the surface of a gallium-arsenide-based photonic crystal.

At even smaller dimensions, J. Hwang and co-workers at the Institute of Technology, Zürich, used a single dye molecule as an optical transistor. An optical transistor of this size could also be used to manipulate individual photons.

In traditional photoconductors, impinging light causes conductivity to increase. Hideyuki Nakanishi and co-workers of Northwestern University, Evanston, Ill., described a class of

nanostructured materials in which conductivity decreases, providing new insights into electron transport in such photoconductors.

The interaction between light and matter would be at the heart of any light-based device. G. Günter and co-workers at the University of Konstanz, Ger., showed that this interaction can happen in an extremely short time; the light waves did not even have time to go through one oscillation. This demonstrated that several unusual light-matter phenomena could now be tested experimentally.

Terahertz Radiation. Devices that control light with frequencies between 0.5 and 5 THz (terahertz; 1 THz = 10^{12} Hz) could be useful in many areas, such as medical imaging, astronomy, and security. Y. Chassagneux and colleagues at the Université de Paris-Sud and Centre National de la Recherche Scientifique, Orsay, France, significantly advanced the field of THz devices by building electrically pumped lasers that operate between 2.55 and 2.88 THz. The laser beam does not spread out much, unlike previous THz lasers.

Nevertheless, devices that can effectively manipulate THz radiation require substantial development. A promising step was made when Hou-Tong Chen and colleagues at Los Alamos (N.M.) National Laboratory demonstrated a two-dimensional device that controlled the phase of THz radiation over a narrow frequency band. Alternatively, the device could also modulate THz radiation over a broad frequency band.

Molecular Imaging. For the first time, the detailed chemical structure of a single molecule, pentacene, was imaged. This was accomplished by Leo Gross and colleagues at IBM Research, Zürich, using an atomic force micro-

scope, which acts like a tiny tuning fork, with one of the fork's prongs passing incredibly close to the sample. When the fork is set vibrating, the prong nearest the sample experiences a minuscule shift in frequency that depends on the molecule's structure. Understanding structure on the molecular scale could help in the design of drugs and electronics.

Molecules in gases and liquids are always moving, thanks to their thermal energy. By using a short laser pulse, a molecule can be “frozen” for a few picoseconds (10^{-12} second). Albert Stolow of the Steacie Institute for Molecular Sciences, Ottawa, and his colleagues did this to a carbon disulphide molecule, observing its dynamics in a photochemical reaction.

A. Ravasio and co-workers at the Centre d'Études de Saclay, France, reported a different method for obtaining images of objects nanometres in size. A 20-femtosecond (10^{-15} -second) pulse of X-rays generated a diffraction pattern when shone on such an object. The diffraction pattern was decoded to produce an image of the object.

Entanglement. The concept of entanglement, where two spatially separated systems may have instantaneous correlations, could someday form the basis of quantum information networks. These networks would require buffers to control how data moves through such a network. Such buffers not only would need to store single “quantum bits” (qubits) but would also need to store “quantum images”—that is, pairs of images that are entangled. To be able to control the flow of the quantum image through such a system would mean that one of the images would be slowed down with respect to the other. A.M. Marino and co-workers at the

The structure of a pentacene molecule is clearly resolved by an atomic force microscope.

Image reproduced by permission of IBM Research—Zürich

University of Maryland at Gaithersburg produced such a delay for a quantum image by postponing one image of the pair by 32 nanoseconds while still keeping it entangled with the other.

In an important step toward the development of computers that rely on the properties of entangled quantum states, L. DiCarlo and colleagues at Yale University demonstrated the first two-qubit quantum-information processor by devising a system that incorporated two qubits on either side of an extended resonant microwave cavity. The interaction between the two qubits allowed highly entangled states between them to be created. Despite this success, much work remained on increasing the power and performance of quantum processors.

J.D. Jost's group at the National Institute of Standards and Technology, Boulder, Colo., took a different approach to entangled states. They took two magnesium-beryllium ion pairs held in different locations and entangled their mechanical vibrational states. They also were able to entangle the internal states of the beryllium ion with the oscillations of the other ion pair. This work pointed the way for possible future experiments in which the effects of quantum mechanics might be observable in systems larger than the microscopic.

Pascal Böhi and co-workers of the Max Planck Institute of Quantum Optics, Munich, took rubidium atoms and cooled them to near absolute zero to form a Bose-Einstein condensation, a state of matter in which they coalesced into a single quantum mechanical entity. They were able to entangle the internal atomic states of the atoms, as well as the states relating to their motion. This work could lead to future quantum computer systems in which many atoms are entangled.

Fundamental Physics. The Casimir-Lifshitz (C-L) force exists between two uncharged perfectly conducting plates because of quantum fluctuations, random tiny amounts of energy, that exist even in a vacuum electromagnetic field. For all systems studied experimentally prior to 2009, the C-L force was attractive. J.N. Munday and co-workers of Harvard University reported the first experimental measurement of a repulsive C-L force on a tiny gold sphere.

Physicists placed fresh limits on the mass of the Higgs boson—the hypothetical carrier particle of the Higgs field that was thought to confer mass on other matter. Researchers at the

Tevatron particle accelerator at the Fermi National Accelerator Laboratory, Batavia, Ill., announced that energies (or equivalent masses) of between 160 and 170 GeV (gigaelectronvolts) could be excluded and that if the particle existed, it had to have an energy between 114 and 160 GeV. (DAVID G.C. JONES)

ASTRONOMY

To mark the 400th anniversary of Galileo's first use of the telescope for astronomical observations, 2009 was designated the International Year of Astronomy by the astronomical community's professional societies, including the International Astronomical Union. The Hubble Space Telescope was repaired in May and then took some of the sharpest images to date of a wide variety of astronomical objects. The year also witnessed both the launch of and the first observations with a variety of other space-based astronomical instruments, such as NASA's Kepler satellite to search for habitable planets orbiting other stars and the European Space Agency's Herschel space telescope and Planck satellite, designed to study far-infrared and submillimetre radiation from astronomical objects and microwave background radiation left over from the big bang, respectively.

Solar System. New searches for water on the Moon were conducted in 2009, in part because of proposals to have future astronauts spend long periods of time there. This interest also spurred astronomers to look through older space-mission data for evidence of lunar water. In September it was announced that three different space probes had detected small amounts of water on widespread areas of the surface. One such probe was India's Chandrayaan-1 spacecraft, which carried NASA's Moon Mineralogy Mapper and operated in 2008–09. Scientists analyzing new data from NASA's Deep Impact/EPOXI probe and 10-year-old data from NASA's Cassini spacecraft also reported evidence of small amounts of water on the Moon's surface. Each of the three probes looked for the chemical signature of either water or the hydroxyl (OH) radical, which comes from splitting water into hydrogen and OH. The most likely place on the Moon to find extensive quantities of water was thought to be in craters on the far side. Water might exist there in the form of ice, since it would be protected from direct exposure to the intense solar radi-

ation. In October NASA's Lunar Crater Observation and Sensing Satellite (LCROSS) sent the upper stage of its launch rocket to crash into a crater called Cabeus, which lies near the Moon's south pole. Nine different instruments aboard LCROSS recorded a great deal of data about the impact itself—which produced a small crater some 28 m (92 ft) across—and about the gas and dust kicked up by the collision. Near the year's end, scientists reported that they had found strong evidence for the presence of significant amounts of water in the material

excavated from the permanently shadowed lunar impact crater.

Another interesting impact within the solar system occurred at the giant gas planet Jupiter. A temporary new atmospheric feature, a debris plume that was the result of an astronomical object's having collided with the planet, was found in Jupiter's south polar region. Australian amateur astronomer Anthony Wesley reported first seeing it on July 19. Then four days later the revamped Hubble Space Telescope snapped the highest-resolution image yet taken of such an evolving Jovian debris plume. The event could have been caused by either an asteroid or a comet of perhaps several hundred metres across. By way of comparison, 15 years earlier Jupiter had sustained a more massive series of hits by debris from the breakup of Comet Shoemaker-Levy 9, which produced many temporary features in the dense Jovian atmosphere. Together, these two sightings suggested that such solar system impacts are more common than had been previously thought.

Stars. One of the most exciting discoveries in 20th-century astronomy was the detection in 1995 of a planet circling another star—an exoplanet (extrasolar planet). By the end of 2009, the number of known exoplanets had exceeded 400. Since these planets are so dim compared with the stars they orbit, they were very difficult to detect directly. Astronomers had found nearly all the known exoplanets by using a variety of indirect means, the most effective of which was to look for tiny changes in the motion of a star along its line of sight, indicating the presence of one or more orbiting planets. This method was used by a group of European astronomers led by Michel Mayor of the Geneva Observatory to detect 32 new exoplanets. The discoveries, which were announced in October, had been made with an instrument called the High Accuracy Radial Velocity Planet Searcher (HARPS), a spectrograph attached to the 3.6-m (142-in) telescope of the European Southern Observatory at La Silla, Chile. It was capable of detecting stellar motions as small as 3.5 km/hr (2.2 mph), about the speed of a person walking. Including the 32 new discoveries, some 75 exoplanets in 30 different planetary systems had been identified

Image of the Moon from NASA's Moon Mineralogy Mapper on the Indian Space Research Organisation's Chandrayaan-1 mission. It shows near-infrared radiation reflected from the Sun. The blue shows the presence of water and hydroxyl molecules.

with HARPS. Earlier in the year Mayor's group had reported the detection of an exoplanet that orbits the star Gliese 581 and has a mass as small as 1.9 Earth masses. This indicated that astronomers were not far from being able to detect planets of about the same mass as Earth. Probably the most intriguing exoplanet discovery in 2009 was of the object designated CoRoT-7b. It was the most likely of the known exoplanets to be a solid, rocky body like Earth. It has a mass of about five Earth masses and a radius of about 1.7 Earth radii. Didier Queloz and colleagues from the Geneva Observatory reported that the planet probably has a silicate mantle and an iron core similar to Earth's. The home star of CoRoT-7b is much like the Sun in mass and temperature and lies about 500 light-years from Earth. The exoplanet's orbit is tilted about 77° with respect to the spin axis of its host star, however, which is much different from Earth's orbit around the Sun. Unfortunately for the search for life on exoplanets, this planet was found to orbit its star at a distance far less than that between Mercury and the Sun. This meant that liquid water could not exist on the surface of CoRoT-7b, so the possibility of its harbouring life as known on Earth was highly unlikely.

Throughout 2009, astronomers reported the detection of a wide range of

astronomical objects with the Fermi Gamma-ray Space Telescope. Perhaps most exciting was the discovery of 16 previously unknown pulsars solely on the basis of their gamma-ray emissions. Thirteen of them coincided with previously detected gamma-ray sources that had not been known to be pulsars. Of the 1,800 pulsars discovered to date, the vast majority had been identified first by radio telescopes, even though their gamma-ray luminosity often exceeds their radio power by orders of magnitude. Detection of these gamma-ray-emitting objects was also helping to solve a half-century-old mystery: the origin of very-high-energy cosmic-ray protons, those with energies of up to a trillion electron volts (TeV). It began to seem likely that most of the TeV cosmic rays detected from Earth are accelerated in rapidly rotating, highly magnetized neutron stars, acting either as ordinary pulsars or as accreting pulsars in binary star systems (X-ray pulsars that accrete matter from their companion stars).

Galaxies and Cosmology. For 40 years, gamma-ray bursts (GRBs)—flashes of gamma rays that last from fractions of a second to minutes—had been detected coming from directions all over the celestial sphere. They were thought to accompany the deaths of massive stars in giant supernova explosions. Because the gamma rays emitted in GRBs are beamed into small solid angles, they can be detected at great distances. On April 23 NASA's Swift satellite identified such a burst of gamma rays, now called GRB 090423 for the date of the event. It lasted for about 10 seconds and originated in the direction of the constellation Leo. Ground-based telescopes in Hawaii and Chile determined that this GRB had come from a supernova in a galaxy with a redshift of 8.2, which indicated that it was very distant. In fact, it was the farthest astronomical object seen to date. The source was so far away that given the time it took light to travel from the host galaxy to Earth, the event had to have occurred a mere 630 million years after the big bang (which, according to the latest cosmological estimates, happened some 13.7 billion years ago). Detection of this GRB provided direct evidence that stars had already formed not very long after the big bang. Com-

plementing this gamma-ray discovery, infrared observations of 21 very distant galaxies were made with the Hubble Space Telescope's new Wide Field Camera 3. They implied that galaxies probably did not form at very much earlier times than suggested by GRB 090423. The colours of the 21 galaxies indicated that they lie between 12.9 billion and 13.01 billion light-years from Earth. Taken together, all these observations suggested that galaxy formation was just beginning—but was happening quite rapidly—very early in the history of the universe. (KENNETH BRECHER)

SPACE EXPLORATION

Manned Spaceflight. The major issue in manned spaceflight in 2009 was the outcome of hearings on the future of the American space program. The Review of U.S. Human Spaceflight Plans Committee—better known as the Augustine Commission, after its chairman, Norman Augustine—was appointed by Pres. Barack Obama in May 2009. It was chartered to review the future of the U.S. in space, including former president George W. Bush's plans to return to the Moon and continue to Mars. The commission concluded that NASA's human spaceflight program was "at a tipping point, primarily due to a mismatch of goals and resources. Either additional funds need to be made available or a far more modest program involving little or no exploration needs to be adopted." While it recommended several options, including a "Flexible Path" using space-shuttle-derived launchers for missions to asteroids, the commission concluded that none would be possible without a significant increase in funding plus increased managerial flexibility within NASA.

Manned missions in 2009 brought the International Space Station (ISS) closer to completion. The ISS could house a crew of six following the addition at the end of 2008 of a bathroom and a urine-distillation processor for recycling water. STS-126 returned with the first samples of recycled water from the urine processor, as well as frozen specimens taken from the crew over several months to help measure the long-term effects of low gravity. In March 2009, STS-119 placed the S6 truss segment, the last of the four large U.S.-built solar arrays, on the starboard side of the ISS. The completed power plant delivered up to 120 kW of electricity and allowed the operation of a large range of experiment facilities.

STS-127 completed the assembly of Japan's Kibo experiment module by installing the exposed platform component. In addition, the shuttle also carried a test model of the DragonEye docking target system that would be used by the commercial SpaceX Dragon spacecraft. The STS-128 mission took up the Leonardo Multi-Purpose Logistics Module, containing 6,894 kg (15,200 lb) of supplies and scientific equipment. The astronauts replaced an ammonia cooling tank and retrieved specimens that had been exposed to space from the exterior of the European Columbus laboratory. The last shuttle mission of the year,

STS-129, took up an assortment of parts, including gyroscopes and nitrogen tanks, in two EXPRESS Logistics Carriers.

A new supply route to the ISS opened when Japan successfully launched the first H-II Transfer Vehicle with the H-II rocket on September 11. It docked with the ISS on September 18, taking up 4,500 kg (9,920 lb) of food, computer equipment, and other supplies. On November 12 Russia's Poisk ("Explore") Mini-Research Module-2 was automatically docked to the ISS. It added an airlock and docking port.

The STS-125 mission performed the fifth and last human servicing call on

the Hubble Space Telescope. In five spacewalks the crews replaced two science instruments, gyroscopes, star sensors, a computer, batteries, and thermal blankets and repaired two science instruments. The mission had been delayed by several months from 2008 when Hubble's primary computer failed. It operated well on the backup, but NASA chose to replace it. This required extra time to pull the spare from storage and requalify it for flight. The astronauts also opened the Advanced Camera for Surveys instrument and replaced parts at the computer board level, something that was never envisioned when Hubble was designed. After STS-129, only five shuttle missions remained before the system was to be retired in 2010.

Space Probes. The only interplanetary launch of the year was NASA's Lunar Reconnaissance Orbiter (LRO) and Lunar Crater Observation and Sensing Satellite (LCROSS) on June 18. LRO was designed to map potential resources on the lunar surface. Most LRO instruments surveyed the lunar surface, searching for, among other things, evidence of water in permanently shadowed craters. A laser altimeter also mapped the lunar surface. It was overshadowed by the LCROSS mission, which used the launch vehicle's Centaur upper stage to strike the Moon. The LCROSS spacecraft, which was devised from the Centaur/spacecraft adapter and used commercial parts, carried cameras and spectrometers to detect materials in the impact plume from the Centaur upper stage. The LCROSS "shepherd" spacecraft separated from the stage on October 8. The two plowed into a crater near the lunar south pole on October 9, with the Centaur preceding LCROSS by about four minutes. The plume revealed "significant" quantities of water, which would be valuable as a resource for life support and propulsion at a lunar base.

India's Chandrayaan-1 lunar satellite, which was launched on Oct. 22, 2008, failed on August 28 as a result of key guidance components' overheating. While this loss cut short the planned two-year mission, officials at the Indian Space Research Organisation judged the mission, India's first interplanetary endeavour, as a success because it discovered water molecules in the lunar surface.

Unmanned Satellites. The major astronomy missions of the year were Russia's Koronas-Foton on January 30, NASA's Kepler on March 6, and Europe's Her-

schel/Planck spacecraft on May 14. Koronas-Foton was part of the International Living with a Star (ILWS) program. It carried instruments to observe the most violent solar activity in the extreme ultraviolet through gamma-ray range of the spectrum. Space physics instruments monitored the response of Earth's magnetosphere to solar storms.

Kepler carried a 95-cm (37.4-in) telescope designed to stare at the same 105-square-degree patch of sky for at least four years. The telescope was slightly out of focus to help it meet its goal of recording when Earth-size planets transit—cross in front of—their host stars. As such it produced not images or maps but light curves of some 100,000 stars. The sensitivity was great enough that early in the mission NASA announced that it could observe a Jupiter-size exoplanet by its reflected light, as well as by transit.

Herschel and Planck were launched on the same Ariane 5 rocket to orbit separately the L2 gravitational balance point between Earth and the Sun. L2 is about 1.5 million km (900,000 mi) from Earth on the opposite side of the Sun. It provides an easy place to "park" telescopes to observe deep space with virtually no radiation input from Earth. Herschel became the largest space telescope, with a 3.5-m (11.5-ft) primary mirror, compared with the Hubble Space Telescope's 2.5 m (8.2 ft), but it operated in the far-infrared spectrum to image stars, galaxies, and star-forming regions. Its three instruments were sensitive to light from 55 to 625 μ m (microns) wavelength. By comparison, the deepest red that the human eye can perceive is 0.77 μ m. Planck carries two millimetre-wave instruments to map unevenness in the intensity and polarization of the cosmic microwave background radiation left over from the big bang.

Launch Vehicles. North Korea failed in a second alleged attempt to orbit a satellite with the Taepodong-2 launch on April 5. While North Korea claimed that it was a satellite launch, Western observers believed it was a three-stage ballistic missile that lofted its payload some 3,800 km (2,360 mi) downrange. On August 25 South Korea also failed to launch a satellite in its first outing with the Naro 1 launch vehicle, which had a Russian-built first stage and a Korean second stage.

The demonstration version of NASA's new Ares 1-X vehicle—possibly the only one in light of the Augustine report—was launched on October 28. The sub-orbital flight tested only the booster,

NASA

The Constellation Program's Ares I-X test rocket lifts off Launch Complex 39B at NASA's Kennedy Space Center in Florida, on October 28.

which had succeeded in all static ground firing tests, and a structural model of the second stage and the Constellation spacecraft. The flight was a success, although NASA was studying to determine why the second stage and booster slowly jackknifed toward each other after separation. The recovered booster suffered a major dent in its lower section when two of its three parachutes failed after opening.

SpaceX, a private launch company, scored its second success out of five attempts with the Falcon 1 vehicle, which flew from Kwajalein Atoll in the Marshall Islands and carried Malaysia's RazakSAT communications satellite. SpaceX had developed and soon will test a larger Falcon 9 vehicle to carry supplies and crews to the ISS in the Dragon capsule.

Advanced testing of the Variable Specific Impulse Magnetoplasma Rocket (VASIMR), developed by former astronaut Franklin Chang-Díaz, showed great promise for providing a stage capable of taking humans to Mars in less than six weeks. VASIMR uses radio waves to heat ionized argon gas, thus accelerating it to high speeds. While the thrust was low, it could be continuous, as opposed to chemical rockets that provide high thrust for a few minutes at most. (DAVE DOOLING)

Religion

INTERFAITH CONTROVERSIES over statements **DENYING** that the Nazis killed six million Jews in the 1940s, disputes in Anglican and Lutheran denominations over the **ORDINATION OF NONCELIBATE GAY MEN AND LESBIANS** to the ministry, and relations between **ISLAMIC MOVEMENTS** and the **GOVERNMENTS** of several countries occupied the world of religion in 2009.

Holocaust Denial. In an attempt to heal a 20-year-old schism in Roman Catholicism, Pope Benedict XVI rescinded in January the excommunications of four members of the traditionalist Society of St. Pius X who had been ordained in 1988 without Vatican permission. One of the four, Richard Williamson, had made statements denying the Nazis' use of gas chambers to exterminate Jews and asserting that only up to 300,000 Jews had died in Nazi concentration camps instead of the generally accepted figure of six million. The pope's rehabilitation of the bishop was denounced by Jewish leaders around the world and led Israel's chief rabbinate to sever ties with the Vatican. Benedict subsequently reiterated his condemnation of anti-Semitism, saying that he had not known about the bishop's views when he lifted the excommunication and that the Vatican needed to make greater use of the Internet to prevent such controversies. In late March a new outcry arose when Brazilian Archbishop Dadeus Grings was quoted in his country's *Press & Advertising* magazine as saying, "More Catholics than Jews died in the Holocaust, but this isn't known because the Jews control the world's media."

In August, Younis al-Astal, a spiritual leader of Hamas, denounced the UN Relief and Works Agency's reported plans to introduce lessons about the Holocaust in its schools for Palestinian children in the Gaza Strip. He declared that adding the subject to the curriculum would amount to "marketing a lie and spreading it." Dutch prosecutors announced in September that they planned to charge the Dutch arm of the Arab European League with having violated hate-speech laws; the group had

published a cartoon on its Web site that suggested that the Holocaust was a fabrication or an exaggeration.

Homosexuality. Delegates representing an estimated 69,000 Anglicans from about 650 parishes adopted a constitution and canons for the new Anglican Church in North America (ACNA) at a meeting in Bedford, Texas, in June. The church was organized as an alternative for Anglicans who disagreed with the theology of the U.S. Episcopal Church and the Anglican Church of Canada on several issues, including the sanctioning of same-sex unions. Former Pittsburgh Episcopal bishop Robert Duncan was installed for a five-year term as the

ACNA's first archbishop. A month later the triennial Episcopal General Convention met in Anaheim, Calif., and adopted a resolution affirming that gay men and lesbians were eligible for "any ordained ministry" in the 2.1-million-member church. Traditionalists who opposed such liberal trends in the Anglican Communion were given a new option in October when the Vatican announced the pope's approval for the establishment of structures known as personal ordinariates, which would enable Anglicans to form their own communities within the Roman Catholic Church. William Cardinal Levada, the Vatican's chief doctrinal official, said that Anglicans would be able to maintain their liturgical traditions and be allowed to have married clergy, although unmarried priests in the new structure would need to remain celibate. In December the Episcopal diocese of Los Angeles elected an openly gay woman, the Rev. Mary D. Glasspool of Maryland, as an assistant bishop. Archbishop Rowan Williams of Canterbury, spiritual leader of the 77-million-member Anglican Communion, said that the election raised "very serious questions" for the Anglican family.

Delegates to the Evangelical Lutheran Church in America's biennial Churchwide Assembly, held in Minneapolis, Minn., in August, pause for a moment of prayer before voting to adopt a resolution that opened the ministry to gay men and lesbians living in "committed relationships."

Scott Rennie, the Church of Scotland's first openly gay minister, rehearses a sermon in Brechin (Scot.) Cathedral in May.

A division similar to the one in the Anglican Communion appeared to have begun in the 4.6-million-member Evangelical Lutheran Church in America (ELCA). Delegates to its biennial Churchwide Assembly, which met in August in Minneapolis, Minn., adopted a resolution that opened the ministry to gay men and lesbians living in "committed relationships." The move was criticized by leaders of the 2.4-million-member Lutheran Church–Missouri Synod and the 390,000-member Wisconsin Evangelical Lutheran Synod. A group called the Lutheran CORE (Coalition for Renewal), which had more than 80 member churches, announced in November that it was making plans for a new Lutheran synod for congregations that opposed the Churchwide Assembly's action.

A majority of regional bodies of the Presbyterian Church (U.S.A.)—88 of the 173 presbyteries—voted against changing the church's rule barring non-celibate gays and lesbians from the ordained ministry. In May the General Assembly of the (Presbyterian) Church of Scotland voted in Edinburgh to defer action on this issue for two years and to bar church courts, committees, and ministers from commenting about it publicly. The assembly took these positions two days after it had voted to uphold the appointment of Scott Rennie, an openly gay man, as minister of a church in Aberdeen, despite an online petition against this action that was said to have been signed by more than 400 ministers and almost 5,000 laypeople. In July more than 1,600 members of the Religious Society of Friends in Britain, popularly known as the Quakers, voted at their annual gathering in York, Eng., to approve marriages for same-sex couples and to ask the government to change the law to recognize such marriages.

Islamic Issues. The Pew Forum on Religion and Public Life reported in October that the world's Muslim population was 1.57 billion, of whom Sunnis represented 87–90%, Shi'ites 10–13%. The report found that Indonesia's Muslim population—203 million, or some 13% of the world's total—was the largest of any country. Among the contrasts turned up by the report were that Germany had more Muslims than Lebanon and that Russia was home to more Muslims than Jordan and Libya combined.

U.S. Pres. Barack Obama attempted to improve his country's relations with the Islamic world in two major speeches. In

April in an address to the Turkish parliament in Istanbul, he said, "The United States is not, and will never be, at war with Islam." In June at Cairo University, he quoted from Islamic, Christian, and Jewish holy books and stated, "America and Islam are not exclusive and need not be in competition." Shortly before Obama's speech in Cairo, a group of Sunni Muslim clerics associated with Egypt's al-Azhar University had announced the creation of a satellite TV channel named Azhari to "promote the idea that Islam is a religion of moderation free from extremism," in the words of Sheikh Khaled el-Guindy, one of the leaders of the project.

Russian Pres. Dmitry Medvedev met in July with 12 Muslim leaders in the Congregational Mosque in Moscow to ask them to speak out against Islamic extremism. A month later, at a meeting in Sochi, Russia, leaders from the North Caucasus told him that an Islamist insurgency had permeated all aspects of society in the region. In response, Medvedev said, "Without consolidating the authority of the Islamic leaders we will be unable to deal with the problems that exist."

In July a pregnant Muslim woman, Marwa al-Sherbini, was fatally stabbed in a courtroom in Dresden, Ger., by

Russian-born Alexander Wiens, who was in court to appeal a fine for having called her a "terrorist" and "Islamist." The perceived lack of media attention given to the killing in the West touched off anti-German protests in Egypt and Iran. Wiens was found guilty of the murder in the same courtroom in November.

French Pres. Nicolas Sarkozy endorsed an initiative by about 60 legislators to have a parliamentary commission study whether to ban the wearing of burkas in public in France. In June in an address to Parliament, he declared, "The burka is not a religious sign. It is a sign of the subjugation, of the submission, of women." In October the Muslim Canadian Congress called for such a ban. Farzana Hassan, a spokesperson for the group, asserted that the garment had "absolutely no place in Canada" because it marginalized women.

Christian Issues. The University of Notre Dame, one of the largest Roman Catholic universities in the United States, invited Obama to deliver its commencement address and receive an honorary degree in May. His visit was controversial because of his support for abortion rights and government funding for embryonic stem-cell research. In his address the U.S. president called for more discussions of such issues and said that "the ultimate irony of faith is that it necessarily admits doubt." Despite the controversy, a Gallup Poll released in March found that 4 in 10 American Catholics believed that abortion was "morally acceptable" and 63% backed embryonic stem-cell research. Two Vatican investigations of American nuns led to protests and expressions of concern by several women's religious orders, which feared that the church might try to rein in nuns with more liberal beliefs or ways of life.

In May, Ireland's Commission to Inquire into Child Abuse released a 2,575-page report documenting what it called a "climate of fear" from the 1930s to the 1990s in schools run by the Irish Roman Catholic Church. The report found that thousands of students had been systematically beaten and sexually abused by priests, nuns, and other staff members. In a subsequent report issued in November, the commission stated that four archbishops of Dublin had failed to disclose confidential files on more than 100 parish priests who had sexually abused children since 1940. The sitting archbishop of Dublin, Diarmuid Martin, said his predecessors

"were wrong, and children were left to suffer."

Metropolitan Kirill (*see* BIOGRAPHIES), who had headed the external relations department of the Russian Orthodox Church for nearly 20 years, was elected in January in Moscow to succeed the late patriarch Aleksey II as head of the church. In July, Kirill rejected an appeal from Ukrainian Pres. Viktor Yushchenko to recognize the Ukrainian Orthodox Church–Kiev Patriarchate, which had broken away from the Moscow patriarchate in the 1990s.

In a letter to Obama in June praising his speech in Cairo, a group of American Christian leaders warned that the Christian population in the Holy Land was "dwindling rapidly" and might cease to exist as a viable community unless there was an Israeli-Palestinian peace agreement. The Evangelical Lutheran Church in America voted at its biennial assembly to share full communion with the United Methodist Church, which had previously approved the agreement. The accord, which had taken 30 years to reach fruition, meant that the two churches recognized the validity of each other's ministers, baptisms, and eucharistic services.

Religious Violence. In May the murder in Vienna of Guru Sant Rama Nand, who was the leader of a Sikh offshoot movement called Dera Sach Khand, led to rioting in several northern Indian cities. Indian Prime Minister Manmo-

han Singh, himself a Sikh, said that he was "deeply distressed" by both the killing and the subsequent violence and stressed that "Sikhism preaches tolerance and harmony."

In Nigeria, Mohammed Yusuf, leader of an Islamic group called Boko Haram, died in July while he was in police custody. The group had staged uprisings in northern Nigeria in an attempt to impose strict Islamic law throughout the country. Some 800 people were killed in the group's attacks on police stations and other public buildings and in the response by security forces. In the aftermath of this violence, the governors of 19 northern states set up a

committee to regulate the activities of Muslim and Christian clergy.

Archbishop Williams spoke out in August against the persecution of Christians in Pakistan after eight Christians were burned alive as homes were set on fire in clashes with Muslims. The violence had been touched off by reports that a Christian had desecrated the

Qur'an. The Anglican leader stated that Pakistan's Christians were "disproportionately affected by the draconian laws against blasphemy," which he said had been abused to settle personal grievances. Several weeks later the Central Committee of the World Council of Churches charged that the Pakistani laws had become "a major source of victimization and persecution" of religious minorities.

Interfaith Relations. During a five-day pilgrimage to the Holy Land in May, Pope Benedict was criticized by several Israeli newspapers for not referring to his native Germany during a speech at the Yad Vashem Holocaust memorial. Later, at a stop at Bethlehem in the West Bank, he expressed "solidarity" with Palestinians, who, he said, "long to be able to return to their birthplace or live permanently in a homeland of their own." In late August the Rev. Samuel Kobia, outgoing general secretary of the World Council of Churches, told its Central Committee meeting in Geneva that Israel's occupation of Palestinian territories was "a sin against God." Later, the committee called on Israel and Palestine to "distinguish between the legitimate interests of the state of Israel and its illegal settlements."

The Tony Blair Faith Foundation joined with the U.K.'s Department for International Development and the charities Islamic Relief, Oxfam, and World Vision to sponsor a series of seminars exploring the role of religion in development work. Blair, a former prime minister of Britain, told the first gathering in September that "people who hold deep convictions about life and its purpose necessarily can be prone to holding those views to excess or the point of prejudice."

Church-State Relations. In April the Vatican denounced the arrests in China of several Roman Catholic leaders, including Bishop Giulio Jia Zhiguo of Zhengding, and said that such actions created obstacles to dialogue. In May Afghan government leaders dumped more than 1,000 books from Iran into a river because their contents were allegedly offensive to the country's Sunni Muslim majority. In September Vietnamese authorities removed followers of Thich Nhat Hanh, a Vietnamese monk who had helped popularize Buddhism in the West, from the Bat Nha monastery in Lam Dong province. The ousted monks and nuns charged that they were removed because Nhat Hanh had called for an end to government

control of religion. Government officials, however, characterized the conflict as a dispute between two Buddhist factions, contending that the action was taken because the abbot of the monastery wanted the Nhat Hanh group to leave.

The French branch of the Church of Scientology was convicted of fraud and fined the equivalent of nearly \$900,000 by a Paris court in October. Six members of the group, which claimed to have 45,000 adherents in France, were also convicted of fraud, but the judges said that no jail sentences were imposed because the church had taken steps to change some practices. Earlier that month the European Court of Human Rights had ruled that Russia's ban on the Church of Scientology was illegal. The court touched off a larger controversy in November when it ruled that crucifixes should be removed from classrooms in Italy because their display could be disturbing for non-Christian pupils and was a breach of the European Convention on Human Rights. In a November referendum Swiss voters approved a constitutional ban on the construction of new minarets. The Swiss People's Party, which sponsored the vote, had warned that Muslim political power could transform the country into an Islamic nation, although Muslims composed only about 4% of the country's population. In December the Pew Forum on Religion and Public Life reported that nearly 70% of the world's people lived in countries with severe restrictions on religion. It ranked Saudi Arabia as the most restrictive

country and the Middle East and North Africa as the most restrictive regions.

Social Trends. A report issued in October by the National Opinion Research Center at the University of Chicago said, "Religious change around the world is a complex phenomenon. No simple description such as secularization, religious revival, or believing without belonging captures the complexity of the process." The report, which analyzed several surveys of religious trends over 40 years in the United States and Europe, determined that religious change in the United States had gone in a secular direction but that the pattern was "complex and nuanced." In March the American Religious Identification Survey of Trinity College, Hartford, Conn., found that between 1990 and 2008 the percentage of Americans who identified themselves as Christian had dropped from 86% to 76%, while the percentage of atheists, agnostics, and other secularists had almost doubled, from 8.2% to 15%. A survey issued in April by the Pew Forum on Religion and Public Life found that about half of American adults had switched their religious affiliation at least once in their lives.

Atheist groups sponsored the placement of ads with the slogan "There's probably no God" on buses in Britain and Spain. The U.K.'s National Secular Society reported in March that more than 100,000 Britons had downloaded "certificates of debaptism" from the Internet to renounce the Christian faith.

People in the News. French physicist and philosopher of science Bernard d'Espagnat (see BIOGRAPHIES) received

the Templeton Prize, which honours individuals who have made "an exceptional contribution to affirming life's spiritual dimension." The Rev. Olav Fykse Tveit, general secretary of the (Lutheran) Church of Norway's ecumenical and international council, was elected general secretary of the World Council of Churches, which had 349 member denominations representing more than 560 million Christians. In May the Rev. Eva Brunne, dean of the Stockholm diocese of the Church of Sweden, was elected Lutheran bishop of Stockholm; she was believed to be the first openly lesbian bishop in the world. Lutheran Bishop Margot Kässmann of Hanover, Ger., was elected in October as chairman of the Evangelical Church in Germany (EKD), an umbrella group of 22 Lutheran, Reformed, and United churches. She became the first woman to head the organization. Archbishop Vincent Nichols of Birmingham, Eng., succeeded the retiring Cormac Cardinal Murphy-O'Connor in May as leader of the Roman Catholic Church in England and Wales.

Prominent religious figures who died in 2009 included evangelist Oral Roberts, who pioneered religious broadcasting in the 1950s and founded the eponymous university in Tulsa, Okla.; the Rev. Frederick J. Eikerenkoetter II, a television minister known as Reverend Ike; Millard Fuller, founder of the Christian charity Habitat for Humanity International; Reform Rabbi Alfred Gottschalk, former president of Hebrew Union College-Jewish Institute of Religion, who had ordained the first women rabbis in the United States and Israel; the Rev. Richard John Neuhaus, a Lutheran convert to Roman Catholicism who had founded the journal *First Things* and cofounded the movement Evangelicals and Catholics Together; Stephen Cardinal Kim Sou-hwan, the first Roman Catholic cardinal of South Korea; the Rev. Gérard Jean-Juste, a Roman Catholic priest and advocate for Haitian rights in the U.S.; the Rev. John Bowen Coburn, a former leader of the U.S. Episcopal Church; Patriarch Pavle, leader of the Serbian Orthodox Church; and Cahal Cardinal Daly, a former leader of the Roman Catholic Church in Ireland. (See OBITUARIES.) Other losses were Elizabeth Clare Prophet, leader of the Church Universal and Triumphant, and Lutheran Bishop Albrecht Schönherr, who had headed the church of Berlin-Brandenburg in the former German Democratic Republic.

(DARRELL J. TURNER)

Comedy writer Ariane Sherine, who helped spearhead an atheist advertising campaign that involved the placement of ads with the slogan "There's probably no God" on buses in Britain and Spain, poses in front of one of the buses in London in January.

ANALYZING THE MEGACENSUS OF RELIGIONS, 1900–2009

Each year since 1750, churches and religions around the world have generated increasing volumes of new statistical data. Much of this information is uncovered in decennial governmental censuses; half the countries of the

world have long asked their populations to state their religions if any, and they still do today. The other major source of data each year consists of the decentralized censuses undertaken by many religious headquarters. Each

year almost all Christian denominations ask and answer statistical questions on major religious subjects. A third annual source is the total of 27,000 new books on the religious situation each in a single country, as well

Worldwide Adherents of All Religions by Six Continental Areas, Mid-2009

Continents. These follow current UN demographic terminology, which now divides the world into the six major areas shown above. See United Nations, *World Population Prospects: The 2006 Revision* (New York: UN, 2007), with populations of all continents, regions, and countries covering the period 1950–2050, with 100 variables for every country each year. Note that “Asia” includes the former Soviet Central Asian states, and “Europe” includes all of Russia eastward to the Pacific.

Change Rate. This column documents the annual change in 2009 (calculated as an average annual change from 2005 to 2010) in worldwide religious and nonreligious adherents. Note that in 2009 the annual growth of world population was 1.17%, or a net increase of 78,362,400 adherents.

Countries. The last column enumerates sovereign and nonsovereign countries in which each religion or religious grouping has a numerically significant and organized following.

Adherents. As defined in the 1948 Universal Declaration of Human Rights, a person's religion is what he or she professes, confesses, or states that it is. Totals are enumerated for each of the world's 239 countries following the methodology of the *World Christian Encyclopedia*, 2nd ed. (2001), and *World Christian Trends* (2001), using recent censuses, polls, surveys, yearbooks, reports, Web sites, literature, and other data. See the *World Christian Database* (www.worldchristiandatabase.org, Brill) and *World Religion Database* (www.worldreligiondatabase.org, Brill) for more detail. Religions (including nonreligious and atheists) are ranked in order of worldwide size in mid-2009.

Atheists. Persons professing atheism, skepticism, disbelief, or irreligion, including the militantly antireligious (opposed to all religion). A flurry of recent books have outlined the Western philosophical and scientific basis for atheism. Ironically, the vast majority of atheists today are found in Asia (primarily Chinese communists).

Buddhists. 56% Mahayana, 38% Theravada (Hinayana), 6% Tantrayana (Lamaism).

Chinese folk-religionists. Followers of a unique complex of beliefs and practices that may include: universism (yin/yang cosmology with dualities earth/heaven, evil/good, darkness/light), ancestor cult, Confucian ethics, divination, festivals, folk religion, goddess worship, household gods, local deities, mediums, metaphysics, monasteries, neo-Confucianism, popular religion, sacrifices, shamans, spirit-writing, and Daoist (Taoist) and Buddhist elements.

Christians. Followers of Jesus Christ, enumerated here under **Affiliated**, those affiliated with churches (church members, with names written on church rolls, usually total number of baptized persons including children baptized, dedicated, or undedicated): total in 2009 being 2,145,970,000, shown above divided among the six standardized ecclesiastical megablocs and with (negative and italicized) figures for those **Doubly affiliated** persons (all who are baptized members of two denominations) and **Unaffiliated**, who are persons professing or confessing in censuses or polls to be Christians though not so affiliated. **Independents.** This term here denotes members of Christian churches and networks that regard themselves as postdenominationalist and neopostolic and thus independent of historical, mainstream, organized, institutionalized, confessional, denominationalist Christianity. **Marginal Christians.** Members of denominations who define themselves as Christians but on the margins of organized mainstream Christianity (e.g., Unitarians, Mormons, Jehovah's Witnesses, Christian Science, and Religious Science).

Confucianists. Non-Chinese followers of Confucius and Confucianism, mostly Koreans in Korea.

Ethnoreligionists. Followers of local, tribal, animistic, or shamanistic religions, with members restricted to one ethnic group.

Hindus. 68% Vaishnavites, 27% Shaivites, 2% neo-Hindus and reform Hindus.

Jews. Adherents of Judaism. For detailed data on “core” Jewish population, see the annual “World Jewish Populations” article in the *American Jewish Committee's American Jewish Year Book*.

Muslims. 84% Sunnites, 14% Shi'ites, 2% other schools.

New religionists. Followers of Asian 20th-century neoreligions, neoreligious movements, radical new crisis religions, and non-Christian syncretistic mass religions.

Nonreligious (agnostics). Persons professing no religion, nonbelievers, agnostics, freethinkers, uninterested, or dereligionized secularists indifferent to all religion but not militantly so.

Other religionists. Including a handful of religions, quasi-religions, pseudoreligions, parareligions, religious or mystic systems, and religious and semireligious brotherhoods of numerous varieties.

Total population. UN medium variant figures for mid-2009, as given in *World Population Prospects: The 2006 Revision*.

as some 9,000 printed annual year-books or official handbooks. Together, these three major sources of data constitute a massive annual megacensus, although decentralized and uncoordinated. The two tables below combine all these data on religious affiliation.

The first table summarizes worldwide adherents by religion. The second goes into more detail for the United States of America. This year there are two new publications both supporting and mapping the data below. First, the *Atlas of Global Christianity* (Edinburgh

University Press) puts Christian data in the context of 1910-2010. Second, the *World Religion Database* (Brill), offers sources and analysis of global religious dynamics.

(DAVID B. BARRETT, TODD M. JOHNSON, PETER F. CROSSING)

Methodology. This table extracts and analyzes a microcosm of the world religion table. It depicts the United States, the country with the largest number of adherents to Christianity, the world's largest religion. Statistics at five points in time from 1900 to 2005 are presented. Each religion's **Annual Change** for 2000–2005 is also analyzed by **Natural** increase (births minus deaths, plus immigrants minus emigrants) per year and **Conversion** increase (new converts minus new defectors) per year, which together constitute the **Total** increase per year. **Rate** increase is then computed as percentage per year.

Structure. Vertically the table lists 30 major religious categories. The major categories (including nonreligious) in the U.S. are listed with largest (Christians) first. Indented names of groups in the "Adherents" column are subcategories of the groups above them and are also counted in these unindented totals, so they should not be added twice into the column total. Figures in italics draw adherents from all categories of Christians above and so cannot be added together with them. Figures for Christians are built upon detailed head counts by churches, often to the last digit. Totals are then rounded to the nearest 1,000. Because of rounding, the corresponding percentage figures may sometimes not total exactly to 100%. Religions are ranked in order of size in 2005.

Christians. All persons who profess publicly to follow Jesus Christ as God and Savior. This category is subdivided into **Affiliated** (church members) and **Unaffiliated** (nominal) Christians (professing Christians not affiliated with any church). See also the note on Christians to the world religion table. The first six lines under "Affiliated Christians" are ranked by size in 2005 of each of the six megablocs (Anglican, Independent, Marginal Christian, Orthodox, Protestant, Roman Catholic). **Evangelicals/evangelicals.** These two designations-italicized and enumerated separately here-cut across all of the six Christian traditions or ecclesiastical blocs listed above and should be considered separately from them. The **Evangelicals** (capitalized "E") are mainly Protestant churches, agencies, and individuals who call themselves by this term (for example, members of the National Association of Evangelicals); they usually emphasize 5 or more of 7, 9, or 21 fundamental doctrines (salvation by faith, personal acceptance, verbal inspiration of Scripture, depravity of man, Virgin Birth, miracles of Christ, atonement, evangelism, Second Advent, et al.). The **evangelicals** (lowercase "e") are Christians of evangelical conviction from all traditions who are committed to the evangel (gospel) and involved in personal witness and mission in the world.

Jews. Core Jewish population relating to Judaism, excluding Jewish persons professing a different religion.

Other categories. Definitions are as given under the world religion table.

Sports and Games

Two traditional **POWERHOUSE** teams dominated their sports again in 2009 as the New York Yankees won their **27TH WORLD SERIES** and the Los Angeles Lakers took their **15TH NBA** title. Swimmers in high-tech swimsuits set an astonishing **147 WORLD RECORDS** during the year. In October the IOC announced that **RIO DE JANEIRO** would become the first South American city to host the **OLYMPIC GAMES**, in 2016.

AUTOMOBILE RACING

Grand Prix Racing. In 2009 the Fédération Internationale de l'Automobile (FIA) Formula One (F1) world drivers' championship was won by Jenson Button of the U.K. His victory was one of the most surprising results in F1 history, considering that the 29-year-old Button was without a team following the 2008 season after Honda Motor Co. announced that it was pulling out of the sport because of the global economic downturn. Fortunately for Button, Brawn GP took over the Honda team a few weeks before the season-opening Australian Grand Prix on March 29. Button started that race from the pole and came away with the win, just his second since joining F1 in 2000. Button, who finished the 2008 season in 18th place, went on to win the pole and the race at the Malaysian Grand Prix one week after his victory in Australia. Following a third-place finish in the next event in China, Button posted wins in the next four races to become the first British driver to register four straight victories in one season since Nigel Mansell accomplished the feat en route to the 1992 drivers' title. (Button also joined Mansell, Damon Hill, Jim Clark, Jackie Stewart, and James Hunt as the only British drivers to have won six races in a season.) Button's amazing start in 2009 gave him an almost insurmountable 26-point lead over Brawn GP teammate Rubens Barrichello of Brazil with 10 races remaining. Button did not

win another race all season, but he did not need to after his dominant start. He wrapped up the title on October 18 with a fifth-place finish in the penultimate event, the Brazilian Grand Prix, and went on to finish third in the season finale in Abu Dhabi, U.A.E., on November 1, to end the season with 95 points. German driver Sebastian Vettel (Red Bull Racing) finished second in the season standings with 84 points, and Barrichello was third with 77. But-

Spectators watch as British Formula One (F1) driver Jenson Button speeds through the streets of Monte Carlo during the Monaco Grand Prix on May 24. Button won the race and the F1 drivers' championship for the season.

Clive Mason/Getty Images

ton and Barrichello helped Brawn GP become the first team to win the constructors' championship in its debut season and the first British team to take the title since McLaren in 1998. Button also gave Britain consecutive F1 titles for the first time since Graham Hill won in 1968 and Stewart in 1969. Lewis Hamilton of McLaren took the trophy in 2008—the first English driver to do so since Damon Hill in 1996—and won two races in 2009, finishing fifth in the year-end standings with 49 points.

Ferrari's Felipe Massa of Brazil, who won a season-high six races in 2008 on his way to finishing one point behind Hamilton, was involved in a near-fatal crash in July while attempting to qualify for the Hungarian Grand Prix. Massa crashed into a safety barrier and suffered multiple skull fractures after a loose car part flew into him and knocked him unconscious. He had surgery around his left eye and later had to have a metal plate inserted. Seven-time world champion Michael Schumacher of Germany, who had retired at the end of the 2006 season, offered to fill in for Massa, but the 40-year-old Schumacher ended his comeback bid because of lingering neck injuries from a motorcycle crash. Massa planned to return to action with Ferrari in 2010.

In October, Frenchman Jean Todt, a former Ferrari team principal, was elected to replace the outgoing Max Mosley of the U.K., who had been FIA president since 1994. Mosley had refused to resign in 2008 after a British tabloid newspaper revealed his involvement in a sado-masochistic sex orgy, and he had won a vote of confidence to remain president through October 2009. Todt, who was backed by Mosley and British F1 boss Bernie Ecclestone, beat out Finnish candidate Ari Vatanen.

The sport was hit by another scandal in 2009 as former Renault team principal Flavio Briatore of Italy was given a lifetime ban by the World Motor Sport Council for having asked Brazilian driver Nelson Piquet, Jr., to deliberately crash at the 2008 Singapore Grand Prix in order to help teammate Fernando Alonso

of Spain win the race. Piquet was cleared of any wrongdoing, but Renault chief engineer Pat Symonds was suspended for five years, and two-time world champion Alonso left the team to join Ferrari in 2010.

The global economic crisis continued to have an effect on F1 in 2009. The FIA announced budget caps and a ban on in-season testing, while the sport lost major sponsors such as ING, the Royal Bank of Scotland, and Credit Suisse. The Canadian Grand Prix, run in Montreal since 1978, was dropped from the calendar, as was the French Grand Prix. Toyota-owned Fuji International Speedway said in July that it would not host the Japanese Grand Prix beginning in 2010, and in November, Toyota followed fellow Japanese automaker Honda in withdrawing from the sport owing to financial considerations. With Honda and Toyota gone, 2010 would mark the first time in eight years that there would be no Japanese F1 team. BMW, which had won only one race since it acquired the Sauber team in 2006, announced that it would not return in 2010. Japanese company Bridgestone Corp., F1 racing's only tire supplier since 2007, reported that it would not supply tires for F1 after its contract expired in 2010. (PAUL DIGIACOMO)

U.S. Auto Racing. American stock car race driver Jimmie Johnson of Hendrick Motorsports won his fourth consecutive Sprint Cup championship in 2009. The 34-year-old Johnson thus achieved a feat never before accomplished in the 61-year existence of the National Association for Stock Car Auto Racing (NASCAR), by most measures the world's most lucrative racing series, with 45 drivers each earning more than \$1 million. Johnson won 7 of the 36 races in the series, beating 50-year-old teammate Mark Martin, who won 5. Jeff Gordon, a four-time former titlist, won once and finished third in the overall ranking. It was team owner Rick Hendrick's ninth title as Chevrolet fought off a determined bid from Toyota for manufacturer honours.

In a year in which all major American auto racing series were constricted because of difficult economic conditions, Johnson, who drove only in the Sprint Cup Series, earned \$7,333,309 before sponsor and other ancillary awards. Toyota's top money-winning driver, 24-year-old Kyle Busch, did not qualify for the Chase for the Sprint Cup (comprising the final 10 races of the Sprint season), but he won 20 times, including the drivers' crown in NASCAR's

subsidiary Nationwide Series, four Sprint Cup races, and seven races in the Camping World Truck Series. Busch earned just over \$8,332,000 total before awards for the team of car owner J.D. Gibbs. Specialist Ron Hornaday won the Camping World truck championship.

Rain plagued the NASCAR schedule. The almost \$19 million Daytona 500 was halted after 152 laps. Matt Kenseth of Ford was awarded the \$1,536,388 first-place money. Bad weather also delayed the longest race on the schedule, the Coca-Cola 600, by one day. David Reutimann of Toyota earned the \$403,748 victory.

Indianapolis Motor Speedway, the second oldest race venue in the U.S. and the jewel of the single-seater Indy Racing League (IRL), staged the 93rd Indy 500, with a total purse of \$14,315,315. The winner, Brazil's Helio Castroneves (*see* BIOGRAPHIES), took home \$3,048,055 of that. Driving for the Roger Penske team, Castroneves won the pole with a speed of 224.864 mph and then bested Dan Wheldon by nearly two seconds at an average speed of 150.318 mph in the IRL's all Dallara-Honda competition. It was the Brazilian's third Indy 500 victory. In third place was Danica Patrick of Andretti Green, her best finish at Indy. Patrick signed with Earnhardt Ganassi Racing to finally attempt American stock cars for a limited schedule.

The speedway's other preeminent race was the Allstate 400, a NASCAR event viewed by approximately 250,000 fans on site and more on TV. Colombian Juan Pablo Montoya led most of the race until NASCAR penalized him for driving too fast in the pit lane. He faded to 11th, and Johnson won the \$448,001 first prize over Martin.

Scotsman Dario Franchitti of the Target Chip Ganassi team, who had tried NASCAR unsuccessfully in 2008, returned to the IRL and won the season drivers' championship. He captured five events to edge on total points Scott Dixon, the defending champion and his teammate, who also won five. Penske's Ryan Briscoe (with three IRL victories) and Castroneves (with two) finished third and fourth for the season, respectively. Though the title standings lead changed 15 times, two formerly successful teams, Andretti and Newman/Haas/Lanigan, had no victories in the 17-race series.

(ROBERT J. FENDELL)

Rallies and Other Races. It was an up-and-down world rally championship

(WRC) season for five-time champion driver Sébastien Loeb (Citroën) of France (*see* BIOGRAPHIES) and his co-driver, Daniel Elena of Monaco. After skipping the Monte Carlo race (which was not part of the WRC in 2009), Loeb took the first five WRC events—in Ireland, Norway, Cyprus, Portugal, and Argentina. A flat tire and a two-minute technical penalty dropped Loeb into fourth place in the Rally of Italy (Sardinia), which was won by Jari-Matti Latvala (Ford) of Finland. The next three rallies—Greece (Acropolis), Poland, and Finland—were captured by Finnish driver Mikko Hirvonen (Ford). In the Rally of Australia in September, Hirvonen was awarded the victory after Loeb, the original winner, and other Citroën drivers were penalized for a technical infringement. Loeb's triumph in Spain (Catalunya) put him only one point behind Hirvonen and set up a classic battle in the season-ending Wales Rally of Great Britain. A mishap with his car hood in the penultimate stage cost Hirvonen more than a minute, and Loeb held on for the win, giving him his 54th career victory and a record sixth consecutive WRC drivers' title—just one point ahead of his Finnish rival. Citroën finished with a comfortable lead over Ford in the manufacturers' rankings.

In sports car competition, the two classic American endurance races again attracted drivers and manufacturers from around the world, but it was the closeness of the finishes that was notable. The Rolex 24 at Daytona, run on Daytona International Speedway's 5.73-km (3.56-mi) road circuit (including three-quarters of the NASCAR racing oval) in Daytona Beach, Fla., was won by Brumos Porsche's David Donohue, Antonio Garcia of Spain, Darren Law, and former Indy 500 winner Buddy Rice. After 735 laps of racing, they beat the Chip Ganassi Lexus team of Montoya, Scott Pruett, and Memo Rojas of Mexico by 0.167 sec (approximately 15 m [50 ft]). It was the closest finish in any major 24-hour race.

In the 57th running of the 12 Hours of Sebring (Fla.), four carmakers were represented in the most powerful LMP classes. Team Joest's Audi R15 TDI—driven by Tom Kristensen of Denmark, Rinaldo Capello of Italy, and Scotsman Allan McNish—scored Audi's 9th victory in 11 tries but just managed to beat the Peugeot 908 entry of three Frenchmen: Franck Montagny, Stéphane Sarrazin, and Sébastien Bourdais. The margin of victory between the two diesel vehicles was 22 seconds after

2,280 km (1,417 mi), and the average speed was 117.986 mph, the fastest ever for the event.

Peugeot upset Audi in the 24-hour Le Mans (France) Grand Prix d'Endurance, with Australian David Brabham, Marc Gené of Spain, and Austria's Alexander Wurz in a Peugeot 908 taking the checkered flag ahead of teammates Montagny, Sarrazin, and Bourdais. The defending champion team of Kristensen, Capello, and McNish, driving an Audi R15, struggled with mechanical problems and finished third overall. Audi had emerged victorious in eight of the previous nine races.

(ROBERT J. FENDELL;
MELINDA C. SHEPHERD)

BASEBALL

North America. *Major League Baseball.* The New York Yankees earned their 27th World Series title to conclude the 2009 Major League Baseball (MLB) season, which was relatively stable despite a troubled economy. (Total attendance for the regular season was 73.4 million, the fifth highest in the sport's history but a decline of 6.5% from 2008.) The Yankees won the Series by defeating the defending champion Philadelphia Phillies 7–3 in game six on November 4 in New York's new Yankee Stadium to win the best-of-seven series by four games to two. New York's Hideki Matsui tied a World Series record by batting in six runs in a single game and was named the Most Valuable Player (MVP). It was pitcher Andy Pettitte's third victory in as many clinching games during the 2009 postseason.

In game one at Yankee Stadium on October 28, Cliff Lee pitched a complete game and Chase Utley hit two home runs to propel the Phillies to a 6–1 victory. Lee struck out 10 and yielded six hits. C.C. Sabathia was the losing pitcher. The Yankees rebounded the next night with a 3–1 triumph behind A.J. Burnett, who pitched seven innings, and Mariano Rivera, who finished with two scoreless innings of relief. Mark Teixeira and Matsui hit home runs off loser Pedro Martinez. When the Series moved to Philadelphia for game three on October 31, the Phillies jumped to a 3–0 lead off Pettitte, but they were overtaken and defeated 8–5 as three Yankees hit home runs—Alex Rodriguez, Nick Swisher, and Matsui. Cole Hamels, MVP of the 2008 World Series, was the losing pitcher. In game four the Yankees scored three runs in the ninth inning to break a tie and force a 7–4 victory. Ro-

In game six of the World Series on November 4, Hideki Matsui of the New York Yankees slams the ball for a two-run homer in the second inning. Matsui scored a record six runs batted in during the Yankees' series-clinching victory.

driguez drove in the winning run with a two-out double off loser Brad Lidge, and Jorge Posada followed with a two-run single. Rivera pitched a scoreless ninth. The Phillies averted elimination by defeating the Yankees 8–6 in game five as Utley hit two more home runs in support of Lee, the winning pitcher. With five home runs for the Series, Utley tied a record shared by former Yankees star Reggie Jackson.

Play-offs. The Phillies won the National League (NL) pennant by defeating the Los Angeles Dodgers 10–4 on October 21 in Philadelphia to capture the National League Championship Series (NLCS) four games to one and become the first team to reach consecutive World Series since the 2000 Yankees. Ryan Howard was named MVP for the NLCS. The Phillies advanced to the NLCS by defeating the Colorado Rockies three games to one in a best-of-five series. The Dodgers swept their series against the St. Louis Cardinals three games to none.

The Yankees clinched their 40th American League (AL) pennant by defeating the Los Angeles Angels 5–2 on October 25 in New York to win the American League Championship Series (ALCS) four games to two. Pettitte was the winning pitcher, and Rivera recorded the save. Sabathia was the MVP for the ALCS. In the AL Division Series, the Yankees swept the Minnesota Twins and the Angels swept the Boston Red Sox, both by three games to none in those best-of-five series.

Regular Season. Minnesota won the AL Central by defeating the Detroit

Tigers 6–5 in a one-game play-off held in Minneapolis on October 6. The Tigers had occupied first place since May 10 and were 5½ games ahead of Minnesota with only 20 games remaining on the 162-game regular-season schedule, but the Twins won 16 of their last 21 games, and they fell into a tie, thus necessitating a 163rd game, which was decided on an RBI single in the 12th inning by Alexi Casilla. The Yankees won the AL East by eight games over the Red Sox, who qualified for the play-off wild-card berth with the best second-place record. The Angels won the AL West by 10 games. The Phillies captured first place in the NL East by six games; the Cardinals topped the NL Central by 7½ games; and the Dodgers won the NL West by three games over the NL wild card, Colorado.

Individual Accomplishments. Joe Mauer of Minnesota batted .365 (the highest ever for a catcher) to claim his second consecutive—and his third in four years—AL batting title and the season MVP honors. Hanley Ramirez of the Florida Marlins won the NL batting crown with .342. Albert Pujols of the Cardinals hit 47 home runs and earned his third NL MVP award; Teixeira and Carlos Pena of the Tampa Bay Rays had 39 homers each to top the AL. Teixeira also led the AL in runs batted in (RBIs) with 122. The NL RBI leaders were Prince Fielder of the Milwaukee Brewers and Howard, both with 141. No pitchers won 20 games, but four collected 19: Sabathia, Justin Verlander of Detroit, Felix Hernandez of the Seattle Mariners, and Adam Wain-

wright of St. Louis. Verlander led the AL with 269 strikeouts; Tim Lincecum of the San Francisco Giants led the NL with 261 and captured his second straight Cy Young Award. Zack Greinke of the Kansas City Royals scored an MLB-best 2.16 earned run average (ERA) and secured his first AL Cy Young Award. Brian Fuentes of the Angels had 48 saves to lead the AL; the NL leader was Heath Bell of the San Diego Padres, with 42.

On July 23 in Chicago's U.S. Cellular Field, Mark Buehrle of the AL White Sox pitched a perfect game, beating Tampa Bay 5–0. The perfect game—all 27 opposition batters retired—was the 18th in major league history, and the 30-year-old left-hander became the sixth pitcher to record both a no-hitter (against the Texas Rangers in 2007) and a perfect game. Buehrle struck out six and was helped by a spectacular catch from centre fielder Dewayne Wise, who climbed the fence to deprive Gabe Kapler of a potential home run for the first out of the ninth inning. Wise briefly lost control of the ball but then grabbed it as he fell to the ground.

San Francisco's Randy Johnson—who pitched the last perfect game for the Arizona Diamondbacks against the Atlanta Braves in 2004—recorded his 300th victory in June. (See BIOGRAPHIES.) Jonathan Sanchez, a 26-year-old left-hander, pitched a no-hitter for San Francisco on July 10, defeating the Padres 8–0. Rivera, the Yankees' veteran relief pitcher, registered his 500th save. Jason Giambi of the Oakland As hit his 400th home run, and Ichiro Suzuki of the Seattle Mariners smacked his 2,000th hit.

All-Star Game. The AL defeated the NL 4–3 to win the annual All-Star Game in St. Louis's Busch Stadium on July 14. The AL continued its dominance in the midsummer event, extending its unbeaten string to 13 and thus securing home-field advantage in the World Series. Curtis Granderson of the Tigers tripled in the eighth inning and scored on a sacrifice fly by Adam Jones of the Baltimore Orioles to break a 3–3 tie. The Rays' Carl Crawford was voted MVP of a game in which the NL scored all of its runs in the second inning. Jonathan Papelbon of the Red Sox was credited with the victory, and Rivera claimed the save by pitching a scoreless ninth inning.

Little League World Series. Chula Vista, Calif., defeated Taoyuan, Taiwan, 6–3 to win the Little League World Series (LLWS) on August 30 in South

Williamsport, Pa. Bulla Graft singled in the go-ahead run in the fourth inning, and Kiko Garcia pitched three-plus innings of scoreless relief for the victors, who secured a fifth consecutive LLWS title by U.S. representatives. With Wen Hau Sung and Chin Ou hitting back-to-back home runs in the third inning, Taiwan seized a 3–0 lead, but California replied with a run in the third before rallying in the fourth when Seth Godfrey drove in a run with a sacrifice fly and Nick Conlin scored on a wild pitch. California advanced to the championship game by routing San Antonio, Texas, 12–2 with a nine-run outburst in the first inning that featured three home runs, including a grand slam by Andy Rios. The game was halted after 3½ innings because of the 10-run rule. (ROBERT WILLIAM VERDI)

Latin America. The 2009 Caribbean Series was held in Mexicali, Mex., February 2–7. The Aragua Tigers (Tigres), representing Venezuela, won the championship with a 5–1 record. Mexico's Mazatlán Deer (Venados) finished second with a 3–3 record. Puerto Rico's champion, the Ponce Lions (Leones), and the Licey Tigers (Tigres) from the Dominican Republic tied for third.

Venezuela lost to South Korea by a score of 10–2 in the semifinals of the World Baseball Classic, held in Los Angeles in March. Cuba, the Dominican Republic, Mexico, Panama, and Puerto Rico failed to reach the semifinal round of the 16-team tournament, which was won by Japan.

In Cuba, Havana Province defeated Villa Clara four games to one to win the 48th Serie Nacional (National Series). It was the first championship for Havana, which had defeated Isla de la Juventud four games to one in the quarterfinals and Pinar del Río by four games to two in the semifinals to advance. Isla de la Juventud infielder Michel Enríquez won the batting title with a .401 average. Alfredo Despaigne from Granma set a new Cuban league home run record with 32. Pinar del Río pitcher Yuniesky Maya went 13–4 to lead the league in wins, while Yadier Pedroso from Havana posted a league-leading 1.91 earned run average.

The Saltillo Sarape Makers (Saraperos) in August defeated the Quintana Roo Tigers (Tigres) four games to two to win its first Mexican League title after nearly 40 years in the league. The Tigers, a team formerly based in Mexico City (1955–2001) and Puebla (2002–06), had won nine previous championships. (MILTON JAMAIL)

Japan. The Yomiuri Giants beat the Nippon-Ham Fighters 2–0 in game six at the Sapporo Dome, the Fighters' home stadium, on Nov. 7, 2009, to win the best-of-seven Japan Series by four games to two. The Giants claimed their first Japan Series title in seven years and 21st overall. Giants catcher Shinnosuke Abe was named the series Most Valuable Player (MVP) after hitting .304 with two home runs and five runs batted in (RBIs), including an RBI double in game six. In the Central League (CL) Climax Series play-offs, the Giants downed the Chunichi Dragons four games to one in the decisive second stage after the Dragons eliminated the Yakult Swallows two games to one in the first stage. In the Pacific League (PL) Climax Series, the Fighters beat the Rakuten Eagles four games to one in the second stage after the Eagles swept the Softbank Hawks in two games in the first stage.

In the regular season, Dragons first baseman Tony Blanco led the CL with 39 homers and 110 RBIs, and Giants outfielder Alex Ramirez hit .322 to win his first batting title. Pitchers Kazuki Yoshimi of the Dragons and Shohei Tateyama of the Swallows tied for the CL lead with 16 wins. Dragons left-hander Chen Wei-yin had a league-best 1.54 earned run average (ERA). Seibu Lions third baseman and designated hitter Takeya Nakamura led the PL with 48 home runs and 122 RBIs, and Eagles outfielder Teppei Tsuchiya captured his first batting title after hitting .327. The Lions' Hideaki Wakui won a PL-leading 16 games. The Fighters' Yu Darvish topped the PL with a 1.73 ERA.

In the second World Baseball Classic, Japan defended its 2006 title, defeating South Korea 5–3 in the final game in Los Angeles on March 23. Daisuke Matsuzaka, a pitcher with Major League Baseball's Boston Red Sox, was voted the tournament MVP.

(HIROKI NODA)

BASKETBALL

Professional. On June 14, 2009, the Los Angeles Lakers won their 15th National Basketball Association (NBA) championship (and their 10th since moving to Los Angeles) with a 99–86 victory over the Orlando Magic in Orlando, Fla., to close out the best-of-seven series in five games. The Lakers' Kobe Bryant, who earned his fourth NBA title—his first since 2001–02—was named the Most Valuable Player (MVP) of the Finals after having averaged 32.4 points per game. In the decisive fifth game,

Bryant scored 30 points to go along with 6 rebounds, 5 assists, 4 blocked shots, and 2 steals.

One year after losing the championship to the Boston Celtics in six games, including a 39-point defeat in the final game, the Lakers became the first NBA team since the 1989 Detroit Pistons to win a championship the season after losing in the Finals. Entering the playoffs, the Lakers ousted the Utah Jazz in the first round and then eked past the Houston Rockets in a hard-fought seven-game series before dispatching the Denver Nuggets in six games in the Western Conference Finals. The 2009 championship gave Lakers coach Phil Jackson his 209th post-season victory and a landmark 10th title, passing legendary Celtics coach Red Auerbach, who had captured nine titles. Lakers guard Derek Fisher also picked up his fourth championship ring. Meanwhile, it was the first title for important role players such as forward Lamar Odom (10th season in the

Kobe Bryant of the Los Angeles Lakers takes a jump shot past Courtney Lee of the Orlando Magic in the decisive fifth game of the 2009 NBA Finals. Bryant scored 30 points in the game, which clinched the Lakers' 15th NBA title.

Ronald Martinez/Getty Images

league) and forward Pau Gasol, who had been acquired from the Memphis Grizzlies 16 months earlier. In the all-important fifth game, Gasol had a double-double consisting of 14 points and 15 rebounds, Odom added 17 points and 10 rebounds, while Trevor Ariza had 15 points and Fisher 13. The Lakers were especially effective from three-point territory, hitting 8 of 16 (50%).

The Magic, playing in the second championship round in the franchise's history and the first since 1995, connected on only 8 of 27 of their three-pointers in the final game, although five players scored in double figures. Rashard Lewis led the team with 18 points and 10 rebounds. Orlando defeated the Philadelphia 76ers in the first round, upset the Celtics in a tough seven-game semifinal series, and reached the showdown with Los Angeles with a four-games-to-two victory over the Cleveland Cavaliers, led by regular-season MVP LeBron James (see BIOGRAPHIES), in the Eastern Conference Finals.

On October 9 the Phoenix Mercury succeeded in capturing the franchise's second Women's National Basketball Association (WNBA) championship in three years with a 94–86 victory over the Indiana Fever in the decisive fifth game in Phoenix. (The team earned the title in 2007 in a five-game series against the Detroit Shock.) The Mercury won the first matchup of the five-game 2009 Finals and then lost two straight before coming back to defeat Indiana in games four and five. The Mercury's Diana Taurasi, the Finals MVP, scored 26 points, 6 rebounds, and 4 assists in the fifth game. Taurasi, who led the University of Connecticut to three consecutive National Collegiate Athletic Association titles before being the top WNBA draft pick in 2004, was also the regular-season MVP. (ANDY JASNER)

College. Going into the 2008–09 season, North Carolina was predicted to be the best team in college basketball, but when the Tar Heels lost their first two Atlantic Coast Conference (ACC) games, the crowning looked to be premature. By the time the teams arrived in Detroit for the National Collegiate Athletic Association (NCAA) Final Four in April 2009, however, Carolina was the big favourite again, and the team did not disappoint. Playing on April 6 in front of a Final Four record crowd of 72,922 at Detroit's Ford Field, North Carolina overwhelmed Michigan State 89–72 to win the school's fifth national championship and second under coach

Mark Humphrey/AP

In the NCAA women's final between the Universities of Connecticut and Louisville on April 7, UConn star Maya Moore charges past two Louisville players. Moore, who was named the Naismith College Player of the Year, contributed 18 points to UConn's 76–54 victory.

Roy Williams in his six years as head coach at his alma mater.

After being embarrassed in the 2008 semifinal game by Kansas, the Tar Heels played throughout the 2009 tournament like a team that could accept nothing short of winning the last game. Carolina stars Tyler Hansbrough, Ty Lawson, and Wayne Ellington all passed on the 2008 National Basketball Association (NBA) draft to make another run at a national championship. North Carolina (34–4) won its six NCAA tournament games by a combined 121 points, with each of the games decided by double digits.

Hansbrough ended his college career with more points (2,872) than any previous player in ACC history. Lawson had 21 points, 8 steals, 6 assists, and just 1 turnover in the championship game against Michigan State, while Ellington was named Most Outstanding Player of the Final Four. Hansbrough, Lawson, and Ellington all were picked in the first round of the 2009 NBA draft.

Big Ten champion Michigan State (31–7) played brilliantly to get to the championship game, upsetting Big East powers Louisville (in the regional final)

and Connecticut (in the Final Four semifinal). Another Big East power, Villanova, also made the Final Four but had the bad fortune of drawing North Carolina in the semifinal.

In the women's NCAA tournament, Connecticut (39–0) did not just win its sixth national women's championship; UConn dominated from start to finish, winning every game in the 2008–09 season by double figures. The Huskies beat Big East rival Louisville (34–5) 76–54 in the championship game, held on April 7 at the Scottrade Center in St. Louis, Mo. Tina Charles, who scored 25 points and had 19 rebounds against Louisville, was named the Most Outstanding Player of the Final Four.

In Coach Geno Auriemma's 24 seasons at UConn, his teams had an incredible 696–122 record, and three of his six national champions were undefeated. The 2008–09 team was clearly one of his best, with stars at every position. No star was bigger than sophomore Maya Moore, one of the most versatile talents in the history of her sport, who won the Player of the Year award. Meanwhile, every key UConn player except senior point guard Renee Montgomery would be back for the 2009–10 season. (DICK JERARDI)

International. Spain won its first EuroBasket title, with an 85–63 victory over Serbia on Sept. 20, 2009, in the final in Katowice, Pol. The victory added credibility to Spain's dream of defending its 2006 Fédération Internationale de Basketball (FIBA) men's world championship in Turkey in 2010. The team traveling to Turkey was expected to include Pau Gasol, Spain's 2.13-m (7-ft)-tall centre, who led his team against Serbia with 18 points, 11 rebounds, and 3 blocks—all game highs. Gasol was determined to make up for having missed Spain's triumph in the 2006 FIBA world championship when a broken foot that he suffered in the semifinal forced him to watch as his teammates overwhelmed Greece 70–47 in the final to win the country's first world title.

In addition to Spain and Serbia, the teams from Europe that qualified for the 2010 world championship included EuroBasket bronze-medalist Greece and fourth-place finisher Slovenia. France and Croatia won classification games to join the other European qualifiers and host country Turkey. With the U.S. having qualified for Turkey on the basis of its gold medal at the 2008 Olympics in Beijing, four slots were available from the Americas championship. Brazil narrowly bested host Puerto Rico 61–60,

while Argentina, which included seven players who played professionally in Spain, defeated Canada 88–73 to take the bronze. Canada rebounded from a string of defeats against Uruguay, Puerto Rico, Argentina, and Brazil by beating Panama and upsetting the favoured Dominican Republic to reach the semifinals and qualify.

Angola, Côte d'Ivoire, and Tunisia qualified from the African championship, played in August in Tripoli, Libya. Côte d'Ivoire provided the tournament's surprise and sealed its place by scoring the final eight points in its semifinal game to beat Cameroon 68–61. Iran impressively retained its Asian championship title by thrashing host China 70–52. Jordan took the third Asian qualifying slot. In December FIBA added four "wild cards" to reach the requisite 24 teams: three from Europe—Germany, Lithuania, and Russia—plus Lebanon.

The Czech Republic (the host country) and the U.S. (the 2008 Olympic champion) were the first names in the ring for the 2010 FIBA women's world championship. France upset defending champion Russia in the women's EuroBasket final in June in Riga, Latvia, as they both qualified, along with Spain, Belarus, and Greece. Brazil, Argentina, and Canada qualified from the Americas, and Oceania's Australia joined Asian qualifiers China, South Korea, and Japan. From Africa, Senegal and Mali went through to round out the 16-team tournament. (RICHARD TAYLOR)

BOBSLEIGH, SKELETON, AND LUGE

Bobsleigh. During the 2008–09 bobsleigh season, Russian pilot Aleksandr Zubkov finished atop the overall four-man and combined World Cup standings, having collected nine World Cup medals, three at Park City, Utah, and one at each other venue on the circuit. At the 2009 world championships, held in February in Lake Placid, N.Y., however, he finished fourth in both disciplines. Beat Hefti of Switzerland, with seven medals throughout the season, took the two-man title in overall World Cup standings and was second in combined standings, but, like Zubkov, he could not get on the podium at the world championships.

The four-man win at the world championships went to American pilot Steven Holcomb. André Lange of Germany took silver, and Latvian Janis Minins secured the bronze. In the two-man event, Switzerland's Ivo Rüegg and Germany's Thomas Florschütz finished first and second, respectively, with Holcomb in third place.

On the women's circuit, Sandra Kiriasis of Germany won her seventh straight overall World Cup title, having collected seven medals in eight World Cup races. Her only nonpodium finish was at the Olympic test event in Whistler, B.C. She also contributed to Germany's world championship team title but fell to a disappointing seventh place in the two-woman event in Lake Placid. Fellow German Cathleen Martini finished second in the overall World

German bobsleigh pilot Sandra Kiriasis (right) and her brakewoman, Berit Wiacker, push off in the World Cup event in St. Moritz, Switz., in January. The duo won the race en route to Kiriasis's seventh consecutive overall World Cup title.

Arno Balzarini—Keystone/AP

Cup standings, followed by American Shauna Rohbock. The world championship gold medal went to British pilot Nicola Minichiello. Rohbock captured the silver, and Martini took the bronze.

Skeleton. Aleksandr Tretiakov of Russia showed consistency throughout the 2008–09 skeleton season and won the overall World Cup title. He earned five podium finishes during the World Cup season and finished third at the 2009 world championships in Lake Placid. Switzerland's Gregor Stähli won the world championship gold medal. British slider Adam Pengilly took second place at the event, his only medal of the year.

In women's action, Marion Trott of Germany finished atop the World Cup rankings, Shelley Rudman of Great Britain took second, and American Katie Uhlaender was third overall. Trott also earned the gold medal at the world championships, ahead of silver medalist Amy Williams of Great Britain and fellow German Kerstin Szymkowiak, who took the bronze. (JULIE PARRY)

Luge. At the luge world championships in Lake Placid, N.Y., in February 2009, American Erin Hamlin slid to gold, the first time since 1993 that a non-German slider had won the world crown. The silver and bronze medals went to Germany's Natalie Geisenberger and Ukrainian Natalia Yakushenko, respectively. German slider Tatjana Hüfner again dominated the World Cup season, finishing in the top two in all nine races and first in the overall standings, ahead of Geisenberger and Anke Wischnewski of Germany. Hamlin, with six top-10 finishes, was sixth in the standings.

Italian Armin Zöggeler continued his men's singles dominance, finishing in the top three spots in eight out of nine races and earning his eighth (and fourth straight) overall World Cup title. Zöggeler, however, was defeated for the world championship gold by German slider Felix Loch, who did not compete in the first three races of the 2008–09 season but came on strong at the end.

Germany, Italy, and Austria dominated the podium throughout the men's doubles season, with Italy's Christian Oberstolz and Patrick Gruber earning the overall World Cup title. At the world championships, Italians Gerhard Plankensteiner and Oswald Haselrieder upset André Florschütz and Torsten Wustlich of Germany for the gold. Americans Mark Grimmette and Brian Martin finished with the bronze.

(JANELE M. MAREK)

BOXING

The exploding popularity in 2009 of Filipino boxing sensation Manny Pacquiao (see BIOGRAPHIES) and the return of undefeated Floyd Mayweather, Jr. (U.S.), created demand for a bout between the pair that could possibly result in the largest-grossing boxing match in history. In December it appeared likely that the much-anticipated fight could take place in 2010.

Pacquiao continued to move from one weight division to another with spectacular results. On May 2 he won *The Ring* magazine junior welterweight championship with a stunning second-round knockout of Ricky Hatton (U.K.) at the MGM Grand in Las Vegas. The 16,262 fans in attendance and a pay-per-view audience of approximately 800,000 saw Pacquiao knock out Hatton with a left hand that crashed into the side of the Englishman's jaw with such a paralyzing impact that the recipient was unconscious before he hit the floor.

Mayweather, who had not fought since Dec. 8, 2007, returned to action on September 19 and won a unanimous 12-round decision over *Ring* and World Boxing Association (WBA) lightweight champion Juan Manuel Márquez (Mexico) at the MGM Grand. Márquez's titles were not at stake because the bout was fought in the welterweight division. When Mayweather failed to make the contracted weight of 144 lb, \$600,000 of his purse was forfeited and given to Márquez. Although Mayweather knocked down Márquez in the second round, it was a rather uneventful fight, with Mayweather's speed

and size advantages carrying him to an easy points verdict. The crowd of 13,116 was several thousand fewer than capacity, but the 1.05 million pay-per-view buys were significantly better than expected.

Pacquiao reinforced his position as the best boxer in the world by moving up in weight again and stopping highly regarded welterweight Miguel Cotto (Puerto Rico) in the 12th round on November 14 in Las Vegas. After taking some early punishment from his hard-hitting adversary, Pacquiao knocked down Cotto in the third and fourth rounds to take control of the fight. The grotesquely battered Cotto was rescued by the referee in the final round. The Cotto bout underscored Pacquiao's status as boxing's biggest attraction. Approximately 1.25 million pay-per-view packages were sold, and a crowd of more than 16,200 packed the MGM Grand for the event. For the second year in a row, Pacquiao was selected as *The Ring* magazine's Fighter of the Year.

The heavyweight division continued to be dominated by Ukrainian brothers Wladimir and Vitali Klitschko. Vitali thrice defended the World Boxing Council (WBC) title, stopping both Juan Carlos Gómez (Cuba) in the ninth round of a bout held on March 21 in Stuttgart, Ger., and Chris Arreola (U.S.) in the 10th round on September 26 in Los Angeles. In his final bout of the year, Vitali tallied a 12-round unanimous decision over Kevin Johnson (U.S.) on December 12 in Berne, Switz. It was Wladimir, however, who attracted the largest crowd of the year

Ukrainian boxer Vitali Klitschko (right) pounds his American challenger, Kevin Johnson, during their WBC heavyweight title bout on December 12. The fight was Klitschko's third successful title defense of the year.

Peter Schneider—Keystone/AP

when more than 60,000 fans filled the Veltins Arena in Gelsenkirchen, Ger., to see him stop previously undefeated Ruslan Chagaev (Uzbekistan) in the ninth round. The one-sided match was Wladimir's seventh successful defense of the International Boxing Federation (IBF) title, and the victory also earned him the vacant *Ring* magazine heavyweight championship.

The former undisputed cruiserweight champion David Haye (U.K.) entered the heavyweight sweepstakes by winning the WBA belt via a 12-round decision over Nikolay Valuyev (Russia) on November 7 in Nürnberg, Ger. The flamboyant Haye was expected to add some much-needed colour to the drab heavyweight picture.

Tomasz Adamek (Poland), the reigning IBF and *Ring* magazine cruiserweight champion, made two successful defenses in 2009. He knocked out Johnathon Banks (U.S.) in the eighth round on February 27 and battered Bobby Gunn (U.S.) on July 11 until the referee ended the fight in the fourth round. Both bouts were contested in Newark, N.J., where a large Polish American population supported Adamek. The Polish fighter returned to his homeland for his third bout of the year, stopping former heavyweight contender Andrew Golota (Poland) in the fifth round on October 24 in Lodz. Despite the fact that Golota was well past his prime, the so-called Polish Fight of the Century bout was a financial success. It attracted a capacity crowd of 14,000 and was viewed by more than 10 million people on Polsat, Poland's largest television network.

Following a ninth-round knockout of Marco Antonio Rubio (Mexico) on February 21 in Youngstown, Ohio, *Ring* and WBC middleweight champion Kelly Pavlik (U.S.) was sidelined for much of the year with a staphylococcus infection. He returned to action on December 19, scoring a fifth-round technical knockout of Miguel Ángel Espino (Mexico) in Youngstown.

Subscription cable TV network Showtime launched a round-robin tournament featuring six of the world's top super middleweights. In the first series of bouts, WBC titleholder Carl Froch (U.K.) won a close 12-round decision over Andre Dirrell (U.S.), on October 17 in Nottingham, Eng. On the same night in Berlin, Arthur Abraham (Armenia) knocked out former world middleweight champion Jermain Taylor (U.S.) in the 12th round. On November 21 Andre Ward (U.S.) beat Mikkel

Kessler (Denmark) via an 11th-round technical decision in Oakland, Calif. The tournament would continue in 2010.

The boxing world was rocked by the violent deaths of three famous fighters in less than a month, beginning with the alleged suicide of Alexis Argüello (Nicaragua) on July 1 in Managua, Nic. Then former IBF super featherweight and WBC junior welterweight titleholder Arturo Gatti (Canada) was found dead on July 11 in Porto de Galinhas, Braz., where he was vacationing with his Brazilian wife. Finally, on July 25 reigning WBC junior middleweight titleholder Vernon Forrest (U.S.) was shot and killed during a robbery at a gas station in Atlanta. (See OBITUARIES.) (NIGEL COLLINS)

CRICKET

On March 3, 2009, the Sri Lankan cricket team bus was attacked on its way to the Gaddafi Stadium in Lahore, Pak., for the Second Test against Pakistan. Six policemen were killed in the gun battle, and Pakistan umpire Ahsan Raza suffered bullet wounds in the chest. Although the majority of the Sri Lankan players were unhurt, Thilan Samaraweera was hit in the left leg by a bullet and had to stay behind in the hospital as his teammates were immediately flown home. It was the first time that the sport had been the target of a terrorist attack, and the cricket world reacted with shock.

Just three months earlier, in late November 2008, a terrorist attack on the Taj Mahal Palace hotel in Mumbai (Bombay) had resulted in the cancellation of the last two one-day internationals between England and India. The England players, who had stayed at the hotel a fortnight before, flew home, and it was widely presumed that the Test series in December would be canceled. The England players, however, under the captaincy of Kevin Pietersen, unanimously agreed to return to India to play the two Tests, and in the end their 1-0 defeat was less important than their gesture in defying the terrorists. Pakistan became a "no-go" area for international cricket, and the second season of the Indian Premier League (IPL) had to be moved to South Africa at short notice after security officials in India said that they could not police both the IPL and the pending Indian general election.

It took a thrilling double-header series between Australia and South Africa

in December and early January 2009 to lift the gloom. For the first time in more than a decade, Australia lost its position as the number one team in the world after South Africa had claimed a 2-1 victory in Australia to move to the top of the rankings. Inspired by its captain, Graeme Smith, South Africa won a series in Australia for the first time, while the former champions, depleted by the recent retirements of Shane Warne, Glenn McGrath, and Adam Gilchrist, lost to India and, most painfully, to England. Australia did gain a measure of revenge, beating South Africa, also by 2-1, in the return Test series in South Africa.

England's season began in controversy. Pietersen was dismissed from the captaincy after just three Test matches in charge because of a personality clash with coach Peter Moores. Pietersen wanted Moores to go, but the selectors dismissed both, and a new captain-coach combination of Andrew Strauss and Andy Flower, respectively, was appointed for the series in the Caribbean. West Indies, desperate to win back the Wisden Trophy from England for the first time since 1997, took the opening Test after a devastating spell of five wickets for 11 runs by fast bowler Jerome Taylor and, helped by lifeless pitches, largely played for draws thereafter. The second Test in Antigua had to be abandoned after only a few balls because the outfield was deemed unfit for play. The match was rescheduled for the Recreation Ground, the island's former Test ground. England was unable to press home its advantage in the remaining Tests and lost the series 1-0.

Defeated in the return series in England, the West Indies team went on strike after a pay dispute with the West Indies Cricket Board. When a scratch team of second-string players lost 2-0 to Bangladesh, which had a previous Test record of 59-1, it ranked as an all-time low for the game in the Caribbean.

The long-awaited Ashes series in England did not quite live up to the 2005 series, though the result—2-1 to the home team—was the same. England held on for a thrilling draw in the opening Test in Cardiff, Wales, and then took the lead in the series at Lord's, where an inspired spell of fast bowling by Andrew Flintoff conjured up memories of the 2005 Ashes. England was comprehensively outplayed by Australia in the fourth Test, but Stuart Broad's 5 for 37 helped England to a first innings lead in the final Test at the Oval and, despite Michael Hussey's

rearguard century, on to victory. Strauss was named Man of the Series for his 474 runs and his leadership as England's captain. Flintoff, a charismatic but injury-prone all-rounder, retired from Test cricket to concentrate on playing one-day and 20/20 cricket. During the Third Test, Captain Ricky Ponting became the leading run scorer in Australian cricket, surpassing Allan Border's career total of 11,174, but he was unable to avoid the ignominy of having lost two Ashes series.

Sachin Tendulkar of India became the leading run scorer in Test history when he passed former West Indian star Brian Lara's record of 11,953 runs in the Second Test against Australia at Mohali, India. Pakistan won the second 20/20 World Cup, and the Deccan Chargers were crowned champions of the IPL. In women's cricket, England's players, led by Charlotte Edwards, swept all before them, winning both the 50-over World Cup and the 20/20 World Cup and retaining the Ashes against Australia. (ANDREW LONGMORE)

CURLING

China won its first women's world curling championship on March 29, 2009, when Wang Bingyu defeated Sweden's Anette Norberg 8-6 in the final in Kangnung, S.Kor. Denmark's Angelina Jensen edged defending champion Jennifer Jones of Canada 7-6 for the bronze. The remaining countries in order were: Switzerland, Germany, Russia, Scotland, the U.S., South Korea, Norway, and Italy.

On April 12, Scotland's David Murdoch took the men's world championship in Moncton, N.B., by stealing two points in the final end of an 8-6 victory over defending champion Kevin Martin of Canada. Norway's Thomas Ulsrud won his third bronze with a 6-4 victory over Ralph Stöckli of Switzerland. The order of finish for the rest of the men's field was the U.S., Germany, Denmark, France, China, Japan, the Czech Republic, and Finland.

The world junior championship in March was a test event of the Olympic venue for the 2010 Vancouver Winter Games. Denmark's Rasmus Stjerne gained the men's title with a 9-6 win over Canada's Brett Gallant in the final, while Scotland's Eve Muirhead won her third straight gold medal and second as a skip in an 8-6 victory over Canada's Kaitlyn Lawes. American Chris Plys took the men's junior bronze, with Switzerland's Martina Baumann earning the women's.

At the world mixed doubles championship in Cortina d'Ampezzo, Italy, in April, Switzerland's Toni Müller and Irene Schori earned their second straight title with a 7-4 victory over Hungary's György Nagy and Ildiko Szekeres. A week later Canada swept the world senior curling championships in Dunedin, N.Z. Pat Sanders downed Switzerland's Renate Nedkoff 10-1 to win the women's title; Ingrid Meldahl of Sweden took the bronze. Eugene Hritzuk held off Paul Pustovar of the U.S. in a 4-3 victory for the men's senior championship, with Scotland's Kevin Prentice placing third. (DONNA SPENCER)

CYCLING

The return to competition of American cyclist Lance Armstrong after an absence of more than three years and his rivalry with Spanish teammate Alberto Contador (see BIOGRAPHIES) in the sport's premier road event, the Tour de France, dominated the cycling headlines in 2009. Armstrong, who retired in 2005 after having won the three-week Tour for a record seventh time, fractured his collarbone during a preparation race in March but was able to contest the Giro d'Italia (Tour of Italy); he finished 12th overall behind the winner, Denis Menchov of Russia.

In the Tour de France, Armstrong failed by less than a second to take the yellow jersey (worn by the overall leader) from Switzerland's Fabian Cancellara after the fourth stage; three days later the American fell behind Contador on the first mountain stage. Contador, who had captured the 2007 Tour, went on to take the overall lead after winning stage 15 in the Alps and held it to the finish on July 26 in Paris after a 21-stage race totaling 3,459.5 km (about 2,150 mi). Contador won with a margin of 4 min 11 sec over Andy Schleck of Luxembourg. Armstrong finished third to become, at 37, the second oldest rider to have stood on the podium.

The subject of doping reemerged during the final week of the Tour when the sport's governing body, the Union Cycliste Internationale (UCI), announced that Italian rider Danilo Di Luca had failed two tests for continuous erythropoietin (EPO) receptor activator (CERA) during the Giro d'Italia, in which he had finished second overall. Tour de France stage winner Mikel Asparloza of Spain was later declared positive for EPO from an out-of-competition test taken on June 26.

Spanish cyclist Alberto Contador rides triumphantly through the streets of Paris on July 26 after winning the 2009 Tour de France.

Bas Czerwinski/AP

Switzerland hosted the UCI world road championships and celebrated a home victory in the men's individual time trial for Cancellara, who dominated the 49.8-km (31-mi) test to take the title for the third time. American Kristin Armstrong regained the women's time trial title, which she had won in 2006. Cadel Evans gave Australia its first men's road race title, attacking in the closing stages to finish 27 seconds clear of his nearest rivals after almost seven hours of racing. Just days earlier Evans had finished third behind the overall winner, Alejandro Valverde of Spain, in the Vuelta a España (Tour of Spain).

Simona Krupeckaite of Lithuania broke the world record for the women's 500-m time trial at the UCI world track championships, held in Pruszkow, Pol. She recorded a time of 33.296 sec to take the title ahead of Australia's Anna Meares, who had set the previous record of 33.588 sec in 2007. Taylor Phinney of the U.S. won the men's elite 4,000-m individual pursuit at the age of only 18, becoming the first American man to take a senior world track title since Marty Nothstein in 1996.

(JOHN R. WILKINSON)

EQUESTRIAN SPORTS

Thoroughbred Racing. *United States.* Two supremely talented female horses, Zenyatta and Rachel Alexandra, thundered their way through flawless campaigns to dominate the American Thoroughbred racing landscape in 2009. Their respective history-making seasons set the stage for a battle between the two for Horse of the Year honours.

Zenyatta, a five-year-old mare, kept her career record unblemished in 14 starts with a stunning triumph over 11 males in the Breeders' Cup Classic at Santa Anita Park in Arcadia, Calif., on November 7 to become the first female in the 26-year history of the 1¼-mi event to emerge victorious. The win vaulted her career earnings to \$5,474,580, surpassing Azeri (\$4,079,820) as the leading money-winning North American-based female horse of all time.

Rachel Alexandra notched her eighth win of a perfect season by defeating older horses in the \$750,000 Woodward Stakes at Saratoga Race Course in Saratoga Springs, N.Y., on September 5, becoming the first female in 56 editions of the race to do so. In her previous start, the three-year-old filly defeated colts in the \$1.25 million Haskell Invitational at Monmouth Park in Oceanport, N.J. Earlier in the year she won the Preakness Stakes, the second jewel of American racing's Triple Crown.

The spring classic season began in stunning fashion when Mine That Bird, an unheralded three-year-old, won the 135th running of the Kentucky Derby. Sent off at odds of more than 50-1, the bay gelding stormed from last in the field of 19 with about half a mile left to prevail by 6¾ lengths over Pioneerof the Nile and return \$103.20 to win, second only to the \$184.90 that bettors collected for Donerail's 1913 triumph in the race. It was the second Kentucky Derby triumph in three years for Mine That Bird's colourful 42-year-old jockey, Calvin Borel, who won in 2007 with Street Sense.

In a somewhat controversial decision, Borel gave up the mount on Mine That Bird to ride Rachel Alexandra in the Preakness two weeks later. It proved the right move, however, as Rachel Alexandra held off the late charge of Mine That Bird, ridden by Mike Smith, to win by one length and become the first filly in 85 years to master the 1³/₁₆-mi test.

When Rachel Alexandra was not entered to race in the third jewel, the Belmont Stakes, Borel was back up on Mine That Bird in his attempt to be-

come the first jockey in history to win all three of the year's Triple Crown races aboard different horses. The 1½-mi classic went to the stretch as Summer Bird, ridden by Kent Desormeaux, charged past Mine That Bird, which faded to third in the field of 10 after having gained the lead in the stretch. Both Summer Bird and Mine That Bird were sired by Birdstone.

The year began on an ominous note when it was announced in January that wagering on racing in the U.S. in 2008 reported a more than \$1 billion decline, or 7.2%, from the previous year. Dwindling coverage of racing in the country's daily newspapers was hit even further by the December 2008 layoffs of longtime turf writers Neil Milbert of the *Chicago Tribune* and John Scheinman of the *Washington Post*, as well as by the death on January 9 of Joe Hirsch, the "dean of American turf writers," at the age of 80. Hirsch joined the staff of the *Daily Racing Form* in 1954 and remained there until his retirement in 2003.

Among notable milestones during the year was jockey Stewart Elliott's 4,000th career victory at Philadelphia Park on January 18. Robby Albarado and Jose Flores reached the 4,000-win plateau on the same day, May 30. Retired Hall of Fame jockey Ismael ("Milo") Valenzuela died on September 2. (See OBITUARIES.) Hall of Fame inductees in 2009 included trainer Bob Baffert, jockey Eddie Maple, and horses Silverbulletday and Tiznow.

Historic Churchill Downs in Louisville, Ky., experimented with night racing for the first time by presenting three summer racing programs in June and July under portable lights. After the three night-racing cards attracted average attendance of 29,705, Churchill officials began accepting bids for the installation of permanent lighting for the track's 2010 season. An August 4 storm produced a record 15-cm (6-in) rainfall in a little over an hour in Louisville, flooding the areas surrounding the track and creating an estimated \$4 million in damage to the Kentucky Derby Museum, which was closed for the remainder of the year.

Magna Entertainment Corp. filed for bankruptcy in March and announced plans to auction off its racing properties. Remington Park in Oklahoma City was sold for \$80.25 million to a subsidiary of the Chickasaw Nation, while Thistledown in North Randall, Ohio, went to Harrah's Entertainment, Inc., for \$89.5 million. Controversy continued to swirl around synthetic racing surfaces when 12 horses died from injuries suffered on the Polytrack surface at Del Mar during the southern California track's 37-day racing meet, an increase from 6 in 2008 and 8 in 2007.

(JOHN G. BROKOPP)

International. Thoroughbred horse racing prize money in Britain and Ireland fell in 2009. It had also dropped over recent years in Germany and Italy. Only in France did it remain strong, thanks to progressive reductions in the pari-mutuel takeout since 1999. The

Thoroughbred filly Rachel Alexandra (right) charges to the finish line of the Preakness Stakes on May 16 as jockey Calvin Borel glances back at the trailing pack.

Nick Wass/AP

number of horses in training for flat racing in England fell, but the number of races increased.

Irish horses continued to produce impressive performances. Sea The Stars, ridden by Mick Kinane, was unbeaten in all six of his Group 1 races, including the 2,000 Guineas, the Derby, the Irish Champion Stakes, and the Prix de l'Arc de Triomphe in France. He was retired to Giltown Stud in Ireland. Kinane, aged 50, announced his own retirement in December. With Sea The Stars skipping the St. Leger to race in the Arc, Mastery, winner of the Italian Derby in May, took the third jewel in the British Triple Crown series. Yeats won the Ascot Gold Cup for the fourth consecutive year.

Royal Ascot attracted runners from farther afield than was usual. Scenic Blast became the fourth Australian winner of the Group 1 King's Stand Stakes since 2003. Wesley Ward, who brought six horses from Kentucky, won with two juveniles and was beaten by a neck with Cannonball in the Golden Jubilee Stakes. Vision d'Etat from France won the Prince of Wales's Stakes.

In Canada, Eye of the Leopard won the Plate Trial and was the victorious favourite in the Queen's Plate. He lost his way thereafter, finishing third to Gallant in the Prince of Wales Stakes. Perfect Shower completed the Canadian Triple Crown with a triumph in the Breeders' Stakes. Seven-year-old Viewed, which in 2008 secured veteran trainer Bart Cummings's 12th Melbourne Cup victory, captured Australia's Caulfield Cup in October but fell to seventh behind 9-1 upset winner Shocking in the Melbourne Cup. Another Cummings horse, three-year-old So You Think, won the Cox Plate, giving Cummings his 256th Group 1 career victory.

Kieren Fallon returned to the saddle on September 4 after having served an 18-month ban for taking cocaine. The six-time British champion jockey was banned by the French authorities a month after his trial on race-fixing charges was dismissed in December 2007. The British Horseracing Authority in July banned the other three professionals involved in that trial. Karl Burke, who had trained his first Group 1 winner (Lord Shanakill) the previous month, was banned for a year. Fergal Lynch, who was fined £50,000 (about \$82,000), moved to ride in the U.S., where Philadelphia Park handed him a similar ban. Darren Williams was suspended for three months and then was refused a license to ride again.

Sir Michael Stoute won his 10th training championship in Britain, and his retained jockey Ryan Moore was champion for the third time. Stoute also trained the first three finishers in the King George VI and Queen Elizabeth Stakes in July: Conduit, Tartan Bearer, and Ask.

Jean-Claude Rouget was French champion trainer for the first time. Most of his horses were ridden by Ioritz Mendizabal, who was named champion jockey for the third time, or by Christophe Lemaire, whose replacement of Christophe Soumillon as the Aga Khan's retained jockey was announced in August. Aidan O'Brien was champion trainer for the 12th time in Ireland, while his jockey Johnny Murtagh won his fourth title. Vincent O'Brien, the greatest trainer produced by Ireland and one of the most influential anywhere in the second half of the 20th century, died on June 1. (See OBITUARIES.)

Great Leighs racecourse, which opened in April 2008, ceased to operate after its meeting on January 15. While England lost a course, however, Wales gained one. Ffos Las, with flat and jumping turf tracks constructed on what was once the largest opencast mine in Europe, opened on June 18. France added a new all-weather track at Lyon, where La Soie was built on the site of the former turf course at Villeurbanne.

Nad al Sheba racecourse in Dubai (U.A.E.), where the U.S.-trained Well Armed won the Dubai World Cup by 14 lengths on March 28, was demolished immediately thereafter. Meydan racecourse was built on the same site, with a Tapeta all-weather surface replacing the dirt track. Qatar joined the countries promoting international racing as Age of Reason, trained in Dubai, won the first Qatar International Cup on February 26. (ROBERT W. CARTER)

Harness Racing. The three-year-old trotter Muscle Hill dominated the North American harness racing news in 2009 by going undefeated in a dozen starts and earning \$2,456,041. His victories included the Hambletonian, the Kentucky Futurity, the World Trotting Derby, and the Breeders Crown. Muscle Hill was touted by many veteran horsemen as the greatest trotter ever, certainly the best in recent decades. He never seemed to be working hard to win his races but always seemed to be well within himself even as his rivals were struggling across the finish line far behind him. His victory in the Hambletonian was timed in 1:50 ¹/₅ for the mile, the fastest clocking ever in the U.S.'s

greatest trotting classic, which was begun in 1926. In two seasons on the track, Muscle Hill won 20 of 21 starts and a total of \$3,273,342. His only loss occurred in the first race of his life, when he was beaten by only a neck.

The top three-year-old pacer of 2009 was Well Said, a quicksilver colt with an amazing burst of speed. He used that speed to win \$1,982,654 and 10 of 14 starts, including the Little Brown Jug, the Meadowlands Pace, and the North America Cup, a sweep that had last been accomplished in 1991. Well Said did not just defeat his rivals, however; he humiliated them by winning the Meadowlands Pace by 6 lengths and the North America Cup by 3 ¹/₄ lengths. His victory in the Little Brown Jug was closer, but he was clearly in control of that race.

Without question, the best turn-around horse of the year was the four-year-old Lucky Jim. He won 17 of his 18 starts during the season and earned \$1,063,618 after having been winless in nine starts in 2008. He had shown ability in his races as a two- and three-year-old in 2007 and 2008, respectively, but had won only twice in 20 starts over those two seasons. Lucky Jim was moved to trainer Julie Miller in 2009 and was castrated, which allowed him to focus more on racing. His only loss came in the Maple Leaf Trot, when he was caught behind a horse that slowed unexpectedly, causing Lucky Jim to lose ground. He finished fast but was still three-quarters of a length short at the finish line.

In late January, French fans saluted Pierre Levesque for having trained three consecutive winners of the Prix d'Amerique, the greatest trotting race in France. The 2009 race was taken by Meaulnes du Corta, trained by Levesque but driven by Franck Nivard. Although Meaulnes du Corta was known to be a fast horse, he was also high-strung. In the 2009 Prix d'Amerique, however, he was flawless as Nivard put him in front early in the 2,700-m race, and they won easily. Levesque also finished fifth with Offshore Dream, a horse he had trained and driven to victory in the Prix d'Amerique in 2007 and 2008.

Sweden's most prestigious race, the Elitlopp, was taken in late May by Torvald Palema, a trotter trained and driven by Ake Svanstedt. The eight-year-old stallion sprinted down the long homestretch at the Solvalla track to win over Jaded of Sweden, Offshore Dream, and another French horse, Nimrod Borealis.

Mr. Feelgood won the Inter Dominion Pacing Final in Australia in late March, becoming the first horse ever to win the Little Brown Jug in the U.S. (in 2006) and then the biggest race in Australasia. A group of New Zealanders had paid \$600,000 for Mr. Feelgood in late 2008 and shipped him to their homeland. The American import raced brilliantly, winning the Inter Dominion by a neck over three-time champion Blacks A Fake. (DEAN A. HOFFMAN)

Steeplechasing. A.P. ("Tony") McCoy on Feb. 9, 2009, became the first man to ride 3,000 winners over jumps when he charged to victory on Restless d'Artaix at Plumpton. McCoy went on to secure his 14th consecutive British jockey championship, while Paul Nicholls was champion trainer for the fourth time. Nicholls won the Cheltenham Gold Cup with Kauto Star (also the 2007 winner), the Queen Mother Champion Chase with Master Minded, and the Hennessy Cognac Gold Cup with Neptune Colonges. All three horses had been purchased in France. Mon Mome, another French-bred horse, became the fifth 100-1 winner of the Grand National and made Venetia Williams the second woman to have trained a Grand National winner.

Swiss-owned Remember Rose won the two most important chases in France: the Gras Savoye Grand Steeple-Chase de Paris and the Prix La Haye Jousselein. Spring Ghent triumphed in the Nakayama Grand Jump in Japan. The 2008 Australian Grand National winner, Ginolad, finished sixth and was later sent to be trained by Williams.

(ROBERT W. CARTER)

FOOTBALL

Association Football (Soccer). *Europe.* In 2009 European national association football (soccer) teams focused their attention on the qualifying matches for the 2010 Fédération Internationale de Football Association (FIFA) World Cup. Meanwhile, the world's richest football clubs seemed to have escaped the global economic downturn.

Florentino Pérez returned as president of Spain's Real Madrid after a three-year absence, during which time the club dispensed with three coaches and five presidents. His return prompted serious attempts to redress Real Madrid's balance with rival Barcelona, which in 2009 won the Union des Associations Européennes de Football (UEFA) Champions League and achieved a La Liga and Copa del

Michael Sohn/AP

In the last UEFA Cup final, on May 20, Brazilian international Jadson (right) kicks in the winning goal for the Ukrainian club Shakhtar Donetsk, which defeated Germany's Werder Bremen 2-1 in overtime.

Rey domestic double. Real Madrid's €411 million (€1 = about \$1.40) annual income was derived from television rights, ticket sales, and marketing, and in the summer of 2009 some €282 million was spent on eight additional players in trades, plus a new coach, Manuel Pellegrini. Real Madrid twice broke the world transfer-fee record in the space of a few days in June, paying €76 million for Brazilian international Kaká from AC Milan and then topping this by paying €94 million to Manchester United for FIFA's World Player of the Year Cristiano Ronaldo. (See BIOGRAPHIES.)

Major Spanish clubs already had a substantial quota of foreigners, with half of Barcelona's squad hailing from abroad, as well as 15 of 25 players on Real's first-team roster. Athletic Club Bilbao, on the other hand, had none, having recruited mainly from the Basque region. The UEFA, the European governing body, and its president, Michel Platini, expressed concern over the English Premier League clubs' continued reliance on foreigners, questioning the teams' ability or will to manage within their means. While Manchester United was largely quiet in the 2009 marketplace, neighbouring Manchester City continued to spend freely on new players, paying out some £200 million (\$330 million) during the year. At the start of the 2009-10 season, English Premier League clubs had players from 68 different countries, with foreign im-

ports representing nearly 60% of the 20 club rosters. FIFA fined Chelsea and banned the club from signing players until January 2011; the London-based club had allegedly induced Gael Kakuta to sign with it in 2007 while he was under contract to the French club Lens, a breach of FIFA's Status and Transfer of Players regulation.

After winning its third successive Premier League championship, Manchester United failed in its bid to retain the UEFA Champions League title. In the final against Barcelona, held on May 27 in Rome, United started as the more confident team, moving the ball around with precision. The first potential scoring opportunity came from a free kick by Ronaldo, but it was not one of his best attempts. It did cause Spanish goalkeeper Víctor Valdés to spill the ball, only for South Korean Park Ji-Sung's follow-up to be blocked for a corner kick. Barcelona took the lead in the 10th minute when the ball was moved to Cameroonian forward Samuel Eto'o on the right wing. He cut inside Serbia's Nemanja Vidic and, with just a glimpse of the goal, fired the ball in off Dutch goalkeeper Edwin Van der Sar's hand inside his near post. Eto'o's goal had an uplifting effect on the Catalans, who settled down to dominate the match with close, accurate passing. United switched to a 4-4-2 formation in the second half, but Barcelona remained the more dangerous side. A free

kick from Xavi Hernández shaved the outside of the post, and it was not until the 70th minute that Barcelona was able to add another goal. Xavi, orchestrating the strategy and pace of the game from midfield, found the United defense in some disarray. His lofted pinpoint diagonal ball was perfectly timed by the Argentine international Lionel Messi (see BIOGRAPHIES), who twisted in the air and scored with a looping header for the 2–0 win.

A week earlier, on May 20, Shakhtar Donetsk of Ukraine and Germany's Werder Bremen had faced off in the final of the last UEFA Cup. The match took place in the Sukru Saracoglu Stadium in Istanbul, the first time that a UEFA final had been held in Asia. Shakhtar adopted an attacking formation but with an isolated striker and took the lead in the 25th minute through a goal by Luiz Adriano. A pass from Romanian international Razvan Rat had been aimed at Ilsinho, who collided with the referee. Adriano then chipped the ball delicately over the advancing Tim Wiese into the German goal. Werder tied the score 10 minutes later when Naldo's strongly struck free-kick went straight at Ukrainian goalkeeper Andriy Pyatov, who fumbled the ball into his own net. The score remained even at the end of regulation, but seven minutes into overtime Jadson scored from Croatian Dario Srna's low cross to give Shakhtar a 2–1 win and Ukraine its first European trophy. All three goals had been scored by Brazilian players. In 2009–10 the UEFA Cup was to be replaced by the UEFA Europa League. With 159 teams entered, the Europa League was organized on similar but expanded lines to the Champions League.

For the first time since the English Premier League was formed in 1992, average attendance figures for the season were topped by those in the German Bundesliga, which averaged 42,565 spectators per game. One of the major factors in the boom in crowds was the comparatively low average ticket price at just over €20 (about \$30). The game in Germany also reported success at intermediate international levels, with the teams at the Under-17, Under-19, and Under-21 levels winning European championship titles. At the domestic level in Europe, teams witnessed the continuing spread of rotating the player squad system. In Germany the 18 Bundesliga clubs called upon the services of 479 players, but only 11 appeared in all 34 regular-season games. In the English Premier

League, fewer than 2% of players were always present.

In the 2009 FA Cup final on May 30, Louis Saha scored the event's fastest-ever goal in 25 seconds for Everton against Chelsea, but goals by Didier Drogba and Frank Lampard pushed Chelsea to a 2–1 victory. Wolfsburg won its first German Bundesliga title, whereas Lyon failed to secure an eighth consecutive French League championship. Standard Liege won its play-off against Anderlecht after a tie at the top of the Belgian League.

Marc Janko of Red Bulls Salzburg scored 39 goals in 34 Austrian League matches. Martin Kamburov of Lokomotiv Sofia was signed halfway through the season but finished top scorer in Bulgaria with 17 goals. David Beckham became the most-capped England outfield player in March when he passed Bobby Moore's record of 108 appearances and took his total number of appearances to 112 while on loan to AC Milan from the Los Angeles Galaxy. Daniel Jarque, the 26-year-old captain of RCD Espanyol, suffered a massive heart attack and died on August 8 during a preseason tour in Italy. Paolo Maldini, the AC Milan and Italian international defender retired at the end of the 2008–09 season, just before his 41st birthday, having completed 902 first team matches for Milan, his only club in a 25-year career; he played 126 times for Italy and was captain for eight years. (JACK ROLLIN)

The Americas. World Cup qualifying dominated association football (soccer) in 2009. Brazil comfortably won the South American qualifying tournament to retain its record of having participated in all World Cup finals. Paraguay and Chile, both under Argentine coaches (Gerardo Martino and Marcelo Bielsa, respectively), also had no problems. Argentina, however, coached by the controversial former World Cup star Diego Maradona, gained the fourth automatic qualifying place only on the last day, with below-par performances. Meanwhile, Argentine star Lionel Messi, who played professionally for Barcelona, was named *Fédération Internationale de Football Association* Player of the Year. (See BIOGRAPHIES.)

The U.S. qualified for the World Cup finals for the 6th straight time by winning the North, Central America and Caribbean zone, followed by Mexico (in its 14th finals appearance) and Honduras. In the play-off for an extra place, Uruguay narrowly beat Costa Rica. The U.S. also showed that it was becoming a power in soccer by reaching the Con-

federations Cup final, losing 3–2 to defending champion Brazil.

Argentina's Estudiantes de La Plata won the South American club championship, the Libertadores de América Cup, for the fourth time by beating Brazil's Cruzeiro 0–0, 2–1. The CONCACAF (Confederation of North, Central American and Caribbean Association Football) club championship had an all-Mexican final for the third time in four years, with Atlante beating Cruz Azul 2–0, 0–0. In the first women's Libertadores Cup, host Santos of Brazil, led by star player Marta Vieira da Silva, overwhelmed Paraguay's Universidad Autónoma de Asunción 9–0 in the final.

In the 2009 South American Recopa, Liga Deportiva Universitaria (LDU) of Quito, Ecuador, the 2008 Libertadores Cup winner, defeated Brazil's Internacional, the 2008 South American Cup winner. LDU also secured the South American Cup in a rematch against 2008 Libertadores finalist Fluminense, which just avoided relegation from the Brazilian championship won by popular Rio de Janeiro rival Flamengo.

Real Salt Lake, which was founded only in 2004, won the U.S. Major League Soccer (MLS) title for the first time. Salt Lake barely qualified for the play-offs but defeated the Columbus Crew and the Chicago Fire before beating the Los Angeles Galaxy on penalty kicks in the MLS Cup final that was held on November 22. (ERIC WEIL)

Africa and Asia. In the inaugural African Nations Championship, a competition designed for players regularly appearing in African association football (soccer) leagues, the Democratic Republic of the Congo (DRC) made a remarkable recovery to win the trophy, beating Ghana 2–0 in the final on March 8, 2009, in Abidjan, Côte d'Ivoire. Only eight days previously the DRC had been beaten 3–0 in a group match by the same Ghana team. Kaluyituka Dioko and Mbenza Bedi settled the final for the DRC, scoring goals one minute into the second period and in the 74th minute, respectively. The DRC's Tresor Mputu was named the best player of the tournament.

In the Gulf Cup final in Oman, the host country defeated Saudi Arabia 6–5 in a penalty shoot-out after a scoreless draw. During the tournament neither team had conceded a goal in 90 minutes of regular play. (JACK ROLLIN)

U.S. Football. *College.* Alabama—and Heisman Trophy-winning running back Mark Ingram—defeated Texas 37–21 in the 2009–10 Bowl Championship Series

(BCS) championship game on Jan. 7, 2010, in Pasadena, Calif. Ingram was the game's offensive Most Outstanding Player, with 116 yd rushing and two touchdowns for the Southeastern Conference (SEC) champion Crimson Tide. Alabama (14–0) knocked Texas (13–1) star quarterback Colt McCoy out of the game early with an injured throwing shoulder, and the All-American did not return in his final game for the Big 12 champion Longhorns.

The Sugar Bowl saw Florida quarterback Tim Tebow end a record-setting four-year tenure at the university by leading the Gators (13–1) to a 51–24 win over Big East champion Cincinnati, which entered the game with a 12–0 record. Tebow passed for a career-high 482 yd and three touchdowns and ran for 51 yd and another touchdown. His 533 total yards were a BCS record, and he helped Florida become the first school in the Football Bowl Subdivision (FBS) to win 13 games in consecutive seasons. Ohio State (11–2), the Big Ten winner for the fifth straight season, ended a three-game BCS losing streak with a 26–17 victory over Pacific-10 champion Oregon (10–3) in the Rose Bowl. The Fiesta Bowl pitted Western Athletic Conference winner Boise State against Mountain West champion Texas Christian University (TCU) in the first BCS bowl other than the national championship game to feature two unbeaten teams. Boise State improved to 14–0 with a 17–10 victory over TCU (12–1). In the Orange Bowl, Iowa (11–2) earned its first BCS victory by winning 24–14 over Atlantic Coast Conference champion Georgia Tech (11–3). The Hawkeyes allowed 143 yd rushing to the Yellow Jackets, who entered the game second in the nation with 307.2 yd rushing per contest.

Ingram became the first player in Alabama history to win the Heisman Trophy, beating out Stanford running back Toby Gerhart by 28 points in the closest vote in the award's 75-year history. The sophomore rushed for a school-record 1,542 yd, gaining 6.2 yd per carry and scoring 15 touchdowns in the regular season. Ingram ran for 113 yd and scored three times as then number two Alabama defeated the top-ranked Florida Gators 32–13 in the SEC championship game, putting the Crimson Tide in the BCS title game and helping end the Gators' 22-game win streak.

News involving coaches dominated college football after the regular season. Notre Dame fired Charlie Weis after the Fighting Irish lost their last four games

and replaced him with Brian Kelly, who then left Cincinnati before the Bearcats' loss to Florida in the Sugar Bowl. Florida coach Urban Meyer was on the sideline during that game, just days after he said that he was taking a leave of absence to concentrate on his health. After beating Cincinnati, however, Meyer said that he planned on returning to Florida for the 2010–11 season. Longtime Florida State coach Bobby Bowden went out a winner in the final game of his storied 57-year career, beating West Virginia 33–21 in the Gator Bowl. Bowden finished with a 389–129–4 record, the second most wins of all time in major college football, behind Joe Paterno of Penn State (394). Texas Tech fired coach Mike Leach three days before beating Michigan State 41–31 in the Alamo Bowl. Leach was let go amid allegations that he had mistreated sophomore wide receiver Adam James after that player suffered a concussion.

McCoy won the Maxwell Award for most outstanding player, the Walter Camp Player of the Year award, the Davey O'Brien National Quarterback Award, and the Johnny Unitas Golden Arm Award as top senior quarterback. Houston's Case Keenum led the FBS with 44 touchdown throws and 5,671 yd passing, more than 1,400 yd better than second-place Levi Brown of Troy. Gerhart won the Doak Walker Award as the

top running back, having finished first in the FBS with 1,871 yd rushing and tied for first with 27 touchdowns on the ground. Notre Dame's Golden Tate won the Fred Biletnikoff Award as outstanding wide receiver, with 93 catches for 1,496 yd and 15 touchdowns. Freddie Barnes of Bowling Green set the National Collegiate Athletic Association (NCAA) single-season record for receptions with 155 catches and led the FBS with 19 touchdown receptions, while Missouri's Danario Alexander topped the country with 1,781 yd receiving—11 more than Barnes. Nebraska defensive tackle Ndamukong Suh was a Heisman Trophy finalist and won the Chuck Bednarik Award and the Bronco Nagurski Trophy as defensive player of the year. He also earned the Outland Trophy as outstanding interior lineman and the Rotary Lombardi Award as outstanding lineman.

Professional. The Pittsburgh Steelers of the American Football Conference (AFC) defeated the Arizona Cardinals of the National Football Conference (NFC) 27–23 in Super Bowl XLIII in Tampa, Fla., on Feb. 1, 2009, winning the NFL's 2008–09 championship and securing a record sixth Super Bowl title. Wide receiver Santonio Holmes won the Super Bowl Most Valuable Player (MVP) award after making a spectacular 6-yd catch deep in the right

New Orleans Saints quarterback Drew Brees (9, with the ball) scrambles to evade Dallas Cowboys defensive end Jason Hatcher (97) in a National Football League game on December 19. Brees led the Saints to a franchise-record 13–3 and a spot in the NFL play-offs.

Bill Feig/AP

Football Changes the Rules

At the National Football League (NFL) annual meeting in March 2009, the league's competition committee adopted a number of new rules to be put into effect during the 2009–10 season. The most talked-about decision was not technically a new rule but rather a clarification of the existing "roughing the passer" regulation. The clarification would prohibit a defensive player who is on the ground from lunging at the lower legs of the opposing quarterback, though hand tackles from the position would still be allowed. (The prohibition did not apply to defenders who are blocked or fouled into the quarterback by another offensive player.) Violation of the revised rule would trigger a 15-yd unsportsmanlike-conduct penalty. The adjustment became known in the media as the "Brady Rule" after New England Patriots quarterback Tom Brady, who, in the first quarter of the first game of the 2008–09 season, famously suffered a torn anterior cruciate ligament and medial collateral ligament in his left knee when a defender dived forward from the ground to tackle him.

The loss of Brady—one of the biggest stars in the NFL—for the remainder of the season hurt both the Patriots and the league, and the NFL was determined to further protect its quarterbacks. There was, however, considerable backlash from both current and former players (primarily from the defensive side of the game), who felt that the emphasis on player safety was getting excessive and that the NFL was on its way toward becoming a "two-hand touch league." The critics noted that the clarification would make defend-

ers try to act against their natural instinct to pursue the ball, which would be difficult to keep in check during the fast and furious play of a typical NFL game. In addition to the Brady Rule, the league passed four more safety rules:

An offensive player may not use his helmet, forearm, or shoulder to deliver a blindside block (one that is delivered to someone who does not see it coming) to an opponent's head or neck.

Initial contact may not be made to the head of a defenseless receiver during a tackle.

On a kickoff, the receiving team may not use a blocking wedge (players standing shoulder-to-shoulder who run upfield in front of the kick returner) of more than two players.

During an onside kick, the kicking team cannot have more than five players on one side of the kicker pursuing the ball.

Another notable rule change, which had nothing to do with player safety, would allow replay officials to review whether a loose ball should be judged a fumble or an incomplete pass. This change also stemmed from a prominent event of the 2008–09 season, when an apparent fumble by Denver Broncos quarterback Jay Cutler that was recovered by the San Diego Chargers was instead ruled an incomplete pass. Denver scored a touchdown and the game-winning two-point conversion soon thereafter, and the loss nearly cost the Chargers a play-off spot.

(ADAM AUGUSTYN)

corner of the end zone with 35 seconds remaining in the game. Holmes finished with nine receptions for 131 yd and that touchdown.

The Steelers, however, did not enjoy much success in the 2009–10 season and could not recover from a five-game losing streak late in the campaign, becoming the 13th defending Super Bowl champion to miss the play-offs. It was the third consecutive time Pittsburgh (9–7) had failed to reach the play-offs the season after winning the Super Bowl (1980, 2006). Arizona went 10–6 for its first 10-win season since 1976 and clinched the NFC West title for the second consecutive season. The Cardinals had last made the play-offs in back-to-back seasons in 1974 and 1975.

The Indianapolis Colts and the New Orleans Saints flirted with undefeated seasons, winning their first 14 and 13 games, respectively. The Colts' start gave them an NFL-record 23-game regular-season winning streak dating to the previous season. Indianapolis finished with an AFC-best 14–2 and won the AFC South for the sixth time in seven seasons behind quarterback Peyton Manning, who won the league MVP award for a record fourth time. New Orleans had the best record in the NFC at 13–3,

setting a franchise record for victories. New Orleans quarterback Drew Brees broke the NFL record for completion percentage in a season with 70.60.

The Minnesota Vikings (12–4) finished with their best record since 1998 and won the NFC North in their first season with Brett Favre at quarterback. Minnesota signed Favre in the off-season, and the 40-year-old veteran had one of the best years of his career. Favre threw for more than 30 touchdowns for the ninth time in his 18-year career as a starter and for more than 4,000 yd for the sixth time, finishing with a career-low seven interceptions. Quarterback Tom Brady returned from a knee injury that kept him out for almost all of the 2008–09 season to lead the New England Patriots (10–6) back to the play-offs and earn Comeback Player of the Year honours. New England won the AFC East after having become the first team to finish 11–5 and still miss the play-offs in 2008–09. Patriots wide receiver Randy Moss (*see* BIOGRAPHIES) passed Buffalo Bills Terrell Owens for second all-time receiver with 148 touchdown catches, behind Jerry Rice (197).

The Dallas Cowboys (11–5) opened their new \$1.15 billion stadium and won their second NFC East title in three

seasons by defeating the Philadelphia Eagles (11–5) on the last day of the regular season. Philadelphia, which signed quarterback Michael Vick after he spent 18 months in a federal prison for his role in a dogfighting ring, and Green Bay (11–5) were the NFC wild cards.

The San Diego Chargers (13–3) won their final 11 games and clinched the AFC West title for the fourth straight season. Chargers running back LaDainian Tomlinson became the fastest player in NFL history to reach 150 touchdowns, doing so in his 137th game. The Cincinnati Bengals (10–6) captured the AFC North for the first time since 2005. The New York Jets (9–7) and the Baltimore Ravens (9–7) qualified as the AFC wild cards.

(PAUL DIGIACOMO)

Canadian Football. The Montreal Alouettes won the 2009 Canadian Football League (CFL) championship with an astounding 28–27 victory over the Saskatchewan Roughriders on November 29 in front of more than 46,000 fans in McMahon Stadium in Calgary, Alta. Down by 10 points going into the fourth quarter, Montreal quarterback Anthony Calvillo threw two touchdown passes (to running back Avon Cobourne and slotback Ben Cahoon) and took the Alouettes within two points at 27–25. A

failed 43-yd field goal attempt by Montreal kicker Damon Duval in the game's final moments triggered a premature celebration by the Saskatchewan players; however, an extra lineman on the field led officials to call a penalty against the Roughriders. With no time left on the clock, Duval was given a second try at 33 yd and scored to give Montreal the win. Calvillo passed for 314 yd with no interceptions. Cobourne and Cahoon were named the Most Valuable Player and the Most Valuable Canadian, respectively.

Montreal (15–3) topped the CFL's East Division and thrashed the British Columbia Lions (8–10) by a score of 56–18 in the Playoffs Finals to qualify for the Grey Cup. West Division champion Saskatchewan (10–7–1) reached the Grey Cup with a 27–17 win over the Calgary Stampeders (10–7–1) in the other Final.

Calvillo, who led the league with 26 touchdowns and a 72.0% completion rate, was named the regular-season Most Outstanding Player for the second straight year and the third time overall. Montreal also boasted the Most Outstanding Offensive Lineman, Scott Flory, and the Most Outstanding Special Teams Player, kick return specialist Larry Taylor. Defensive end Ricky Foley of the B.C. Lions was voted the Most Outstanding Canadian.

(MELINDA C. SHEPHERD)

Australian Football. Geelong won its second Australian Football League (AFL) premiership in three years with a hard-fought 12.8 (80)–9.14 (68) victory over St. Kilda in the Grand Final at the Melbourne Cricket Ground on Sept. 26, 2009. A crowd of 99,251 braved cold and wet conditions to see the favourites come from behind at three-quarter time to snatch victory in a thrilling last quarter. The stars of Geelong's victory were Paul Chapman, who was voted the Norm Smith medalist as best player in the Grand Final; Harry Taylor, who helped shut down St. Kilda's ace forward Nick Riewoldt; Gary Ablett; and Jimmy Bartel. Ablett won the Brownlow Medal, for the AFL's best and fairest player in the 22-round home-and-away season, and took home the Leigh Matthews Trophy, the AFL Players' Association most valuable player award, for a record third straight year.

Among the other home-and-away individual honours, the Coleman Medal for leading goal kicker went to Carlton's Brendan Fevola with 86 goals; he scored three more in the finals. Daniel

Rich of the Brisbane Lions received the Rising Star Award for best young player, and Riewoldt was named the All-Australian captain. (GREG HOBBS)

Rugby Football. In 2009 the New Zealand All Blacks reclaimed their crown as the world's best Rugby Union team, overtaking South Africa with a stunning finish to the year. South Africa, the 2007 World Cup champion, beat the British and Irish Lions 2–1 in an epic three-Test series and then lifted the Tri-Nations crown in September. The South Africans, however, failed to continue this form on their European tour in November, losing to both France and Ireland. These defeats allowed New Zealand to end the year as the world's number one-ranked side, ahead of South Africa and Australia. In many ways it was remarkable that the All Blacks managed to claim the top spot, as they had one of their worst years, losing four times in 12 months—three times to South Africa and once to France. They finished strong, however, going unbeaten in Europe with wins over England, Wales, Italy, and France.

Australia went some way to redeeming an awful year when it beat Wales 33–12 in the last game of the year. Before that match Australia had finished at the bottom of the Tri-Nations, failed to qualify a side in the Super 14 playoffs, and lost to Scotland for the first time in 27 years.

In Europe the game was all about Ireland, which finished the year ranked fourth. Under the captaincy of Brian O'Driscoll, Ireland won its first Six Nations Grand Slam in 61 years. O'Driscoll also led Leinster to that club's first Heineken Cup victory before another Irishman, Paul O'Connell, led the Lions' tour to South Africa. Ireland went unbeaten through its three Tests in November to become the first major Test side since the game turned professional in 1995 to compete an entire calendar year without losing. To cap an incredible career over the past few years, O'Driscoll was named *Rugby World* magazine's Player of the Decade.

Unfavourable headlines followed the English game throughout 2009. In January England prop Matt Stevens was banned for two years after having tested positive for cocaine, and then Justin Harrison was banned for eight months after he acknowledged having taken the drug. This was followed by bans for three other players who refused to take drug tests. One of English rugby's most famous clubs, Harlequins, was embroiled in a scandal of its own.

Dean Richards, the team's director of rugby, was banned, along with wing Tom Williams, after they admitted to having used fake blood to pull off a substitution in a Heineken Cup match.

On the domestic front, the Pretoria-based Blue Bulls lifted the Super 14 trophy after beating the Chiefs from New Zealand in the final. In Europe, Leicester was the English champion, and Munster picked up the Magners League.

Late in the year rugby made international headlines twice. First, rugby sevens was readmitted into the Olympic Games, beginning with the Rio de Janeiro Games in 2016. Then *Invictus*, a Hollywood blockbuster movie about South Africa's upset victory in the 1995 World Cup, had its premiere in Los Angeles in December. (PAUL MORGAN)

GOLF

One of the most dramatic golf stories to capture the public's imagination in 2009 was the attempt in July by 59-year-old Tom Watson of the U.S. to win a record-equaling sixth British Open championship and thus become the sport's oldest major winner by 11 years. Nine months after having had hip-replacement surgery, Watson was one putt away from accomplishing this feat on the same Turnberry course in Scotland where he had beaten American Jack Nicklaus in 1977 for the second of his five victories. On that occasion a closing birdie clinched the title for Watson, whereas this time a par four would have sufficed, but Watson's approach went just over the green; he putted 3 m (about 10 ft) past the hole. He missed his putt from there and fell into a tie with fellow American Stewart Cink at a two-under-par 278. The four-hole playoff proved to be a one-sided affair, though, as Watson appeared to run out of steam and Cink captured his first major by six strokes. On receiving the Claret Jug, the 36-year-old Cink paid tribute to a true legend of the game, whose own words summed up the occasion: "It would have been a hell of a story," said Watson. "It wasn't to be. And yes, it's a great disappointment."

In the Masters Tournament at the Augusta (Ga.) National Golf Club in April, 48-year-old American Kenny Perry almost rewrote the record books as well. Perry was two strokes in front with two holes to play, but he bogeyed both and finished regulation play alongside compatriot Chad Campbell and Argentina's Angel Cabrera with an aggregate score of 276, 12 under par. Campbell dropped

out at the first hole of sudden death, and on the next hole Perry bogeyed again to hand the title to 2007 U.S. Open winner Cabrera, who thus became the first South American golfer to win two majors.

Former world number one David Duval had dropped to 882nd in the rankings by the start in June of the 2009 U.S. Open at Bethpage Black on New York's Long Island, but in a year destined to be remembered for surprises and upsets, he finished joint runner-up with two other Americans, Ricky Barnes (himself ranked 519th) and Phil Mickelson, for whom it was a record fifth second place in the event. The player to deny them all was another American, 29-year-old Lucas Glover, whose previous best performance in a major had been 20th place at the 2007 Masters. The unassuming Glover took the title by two strokes with a four-under-par total of 276.

After reconstructive surgery following his 2008 U.S. Open victory, world number one Eldrick ("Tiger") Woods had spent eight months recuperating and struggled in the first three majors of the season, finishing in a tie for sixth place in both the Masters and the U.S. Open and then in the British Open failing to make the cut for the first time since the 2006 U.S. Open. In March he won his third event of the season, however, and after four more victories in his next 10 starts, he finally looked set to add to his major haul in the Professional Golfers' Association (PGA) championship at Hazeltine National in Chaska, Minn. Woods was two strokes in front after 54

holes, and all of his previous 14 major successes had come when he was in the lead with a round to go. On this occasion, however, he was overtaken by 37-year-old South Korean Yang Yong-Eun, who scored one of the biggest upsets of the sporting year and became the first Asian male golfer to win a major. Only 478th in the world at the start of the season, Yang had already risen to 110th by the time of the PGA championship. A chip-in eagle at the 14th hole and a closing birdie—in which he hit a 190-m (about 620-ft) approach over trees and a greenside bunker to within 4 m (about 13 ft) of the flag—were the defining moments of Yang's historic three-stroke eight-under-par victory.

Woods had a small measure of revenge two months later when he and Yang met again in the Presidents Cup singles at Harding Park in San Francisco. A crushing 6 and 5 victory over Yang gave Woods a perfect five wins out of five matchups as the United States defeated the International side 19½–14½. There was also success for the U.S. teams in the women's professional Solheim Cup against Europe (16–12) and the men's amateur Walker Cup against Britain and Ireland (16½–9½). At the Mission Hills course in Shenzhen, China, in November, Italy captured its first World Cup as brothers Edoardo and Francesco Molinari rallied on the final day to beat Ireland and Sweden, tied for second place, by one point.

For the second time in three years, Woods captured the \$10 million bonus on offer in the PGA Tour's FedEx Cup

play-off series; he finished the year as leading money winner for the ninth time with \$10,508,163. His victories included the World Golf Championships–BridgeStone Invitational for a seventh time. The other three titles in the WGC series were captured by Australian Geoff Ogilvy (Accenture Match Play in Marana, Ariz.) and Mickelson (CA Championship in Doral, Fla.), and the HSBC Champions in Shanghai). On December 11, following revelations and his admission that he had engaged in marital infidelities, Woods announced that he would be taking an "indefinite break" from professional golf.

Lorena Ochoa of Mexico continued to hold the world number one position throughout 2009, but the year saw four new Ladies Professional Golf Association (LPGA) major champions. American Brittany Lincicome was successful at the Kraft Nabisco Championship in Rancho Mirage, Calif.; Swedish rookie Anna Nordqvist captured the McDonald's LPGA Championship in Havre de Grace, Md.; South Korean Ji Eun-Hee won the U.S. Women's Open at Saucon Valley in Bethlehem, Pa.; and the Ricoh Women's British Open trophy was lifted at Royal Lytham & St. Annes in Lancashire, Eng., by Scotland's Catriona Matthew just 11 weeks after she had given birth to her second child and only a week after she and her husband had had to flee an apartment fire in France. Rookie of the Year Shin Ji-Yai of South Korea led the LPGA money list with \$1,807,334 and nearly upset Ochoa for Player of the Year honours.

The U.S. and British men's amateur championships were notable for the fact that both produced their youngest-ever winners. In the British Amateur at Formby in England, Italian Matteo Manassero triumphed at age 16; a month later he finished 13th in the British Open. At the U.S. Amateur at Southern Hills in Tulsa, Okla., 17-year-old South Korean An Byeong-Hun, the son of two Olympic table tennis medalists, was victorious.

The European Tour had seen only one amateur winner prior to the 2009 season, but two more arrived in the space of four months. First, 18-year-old New Zealander Danny Lee—An's predecessor as U.S. Amateur champion—captured the Johnnie Walker Classic in Perth, Australia, to become the circuit's youngest-ever champion. Then Ireland's 22-year-old Shane Lowry won the Irish Open. Both turned professional soon afterward. The tour culminated in the inaugural Dubai World Champi-

onship for the leading 60 money winners, but economic pressures led to a 25% reduction (from \$10 million to \$7.5 million) in both the event prize fund and the season-ending bonus money. England's Lee Westwood won the event by six strokes and topped the final money list with a season total of €4,237,762 (about \$6,357,000).

A campaign to have golf included in the Olympic Games for the first time since 1904 was successful on the second attempt, with the International Olympic Committee voting in October to include the sport in the program for the Rio de Janeiro Games in 2016. The plan was for men's and women's 72-hole stroke play events involving the world's top 15 players and two representatives from different countries to make up 60-strong fields. Mickelson commented: "Everybody that I have talked to is excited. . . . It is the greatest thing to happen to our sport." (MARK GARROD)

GYMNASTICS

At the 2009 artistic gymnastics world championships, held in October in London, China earned the most medals with nine, including six gold. The U.S. secured five medals (two gold), while Romania took four (two gold).

American teammates Bridget Sloan and Rebecca Bross battled for the women's all-around title. Bross led after the first three rounds of competition, but after she suffered a fall during her floor routine in the last rotation, it was Sloan who won the title with a score of 57.825 to Bross's 57.775. Japan's Koko Tsurumi (57.175) took the bronze. In the apparatus finals another American, Kayla Williams, won the gold medal in the vault; Switzerland's Ariella Kaeslin secured the silver, and France's Youna Dufournet earned the bronze. He Kexin of China, the uneven bars champion at the 2008 Olympic Games, defended her title, followed by Tsurumi in second place; Bross and Romania's Ana Porgras tied for third place. China's Deng Linlin won the balance beam title, ahead of Lauren Mitchell of Australia and Ivana Hong of the U.S. in second and third place, respectively. The floor exercise title went to British gymnast Elizabeth Tweddle; Mitchell was second, and China's Sui Lu was third.

On the men's side, Kohei Uchimura of Japan won the all-around title, scoring 91.500 points. Britain's Daniel Keatings (88.925) took second, and Russia's Yuri Ryazanov (88.400) was third. Sadly,

Koji Sasahara/AP

Yevgeniya Kanayeva of Russia displays her flexibility in the ball event at the rhythmic gymnastics world championships in September.

Kanayeva dominated the competition, with six gold medals.

Ryazanov, age 22, was killed in a car accident just days after the world championships concluded.

Gymnasts from China triumphed in four of the six men's individual events. Zhang Hongtao won the pommel horse, followed by Hungary's Krisztian Berki and Australia's Prashanth Sellathurai. On rings Yan Mingyong edged out 36-year-old former champion Iordan Iovtchev of Bulgaria and Ukraine's Oleksandr Vorobiov. Wang Guanyin took the parallel bars, with his teammate Feng Zhe in second place and Japan's Kazuhito Tanaka in third. Finally, Zou Kai won horizontal bar, ahead of Dutch gymnast Epke Zonderland and Igor Cassina of Italy in second and third place, respectively. Marian Dragulescu of Romania earned both of the remaining gold medals: in the floor exercise, followed by Zou and Israel's Alexander Shatilov, and in the vault, with Romania's Flavius Koczi second and Russia's Anton Golotsutskov third.

At the rhythmic gymnastics world championships, held in Mie, Japan, during September 7–13, Russian Yevgeniya Kanayeva won all six events in which she competed. She took the gold medal in all four apparatus finals (rope, hoop,

ball, and ribbon) and in the individual all-around competition, as well as securing the highest personal score in Russia's team gold. (Kanayeva's achievement matched Belarusian gymnastics legend Vitaly Sherbo's record of six gold medals at one competition, which he earned at the 1992 Olympic Games in Barcelona.) Italy pulled ahead of Belarus and Russia to win the group all-around event. (LUAN PESZEK)

ICE HOCKEY

North America. In the National Hockey League (NHL), 21-year-old Sid ("the Kid") Crosby, as captain of the Pittsburgh Penguins, played like a savvy veteran as he led his team to the 2009 Stanley Cup championship, his first NHL title and the third in the history of the franchise. Capping a very entertaining postseason for the NHL, the Penguins met the Detroit Red Wings in a rematch of the 2008 final, which Detroit had won in six games. The Wings were favoured to repeat and quickly won the first two games in the 2009 best-of-seven final. Pittsburgh, however, led by Crosby and forward Evgeni Malkin, stormed back to win four of the next five games to capture the championship with a tense 2–1 victory in game seven. The thrilling final was instantly hailed as a classic, and it was sweet redemption for Pittsburgh's Canadian-born captain and his relatively young squad. Malkin became the first Russian to be presented with the Conn Smythe Trophy as the most valuable player in the play-offs. Malkin was also the first player to lead the NHL in scoring in both the regular season (113) and the play-offs (36) since former Pittsburgh star (now co-owner) Mario Lemieux did it in 1992.

While Malkin topped the league in points during the season with 35 goals and 70 assists, it was once again the Washington Capitals' left winger Alexander Ovechkin who dazzled with the most goals (56). It was the third time in four seasons that the flashy Russian had topped the 50-goal threshold. Ovechkin was the runaway winner of the Hart Trophy, presented to the most valuable player during the regular season. Ovechkin became the first repeat winner of that award since goaltender Dominik Hasek of the Buffalo Sabres won back-to-back Harts in 1997 and 1998. Colorado's Joe Sakic, one of the league's greatest players, retired at the end of the season, leaving the game as the eighth all-time leading scorer in

NHL history, with 1,641 points accumulated during his 20 seasons.

One of the more heartwarming stories of the regular season belonged to 35-year-old goaltender Tim Thomas, an American who had bounced around the minors and Europe for almost a decade before finding a home in the NHL with the Boston Bruins. Thomas had a remarkable season, leading the league in save percentage (.933) and goals-against average (2.10), and was presented with the Vezina Trophy as the NHL's top goaltender. Other individual trophy winners included Columbus goaltender Steve Mason, who was named Rookie of the Year; Boston's Zdeno Chara, top defenseman; and Boston's Claude Julien, Coach of the Year.

Another highlight from the season involved New Jersey Devils goaltender Martin Brodeur (see BIOGRAPHIES), who returned to the lineup after a long absence due to injury and promptly passed the legendary Patrick Roy for the most career victories by a netminder. Brodeur recorded his 552nd victory on March 17, 2009, with a 3–2 victory over the Chicago Blackhawks. The NHL staged another successful Winter Classic, a regular-season game played outdoors; this time the Blackhawks and Detroit played at Chicago's Wrigley Field, a historic baseball park.

The San Jose Sharks, with 117 points, were the league's best team during the regular season, but they bowed out of

Stanley Cup contention early, losing to Anaheim in the first round. The Columbus Blue Jackets played well enough to qualify for a play-off berth for the first time in the eight-year history of the franchise. On the downside, one of the most disappointing seasons belonged to the iconic Montreal Canadiens, a franchise that celebrated its centennial season but suffered through controversy on and off the ice. There were reports that two of Montreal's players were socializing with a gangster, and the owner had begun the process of selling the team. Coach Guy Carbonneau was fired mid-season and replaced by general manager Bob Gainey, but the team was swept out of the play-offs in four consecutive games by Boston in the first round.

At the end of the season, the Phoenix Coyotes filed for Chapter 11 bankruptcy protection, with owner Jerry Moyes saying that he had lost more than \$200 million since 2001. As a result, protracted legal proceedings ensued as the bankruptcy court had to decide who would take over the team and whether a new owner had the right to move the franchise.

July 1, the day that players without contracts became free agents, brought the usual frenetic roster changes. Among the biggest moves, Marian Hossa left Detroit to sign with Chicago, Marian Gaborik departed Minnesota for a contract with the New York

Rangers, Brian Gionta joined Montreal after playing for New Jersey, and Alex Kovalev moved from Montreal to Ottawa. Chris Pronger, one of the best defensemen in the league, was traded from Anaheim to Philadelphia.

International. Just as the Stanley Cup championship was a repeat of the previous year's NHL final, so too was the International Ice Hockey Federation (IIHF) men's world championship as Russia and Canada faced off in Bern, Switz., in May 2009. Once again the Russians captured the gold, with a 2–1 victory in a thrilling, well-played game that careened from one end of the ice to the other. Aleksandr Radulov scored the winning goal in the second period, finishing off a 2-on-1 break. Oleg Saprykin had tied the game after Jason Spezza put Canada into a short-lived 1–0 lead. Both goaltenders, Ilya Bryzgalov for Russia and Canada's Dwayne Roloson, were spectacular, and each made several tough saves to keep the game close. Though he did not score, Russian forward Ilya Kovalchuk was a dominant force as he was double-shifted throughout the final and spent more than half of the game on the ice. Kovalchuk was named Most Valuable Player (MVP) and top forward of the tournament. Andrei Mezin of Belarus was honoured as the top goaltender at the championship, and Canada's Shea Weber was named best defenseman. Martin St. Louis of Canada topped all scorers with 15 points in nine games.

In the bronze medal game, Sweden defeated the United States 4–2 as Carl Gunnarsson scored the winner in the third period. It was a measure of redemption for Sweden, which had lost in the bronze medal match at the two previous world championships. The Swedes won the medal with their backup goaltender, Stefan Liv, after the projected starter, Jonas Gustavsson, returned to Sweden to be with his ailing mother. Liv made 37 saves as the Americans outshot the Swedes 39–28.

At the women's IIHF world championship, which was played in Hämeenlinna, Fin., in April, international powerhouses Canada and the U.S. again faced off for the gold medal. For the second year in a row—and for the third time since the women's world championship was established—the Americans emerged victorious, pulling away in the third period en route to a 4–1 win. The game, closer and more exciting than the final score might indicate, was clinched by Caitlin Cahow's second goal of the game, which gave her squad

Pittsburgh Penguins forward Evgeni Malkin (right) maneuvers the puck away from Brian Rafalski of the Detroit Red Wings in game six of the NHL Stanley Cup finals on June 9. Malkin won the Conn Smythe Trophy as the most valuable player in the tournament.

PCN Black/Alamy

Gold medalist Kim Yu-Na of South Korea displays her graceful style in the final free skate at the world figure skating championships in March.

a 3–1 lead midway through the final period. The two goals were Cahow's first of the tournament. The U.S. goaltender Jessie Vetter finished with a spectacular 39 saves. Her counterpart, Canada's Charline Labonte, was named the event's best goaltender by the tournament directors, but Vetter was given the nod as the all-star netminder by the journalists on hand. Finland's Jenni Hiirikoski was acknowledged by the directors as the top defender, while Canada's Hayley Wickenheiser was named top forward. In the bronze medal game, Finland defeated rival Sweden 4–1 as Michelle Karvinen scored twice for the Finns.

At the IIHF under-20 tournament, the hockey world was given a chance to watch up-and-coming Canadian star forward John Tavares, who was named the event's MVP and later became the first player selected in the NHL entry draft by the New York Islanders. Tavares finished the tournament with 15 points, second only to countryman Cody Hodgson's 16 points, as Canada won its fifth consecutive gold medal, thanks to a 5–1 victory over Sweden on January 5 in the final in Ottawa. Hodgson scored twice in the final game, which was played before a tournament record crowd of 20,380 spectators. Russia defeated Slovakia 5–2 to secure the bronze medal.

(PAUL HUNTER)

ICE SKATING

Figure Skating. With the 2010 Winter Olympics in Vancouver on the horizon, 2009 was an important year for figure skaters, and South Korea's Kim Yu-Na (see BIOGRAPHIES) established herself as the one to beat in Canada. At the International Skating Union world figure skating championships, held in Los Angeles in March, Kim had a record-setting performance to give her homeland its first senior-level world figure skating title. Kim took a big lead in the short program and went on to finish with a record 207.71 points (8.19 better than the previous mark, set in 2006 by her longtime rival Mao Asada of Japan). Kim was a stunning 16.4 points ahead of silver medalist Joannie Rochette of Canada and nearly 20 points ahead of Asada, the defending champion, who finished fourth behind the 2007 winner,

Miki Ando of Japan. Before her triumph in Los Angeles, Kim also posted victories at Skate America, the Cup of China, and the Four Continents event in February. She failed to win her third straight Grand Prix title, however, finishing second to Asada.

While Kim dominated at the world championships, the American women failed to medal for a third straight year. With Alissa Cizisny finishing in 11th place and Rachel Flatt in 5th, the combined placement of 16 meant that the U.S. would be sending only two women to the Olympics for just the second time since 1924.

On the men's side, Evan Lysacek, despite having a stress fracture in his left foot, became the first American man to win the world championship since Todd Eldredge in 1996. Patrick Chan of Canada took the silver after having captured the gold at the Four Continents in Vancouver. Former world champion Brian Joubert of France, who won the European figure skating championships in Helsinki in January, took the bronze in Los Angeles.

Ice dancers Oksana Domnina and Maksim Shabalin edged Tanith Belbin

and Benjamin Agosto of the U.S. to win the gold medal, Russia's first medal of any kind at the world championships since 2005. Canada's Tessa Virtue and Scott Muir took home the bronze. Russia also won a bronze medal in pairs, with Yuko Kawaguchi and Aleksandr Smirnov finishing behind silver medalists Zhang Dan and Zhang Hao of China and Germany's gold-winning duo of Aliona Savchenko and Robin Szolkowy. Savchenko and partner Szolkowy also won the gold at the European championships.

Speed Skating. American Shani Davis was again the star of the 2008–09 speed-skating season, defending his World Cup titles in the 1,000 m and 1,500 m while setting world records in both of those distances. At the World Cup speed-skating final near Salt Lake City, Utah, in March 2009, Davis became the first skater to go 1,500 m in less than 1 min 42 sec, finishing with a time of 1 min 41.80 sec. It was his fourth world record at that distance. That win also gave Davis his second straight World Cup season title in the 1,500 m, well ahead of fellow American Trevor Marsicano in second place.

One day after establishing the 1,500-m world record, Davis—along with Marsicano—skated in the 1,000 m. Marsicano set the world mark at 1 min 6.88 sec, but that record proved to be short-lived when Davis later finished in 1 min 6.42 sec. Davis won the season title in the 1,000 m for the second straight year and the third time in four seasons. China's Yu Fengtong took the men's 500-m title.

Davis also set a track record with a time of 1 min 8.66 sec to win the 1,000 m and earn the overall title at the world sprint speed-skating championships, held in Moscow in January. At the world single-distance championships in March, Davis and Marsicano won gold and silver medals, respectively, in the 1,500 m on the Richmond Olympic Oval, the speed-skating venue for the 2010 Vancouver Games. Marsicano also won the 1,000 m, while Davis finished third. Sven Kramer of The Netherlands again dominated the longer distances. He won both the 5,000- and 10,000-m races in Vancouver and at the world championships in Hamar, Nor., in February and secured his third straight all-around speed-skating title.

On the women's side, a pair of Canadians won World Cup season titles; Christine Nesbitt took the 1,000 m, and Kristina Groves won the 1,500-m crown for the second straight year. Germany's Jenny Wolf continued her dominance in the 500 m with her fourth consecutive season title. At the world championships in Hamar, Czech skater Martina Sablikova earned her first all-around title with victories in the 3,000- and 5,000-m races; Nesbitt and Groves won the 500 m and 1,500 m, respectively. In July five-time Olympic gold medalist Claudia Pechstein of Germany received a two-year ban because of blood doping. She would therefore miss the Vancouver Games.

At the ISU short-track world championships, held in Vienna in March, South Korea's Lee Ho-Suk won the 1,000-m and 1,500-m events and finished second in the 3,000 m to take the men's overall title. Wang Meng of China secured her second consecutive women's overall title with victories in the 500 m and 1,000 m.

(PAUL DIGIACOMO)

SAILING (YACHTING)

The America's Cup, sailing's most prestigious race, was in litigation throughout most of 2009. In the summer the New York Supreme Court ruled 6-0 in favour of the Golden Gate Yacht Club (GGYC), directing that the Deed of Gift challenge be scheduled for February 2010. As the official challenger, GGYC specified the boat: a massive multihull, with maximum dimensions of 27.5 m (90 ft) both on the waterline and on the beam. Société Nautique de Genève (SNG), the defender, selected the emirate of Ras al-Khaimah, in the U.A.E., as the venue, but the court later ruled that under the Deed of Gift the race had to take place either in the Southern Hemisphere or in Valencia, Spain. In November SNG issued the official notice that the Cup would take place in Valencia on Feb. 1-25, 2010.

At Key West Race Week in January 2009, entries were down 30%, but three racing circles provided the superb competition expected in this nearly ideal location for winter sailing. The *Melges 32 Star* was declared the boat of the week. In February a new winter venue was established by the Royal Ocean

On November 8 the trimaran l'Hydroptère, under the command of French skipper Alain Thébault, surges to a world-record sailing speed of 50.17 knots over one nautical mile.

Racing Club: the Caribbean 600, a distance race from Antigua that used other islands as turning marks and finished off the coast of English Harbour, where it started. A wide variety of boats participated, from the supermaxis to family-crewed Swans taking a break from recreational cruising. The 30.5-m (100-ft) supermaxi *ICAP Leopard* set a monohull offshore record (44 hr 5 min 14 sec) and finished second on corrected time behind the 15-m (50-ft) canting keel *Lee Overlay Partners*.

The 2008-09 Volvo Ocean Race was completed in June after eight months. Eight 21.3-m (70-ft) box-rule boats started and seven finished the 10-leg circumnavigation, but four boats were required to withdraw from one or more legs owing to damage. (Volvo 70s sail routinely in the 30-knot range and are vulnerable to underwater damage by unseen objects.) The boats raced inshore between legs, adding points to their score in round-the-buoy events. *Ericsson 4* and skipper Torben Grael of Sweden won decisively.

The Transpacific Race in July allowed the supermaxis to join the fleet, with their own prizes. Predictably, a new course record was established by the 30.5-m (100-ft) *Alfa Romeo* in 5 days 14 hr 36 min. *Samba Pa Ti*, a modified Transpac 52 (TP52), was the corrected-

time winner. In the Fastnet Race, held in August, the big boats dominated the results. *ICAP Leopard* was first to finish, and the new 22-m (72-ft) IRC-handicapped *RAN 2* won on IRC-corrected time.

Banque Populaire V, the world's largest trimaran at 40 m (131 ft), set a Transatlantic sailing record in 3 days 15 hr 25 min 48 sec, achieving an average speed of 32.9 knots. It also established a new 24-hour distance mark, logging 907.9 nautical miles at an average speed of 37.8 knots, with a top speed of 47 knots. The 18-m (59-ft) hydrofoil trimaran *l'Hydroptère* set world records at two distances in late 2009, with an average speed of 51.36 knots over 500 m on September 4 and an average speed of 50.17 knots over one nautical mile on November 8. Michel Desjoyeaux won his second Vendée Globe race (solo nonstop circumnavigation) in a water-ballasted monohull IMOCA 60 and set a new record of 84 days 3 hr 9 min.

Offshore, the 2009 Sydney Hobart race was held at the end of December. *Wild Oats XI*, which took its fourth consecutive first-to-finish-line honours in 2008, was second behind *Alfa Romeo*, a 30.5-m yacht from New Zealand. *Two True* was declared the overall winner after a collision protest was dismissed.

(JOHN B. BONDS)

SKIING

Alpine Skiing. The 2008-09 Alpine skiing season saw Norway's Aksel Lund Svindal (see BIOGRAPHIES) make a triumphant return to the top as the men's overall International Ski Federation (FIS) World Cup title winner. Svindal had won the men's overall crown in the 2006-07 series but missed most of the 2007-08 season owing to injuries. American Lindsey Vonn won the women's overall World Cup and showed for the second straight year why she was considered one of the best skiers in the world.

Svindal held off Austria's Benjamin Raich by only two points in 2008-09; he captured three World Cup races, and Raich won four. Svindal also took the supergiant slalom (super G) season title and finished in the top five in both the downhill and the giant slalom (GS) standings. The men's downhill title was won for the third time in five seasons

by Michael Walchhofer of Austria. Switzerland's Didier Cuche secured his first GS season title after reigning as the downhill champion in 2006–07 and 2007–08. In slalom, France's Jean-Baptiste Grange cruised to his first season title by 87 points. Carlo Janka of Switzerland earned his first World Cup season crown in combined.

Vonn easily finished 364 points ahead of Germany's Maria Riesch to become the first American woman to win two World Cup overall titles. She also dominated in downhill to take her second straight season title in that discipline and secured her first crown in super G after winning the final race of the season. Overall in 2008–09, Vonn finished on the podium 16 times and won 9 World Cup races. After having won the super G and combined crowns in 2007–08, Riesch cruised to the slalom season title by 211 points over Sarka Zahrobska of the Czech Republic, with Vonn in third place. The women's GS champion was not so clear-cut, but Finland's Tanja Poutiainen, the 2005 season winner in the discipline, hung on to beat Kathrin Zettel of Austria by just seven points. Sweden's Anja Pärson, a five-time Olympic medalist, won the combined discipline by 25 points over Vonn for her seventh career World Cup season title and her first since 2005–06.

At the 2009 FIS Alpine world ski championships in Val d'Isère, France, in February, Svindal took the gold medal in super combined and the bronze in super G. Cuche won the gold in super G, with Janka earning the gold in GS. Canada's John Kucera secured his first world championship title, in the downhill. On the women's side, Vonn won the gold in downhill and super G, and Zettel captured the super combined, while German teammates Riesch and Kathrin Hölzl took the gold in slalom and GS, respectively.

Nordic Skiing. Dario Cologna of Switzerland earned the men's overall cross-country World Cup title in 2008–09 by winning the last competition of the season. Norway's Ola Vigen Hattestad won the men's sprint title for the second consecutive season and earned gold medals in individual sprint and team sprint at the 2009 FIS Nordic world ski championships in Liberec, Czech Rep. Pietro Piller Cottrer of Italy won the World Cup season title in distance. In the women's field, Poland's Justyna Kowalczyk ended the two-year run of Finland's Virpi Kuitunen as overall and distance champion by taking the season titles in both disciplines.

Kowalczyk also won two gold medals and a bronze in Liberec. Petra Majdic of Slovenia won the sprint title for the second straight season.

In Nordic combined, Finland's Anssi Koivuranta captured his first overall title, posting seven World Cup victories. Magnus Moan of Norway finished second, and American Bill Demong placed third for the second straight season. Gregor Schlierenzauer of Austria was the overall ski jumping champion after becoming the first person to win 13 World Cup events and score more than 2,000 points in a season (2,083). American Lindsey Van achieved the first women's FIS ski jumping world championship in Liberec, with a winning jump of 97.5 m.

Freestyle Skiing. Canadian Alexandre Bilodeau won the 2008–09 World Cup moguls title after Australia's Dale Begg-Smith had taken the crown the previous three seasons. Hannah Kearney of the U.S. won the women's moguls title. Canada's Steve Omischl scored his third straight aerials World Cup title, and Lydia Lassila of Australia took the women's crown after having finished second in 2007–08. France's Ophélie David won her sixth straight season title in ski cross; Tomas Kraus of the

On February 20 American ski jumper Lindsey Van holds her skis aloft to celebrate after winning the gold medal in the first-ever women's ski jumping world championship.

Matthias Schrader/AP

Czech Republic earned the men's crown for the second season in a row. Ski halfpipe titles went to France's Kevin Rolland and Virginie Faivre of Switzerland.

Snowboarding. Austria's Siegfried Grabner won the overall World Cup snowboard title in 2008–09, as well as the season crown in parallel. The snowboardcross (SBX) season title went to his compatriot Markus Schairer. Ryo Aono of Japan won the halfpipe title, and Austria's Stefan Gimpl took the big air crown for the second straight season. Doris Günther of Austria was the women's overall winner. American Lindsey Jacobellis finished second overall for the second consecutive season and won the SBX title for the second time in three years. Germany's Amelie Kober took the women's crown in parallel, and Liu Jiayu of China was the halfpipe season champion. (PAUL DIGIACOMO)

SQUASH

The highlight of 2009 was to have been acceptance of squash into the program for the 2016 Rio de Janeiro Olympic Games. A strong bid had been mounted accentuating the universality, competitive structure, and other benefits that made squash a contender. In the end, however, only golf and rugby sevens were accepted by the International Olympic Committee for the 2016 Games; as a result, squash would need to wait another four years to try again.

On court the year saw a near monopoly of titles by Egyptian players. When the men's world team championship took place in Odense, Den., in October, Egypt took the title for the second time, with a squad featuring three of the top-four-ranked players. In a tight final Egypt beat third-seeded France 2–1. Defending champion England lost to France in the semifinals and to Australia in the play-off for the bronze medal. One month later in Kuwait, there was an all-Egyptian final in the men's World Open; Amr Shabana won his fourth World Open title when he beat defending champion Ramy Ashour 11–8, 11–5, 11–5.

Malaysia's Nicol David, who was based in Amsterdam, won the women's World Open, held in that city in September. She beat Australian-born Natalie Grinham, who had recently gained Dutch citizenship, 3–11, 11–6, 11–3, 11–8 in the final. This was the fourth World Open title in five years for David, the sport's number-one-ranked woman since 2006.

At the junior level there was an Egyptian double in the world under-19 individual championships staged in Chennai (Madras), India, in August. The women's title went to 13-year-old Nour El Sherbini, who became the sport's youngest-ever world champion when she beat countrywoman Nour El Tayeb in the final. (A week later El Sherbini also led the Egyptian women to the under-19 team title.) Mohamed El Shorbagy, the 18-year-old top seed from Alexandria, successfully defended his men's individual title, defeating second-seeded Ivan Yuen of Malaysia 11–9, 12–10, 11–2. (ANDREW SHELLEY)

SWIMMING

In 2009, 15 years after the sport of swimming was marred by widespread use of illegal performance-enhancing drugs, primarily on the part of Chinese competitors, swimming was again fraught with controversy—this time over the use of swimsuits made from high-tech materials that clearly enhanced performance in contravention of Fédération Internationale de Natation (FINA) rules. (See Sidebar.) Indeed, many critics referred to the expensive (\$400–\$550) suits as “high-tech doping.” The dispute, which led to the banning of nontextile swimsuits beginning in 2010, became so heated that it overshadowed the performance of the athletes in major meets around the globe, including the year's premier long-course (50-m) event, the 13th FINA world championships held in Rome on July 17–August 2. It also forced the incumbent FINA president to abandon his reelection bid and led to serious discussion of a radical revision of FINA's structure.

The world championships, which featured a record 2,800 aquatic athletes from almost 200 countries, saw some spectacular swimming, though how much was due to the athletes and how much to the suits was debated interminably. As expected, the U.S. won the team crown in Rome, but the medals were dispersed to more countries than ever before: swimmers from 25 countries earned at least one medal, while an unprecedented 17 countries took gold. The championships produced no fewer than 43 world records in the 40 events that were contested. In fact, the world records going into the meet were bettered some 57 times in Rome as even nonwinners often broke the old marks—results one expert dismissed as “absurd.” By the time the meet ended, only a handful of prechampionship world

records remained intact, and by year's end 73 new long-course world records had been set and another 74 had been set in 25-m short-course competitions, though several of those were disallowed.

After taking a three-month break from the sport after the 2008 Beijing Olympic Games, American superstar Michael Phelps quickly got back into shape but opted to swim “only” three individual events and all three relays. The 100-m butterfly turned out to be almost a duplicate of Phelps's triumph over Serbia's Milorad Cavic at the Olympics. Cavic was faster for the first 50 m, and his lead over the American was even greater than in Beijing. That just meant a greater challenge for Phelps, however, and the two men became the first in history to crack the 50-sec barrier, with Phelps touching first in 49.82 sec, just 0.13 sec ahead of Cavic. Phelps then cut half a second off his own global standard in the 200-m fly, touching in 1 min 51.51 sec, almost two seconds in front of a very fast field. Phelps racked up more gold as a member of the three U.S. relay teams. At year's end, *Swim-*

Water skims off of American Ariana Kukors's nontextile Jaked01 swimsuit as she races to a world record of 2 min 07.03 sec in the semifinals of the women's 200-m individual medley at the FINA world championships on July 26. Kukors swam an even-faster 2 min 06.15 sec in the finals the next day.

Mark J. Terrill/AP

ming World magazine named Phelps the male World Swimmer of the Year for the sixth time and the fourth in a row.

Despite Phelps's superb performance, Germany's Paul Biedermann proved the adage that on any given day, no one is unbeatable. First, he thrashed Phelps in the 200-m freestyle, slicing nearly a second off the American's record with a brilliant 1 min 42.00 sec, and then Biedermann carved 0.01 sec off Australian Ian Thorpe's 400-m mark (set in 2002) with a time of 3 min 40.07 sec.

Two other men scored individual doubles: American Ryan Lochte and Brazil's César Cielo. Lochte lowered Phelps's mark in the 200-m individual medley (IM) to 1 min 54.10 sec and then won the 400-m IM. Cielo took the sprint double, charging through the 50-m freestyle in 21.08 sec, just off Frenchman Fred Bousquet's world record but 0.13 sec ahead of Bousquet in the race. Cielo also won the 100 m, posting a record 46.91 sec, just in advance of France's former world record holder Alain Bernard and Bousquet. Cielo lowered the 50-m mark to 20.91 sec in December.

Italy's Federica Pellegrini and Germany's Britta Steffen provided much of the fireworks in the women's competition. Pellegrini swam to two barrier-breaking victories in Rome and was narrowly selected over Steffen as *Swimming World's* female World Swimmer of the Year. In the 200-m freestyle, Pellegrini lowered her own world record by nearly two full seconds to 1 min 52.98 sec. She also became the first woman in history to swim 400 m under the four-minute barrier, with a brilliant 3 min 59.15 sec. Steffen, the Beijing Olympic champion in the 100-m freestyle, proved that she was still the best female sprinter in the world as she sped to a world-record time of 23.73 sec in the 50 m and a record 52.07 sec in the 100 m.

Perhaps the championship's most spectacular performance was by American Ariana Kukors, who destroyed the world record in the 200-m IM twice in two days, ending with an amazing 2 min 06.15 sec, more than two seconds under the previous record set by Australia's Stephanie Rice in Beijing. Astonishingly, Kukors had not even made the U.S. team in this event at the national trials but was added to the event squad when another swimmer decided not to compete in it.

On the political front Mustapha Larfaoui of Algeria had expected to breeze to his sixth consecutive four-year term as FINA president, but FINA treasurer

The Swimsuit War

The sport of swimming faced one of its most difficult challenges in 2009 as athletes, coaches, swimsuit companies, and the Fédération Internationale de Natation (FINA), swimming's international governing body, squared off over the growing use of performance-enhancing high-tech swimsuits. The first shot was fired by Speedo in February 2008 when it introduced the seamless polyurethane LZR (pronounced "laser") Racer, reportedly developed in cooperation with NASA. The most radical version of this swimsuit line was a full bodysuit that covered the swimmer from neck to ankles. Swimming had seen full bodysuits before the LZR, most notably when Australia's Ian Thorpe set world records in 2000–02 while wearing Adidas's bodysuit. There was no convincing evidence that the suit made anyone faster, and in October 1999 FINA had approved the bodysuits for competition. Several companies created new bodysuits for the 2000 and 2004 Olympic Games, but post-Olympic analyses cast doubt on any claims of performance enhancement.

The LZR, however, was "the real deal." LZR-related world records were set within days of the swimsuit's introduction—the first in what became a torrent of increasingly meaningless records. At the 2009 FINA world championships, 40 events were contested and 43 world records were unceremoniously overthrown. That brought to 179 the number of world records (both long- and short-course) set in the 18 months since the first appearance of the LZR. By the end of 2009, the total number of world records broken in those 23

months stood at a staggering 255. In 2009 alone, 147 world records were smashed, although some were later disallowed.

Critics, including some coaches and sportswriters, claimed that the suits undermined such values as hard work, superb conditioning, and technical mastery; rendered meaningless the great performances of the past; and, with records lasting only a few weeks—or even days—risked making the sport a laughingstock. FINA officials dismissed the dissenters as misguided and pointed to innovations that transformed other sports—for example, the clapskate in speed skating and the fibreglass pole in pole vaulting. Unlike those innovations, however, the high-tech swimsuits kept evolving, especially as more manufacturers entered the fray.

While records were falling with monotonous regularity, FINA officials planned for the organization's 201-member Congress to endorse their decision to allow virtually all high-tech suits in competition. When the Congress convened on July 24, however, the U.S. delegation offered a carefully prepared motion to allow only textile swimsuits, to eliminate compression-enhancing features such as zippers, and to limit coverage to "between the waist and knees for males, [and] not beyond the shoulders or below the knees for females," with the arms remaining uncovered for both sexes. The vote was an overwhelming 168–6 in favour of the U.S. resolution and in repudiation of FINA's position. The ban was to become effective on Jan. 1, 2010, bringing to a close the era of the performance-enhancing high-tech suits.

(PHILLIP WHITTEN)

Julio Maglione of Uruguay threw his hat into the ring, forcing what would have been the organization's first contested election in its 100-year history. Ultimately, Larfaoui withdrew from the contest, and Maglione, who promised to stay in office for only one term, was elected president in July.

Diving. Chinese divers won every international meet that they entered in 2009 and then overwhelmed the rest of the world's divers at the world championships in Rome, where they earned gold in 7 of the 10 events and took 14 medals of a possible 16. Guo Jingjing reinforced her credentials as the greatest female diver in history by winning both 3-m springboard events—taking the individual and (with teammate Wu Minxia) the synchronized crowns—for the fifth consecutive world championship. (Guo also took gold in the same events at both the 2004 and 2008 Olympic Games.) Chinese veterans Chen Ruolin and Wang Xin won the 10-m synchronized event. Mexico's Paola Espinosa won her country's first-ever diving world championship gold medal, coming from eighth place to upset Chinese Olympic champion Chen Ruolin decisively in the 10-m final. In the 1-m springboard—a non-Olympic event—

Russia's Yuliya Pakhalina scooped the gold.

Tom Daley, Britain's 15-year-old sensation, pulled off the biggest upset in the men's competition. Daley jumped from fourth to first on his two final dives in the 10-m platform, receiving eight perfect 10s from the judges, to defeat China's Qiu Bo and Zhou Luxin. The remaining four men's events belonged to China. Qin Kai nipped teammate Zhang Xinhua and Australia's Matt Mitcham to take the 1-m springboard. He Chong proved his Olympic gold medal in the 3-m springboard was not a fluke by winning the event in Rome. The synchronized events showcased the near-perfect technique of the Chinese divers. In the 3-m event, Qin Kai and Wang Feng breezed to victory, and the 10-m contest saw China's Huo Liang and Lin Yue triumph as the U.S. nipped Cuba for the silver.

Synchronized Swimming. At the 13th FINA synchronized swimming world championships in Rome, Russian athletes captured six of the seven gold medals, nearly duplicating their six-gold, one-silver effort at the 2007 world championships in Melbourne. This time around, the only event that the Russians did not win was the one in

which they did not compete: the 10-woman free combination, won by Spain, which collected silver in the other six events. Therefore, Spain, with a total of seven medals, topped Russia in the final standings. China, led by the Jiang twins—Tingting and Wenwen—was a distant third with one silver and four bronze medals, followed by Canada and Italy. In all, swimmers from 42 countries competed in the synchronized events in Rome, with athletes from 15 qualifying for at least one final, but 10 countries, including Japan and the U.S., failed to medal.

Three Russians, all veterans with long international careers, topped the individual medal count. Nataliya Ishchenko led the way with four gold, followed by Svetlana Romashina (three) and Anastasiya Davydova (two). Gemma Mengual, a 32-year-old Spaniard, took home one gold and four silver medals.

(PHILLIP WHITTEN)

TENNIS

Across the board, on innumerable levels, Roger Federer of Switzerland was the 2009 Player of the Year in tennis, becoming only the sixth man in history to win all four Grand Slam events. The

On September 14 Juan Martín del Potro of Argentina smashes the ball in the men's singles final of the U.S. Open, where he upset five-time champion Roger Federer of Switzerland for the title.

champion whom many experts considered the best player ever set an all-time record for men when he captured the All-England (Wimbledon) title, his 15th major men's singles championship. He then finished the year at number one in the world in the Association of Tennis Professionals (ATP) rankings for the fifth time in a magnificent six-year span.

Other players also had much to celebrate in 2009. The towering 2-m (6-ft 6-in) Juan Martín del Potro of Argentina garnered his first Grand Slam title at the U.S. Open. Rafael Nadal became the first Spaniard to win the Australian Open, his first major tournament title on a hard court. Serena Williams of the U.S. secured the Australian Open and Wimbledon crowns and ended a year as the Women's Tennis Association (WTA) number one player for only the second time in her illustrious career. Russian Svetlana Kuznetsova took her second career major singles title, winning the French Open. Meanwhile, Belgian Kim Clijsters came out of a 27-month retirement (during which she had a baby) to win a second U.S. Open in only her third tournament back in action. The highest-paid woman on the Sony Ericsson WTA Tour was Williams, with \$6,545,586. Federer was the top prize-money winner on the ATP World Tour, at \$8,768,110.

Australian Open. Clashing for the seventh time in a Grand Slam final, Nadal and Federer put on a stupendous display of shot-making craftsmanship before the Spaniard recorded a 7-5, 3-6, 7-6 (3), 3-6, 6-2 triumph over his Swiss

adversary. It was the third time in a four-tournament span at the majors that Nadal had ousted Federer in the championship match, and the victory gave the Spaniard a 5-2 edge over his chief rival in Grand Slam finals. Nadal was stretched to his limits against Fernando Verdasco in a semifinal showdown between Spanish left-handers. Nadal was down at 4-4, 0-30 in the fifth set but rallied for a 6-7 (4), 6-4, 7-6 (2), 6-7 (1), 6-4 victory.

Number two seed Serena Williams crushed third-seeded Dinara Safina of Russia 6-0, 6-3 in the women's championship match. Williams was on the brink of defeat in her quarterfinal with eighth-seeded Kuznetsova, who served for the match in the second set, but Williams escaped to win the match 5-7, 7-5, 6-1.

French Open. Heading into his fourth-round contest against Robin Söderling of Sweden, Nadal had never been beaten at Roland Garros and had yet to lose a best-of-five-set match anywhere on clay. In one of the biggest upsets ever produced at the world's premier clay court event, however, the four-time champion was ousted by his inspired Swedish opponent, bowing 6-2, 6-7 (2), 6-4, 7-6 (2). Federer, who had lost to Nadal four years in a row at Roland Garros (including three consecutive finals), also struggled in the fourth round. Federer trailed by two sets to love and was down break point at 3-4 in the third set against the seasoned German Tommy Haas, but an audacious forehand winner saved the

Swiss champion, who rallied admirably to win in five sets. He survived another five-set skirmish with del Potro in the semifinals and then took apart Söderling 6-1, 7-6 (1), 6-4 in the final.

Number seven seed Kuznetsova overcame second-seed Williams in the quarterfinal match of the tournament for the women, eclipsing the American 7-6 (3), 5-7, 7-5 in a match that featured one high-quality rally after another. The top-seeded Safina—appearing in a second straight Roland Garros title match—struggled with nerves in the final against Kuznetsova, who prevailed 6-4, 6-2.

Wimbledon. On the fabled British grass courts, Federer collided with his old rival Andy Roddick of the U.S. for the third time in a Wimbledon final, though Roddick had taken only one set in their two previous title matches on the Centre Court. Roddick played a strategically impeccable semifinal match, preventing 22-year-old Andy Murray from becoming the first British man to reach the final at Wimbledon since Bunny Austin lost to American Don Budge in 1938. In the final Roddick gave one of the signature performances of his career, taking the opening set and leading 6-2 in a pivotal second-set tie-break before Federer collected six points in a row to salvage the set. Roddick held serve 37 consecutive times in the match before losing his delivery in the final game of a 5-7, 7-6 (6), 7-6 (5), 3-6, 16-14 encounter. The 77-game match was the longest-ever final at Wimbledon, and the 30-game fifth set was likewise the longest-ever fifth set. Federer served a career-best 50 aces as he collected his record 15th Grand Slam title, with American Pete Sampras, who had won 14 majors between 1990 and 2002, watching in the stands.

Serena Williams took her third championship singles title, beating her sister Venus in the final 7-6 (3), 6-2. Serena, who did not lose her serve once in the match, defeated her older sibling for the sixth time in eight head-to-head clashes in the majors. In the semifinals five-time champion Venus obliterated the top-seeded Safina 6-1, 6-0, and Serena battled back ferociously from match-point down to oust another Russian, fourth-seeded Yelena Dementiyeva, 6-7 (4), 7-5, 8-6.

U.S. Open. Argentina's quietly imposing del Potro lived up to the expectations of many authorities by securing the last major championship of the year. In the semifinals he blasted Nadal off the court 6-2, 6-2, 6-2, and in the final he toppled Federer 3-6, 7-6 (5), 4-6, 7-6 (4), 6-2. No one had ever before

knocked out that illustrious duo in the same Grand Slam event. Federer, in pursuit of a sixth consecutive U.S. Open title, served at 5-4, 30-0 in the second set but was surprisingly broken. In the fourth set, Federer was twice just two points away from prevailing, but del Potro held on to get the win.

The unseeded Clijsters—a wild card—played arguably the best tennis of her career to regain the crown that she had garnered four years earlier. The captivating Belgian took out Marion Bartoli of France (seeded number 14), Venus Williams (number 3), and China's Li Na (number 18) en route to her meeting with second-seed Serena Williams in the semifinals. Williams was down a set and serving at 5-6, 15-30 in the second set when she was called for a foot fault on her second serve. That double fault put her down double-match point. Enraged, Williams verbally lashed out at the lineswoman who made that call, and her profanity-laden diatribe led to a point penalty because she had earlier been warned for racket abuse. The match was over, with Clijsters winning 6-4, 7-5. Clijsters stopped ninth-seeded Caroline Wozniacki of Denmark 7-5, 6-3 in the final, recouping from 2-4, 15-40 to take the crucial first set. Williams was fined \$10,000 by the United States Tennis Association for her tirade but was later assessed an additional \$82,500 by the International Tennis Federation, put on probation for two years, and warned that another "major offense" in that span at any Grand Slam event would result in a larger fine and a suspension from the following U.S. Open.

Other Events. In London, Russian Nikolay Davydenko took the Barclays ATP World Tour Finals, defeating Federer for the first time and then stopping del Potro in a straight-set final. Serena Williams beat her sister Venus in the final of the Sony Ericsson Championships in Doha, Qatar. In the Fed Cup final, held in Calabria, Italy—led by Francesca Schiavone and Flavia Pennetta—beat the U.S. 4-0. Spain—propelled by Nadal and David Ferrer—won its second straight Davis Cup, overwhelming the Czech Republic 5-0 in the final in Barcelona. (STEVE FLINK)

TRACK AND FIELD SPORTS (ATHLETICS)

Usain Bolt of Jamaica made the 2009 track and field season his own, improving his individual sprint world records and winning three world championships golds. Ethiopian dis-

tance runner Kenenisa Bekele won two world titles that cemented his reputation as the most dominating track and field athlete of the decade, but the accomplishments of Bolt and Bekele competed for headlines with a gender controversy surrounding Caster Semenya, the South African teenager who captured the women's 800-m world title.

World Outdoor Championships. Nine meet records were broken at the International Association of Athletics Federations (IAAF) world championships, held Aug. 15-23, 2009, in Berlin. Bolt accounted for the most spectacular of these as he raced to world records of 9.58 sec in the 100 m and 19.19 sec in the 200 m as well as running the third leg on Jamaica's 37.31-sec meet-record win in the 4 × 100-m relay. His only gaffe along the way was a false start in his 100-m semifinal. Bolt attributed his early jump to playful competition with his Antiguan training partner, Daniel Bailey, to see who could achieve a faster reaction time. Bolt incurred no penalty, but a new rule to take effect in 2010 would trigger immediate disqualification for any false start.

Before the 100-m final, the common assumption was that if anyone could challenge Bolt, it would be his American rival Tyson Gay. With a legal 0.9-m/sec wind behind him, Bolt propelled his 1.96-m (6-ft 5-in) frame from the blocks with phenomenal speed. He led the field with his fourth stride, at which point his closest competitors had already taken five steps, and at 20 m held a 0.01-sec margin over the Olympic silver medalist Richard Thompson of

Trinidad and Tobago as Gay ran in fourth place. Over the next 20 m, Gay raced into second place but proved powerless to stop Bolt from widening his lead to more than 1.5 m (nearly 5 ft) at the finish. Gay's time of 9.71 sec left former world record holder Asafa Powell of Jamaica (9.84 sec) a thoroughly beaten third but paled behind Bolt's rush under the 9.60-sec barrier.

In the 200-m final, Bolt defied his own prediction that he would not better his 19.30-sec world record from Beijing. After comfortably leading 2004 Olympic champion Shawn Crawford at the halfway point with a split of 9.92 sec, Bolt shattered the record by 0.11 sec with a 6-m winning margin. For the first time in history, five finishers bettered 20.00 sec in one race.

Bekele sprinted away from Zersenay Tadese of Eritrea on the last lap of the 10,000-m final to win in 26 min 46.31 sec, a meet record that lowered Bekele's own standard set in 2003 in his first world championships appearance. The victory earned the 27-year-old Bekele a clean sweep of all world and Olympic gold medals in the event since 2003, an achievement unmatched by any other athlete in any event during the decade. In the 5,000 m, Bekele outkicked defending champion Bernard Lagat of the U.S. to match his double victory of the Beijing Olympics and become the first man to win the long-distance track double at a world championships.

Anita Włodarczyk of Poland set the only women's world record in Berlin, in the hammer throw. Germany's Betty Heidler, the defending champion, raised

At the IAAF world championships in August, Anita Włodarczyk of Poland set the only women's world record, a stunning 77.96 m (255 ft 9 in) in the hammer throw.

Matt Dunham/AP

the meet record by 7 cm (2 in) in the qualifying round to 75.27 m (246 ft 11 in) and subsequently took the lead from Włodarczyk in the first round of the final. In the second round, however, Włodarczyk spun the hammer out to 77.96 m (255 ft 9 in) to take gold and the world record. While celebrating, Włodarczyk stepped on the track's curb and sprained her ankle so badly that she was forced to skip the rest of the season.

Men's meet records were also set by Kenyans Ezekiel Kemboi in the steeplechase (8 min 0.43 sec) and Abel Kirui in the marathon (2 hr 6 min 54 sec). Olympic champion Melaine Walker of Jamaica set a meet-record 52.42 sec in the women's 400-m hurdles. In the final tally, the U.S. led the world championships medal standings with 22 medals (10 gold), ahead of Jamaica with 13 medals (7 gold).

Semenya incited controversy that had nothing to do with the fact that she tangled with defending 800-m champion Janeth Jepkosgei of Kenya in the first heat, causing Jepkosgei to fall and fail to finish. Jepkosgei advanced to the semifinal on appeal and then earned a place in the final, but Semanya won the championship in 1 min 55.45, flexing her arms in a bodybuilder's pose as she crossed the line. Semanya skipped the postrace press conference and returned home to a heroine's welcome. A media frenzy began with a leaked report that the IAAF had conducted sex tests on the powerfully built 18-year-old Semanya to determine if she was really a woman. As recriminations, apologies, and expressions of sympathy for Semanya passed in the press between her country's federation, Athletics South Africa (ASA), and the IAAF, ASA Pres. Leonard Chuene angrily denied knowing that sex-verification testing was conducted on Semanya in South Africa before the championships. Chuene later admitted to lying on that point. The furor grew more heated after press reports alleged that testing had shown Semanya to have an intersex condition. The unconfirmed accounts claimed that she had internal male genitalia and testosterone levels three times higher than normal for a woman, levels that could impart an athletic advantage. As a result, the South African Sports Confederation and Olympic Committee subsequently ousted Chuene and took over management of ASA. The IAAF reserved comment on the reports until its council meeting in November. Two days before that meeting, the IAAF issued a statement saying that medical testing of

Semenya was not complete and that the council would not discuss the case until further notice. A day later South Africa's sports ministry announced that the IAAF had agreed to let Semanya keep her medal and prize money, but the IAAF declined to comment on the claim.

International Competition. The Golden League series, in which athletes winning their event at each of six elite European invitational meets split a \$1 million jackpot, had its swan song in 2009. Bekele, American 400-m runner Sanya Richards, and Russian pole vaulter Yelena Isinbayeva each earned a third of the prize. Bekele extended his unbeaten streak at 5,000 m to 17 finals and his streak at 10,000 m to 12 finals. Richards lost her first 400 m of the season but thereafter won 10 straight. At the World Athletics Final (WAF), another IAAF fixture that would not be contested in the future, Richards placed second in the 200 m in addition to winning her specialty. Women's shot-putter Valerie Vili of New Zealand, the reigning Olympic and world champion, stretched her unbeaten skein to 25 finals, the longest at the elite level in any individual event. The IAAF was to replace the Golden League and the WAF in 2010 with a new Diamond League, a series of 14 meets in Asia, Europe, the Middle East, and the U.S., with \$6.3 million in prize money on offer and 32 disciplines.

Isinbayeva, who had not lost for six seasons, placed second behind Poland's Anna Rogowska at the London Grand Prix meet in July, and at the world championships she no-heighted. The next week in Zürich, Isinbayeva confessed to complacency and then went out and raised her world record to 5.06 m (16 ft 7¼ in).

In April the International Olympic Committee (IOC) identified 2008 Olympic men's 1,500-m champion Rashid Ramzi of Bahrain as one of six athletes from three sports caught positive for banned CERA, a form of the endurance-boosting drug erythropoietin (EPO). The result came from retesting of Beijing Olympic samples after a test for the previously undetectable drug had been developed. Ramzi proclaimed his innocence, but in November the IOC stripped him of his medal.

Cross Country and Marathon Running. For the first time since 2004, Ethiopia's Haile Gebrselassie did not run the fastest marathon of the year. That honour went to 31-year-old Kenyan Duncan Kibet, who narrowly defeated his countryman James Kwambai with the same time, 2 hr 4 min 27 sec, in Rot-

terdam, Neth. No marathoner besides Gebrselassie had ever run faster, and the pair spearheaded an onslaught of fast times. The 25 sub-2-hr 7-min marathons run in 2009 races accounted for a quarter of history's total.

In the World Marathon Majors, a series scored on a two-year basis in which athletes collect points for placings in five major city marathons—London, Boston, Berlin, Chicago, and New York City—plus the Olympics and world championships races, the 2008–09 men's title went to 2008 Olympic champion Samuel Wanjiru of Kenya, who scored 2009 victories in London and Chicago. The women's title went to Irina Mikitenko of Germany, a repeat series winner, who won in London and placed second in Chicago in 2009. Wanjiru and Mikitenko each collected \$500,000.

At the world cross country championships, held in Amman, Jordan, on March 28, Kenya and Ethiopia shared top honours. Kenya won three of the four team titles, including the senior men's and women's, plus the senior women's individual title, which went to Florence Kiplagat. Ethiopia won the other three individual titles and the junior women's team crown. Ethiopian Gebre Gebremariam won the senior men's individual title. (SIEG LINDSTROM)

VOLLEYBALL

Americans Jen Kessy and April Ross defeated Juliana Felisberta Silva and Larissa Franca of Brazil (30–28, 23–21) to win the women's gold medal at the 2009 Fédération Internationale de Volleyball (FIVB) beach volleyball world championships, held in Stavanger, Nor. Talita Antunes and Maria Antonelli downed fellow Brazilians Ana Paula Connelly and Sandra Pires Tavares (21–13, 21–16) to earn the bronze. Kessy and Ross had finished in 37th place at the 2007 world championships. In the men's competition, Germany's Julius Brink and Jonas Reckermann established themselves as one of the world's premier tandems following a 21–16, 21–19 victory over Brazil's Alison Cerutti and Harley Marques in the final. Defending Olympic and world champions Phil Dalhausser and Todd Rogers of the United States earned the bronze medal by downing David Klemperer and Eric Koreng of Germany 21–11, 21–16.

Brazil recaptured the world's top position in both men's and women's indoor volleyball. In Belgrade, Serbia, the Brazilian men edged the host country

22–25, 25–23, 25–22, 23–25, 15–12 to earn the 2009 FIVB World League championship. It was Brazil's sixth title in the past seven World League competitions and its eighth overall. Sergio Dutra Santos of Brazil was named the tournament Most Valuable Player. Russia easily beat Cuba 25–13, 26–24, 25–16 to win the bronze medal. Brazil's women won their eighth FIVB Grand Prix title after posting a perfect 5–0 record during the final round, which was held in Tokyo. Russia (4–1) and Germany (2–3) captured second and third place, respectively. The key match of the final round occurred when Brazil edged Russia 25–20, 22–25, 25–17, 24–26, 16–14. Brazil closed out the calendar with a victory at the FIVB Grand Champions Cup men's tournament in Japan. The Cuban and Japanese men finished second and third, respectively. In the women's competition an undefeated Italian team upset the defending Brazilians, who settled for second place. The Dominican Republic was third. (RICHARD S. WANNINGER)

WEIGHTLIFTING

The 2009 International Weightlifting Federation world championships were held Nov. 17–29, 2009, in Koyang (Goyang) city, S.Kor. The competition involved 373 athletes (235 men and 138 women) from 72 countries, and 135 medals were awarded in snatch, clean and jerk, and overall total in the eight men's and seven women's body-weight categories. Six senior world records were broken, four of them in the women's division.

In the women's competition the 63 medals were all won by athletes from Asia and Europe. As in past years, China finished with the most medals, 16 (6 gold, 5 silver, and 5 bronze), but Kazakhstan had more gold (7) in addition to 1 bronze. Other countries with multiple medals included Russia with 9, Turkey with 8, and Armenia and South Korea with 6 each. South Korean Jang Mi-Ran bagged her fourth super-heavyweight title with a 323-kg (712.1-lb) overall total and a new world record in clean and jerk: 187 kg (412.3 lb).

In the men's division, China topped the men's rankings with 23 (12 gold), followed by South Korea with 8 (4 gold), Ukraine with 6 (1 gold), Armenia with 6 (no gold), and Indonesia with 5 (1 gold). An Yong-Kwon of South Korea won the superheavyweight category with an overall total of 445 kg (981.1 lb). (DRAGOMIR CIOROSLAN)

WRESTLING

Freestyle and Greco-Roman. In September 2009 Russia earned four gold medals and easily won the Fédération Internationale des Luttes Associées (FILA) men's world freestyle wrestling championships, held in Herning, Den. The favoured Russian team outpointed Azerbaijan 63–48, with third place going to Iran (40 points). The four champions who led the Russians to victory were Besik Kudukhov at 60 kg, Denis Tsargush at 74 kg, Khadzhimurat Gatsalov at 96 kg, and Bilyal Makhov at 120 kg. The American men had another sub-par performance, going away with only two medals—a silver by Jake Herbert at 84 kg and a bronze by Tervel Dlagnev at 120 kg. Azerbaijan, with 42 points and two gold medalists, topped the women's freestyle, ahead of Japan and Canada (both with 37 points) and Ukraine (35).

In the Greco-Roman competition, Turkey captured two gold medals out of the seven weight classes to outlast Iran 44–39. Azerbaijan was a point back with 38, followed by Russia with 31. The gold-medal winners for Turkey were Selcuk Cebi at 74 kg and Nazmi Avluca at 84 kg. The United States earned a silver medal at 120 kg when veteran Dremiel Byers was pinned in the gold medal match by defending Olympic and world champion Mijain López of Cuba.

At the National Collegiate Athletic Association wrestling championships in March, the University of Iowa won its second straight title by a slim 96.5–92 margin over Ohio State University. This was Iowa's 22nd mat title since 1975.

(RON GOOD)

Sumo. The two Mongolian *yokozuna* (grand champions) duelled for dominance during 2009. Hakuho compiled a stunning 86–4 record for the year and took his career total of Emperor's Cups to 12 with victories in three *basho* (grand tournaments): the Haru (spring) Basho in March, the Nagoya Basho in July, and the year-ending Kyushu Basho in November. Asashoryu began the year with a win in the Hatsu (New Year's) Basho in January and took the Aki (autumn) Basho in September. Harumafuji, who had changed his *shikona* (fighting name) from Ama in late 2008 upon his promotion to *ozeki* (champion) rank, won the Natsu (summer) Basho in May.

Despite a mediocre win-loss record in 2009, popular *ozeki* Kaio completed his 98th *basho*, eclipsing the record that was formerly held by Takamiyama. Takamiyama, born Jesse Kuhau-lua, retired as sumo's first Hawaiian stablemaster in June, handing his coaching duties to Ushiomaru. Another notable retirement was that of former *ozeki* Dejima. (KEN COLLIER)

Russian freestyle wrestler Besik Kudukhov (right) throws Zelimkhan Huseynov of Azerbaijan in the 60-kg final at the world wrestling championships in September. Kudukhov, who won the 55-kg event in 2007, earned the gold medal.

World Affairs

SUFFERING from the effects of a global **RECESSION**, many countries **STRUGGLED** with high **UNEMPLOYMENT** and **SHRINKING** budgets. An **H1N1** flu pandemic **INFECTED** tens of thousands of people worldwide. While **CHINA** mounted **ELABORATE** celebrations to mark the **60TH ANNIVERSARY** of the founding of the People's Republic, Germany too prepared festivities in remembrance of the fall of the **BERLIN WALL** 20 years earlier.

UNITED NATIONS

The United Nations in 2009 continued its efforts to deal with important global issues on many fronts but was forced to do so in the context of the continuing global economic and financial crisis. It was the UN Year of Climate Change, but little progress toward a comprehensive global climate change agreement emerged. The global food crisis persisted, but few new concerted global actions were targeted for dealing with it coherently. Afghanistan rose to the top of the global security agenda as insecurity and the death toll there mounted significantly during the year. Progress toward attainment of the Millennium Development Goals (MDGs) stagnated along with the global economy. On a more positive note, 2009 marked the return to greater engagement in multilateral affairs of the United States, led by the new administration of Pres. Barack Obama.

Peace and Security. The wars in Iraq and Afghanistan continued to dominate global peace and security news. The security situation in Afghanistan continued to decline. Much of the violence centred on the lead-up to and the follow-up to the presidential elections. This fact was highlighted when on October 28 five staff members of the UN Assistance Mission in Afghanistan (UNAMA) were killed in a suicide attack in Kabul. UNAMA estimated that Afghan civilian

deaths exceeded 2,000 during the first 10 months of the year.

The UN Assistance Mission for Iraq continued its work in support of political reconciliation, institution building, and establishment of the rule of law in the country. At the end of the year, the UN fielded 17 peace missions comprising more than 117,000 troops, police, and civilians, with a total annual

Libyan leader Col. Muammar al-Qaddafi pretends to rip up a copy of the UN Charter as he delivers his first-ever address to the UN General Assembly in New York City in September; during his speech he accused the veto-wielding members of the Security Council of violating the principles of the UN Charter.

Mike Segar—Reuters/Landov

budget of nearly \$7.8 billion. Troops and personnel were contributed by more than 100 member states, with the largest contributors being Pakistan, Bangladesh, India, and Nigeria. Of the 17 missions, 8 were in Africa, where the UN increased its presence in Chad, Darfur (a region of The Sudan), and the Democratic Republic of the Congo (DRC).

Highlighting the situation in Africa, the UN Security Council in January authorized the deployment of 5,500 uniformed personnel to replace the European Union EUFOR military force. As of October 31, just under 3,000 uniformed personnel were in place. By the end of November 2009, the hybrid United Nations/African Union Mission in Darfur (UNAMID) had been increased to 19,588 uniformed personnel. The primary mandate of the force remained the protection of civilians and humanitarian assistance providers as well as the monitoring of the implementation of agreements, assistance in the develop-

ment of political processes, and promotion of good governance. As in 2008, UNAMID's work remained hampered by the lack of transport and aviation assets and logistic support. The UN Mission in the Sudan (UNMIS) continued its main mandate to help resolve core issues that stood in the way of implementation of the 2005 Comprehensive Peace Agreement. By December UNMIS, with 9,955 uniformed personnel in the field, had nearly reached its authorized level of 10,000. The UN mission in the DRC continued to be the largest. In November 2008 the Security Council authorized the expansion of the force by 3,000 military and police, and as of Nov. 30, 2009, 20,255 uniformed personnel were in the field. Meanwhile, the UN Operation in Côte d'Ivoire stood at more than 8,000 in October 2009. Somalia remained high on the list of international security concerns. At year's end the Security Council approved sanctions on Eritrea for aiding Somali insurgents and continuing its conflict with Djibouti.

Preventative diplomacy and the use by Secretary-General Ban Ki-Moon of special and personal representatives and envoys became ever-increasing tools in the UN's peace-building efforts. In 2009 such special envoys were actively engaged in more than 30 countries or regions, and more than two dozen other UN emissaries were assigned to deal with specific global policy issues, such as climate change, financing for development, human rights, humanitarian aid, and so forth. The importance placed on postconflict peace building also grew in recent years. By April 2009 the UN's Peace-building Fund had received more than \$300 million in contributions and had allocated more than \$131 million to 12 countries for 65 projects.

The review process for the Treaty on the Non-Proliferation of Nuclear Weapons picked up momentum, and a formal review conference was in the works for 2010. Nuclear and conventional weapons proliferation remained an important agenda item, with particular focus on North Korea and Iran. The former conducted a second nuclear test in May 2009 in violation of Security Council resolutions, and concern continued over Iran's evolving nuclear program. On October 30, UN member states agreed to a timetable for negotiating an arms trade treaty by 2012.

Terrorism. In September 2008 the UN General Assembly renewed its commitment to the Global Counter-Terrorism Strategy that it had adopted two years earlier. A UN Counter-Terrorism Implementation Task Force had been established in 2005, and Secretary-General Ban was requested to make the necessary institutional changes to enhance the organization's support of the task force's work, which was organized around eight working groups focusing on cross-cutting themes.

On Dec. 17, 2009, the UN Security Council passed a U.S.-sponsored resolution (Res. 1904) to revise the content and process of the UN 1267 Committee's sanctions list, making it more transparent and fair and providing recourse for individuals and firms wrongly included on the UN sanctions list. The primary purpose of the UN list was to serve as a tool for governments to deny terrorists access to funding, weapons, travel, and other resources.

Humanitarian Affairs and Human Rights. UN humanitarian relief efforts reached near-record levels in 2008, responding to 55 emergencies, including natural disasters, the global food crisis, and

civil conflict. More than \$12 billion was mobilized globally for such efforts. In late November 2009 the UN launched a \$7.1 billion appeal for contributions for 2010 to assist 48 million people in 25 countries. The number of refugees declined in 2008. The year ended with 10.5 million refugees under the care of the UN High Commissioner for Refugees (UNHCR) and 4.7 million receiving assistance from the UN Relief and Works Agency for Palestine Refugees in the Near East (UNRWA). In addition, another 839,000 individuals filed claims for asylum or refugee status, and 827,000 cases awaited determination at the end of the year. Nearly half of the refugees who were receiving assistance from UNHCR were from Iraq and Afghanistan; another 20% were from Africa. More than two-thirds of the world's displaced peoples remained inside their own countries. The number of internally displaced persons (IDPs) remained around 26 million for the second consecutive year. UNHCR cared for more than half of these IDPs. Nineteen African countries accounted for 11.6 million IDPs, and The Sudan, Colombia, and Iraq were home to the largest number of internally displaced persons.

Reversing the administration policy of former president George W. Bush toward the UN Human Rights Council, the U.S. sought and won election to the world's highest human rights body in May 2009. Upon taking office, President Obama moved to ban the use of torture by the U.S. military and issued an executive order to close the infamous Guantánamo Bay, Cuba, detention centre (known as Gitmo) within one year. A military judge at Guantánamo and later the U.S. Senate moved to block the order, however. More than 200 detainees remained at Gitmo in November, but on December 15 Obama issued a presidential memorandum ordering the transfer of detainees to Thomson Correctional Center in Illinois. The measure would need approval by the U.S. Congress, however.

As 2009 drew to a close, domestic violence in Iran intensified. UNHCR expressed concern over excessive use of force and human rights violation by Iranian security forces and called on the government to halt these activities.

Development and the MDGs. Only six years remained until the 2015 target deadline for achieving the MDGs. Yet, in the words of the 2009 UN Millennium Development Goals Report, the outlook was "grim." The global economic downturn had a significant impact on the

MDG process. Progress toward achieving the goals was slowed in many areas and even reversed in others. In regard to MDG 1—reducing extreme poverty—the strides made during the preceding decade and a half were blunted, and although overall poverty rates continued to decline, the UN estimated that 55 million to 90 million more people would be living in extreme poverty than had been anticipated prior to the economic crisis that began in late 2008. The situation for girls and women was especially problematic. Women continued to be much more vulnerable with regard to sustainable livelihoods, and four years after the MDG target date for reaching gender parity in primary- and secondary-school education, girls lagged behind. Maternal health—the MDG on which there was the least progress to date—remained an elusive quest.

The UN reported that the gap between the goal of creating an international trading system that was rule-based, predictable, equitable, and nondiscriminatory and the reality of the 2009 global trading system was widening. In 2008 official development assistance (ODA) reached its highest level ever, increasing by 10% in real terms over 2007. Over the previous decade, assistance to less-developed countries (LDCs)—especially sub-Saharan African countries—had increased substantially. LDCs accounted for about 30% of all ODA. Yet ODA distribution and coverage remained very skewed. In 2007, for example, two countries, Iraq and Afghanistan, with less than 2% of the population of less-developed countries, received one-sixth of the total country-allocatable ODA.

Food Crisis. The world food crisis that had significantly worsened in 2008 remained one of the world's greatest challenges in 2009. Despite a decrease in prices in late 2008, food costs continued to be high.

A World Food Summit on food security was held in Rome on Nov. 16–18, 2009. The final conference document, while calling on governments to reinforce efforts to meet the MDG target of reducing hunger by half by 2015, contained no new financial commitments for doing so. On a more positive note, the World Bank announced in late November that it had launched a \$1.5 billion trust fund to promote agricultural production in poor countries. Donor countries pledged a total of \$20 billion in aid.

Health. Beginning in April 2009, the world witnessed the first influenza pan-

demic in more than four decades—influenza A H1N1. By year's end 12,220 deaths had been reported worldwide, and the World Health Organization (WHO) had declared the pandemic on the decline. H1N1 vaccines were finally becoming available in many areas worldwide. (See Special Report on page 194.)

As a result largely of global and regional immunization campaigns, especially in sub-Saharan Africa, deaths from measles dropped 74% from 2000 to 2007. More than 80% of children 12–23 months old in less-developed regions received at least one dose of measles vaccine.

The global campaign against malaria made inroads, but nearly a million people died annually of the disease. Malaria deaths were highly regionalized, with 89% in sub-Saharan Africa in 2008; the overwhelming majority of fatalities were children. To frustrate matters, in late December 2009, news broke of a new drug-resistant strain of malaria in the Cambodia-Thailand border region.

Globally, the number of people living with HIV/AIDS continued to hover around 33 million. In some regions, however, infection rates continued to rise. In Eastern Europe and Central Asia, for example, HIV prevalence rates had doubled since 2001, and the number of persons living with HIV/AIDS had ballooned from 630,000 in 2001 to 1,600,000 in 2007. Two-thirds of persons living with HIV were located in sub-Saharan Africa, and most of these were women.

Maternal mortality continued to plague the LDCs worldwide; in 2005 (the year for which the most recent statistics were available), more than half a million women and girls died annually from birth-related complications—representing 99% of such deaths globally. Half of all maternal deaths occurred in sub-Saharan Africa, and another third occurred in South Asia.

Environment. In October 2008 the UN Environment Programme (UNEP) called for a “Global Green New Deal” and launched the Green Economy Initiative to provide a long-term strategy for dealing with global environmental degradation. Two months later Secretary-General Ban reiterated this call and challenged member states to provide investment to create millions of green jobs. By 2009 various UN agencies were mobilized for the effort.

The year 2009 was the UN-designated Year of Climate Change. A series of major international conferences were held,

culminating in a final global agreement in Copenhagen in December to replace the Kyoto Protocol, which was scheduled to expire in 2012. The rather contentious conference in Copenhagen, (attended by representatives from 193 countries) elicited a very weak non-binding global agreement. The outcome document provided for \$100 billion in aid by 2020 for poor countries to address climate change and noted the importance of taking measures to limit global warming to a target level of 2 °C (3.6 °F). There were no binding targets, however.

Administration and Reform. By the end of 2009, the number of UN member states stood at 192. The regular biennial budget for 2008–09 was \$4.87 billion. Secretary-General Ban's restructuring of the UN's peace and security operations—including the Department of Peacekeeping Operations, the Department of Field Support, the Office of Rule of Law and Security Institutions, and Integrated Operational Teams—continued during the year. In an attempt to revitalize the UN Secretariat, the General Assembly agreed to streamline the organization's personnel and service-delivery systems.

(ROGER A. COATE)

EUROPEAN UNION

The European Union faced a series of daunting challenges as 2009 opened. At the top of the list—and the most urgent—was how to respond to the global economic crisis. How would a union of 27 states, comprising the stronger economies of its Western member countries and the poorer former communist states that were more recent entrants, forge a coherent strategy? Should the union back the U.K.'s calls for a massive global fiscal stimulus of the kind championed by the United States or sit tight and resist higher borrowing in an attempt to ride out the recession?

Dark clouds also hung over the EU project itself as the year began. The bloc's drive to reform its own institutions so they could perform better with an enlarged membership of 27 remained in deep trouble. The EU's Lisbon Treaty—the product of eight years of painstaking work—had been drawn up with the intention of pooling more powers at the European level, in part by creating the new posts of EU president and a more powerful foreign policy chief and by reducing the right of one country to veto the wishes of the rest. The idea was that if Europe could

speak as one, rather than as 27, it would be far better able to punch its weight in global negotiations, whether on trade and the economy, foreign affairs, or the environment. Yet some member states were determined not to back the deal, arguing that too much power was being transferred from national governments to Europe.

It was just these kinds of concerns that had led Ireland to reject the treaty in a referendum in June 2008. Countries such as the Czech Republic were also showing a reluctance to sign up. If just one of the 27 states refused to agree, the treaty would be dead. Somehow, Ireland had to be persuaded to vote again, and the other doubters had to be won round.

There were also divisions over plans to expand the community farther eastward by admitting new member states in years to come. The question of whether Turkey should win admission continued to split the union.

Moreover, rather than forge a spirit of unity, the economic crisis opened up deep divisions. By early February the Czechs, who held the rotating presidency of the EU for the first six months of 2009, had become involved in a damaging spat with France, which Czech leaders accused of having pushed protectionist policies to help its own car industry at the very time Europe should have been acting together as one. French Pres. Nicolas Sarkozy responded to the economic downturn by criticizing French car companies that relocated plants to Eastern European countries in an effort to cut costs, and these countries cried foul. Czech Prime Minister Mirek Topolánek accused Sarkozy of having adopted “beggar thy neighbour” policies to protect France's interests. It seemed that the economic difficulties were forcing some countries to look to their national interests, not the broader European one. Would Europe's entire single market fracture under the pressure?

The arguments spilled over into discussions of whether the EU should back big fiscal stimulus packages or keep a tight rein on borrowing. In late March, Topolánek described the U.S. and U.K. approach, which favoured pumping in huge sums of money to keep the world economy afloat, as “the road to hell.” U.K. Prime Minister Gordon Brown, on the other hand, said that he believed that “global leaders recognize the need to cooperate.” In the end, as so often happened in Europe, it was left for countries to

agree to disagree and to launch their own fiscal stimulus packages if they so desired.

In June the EU staged elections to the increasingly powerful, but still fledgling, European Parliament. Centre-right parties enjoyed the greatest success, and in July conservative former Polish prime minister Jerzy Buzek (see BIOGRAPHIES) was elected the body's president. Centre-left parties in power in countries such as the U.K., Spain, and Portugal took a battering in the June elections because they were blamed for the economic downturn. Disillusion with the European Union, and politicians in general, was evident in a turnout of just 43% of the 388 million eligible voters. Most alarming was the success of far-right parties, which took advantage of rising nationalist sentiment and suspicion of remote government. In the U.K. the political establishment was shaken when the openly antiforeigner British National Party seized two seats in the European Parliament. It was the first time that the party had ever gained a foothold in Europe's emerging legislative assembly. Far-right parties also increased their votes dramatically in several other countries, including Austria, The Netherlands, Hungary, Denmark, and Finland. It was another alarming sign that the people of Europe were splintering off from a political elite intent on centralizing its power base at a European level.

By early summer, however, the EU was renewing its enthusiasm to drive

forward with political integration and expansion. Turkey expressed its continued eagerness to join the union, although its bid met with intense resistance from countries such as Austria and France. Both Albania and Iceland formally applied for membership in the EU in 2009. Iceland had long stood aloof from the EU, believing it could thrive on its own, but the economic crisis that had ravaged its banking system left it feeling vulnerable. Carl Bildt, foreign minister of Sweden, which had assumed the presidency of the EU in June, welcomed Iceland's newfound community spirit. The country's existing level of economic integration with the rest of Europe, Bildt said, would allow it to be placed on a "shorter track" for membership than states that were economically and politically less prepared, such as countries in the Balkans.

Meanwhile, the bloc's leaders tried to reinvigorate the union's stalled reform process. They agreed to measures designed to make the Lisbon Treaty more acceptable to the Irish. New guarantees ensured that Ireland would retain its military neutrality and the right to determine its own taxes and policies on issues such as abortion. Ireland held a second referendum in October, and this time Irish voters backed the treaty by 67.1% to 32.9%—a swing of 20.5% to the "yes" camp since the summer of 2008. Most European leaders were elated. Within days, Polish Pres. Lech

Kaczynski signed the treaty. The only country left to put its name to Lisbon was the Czech Republic. Eventually, after receiving some further guarantees for his country, Czech Pres. Vaclav Klaus, a strong Euroskeptic, reluctantly ratified the treaty in November.

There was no time for self-congratulation, however, since arguments had already begun over who should fill the top posts created under the Lisbon Treaty, particularly that of first permanent president of the European Council. Although the role was not clearly defined in the treaty, it was obvious that it would carry huge power and prestige. The occupant would represent the EU in global meetings and serve as the face of Europe. For weeks there was discussion about whether Tony Blair, the former U.K. prime minister, should be given the role. Many member states, however, objected to Blair, mainly because of his support for the war in Iraq and the U.K.'s failure to adopt the euro during his tenure as prime minister. At a summit in late October, it became clear that even France and Germany—the "big two" of the EU—had profound doubts about Blair. Other names were floated, but as agreement proved elusive, the decision was postponed to another meeting in mid-November.

In the end the matter was resolved without the expected drama. Blair was rejected by EU leaders in favour of Belgian Prime Minister Herman Van Rompuy. (See BIOGRAPHIES.) Rather than opting for a world-renowned figure who would have overshadowed the 27 EU heads of government, the decision was made to appoint a low-key figure, an effective organizer who was little known outside Belgium—and who was uncontroversial. The appointment of British Baroness Ashton (see BIOGRAPHIES), the EU trade commissioner, as the first high representative for foreign affairs and security policy was also something of an anticlimax. Ashton, while respected, was pretty much unheard of outside the U.K.'s Labour Party and the European Commission, on which she had served for a little over a year. In deciding on these appointments, the European Union had shown, however, that it was pressing ahead after an eight-year struggle to modernize. The Lisbon Treaty came into force on December 1.

The year ended in disappointment when world leaders gathering for the UN climate-change talks in Copenhagen failed to agree to legally binding

targets to cut greenhouse-gas emissions. The EU had taken a lead role in pushing for firm commitments backed by international law and had set its sights on a deal that would have committed countries to a 30% cut in emissions, compared with 1990 levels, by 2020. When a deal finally came, much of the detail was struck by the U.S. and China, and this left an impression that the EU had been bypassed. The accord contained aspirations to cut emissions and finance measures to mitigate the effects of climate change in poorer countries—but there was nothing legally binding. While some form of unity was achieved after two weeks of haggling, the accord fell far short of the EU's hopes and showed that in China it had an increasingly powerful force to confront in global affairs.

MULTINATIONAL AND REGIONAL ORGANIZATIONS

The global financial crisis that began in 2008 set the agendas for many multinational and regional organizations in 2009. The focus of many such groups was on stimulating recovery, providing greater regulation of financial institutions, and increasing cooperation.

One striking development was the eclipse of the Group of Seven/Eight by

the Group of 20 (G-20). In April and September, G-20 leaders met to discuss the economic crisis and the reform of financial regulatory systems and to jump-start the Doha round of World Trade Organization negotiations. The summits largely produced agreements to continue talking about the issues. The September summit, however, approved the "Pittsburgh Pact," which signified the G-20's new role as the primary forum for global economic cooperation. The leaders adopted broad outlines for stronger capital standards for banks and greater voting power in the IMF and World Bank for China and other fast-growing developing countries.

In June the BRIC countries (Brazil, Russia, India, and China) held their own, inaugural summit. Accounting for about 15% of the world economy and 40% of global currency reserves, they were drawn together by their dissatisfaction with the U.S.'s role in the global financial system, especially the dollar's status as the world reserve currency. The BRIC countries were a disparate group, however, and their summit produced more rhetoric than substance.

At the year's two summits of the Shanghai Cooperation Organization (SCO), the financial crisis took precedence over the usual regional security issues. Summit communiqués stressed the priority of speeding the implementation of plans to increase international cooperation within the region—particularly regarding infrastructure and communication to counter threats to stability.

Asia-Pacific Economic Cooperation (APEC) celebrated its 20th anniversary in 2009. Various meetings were held throughout the year in Singapore on the theme of "Sustaining Growth, Connecting the Region." The November summit was short on substance and long on rhetoric about recovering from the financial crisis, fostering sustainable economic growth, strengthening regional integration and global regulatory policies, resisting protectionism, and concluding the Doha negotiations.

The October summit of the Association of Southeast Asian Nations (ASEAN) was attended by leaders from China, Japan, South Korea, Australia, India, and New Zealand. Their agenda included discussing the expansion of regional trade, finding new paths to growth that were independent of U.S. and European markets, and addressing the poor transportation infrastructure in parts of the region. The organization's leaders asserted that they were on track

to implement the ASEAN Free Trade Area in January 2010, which would initially eliminate tariffs on more than 87% of imports within six of the member countries. In late October ASEAN also inaugurated its Intergovernmental Commission on Human Rights to help promote social development and justice. The commission, however, encountered charges that it would be a "toothless" body, given ASEAN members' strong adherence to the norm of noninterference.

Along with calling for increased economic cooperation and reforms of global financial architecture, organizations in Latin America and Africa also dealt with challenges to democracy. The Organization of American States (OAS), the South American Common Market (Mercosur), and the Union of South American Nations (UNASUR) were all involved in a crisis in Honduras, where the elected president was ousted in a coup in June. These groups called for his reinstatement, and the OAS also suspended Honduras and led efforts to mediate a solution—efforts that produced agreement among the parties but little movement toward implementation. In a major step, the OAS voted to lift Cuba's long suspension from the organization, provided that Cuba met certain conditions.

The African Union (AU), the Southern African Development Community (SADC), and the Economic Community of West African States (ECOWAS) were involved in political crises in Madagascar, Zimbabwe, Niger, Guinea, and Guinea-Bissau. Both the AU and the SADC suspended Madagascar, and the AU led mediation efforts concerning that country's transitional government and elections. Following an extraordinary summit in October, ECOWAS suspended Niger and appointed mediators to address the situations in both Niger and Guinea.

The AU continued to bear a significant burden for peacekeeping in the Darfur region of The Sudan and in Somalia. Along with the Arab League, it had been vocal in rejecting the International Criminal Court's arrest warrant against Sudanese Pres. Omar al-Bashir on war crimes charges. Bashir was welcomed at both the AU and Arab League summits, but both organizations supported the creation of a hybrid tribunal of Sudanese and foreign judges appointed by the AU in order to try Bashir.

In February the Arab League sent a delegation to the Gaza Strip to investigate charges of Israeli war crimes dur-

ing military operations there in late 2008 and early 2009. In September, following publication of a UN fact-finding commission's report, the league's secretary-general submitted a request for an International Criminal Court investigation of war crimes committed in Gaza. Although the league faced problems with unity in 2009, members were united in their decision to call for a freeze on the expansion of Jewish settlements in the Israeli-occupied territories as a prerequisite for both further peace talks between Israel and the Palestinians and formal recognition of Israel. (MARGARET P. KARNS)

DEPENDENT STATES

Europe and the Atlantic. On June 21, 2009, Greenland's national day and the 30th anniversary of the Danish territory's home rule, Greenland celebrated the beginning of a new era under an expanded self-government agreement (approved by referendum in November 2008). During a day of festivities, Denmark's Queen Margrethe II handed over the official self-rule documents in a ceremony in Greenland's capital, Nuuk, attended by dignitaries from 17 other countries and territories. On June 2 the left-wing Inuit Ataqatigiit (IA; "Community of the People") won a landslide victory in elections to Greenland's 31-seat Landsting (legislature), with 43.7% of the vote and 14 seats (up from 7 in the 2005 ballot). The Forward (Siumut) Party, senior member of the

outgoing ruling coalition, fell to second place with 26.5% and 9 seats (down from 10). IA leader Kuupik Kleist was sworn in as prime minister on June 12.

In October an unexpected source of rare-earth metals was discovered in Greenland that could challenge China's domination (95%) of world supplies of rare-earth metals. The Ilimaussaq field was the world's largest-known reserve of rare-earth metals, and according to the Australian mining company that held the development rights, it could meet at least 25% of global demand for the forthcoming half century and double Greenland's GDP. Under the new agreement with Denmark, Greenland would keep half of the income from oil and minerals, with the ultimate goal of full financial and political independence.

On July 21 Spanish Foreign Minister Miguel Ángel Moratinos arrived in Gibraltar for talks with his British counterpart, David Miliband, and Gibraltar Chief Minister Peter Caruana. It was the first formal visit in some 300 years by a Spanish minister to Gibraltar, which was ceded to British control in 1713. (MELINDA C. SHEPHERD)

Caribbean and Bermuda. Luis Fortuño of the pro-statehood New Progressive Party was sworn in on Jan. 2, 2009, as governor of Puerto Rico. Former governor Aníbal Acevedo Vilá was acquitted in March on several corruption charges, which had dogged him throughout his unsuccessful 2008 reelection campaign against Fortuño.

U.S. President-elect Barack Obama reassured Puerto Rico in early January that its current Commonwealth status would be examined again during his term in office, and in July the U.S. House of Representatives approved another referendum for Puerto Rico. Referenda on the territory's constitutional status had been held previously in 1967, 1993, and 1998, all of which rejected the options of statehood or independence.

Fortuño's new administration made clear its determination to offer strong support to the development of renewable energy in Puerto Rico when in January it canceled a \$74 million natural gas pipeline being built by Sweden's Skanska for the state-owned Puerto Rico Electric Power Authority (PREPA). The Skanska pipeline was to take natural gas from the EcoEléctrica power plant in Peñuelas to PREPA's 700-MW plant at Salinas.

The Dutch territory of Curaçao in a nonbinding referendum in May narrowly approved the 2006 agreement designed to elevate Curaçao to the status of autonomous territory within The Netherlands. Bonaire's final status remained unsettled at year's end, with a referendum likely to take place in early 2010.

Civil unrest returned to the French dependency of Guadeloupe in February, with at least one death reported, following violence and looting against the background of a general strike that began in January and also spread to Martinique. Union leaders blamed high prices and "inadequate" wages for their withdrawal of labour. The strike was called off in March after agreement was reached on a new wage deal for lower-paid workers.

In August the U.K. government suspended parts of the constitution of its Turks and Caicos colony, removing the premier and cabinet and dissolving the 21-member House of Assembly. The day-to-day running of the colony was transferred to the U.K.-appointed governor, Gordon Wetherell. The action, which had been announced in March, was taken following the interim report of a commission of inquiry set up in July 2008 to investigate allegations of corruption against elected officials. The commission found that corruption was "endemic," and in July 2009 the U.K. said that it was considering a criminal investigation of former premier Michael Misick and four of his cabinet ministers.

The opposition United Democratic Party swept to victory in the May gen-

eral election in the U.K.'s Cayman Islands, taking 9 seats in the 15-member Legislative Assembly. The Movement for Change and Prosperity regained office in Montserrat in September when its leader, Reuben Meade, led the party to victory in the general election, winning six out of nine Legislative Council seats.

Bermuda Premier Ewart Brown's decision to give sanctuary to four Chinese Muslim Uighurs on their release in June from the U.S. prison at Guantánamo Bay, Cuba, triggered a motion of no confidence against him in the Bermuda parliament, which he survived. The U.K. government expressed displeasure that the premier had not discussed the matter with the British-appointed governor beforehand.

(DAVID RENWICK)

Pacific Ocean. On Sept. 29, 2009, an earthquake of magnitude 8.0 took place about 190 km (120 mi) southwest of American Samoa. That same day the resulting tsunami struck American Samoa, killing more than 20 people and causing extensive damage in the capital, Pago Pago. U.S. Pres. Barack Obama later that day declared the territory a disaster area. American Samoa already faced economic problems, as a mandated increase in the U.S. federal minimum wage was blamed for cutbacks at two tuna canneries that provided the majority of private-sector employment in the territory. In Sep-

tember the government sought a loan in a last-minute bid to retain 2,000 jobs by purchasing one cannery, which was scheduled to close at month's end.

In September the first U.S. military and related personnel arrived in Guam from the Japanese island of Okinawa. Japan, which was funding a significant part of the bill for the relocation of 8,000 U.S. marines and 9,000 dependents, had provided \$740 million for rebuilding Guam's aging infrastructure. A U.S. congressional report suggested that this funding would not be sufficient to cover the costs of the realignment agreed to in 2006.

An Asian Development Bank report in August asserted that in the Cook Islands lending to business was down, import demand and export volumes were low, and tax revenue was falling. The local economy received a boost in the second half of the year from the Pacific Mini Games and aggressive marketing of tourism in regional markets. The Cook Islands also submitted a claim in the UN to 400,000 sq km (154,000 sq mi) of extended continental shelf that might contain valuable manganese nodules.

French Polynesian Pres. Gaston Tong Sang, facing a vote of no confidence, resigned on February 7 after only nine months in office. The territory's Assembly elected its own speaker, former president Oscar Temaru, as Tong Sang's replacement. On November 24, how-

ever, Temaru's coalition government—the fourth since the 2008 election—fell to a no-confidence motion and was replaced by one led by Tong Sang. In September former president Gaston Flosse was convicted on the first of several charges of corruption and ordered stripped of his Senate seat. Flosse appealed the loss of his seat, and thus his immunity, to the French constitutional court. This loss of immunity allowed the prosecutor to detain Flosse while the corruption inquiry proceeded. The territory received some \$232 million in aid from the French Development Agency in 2008 to offset the declining economic conditions and to generate growth. A Council of State in Paris annulled a French Polynesia Assembly vote to suspend a controversial pearl export tax until December 2009.

After provincial elections in May, the New Caledonian Congress named Philippe Gomès as the new head of government. Tension arose in the territory in May as members of the Kanak USTKE union confronted local aviation interests and French police at the domestic airport, and six union leaders were jailed for up to one year. Indian Ocean. On March 29, 2009, voters on Mayotte (the only one of the four islands in the Comoros group that voted in 1974 to remain a French dependency) participated in a referendum on the island's future relationship with France. More than 95% approved a change of status from that of a departmental collectivity to an overseas *département* of France. This would necessitate replacing the local Muslim legal system, including the practice of polygamy, with French law. Comoros, which did not recognize French rule in Mayotte, protested the vote and criticized the treatment of Comoran immigrants to Mayotte.

Civil unrest in French Caribbean dependencies flared over high prices and inadequate wages and spread in early March to Réunion, where protesters called for a general strike on March 10. It was reported in 2009 that Réunion registered the highest unemployment rate in the EU, 25.2%, with some 50% of people aged 15–24 out of work.

In early 2009 the Chagos Conservation Trust and other environmental groups called for the creation of a marine reserve in the uninhabited British Indian Ocean Territory coral atoll. Exiled Chagos islanders, who in 2008 had lost their battle in the British House of Lords for the right of return, appealed that decision to the European Court of Human Rights in 2009 and protested that the reserve would be more effective if they were permitted to return as "custodians of the environment."

Australian Immigration Minister Chris Evans was forced to double the size of the Australian detention centre on Christmas Island to house 2,300 people. This followed a sharp increase in the arrival of asylum seekers on boats sailing into Australian waters. Late in the year the Australian government transferred some asylum seekers to mainland Australia for processing. Evans rejected claims by the new Australian opposition leader, Tony Abbott, that the government had abandoned offshore processing of asylum seekers and reiterated that the government was committed to mandatory detention of unauthorized boat arrivals.

(A.R.G. GRIFFITHS)

ANTARCTICA

Ice averaging roughly 2,160 m (7,085 ft) in thickness covers more than 98% of the continent of Antarctica, which has an area of 14 million sq km (5.4 million sq mi). There is no indigenous human population, and there is no land-based industry. Human activity consists mainly of scientific research. The 47-nation Antarctic Treaty is the managerial mechanism for the region south of latitude 60° S, which includes all of Antarctica. The treaty reserves the area for peaceful purposes, encourages cooperation in science, prescribes environmental protection, allows inspections to verify adherence, and defers the issue of territorial sovereignty.

At the 32nd Antarctic Treaty Consultative Meeting (ATCM), held in Baltimore, Md., on April 6–17, 2009, more than 400 diplomats, Antarctic program managers, logistics experts, and polar scientists from 47 countries—including the 28 consultative parties with a scientific presence in the Antarctic—gathered to discuss issues ranging from protecting the environment to advancing science and managing tourism. The representatives agreed to rules related to tourism that included a prohibition on landings by tourists from ships carrying more than 500 passengers and a requirement that ships land no more than 100 passengers at a time. They also agreed to support the International Maritime Organization's (IMO's) efforts to ensure the safety of Antarctic shipping and to petition the IMO to extend the boundary of the organization's Antarctic Special Area northward to the

Antarctic Convergence in order to protect the region's marine ecosystem.

At the meeting the representatives also recognized the 50th anniversary of the signing of the Antarctic Treaty in December 1959. In a declaration they acknowledged the treaty's contribution to promoting peace and international cooperation in the Antarctic region and reaffirmed their commitment to the objectives and purposes of the treaty. In a second declaration they recognized the role of polar science in understanding climate change and encouraged participants in the most recent International Polar Year program (which ran from March 2007 to March 2009) to continue their cooperation and scientific research.

During the ATCM the Committee for Environmental Protection discussed or proposed for discussion 2 new and 11 revised management plans for Antarctic Specially Protected Areas. The committee also discussed the impact of nonnative species in the region and new guidelines for managing historic sites and monuments and agreed to study the environmental impacts of tourism and nongovernmental activities in Antarctica.

During the 2008–09 austral summer, 37,858 tourists visited the continent, with some 37,585 arriving by ship. Of these, 26,933 landed in the Antarctic Treaty area. About 275 participated in multiday land-based expeditions to the continental interior; 285 made day visits by air to King George Island near the coast of the Antarctic Peninsula;

and 174 visitors traveled by yachts (each vessel carrying 12 or fewer passengers) to the Antarctic Peninsula. The Russian icebreaker cruise ship *Kapitan Khlebnikov*, operated by Quark Expeditions, became trapped in sea ice in the Weddell Sea for three days in November with 101 passengers on-board the vessel.

In late 2008 the U.S. and New Zealand began building Antarctica's first wind farm with three 330-kW wind turbines on a site overlooking New Zealand's Scott Base on Ross Island. Antarctica New Zealand was to lead the estimated \$6 million project and cover most of the cost as part of its contribution to the shared logistics pool with the U.S. Antarctic Program, which transported most fuel, personnel, and materials to the continent for both national programs. The project would cut fuel consumption by about 463,000 litres (122,312 gal) every year, and wind-generated electricity would reduce greenhouse gas production by 1,242 tons of carbon dioxide annually. The wind-generated electricity, which would flow into the U.S. distribution system at McMurdo Station, would supply about 15% of McMurdo's annual demand; the smaller New Zealand station would draw about 87% of its electricity requirements from the U.S. distribution system. The two countries

expected the wind farm to be operational in February 2010.

The U.S. Antarctic Program was to complete the modernization of the Amundsen-Scott South Pole Station during the 2009–10 austral summer. The final phase would be the demolition and removal of the South Pole geodesic dome.

Early in the 2008–09 austral summer, a fire destroyed a building, killed one person, and injured two others at the Russian station Progress, located in East Antarctica. The injured, who were part of a 10-person construction team, were taken to China's nearby Zhongshan station. China officially opened its first inland station on Feb. 2, 2009. Kunlun station, which was China's third Antarctic station, was located in East Antarctica at Dome A, about 4,093 m (13,429 ft) above sea level. Scientific activity at the station would focus on ice core drilling.

Researchers who had participated in the five-nation Antarctic Geological Drilling Program announced in October that they had found unexpected evidence of a remarkably warm period in Antarctica 15.7 million years ago. The evidence found in a sedimentary core, drilled from the seafloor underneath the Ross Ice Shelf, indicated that even a slight rise in atmospheric concentrations of carbon dioxide affected the sta-

bility of the West Antarctic Ice Sheet. Because the dynamics of ice sheets were not well understood, discoveries such as this one improved scientific understanding of the mechanisms that controlled the growth, melting, and movements of ice.

In May, British scientists published an analysis suggesting that if the West Antarctic Ice Sheet were to collapse, the sea level rise would be only half as much as had been estimated—3 m (10 ft) rather than 6 m (20 ft). The authors predicted that seas would rise unevenly because the shift in a huge mass of ice away from the South Pole would subtly change the strength of gravity locally and the rotation of the Earth.

In October, NASA scientists reported in the journal *Science* that satellite observations showed that over the past seven years ice sheets in Greenland and Antarctica appeared to be shrinking faster than originally thought. In Antarctica the loss rate had more than doubled.

(WINIFRED REUNING)

ARCTIC REGIONS

The Arctic regions may be defined in physical terms (astronomical [north of the Arctic Circle, latitude 66° 30' N], climatic [above the 10 °C (50 °F) July isotherm], or vegetational [above the northern limit of the tree line]) or in human terms (the territory inhabited by the circumpolar cultures—Inuit [Eskimo] and Aleut in North America and Russia, Sami [Lapp] in northern Scandinavia and Russia, and 29 other peoples of the Russian North, Siberia, and East Asia). No single national sovereignty or treaty regime governs the region, which includes portions of eight countries: Canada, the United States, Russia, Finland, Sweden, Norway, Iceland, and Greenland (part of Denmark). The Arctic Ocean, 14.09 million sq km (5.44 million sq mi) in area, constitutes about two-thirds of the region. The land area consists of permanent ice cap, tundra, or taiga. The population (2009 est.) of peoples belonging to the circumpolar cultures is about 535,000 (Aleuts [in Russia and Alaska], more than 4,000; Athabascans [North America], 40,000; Inuits [or Eskimos, in Russian Chukotka, North America, and Greenland], 155,000; Sami [Northern Europe], 85,000; and 41 indigenous peoples of the Russian North, totaling about 250,000). International organizations concerned with the Arctic include the Arctic Council, the Barents Euro-Arctic Council, the Inuit Circumpolar Council, and the Indigenous Peoples' Secretariat. International scientific cooperation in the Arctic is the focus of the International Arctic Research Center of the University of Alaska at Fairbanks and the University of the Arctic, a circumpolar network of member institutions.

Arctic summer sea ice hit its 2009 annual minimum on September 12. At 5.1 million sq km (1.97 million sq mi) of coverage, the 2009 minimum was the third lowest on record, 24% below the 1979 to 2000 average. The countries bordering the Arctic region (the U.S., Canada, Denmark [Greenland], Norway, and Russia) continued their interest in the more open and accessible Arctic Ocean. Much of the ongoing undersea mapping work carried out in 2009 was done jointly by pairs of countries. Russia and the U.S. conducted collaborative research in the Chukchi Sea; the U.S. and Canada worked together in the Beaufort Sea; and Canada and Denmark worked cooperatively in the high Arctic.

During the year the countries bordering the Arctic continued the process of establishing rights to territory and undersea resources under the aegis of the UN Convention on the Law of the Sea. In April the UN confirmed Norway's claim to extend the boundary of its continental shelf, based on undersea mapping submitted in 2006. The decision added some 235,000 sq km (91,000 sq mi) to Norway's continental shelf area. Russia's claim for Arctic undersea rights was submitted in 2007, and the country continued to carry out research to support its claim. Canada was expected to submit a claim by 2013, and Denmark was to make its proposal by 2014. The U.S. had yet to ratify the convention, although Pres. Barack Obama had signaled support for it.

In August the U.S. introduced a moratorium on commercial fishing in its exclusive economic zone off the Arctic coast of Alaska. The moratorium was announced to provide time to determine the level of fish stocks, the role of Arctic fish in the ecosystem, and their response to the changing sea ice conditions. Fishing fleets worldwide had expressed interest in expanding their operations into the newly opening waters of the Arctic.

The Arctic Council released a major report on Arctic marine traffic in spring 2009. Transport activity was expected to increase from fishing, resource development, tourism, research, and commercial shipping. The report made recommendations for search-and-rescue capabilities in the event of accidents and spills. Just weeks before the report was released, a Russian nuclear-powered ice breaker collided with an unladen oil tanker in the Kara Sea. The tanker was damaged, but there was no

impact on the environment. Russia continued to promote and commercialize summertime shipping along its Northeast Passage in Eurasia, which reduces travel distances between Europe and the Pacific coast by some 5,000 km (3,100 mi). Two German cargo ships successfully completed the transit in September 2009. The new Russian ice breakers *50 Let Pobedy* and *Rossia* accompanied the ships along the most northerly section of the passage. In July the U.S. introduced bills to build two new ice breakers for use in polar waters and to coordinate shipping infrastructure with other Arctic countries. Russia also had plans to add another six nuclear-powered ice breakers by 2020.

In May Russia began construction on the world's first nuclear power plant on an offshore platform. An additional three offshore nuclear plants were in the plans for coming years. The platforms were intended to have multiple uses, one of which was to supply power for exploration for and development of petroleum and natural-gas reserves. Earlier in the spring, Norway had launched two new offshore semi-submersible rigs designed for harsh environmental conditions and ultra-deepwater drilling. Interest in Arctic oil and gas continued to grow in 2009. In 2008 the U.S. Geological Survey had determined that the Arctic contained 13% of the global oil reserves and that it contained 30% of the global gas reserves, with the majority of these reserves located along the Russian continental shelf.

Progress was modest in 2009 on two major pipeline projects in North America to connect hydrocarbon reserves in the Arctic to U.S. and Canadian markets. There was some assessment and planning work for the two gas pipeline routes—one in the MacKenzie Valley project in Canada (estimated at \$15 billion) and two competing proposals in Alaska (with construction costs having increased to an estimated \$30 billion). Interest in northern gas, however, had diminished as a result of technological innovations in drilling. Improvements in steam-extraction technology, known as hydraulic fracturing, were revitalizing natural gas reserves that were closer to markets.

It had been known that methane, the principle component of natural gas, also exists in the Arctic permafrost, both in the tundra and in the undersea frozen layer of the continental shelf. New studies in 2009 focused on

determining how much methane and carbon dioxide was stored in the Arctic and what quantity of these greenhouse gases might be released as the Arctic warms. The concern was that the addition of large amounts of the two gases could create a feedback loop that would accelerate climate change. One of these studies, coauthored by the executive director of the Global Carbon Project by the Commonwealth Scientific and Industrial Research Organization, estimated that some 1.5 trillion tons of carbon dioxide were stored in frozen soils, twice what had been previously estimated. Studies in the Arctic and elsewhere were also conducted into developing technologies that could harvest methane hydrates to use as a fuel rather than allowing the methane to escape into the atmosphere. The result from such harvesting could be significant, since methane is 20 to 25 times more potent than carbon dioxide as a greenhouse gas.

Research of the circumpolar biodiversity also continued in 2009. A Canadian study revealed that caribou and reindeer herds across the Arctic had declined by some 60% over the previous 30 years. Caribou and reindeer were considered a cornerstone species for the subsistence economy of the Arctic's indigenous peoples. Polar bears, also critical to the economy and culture of indigenous peoples, had been under threat from climate change as well, and in 2008 the U.S. government had listed them as a threatened species. These and other issues were discussed at the Indigenous Peoples' Global Summit on Climate Change hosted by the Inuit Circumpolar Council in Anchorage, Alaska, in April 2009.

Late in the summer, UN Secretary-General Ban Ki-Moon traveled to the Arctic before attending the World Climate Conference in Geneva in September. "The Arctic is warming faster than anywhere else on Earth," said Ban, describing the relationship that the Arctic has on world climate, "Changes in the Arctic are accelerating global climate change." His pronouncements added urgency to the UN Climate Change Conference that convened in December in Copenhagen to negotiate the treaty that would succeed the Kyoto Protocol. Leaders at the conference, however, were unable to arrive at a treaty to succeed the Kyoto Protocol, but they did reach agreement on an accord that would see negotiations continue in 2010. (JOHN STREICKER)

AFGHANISTAN

Area: 645,807 sq km (249,347 sq mi)
Population (2009 est.): 28,150,000 (including Afghan refugees in Pakistan and Iran)
Capital: Kabul
Chief of state and head of government:
 President Hamid Karzai

The war in Afghanistan assumed a higher global profile in 2009 as Taliban attacks inside Pakistan demonstrated the international character of the Islamist insurgency in both countries. U.S. and NATO troop levels in Afghanistan rose above 100,000, most of them American.

It was a year of reassessment by Afghanistan's Western allies. After taking office in January, U.S. Pres. Barack Obama began framing new policies to counter Taliban attacks. He authorized higher troop levels and replaced NATO's commander in Afghanistan. Economic reconstruction and the training of Afghan forces became high priorities. In recognition of the regional nature of the opposition, U.S. policy would view Taliban activity on both sides of the Afghanistan-Pakistan frontier as a whole.

There was a new willingness on the part of the U.S. to reach out to moderate Taliban, especially to those fighting for money rather than ideology. Many Western policy makers saw the insurgency in Afghanistan as composed of three groups. The first, the Taliban group led by Mullah Mohammad Omar, was loosely organized and active mostly inside Afghanistan. Many of this group's members were Pashtuns who fought for local or tribal issues and might respond to programs addressing their concerns. A second Taliban group, led by members of the Haqqani family, was credited with having introduced suicide attacks and bombings of public buildings to Afghanistan and was said to be connected with both al-Qaeda and elements of Pakistan's military. Finally, the group led by the warlord Gulbuddin Hekmatyar remained independent of the Taliban while sharing their Islamist orientation. It was not known whether Hekmatyar might find common ground with the government of Pres. Hamid Karzai.

Throughout the year interest focused on Afghanistan's second presidential election, in which Karzai stood for re-election. Registration was under way in the winter for a vote anticipated in the spring. According to Afghanistan's constitution, Karzai's term would end on May 22. In January, however, the Independent Election Commission, appointed by Karzai, announced that the election would be delayed until August 20 because of security and weather concerns. Although it was backed by the UN, the U.S., and other international leaders, this decision was rejected by many Afghan politicians, who argued that it was illegal. The controversy continued until the end of March, when the Supreme Court announced that Karzai could hold office until the August election.

The summer saw a spirited campaign with a broad field of candidates. An Electoral Complaints Commission, which included UN observers as well as Afghans, was charged with investigating and ruling on reported irregularities. The election provoked thousands of complaints of ballot fraud, and counting continued for two months. The first count gave Karzai enough votes to avoid a runoff, but several hundred thousand ballots in his favour were eliminated when convincing evidence of mass fraud was brought to light. A runoff between Karzai and former foreign minister Abdullah Abdullah was ruled necessary. Abdullah demanded that officials overseeing the election be replaced to prevent further fraud, but he was ignored. On November 1 he withdrew his participation, and Karzai was declared the winner without the need for a second vote. The president immediately pledged to remove the taint of corruption from his government.

New strategies could not disguise growing tensions between the Afghan government and its international defenders. Despite NATO's revised rules of engagement, its air strikes continued to cause civilian casualties. Many Afghans, including Karzai, openly criticized the foreign troops for not protecting the population. International leaders, whose own populations were becoming discouraged by so few signs of success, pointed to the corruption and inefficiency in Afghanistan's government and demanded reform.

In March the parliament passed, and Karzai signed, a bill legalizing the traditional family law of the Hazara, a law that was to apply only to this Shi'ite mi-

David Goldman/AP

U.S. Army soldiers wait to be evacuated by helicopter after their armoured vehicle struck an improvised explosive device in Afghanistan's Vardak province in August.

nority. Shi'ite parliamentarians argued that it was legal recognition of Hazara culture, but many inside and outside Afghanistan denounced the law for infringing on women's rights. Under pressure, Karzai promised to review the measure. He later signed a separate law making violence against women illegal. In July, however, Karzai enacted a revised version of the Hazara family law, which, among other provisions, forbade a woman to work outside the home without her husband's permission and allowed a man to withhold food from his wife if she refused to have sex with him.

The year saw a shift in Russian and Central Asian attitudes toward NATO shipments to Afghanistan, from allowing only nonlethal supplies to cross their countries to opening routes to arms shipments. Several Asian countries voiced new warmth and friendship toward Afghanistan's government. China offered expanded economic cooperation but remained noncommittal on requests to open the border of Afghanistan's Vakhn region to trade. India too was eager to participate in Afghanistan's development, and even Japan offered extensive financial aid to the country. On another bright note, in April Afghanistan established its first national park, Band-e-Amir, in a region renowned for the intense, clear blue of its mountain lakes. (STEPHEN SEGO)

ALBANIA

Area: 28,703 sq km (11,082 sq mi)
Population (2009 est.): 3,191,000
Capital: Tirana
Chief of state: President Bamir Topi
Head of government: Prime Minister Sali Berisha

Albania was admitted to NATO at the alliance's summit in Strasbourg, France, on April 4, 2009, and formally applied for full EU membership on April 28. The EU considered the general elections held on June 28 to be a litmus test of the country's progress. By having introduced a new electoral system in which seats were allocated proportionally by districts, legislators had significantly diminished the chances of small parties to win seats. The centre-right alliance led by Prime Minister Sali Berisha's Democratic Party of Albania (PD) won 47.5% of the vote, compared with 38.8% for the bloc led by the Socialist Party of Albania (PS). The conservatives secured 70 of the 140 parliamentary seats and formed a coalition with the Socialist Movement for Integration (LSI), which won 4 seats. This marked a turning point in postcommunist Albania's polarized political culture; it was the first coalition government that included parties from both the left and the right. In Berisha's new cabinet, which took office on September 17, LSI leader Ilir Meta became foreign minister. Meta, who had served as prime minister from 1999 to 2002, had broken away from the PS in 2004 to help found the LSI. Former defense minister Fatmir Mediu of the Albanian Republican Party (PR) returned to the cabinet as environment minister after Albania's Supreme Court dismissed a case against him (owing to his parliamentary immunity) in connection with a deadly blast at a military depot in 2008. A trial opened on October 29 of 29 persons accused of negligence and murder in connection with the blast. They included former army chief of staff Luan Hoxha and four senior executives of the Alba-Demil Co., which operated the facility in Gerdec. By year's end no new investigations had started against Mediu.

The opposition PS, led by Tirana Mayor Edi Rama, boycotted the constitutive session of the parliament on September 7, arguing that there had

been irregularities in the electoral process. The EU stated that although Albania had made progress in its voting system, its political parties should end the "politicization" of the electoral process. It referred to a report of the Organization for Security and Co-operation in Europe (OSCE) that criticized delays in the vote count and the "high levels of mistrust among political parties and their representatives at all levels of the election administration." OSCE monitors also noted procedural violations.

In one such case, just three days before the elections, Berisha and his Turkish counterpart, Recep Tayyip Erdogan, held a ceremony to inaugurate a central stretch of highway linking the Kosovo-Albania border with Albania's main road system. The entire highway, which was expected to be finished in the spring of 2010, would reduce the travel time between Kosovo and the Albanian capital from up to eight hours to only about three. The event highlighted the importance that Berisha placed on developing ties with Kosovo. On October 6 he made a highly symbolic visit to its capital, Pristina, where he signed a series of cooperation protocols and received an honorary doctorate from the University of Pristina. On September 18 in Podgorica, Montenegro, Pres. Bamir Topi and his Montenegrin counterpart, Filip Vujanovic, pledged to strengthen ties between their countries and to build a highway along the Adriatic coast. Other key development projects included the construction of a new terminal at Tirana's international airport that increased passenger capacity by 40%.

The new government maintained a centre-right platform. Berisha proposed to legalize same-sex marriage and to adopt the euro as Albania's currency. In the second quarter of 2009, the unemployment rate was 12.7%, and GDP growth was estimated at 5.3% year-on-year. (FABIAN SCHMIDT)

ALGERIA

Area: 2,381,741 sq km (919,595 sq mi)
Population (2009 est.): 35,369,000
Capital: Algiers
Chief of state: President Abdelaziz Bouteflika
Head of government: Prime Minister Ahmed Ouyahia

The dominant event in Algeria in 2009 was the presidential election held on April 9. The ground had been well prepared; constitutional amendments that favoured the incumbent had been promulgated by presidential decree on Oct. 29, 2008, and approved overwhelmingly by the parliament on Nov. 12, 2008. The amendments removed the bar on a president's serving more than two consecutive terms and made the government answerable to the president rather than Algeria's bicameral parliament, although the parliament reserved the formal right to reject the prime minister's program. In February 2009 Pres. Abdelaziz Bouteflika (*see* BIOGRAPHIES) announced that he would stand for reelection.

In an election almost universally considered fraudulent, Bouteflika won, officially gaining 90.2% of the vote with a reported turnout of 74.5%. Observers believed that the actual turnout was probably about 30%, with the president receiving about half of the vote. Bouteflika was believed to be grooming his younger brother, Said, as his successor. A new political party loyal to the president was being formed, and Said was expected to lead it.

The February announcement that Bouteflika would seek a third term was greeted by a wave of violence, normally suppressed in winter because of the severe weather. An attack near Jijel killed nine security guards and injured two others. Near Tébéssa, seven died in two bombings. Then, in June, eight policemen and two civilians died in a bombing in Boumerdes province, followed by the deaths of 19 gendarmes in an attack on a Chinese construction project near Bordj Bou Arreridj. At the end of the month, five communal guards were killed and two others kidnapped in Khenchela province.

In late July the security services killed a would-be suicide bomber in Dellys. Clashes occurred in Algiers at the start of August between Chinese and Algerian traders in the capital's "Chinatown." In mid-August three militants were killed at Bordj Bou Arreridj. Five more people died in an attack in Jijel province at the end of the month, and three soldiers were killed in September in a shootout between security forces and a terrorist group in the town of Boumerdes. Although the number of violent deaths had diminished slightly, the geographic range of the attacks widened over northern Algeria in 2009.

The group calling itself al-Qaeda in the Islamic Maghrib (formerly the

Salafist Group for Preaching and Combat) continued to be a cause for concern in Algeria. At the start of June, the group killed a British hostage in neighbouring Mali, although it later released a Swiss hostage it had held in Mali for a \$4 million ransom. Because of such violence, Algeria joined a new 25,000-strong security force initiative with Sahel countries and the United States.

Algeria canceled the purchase from France of four frigates for its navy, looking to Italy and Britain instead for major arms purchases. Measures introduced by Algeria to increase control over foreign investment, including a demand that Algeria serve as the majority stakeholder in joint ventures, were beginning to scare off investors in 2009. The new policy was the result of the president's personal resentment of the failure of foreign investors, particularly oil companies, to reinvest profits.

(GEORGE JOFFÉ)

ANDORRA

Area: 464 sq km (179 sq mi)

Population (2009 est.): 85,200

Capital: Andorra la Vella

Chiefs of state: Co-princes of Andorra, the president of France and the bishop of Urgell, Spain

Head of government: Chief Executives
Albert Pintat Santolària and, from June 5,
Jaume Bartumeu Cassany

On June 5, 2009, Jaume Bartumeu Cassany of the Social Democratic Party (PS) was sworn in as Andorra's new head of government. This marked the first time in 15 years for the Andorran government to be run by any party other than the Liberal Party. In parliamentary elections held on April 26, the PS claimed 45.03% of the vote and 14 of the 28 seats in the General Council. The Liberal Party-led Reformist Coalition garnered 32.34% of the vote and 11 seats, while Andorra for Change collected 18.8% and 3 seats.

Bartumeu was a founding member of the PS and had been a leader of the opposition in the General Council since 2005. As head of the government, he vowed to improve fiscal and banking transparency, and toward that end Andorra and France signed an agreement

in September aimed at facilitating the exchange of tax information. Andorra was reported to be discussing similar agreements with a number of other countries. Tourism remained the driving force of the Andorran economy, continuing to account for more than 80% of GDP. Andorra's unemployment rate stood officially at 0%. (ANNE ROBY)

ANGOLA

Area: 1,246,700 sq km (481,354 sq mi)

Population (2009 est.): 18,498,000

Capital: Luanda

Chief of state and head of government:

President José Eduardo dos Santos, assisted
by Prime Minister António Paulo Kassoma

The decline in oil prices slowed Angola's economic growth from 25% in 2008 to about 3% in 2009. Aiming to maintain Angola's place as one of the world's 10 fastest-growing economies, despite the global recession, the government pledged to implement plans for national reconstruction, macroeconomic stability, poverty reduction, and the revival of agricultural production. Angola had become sub-Saharan Africa's largest oil producer, ahead of Nigeria and Libya, and was China's largest oil supplier; however, the non-oil sector of the economy had grown even more rapidly than oil, a positive step toward diversification. Angola's role in the African Union, the Southern African Development Community, and the UN Human Rights Council became increasingly important, underscored by Italy's invitation to Angola to participate in the Group of Eight summit on the world economy.

Angola's continued economic success, political stability, and importance in southern African power relations attracted significant investment overtures from China, the U.S., and Europe. President dos Santos's 30 years of experience as head of state accounted for his administration's skilled and tough negotiation with international financial agencies, multinational firms, and governments. Angola secured at least \$13 billion in oil-backed loans from China, a key participant in reconstructing Angola after its prolonged civil war. Bilateral trade volume between China and

Gianluigi Guercia—AFP/Getty Images

During his trip to Angola in March, Pope Benedict XVI waves to the crowd gathered at a stadium in Luanda.

Angola had reached \$25.3 billion by January. China also pledged to help devise and implement agricultural-development programs in Huíla and Uíge provinces. In September Angola and the IMF settled their differences and resumed talks about loans.

The parliament, led by the majority Popular Movement for the Liberation of Angola (MPLA) party, which controlled 191 seats of the 220-member parliament, set up a commission to draft a new constitution. Work on the new constitution took longer than expected. By year's end the constitution remained unfinished, and a presidential election that should have occurred in 2009 had not been scheduled.

In March heavy rains caused devastating floods in Luanda, Cunene province, and elsewhere; 220,000 farmers were displaced. Aid agencies warned that the damage of 130,000 ha (321,000 ac) of farmland, especially in Cunene province, might result in serious food shortages. Demining operations in 18 provinces continued along the railways, telephone networks, and electricity lines, making train travel more secure and expansion of the infrastructure possible.

The year was punctuated by an unusual number of high-profile official visits by international leaders, testimony to Angola's emergence as a continental power. They included Chinese Minister of Commerce Chen Deming (January), Pope Benedict XVI (March), Russian Pres. Dmitry Medvedev (June), U.K. Minister of State, Foreign and Commonwealth Office, Lord Malloch-Brown (June), Cuban head of state

Raúl Castro (July), and U.S. Secretary of State Hillary Clinton (August). Echoes of 1970s Cold War diplomacy abounded. While Medvedev and Castro reinforced their countries' historic ties with Angola's liberation movement and postindependence development, Malloch-Brown and Clinton were intent on securing favourable trade positions in the face of growing competition from China. (LARAY DENZER)

ANTIGUA AND BARBUDA

Area: 442 sq km (171 sq mi)
Population (2009 est.): 85,600
Capital: Saint John's
Chief of state: Queen Elizabeth II, represented by Governor-General Dame Louise Lake-Tack
Head of government: Prime Minister Baldwin Spencer

Antigua and Barbuda was rocked to its foundations when in February 2009 the U.S. Securities and Exchange Commission filed civil charges against Sir Robert Allen Stanford (who held dual U.S. and Antiguan citizenship) for having allegedly orchestrated a fraudulent multibillion-dollar investment scheme. One of the main charges involved the sale of about \$8 billion in certificates of deposit that were issued with the promise of improbably high interest rates. Antigua-based Stanford International Bank was Antigua and Barbuda's second biggest employer, after the government.

Prime Minister Baldwin Spencer described the situation as having "profound implications" for the country. Stanford's impact on Antigua and Barbuda and the Caribbean as a whole also extended to the region's most popular game, cricket, into which he had poured millions of dollars in the past few years. The Stanford debacle was expected to have repercussions for the country's reputation as an offshore financial centre, especially in light of the Group of 20 decision at its summit in April to impose sanctions on financial centres that failed to comply with internationally agreed-upon standards.

The United Progressive Party (UPP) retained its hold on government in the March general election, winning 9 of the 17 seats in the House of Represen-

tatives. The Antigua Labour Party (ALP) obtained 7. The Barbuda People's Movement (BPM) captured the Barbuda seat. (DAVID RENWICK)

ARGENTINA

Area: 2,780,403 sq km (1,073,520 sq mi)
Population (2009 est.): 40,276,000
Capital: Buenos Aires
Head of state: President Cristina Fernández de Kirchner

Argentine Pres. Cristina Fernández de Kirchner began 2009 with low public approval ratings, rising dissent within her governing Peronist movement, and serious economic difficulties stemming from a combination of the global recession and her government's mismanagement of economic policy. In the face of this growing crisis, in March Fernández de Kirchner unexpectedly reformed the electoral law in order to set June 28 as the date for midterm congressional elections (previously scheduled for October) in which one-half of the seats in the Chamber of Deputies (127 of 257) and one-third of the seats in the Senate (24 of 72) were to be elected.

The marquee battle on June 28 was in the province of Buenos Aires. Fernández de Kirchner's spouse, former president Néstor Kirchner (who after leaving office in 2007 continued to be the country's de facto political leader), squared off against dissident Peronist Francisco de Narváez as well as a non-Peronist opposition alliance led by Margarita Stolbizer. The Chamber list headed by Kirchner utilized copious amounts of government resources to support its campaign. The independently wealthy de Narváez matched Kirchner's campaign spending to a considerable extent, while Stolbizer's impoverished campaign struggled to gain traction among voters.

On June 28 the Kirchners suffered a severe rebuke at the polls. In the province of Buenos Aires, the government's list, headed by Néstor Kirchner, finished second to that of de Narváez (32% to 35%). In the federal capital district, the Kirchners' list placed fourth (12% of the vote), while in Santa Fe and Córdoba, the country's two other large provinces, the Kirchners' Cham-

ber lists came in third (10%) and fourth (9%), respectively, behind dissident Peronist lists. These four districts jointly accounted for 62% of the population, and the Kirchners failed to achieve victory in a single one.

Overall, government supporters won 47 and 8 seats in the Chamber and Senate, respectively. When the renewed Chamber and Senate were constituted on December 10, the Kirchners possessed a Chamber delegation of only 87 members (plus approximately 20 allies) and a Senate delegation of 32 members (plus approximately 5 allies). The days in which the Kirchners could rely on a disciplined legislative majority to obediently approve their legislative initiatives were clearly in the past.

While many hoped that the Kirchners' electoral defeat would lead them to adopt a more consensual governance style, to the contrary the Kirchners ratcheted up their level of conflict and antagonism with a host of groups, including the principal agricultural organizations, the major media companies, the non-Peronist opposition, and dissident Peronists. In addition, immediately following the election, Health Minister Graciela Ocaña resigned, and several Cabinet moderates, in particular Cabinet Chief Sergio Massa, were replaced.

After experiencing six straight years of robust economic growth, in 2009 the Argentine economy shrank by 3%. While the government's continued intervention of the national statistics agency and fraudulent manipulation of economic indicators rendered the official inflation rate unreliable, private estimates suggested that inflation in 2009 was a comparatively high 15%. (MARK P. JONES)

ARMENIA

Area: 29,743 sq km (11,484 sq mi). About 13% of neighbouring Azerbaijan (including the 4,400-sq-km [1,700-sq-mi] disputed region of Nagorno-Karabakh [Armenian: Artsakh]) has been under Armenian control since 1993.

Population (2009 est.): 3,083,000 (plus 138,000 in Nagorno-Karabakh)
Capital: Yerevan
Chief of state: President Serzh Sarkisyan
Head of government: Prime Minister Tigran Sarkisyan

In 2009 new initiatives to resolve the Nagorno-Karabakh conflict and establish diplomatic relations between Armenia and Turkey exacerbated existing political tensions that had been triggered by the disputed February 2008 presidential election. An independent fact-finding group—established by Pres. Serzh Sarkisyan in June 2008 to assess the findings of the ad hoc parliamentary commission that was investigating Yerevan's postelection clashes—suspended its activities in early May 2009 owing to friction between government-appointed and opposition members. Sarkisyan formally dissolved the group one month later. On September 16 the ad hoc parliamentary commission ruled that the police had acted correctly in using force against opposition demonstrators. Under pressure from the Parliamentary Assembly of the Council of Europe, on June 19 the Armenian parliament declared an amnesty for dozens of opposition supporters jailed for their imputed role in the postelection violence.

Sarkisyan's Republican Party of Armenia won 47.3% of the vote in the May 31 Yerevan municipal elections and thereby earned the right to name the city mayor. The Armenian National Congress (HAK), headed by former president Levon Ter-Petrosyan, finished third with 17.4%. The HAK protested that the voting was marred by large-scale fraud, and its members collectively rejected their municipal council mandates. The Armenian Revolutionary Federation–Dashnaksutyun (HHD) and the opposition Heritage Party declined Ter-Petrosyan's call for closer cooperation.

The country's GDP plummeted by 18.5% during the first seven months of 2009 but began to stabilize after Armenia received emergency loans from international financial institutions. In June the U.S. cut aid to Armenia by one-third owing to concern over the handling of the 2008 presidential elections and subsequent protests.

On April 22 the Turkish and Armenian gov-

ernments announced that they had reached an agreement on a framework for normalizing relations. Shortly thereafter the HHD formally quit the four-party governing coalition to protest what it termed Sarkisyan's overly conciliatory Turkish policy. On August 31 Armenia and Turkey made public two protocols on establishing diplomatic relations and opening their mutual border. The Armenian and Turkish foreign ministers signed those protocols on October 10, but neither country's parliament immediately ratified them. Shortly thereafter President Sarkisyan visited Turkey to attend an association football (soccer) match between the two countries' teams, responding in kind to a similar visit to Armenia by Turkish Pres. Abdullah Gül in September 2008.

(ELIZABETH FULLER)

AUSTRALIA

Area: 7,692,208 sq km (2,969,978 sq mi)

Population (2009 est.): 21,829,000

Capital: Canberra

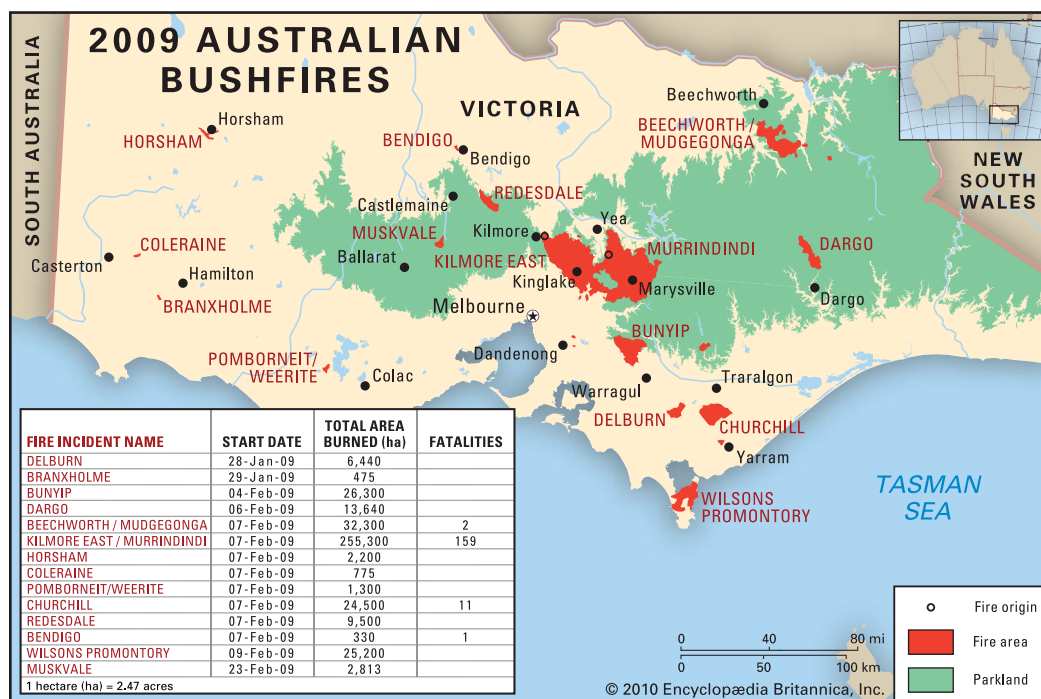

Chief of state: Queen Elizabeth II, represented by Governor-General Quentin Bryce

Head of government: Prime Minister Kevin Rudd

Domestic Affairs. In early 2009 Australia was devastated by bushfires, with many homes in the state of Victoria razed to the ground, and some homeowners were burned alive in their houses. (See Sidebar.) The general public rallied behind the survivors; appeals for donations were successful; and these funds combined with major government assistance to speed up the rebuilding process, which began as soon as it was safe to reenter the burned-out zones.

Although coal was the country's biggest export and Australia had the highest per capita carbon emissions in the developed world, Prime Minister Kevin Rudd's government introduced legislation to launch a carbon-trading scheme to tackle global warming. In August Parliament rejected the plan to introduce carbon permits costing \$A 10 (about U.S.\$8.40) per ton from July 2011, with opposition senators defeating the bill by 42 votes to 30. The legislation was defeated a second time in December when it was reintroduced. Rudd was forced to reshuffle his front bench in June after Joel Fitzgibbon resigned as minister of defense amid allegations of misconduct.

The plight of Aboriginal Australians was in the news in August when James Anaya, a UN special rapporteur on indigenous rights, criticized Northern Territory intervention. Anaya declared that income management and bans on

The Australian "Black Saturday" Bushfires

On Feb. 7, 2009, a day that was dubbed "Black Saturday" in Australia, deadly bushfires swept through the southern state of Victoria, leaving 173 people dead and 500 injured. In addition, more than 2,000 homes were destroyed, and experts estimated that the number of affected wildlife (killed or injured) could climb well into the millions.

With its abundant forests and hot dry climate, Australia had often suffered from deadly bushfires, most notably the 1939 "Black Friday" blaze in Victoria, in which 71 people were killed, and the 1983 "Ash Wednesday" fires in Victoria and South Australia, where 75 people perished. The scale of the recent fires—attributed to extreme weather conditions coupled with a severe and protracted drought that had created tinder-dry vegetation across the state—was unprecedented and left the country in a state of shock.

On February 7, Victorians were told to brace for the "worst day" in the state's history; weather forecasters warned of a record heat wave with temperatures soaring to 46.4 °C (115.5 °F), combined with gale-force winds of up to 90 km/hr (56 mph). That day more than 47 major fires erupted across the state, 14 of them claiming lives or causing significant damage. The most deadly conflagration, known as the Kilmore East fire, which claimed 121 lives, was sparked by a faulty power pole near the township of Kilmore East, 60 km (37 mi) north of Melbourne. The flames quickly jumped a major highway and roared into a forest where they turned into a giant fireball, dwarfing the resources of local firefighters who could only flee in its path. Aided by steep slopes and powerful winds, this fire raced through a series of townships, including Kinglake (where 38 people died), Strathewen (27 perished), and St. Andrews (12 were killed), catching residents by surprise and trapping many in their homes. Some sought to escape by car as the fires approached, but dozens died on the roads as they were overtaken by the fire.

Late in the afternoon a sudden change in wind direction pushed the fire to the northeast, bringing new towns into its path. A parallel fire, known as the Murrindindi fire, also blew to the northeast,

swallowing the unsuspecting tourist town of Marysville, where 34 people lost their lives. Fire experts said that these two fires alone released energy equivalent to 1,500 Hiroshima-sized atomic bombs.

Fires also ravaged other parts of the state, including the eastern region of Gippsland, where 11 people were killed. In some townships there was no more than a handful of survivors after the fires swept through. The township of Flowerdale, 65 km (40 mi) north of Melbourne, was razed to the ground.

The government immediately announced that a Royal Commission would be formed to look into the disaster but declared that the emergency services had done the best that they could in the face of an unprecedented natural phenomenon. When in August the Royal Commission released its 360-page interim report on the tragedy, however, it was highly critical of many aspects of Victoria's emergency service agencies. In particular, the report disclosed that the public warnings given by the Country Fire Authority (CFA) to the communities in the fire's path were inadequate and in some cases nonexistent. It revealed that the CFA personnel in charge of managing the fires failed to issue timely warnings, with the result that many people did not know that they were in danger until the fire was upon them. In addition, serious deficiencies were pinpointed in the command and control systems of the emergency services agencies, a problem that led to confusion, inertia, and poor decision making at crucial times. Among the 51 recommendations included in the report were changes to the "stay or go" policy that, before February 7, had advised residents to choose between remaining and defending their property against a fire or leaving the property early.

The report concluded that since 113 people died in their homes on Black Saturday, many homes could not be defended against a major bushfire, and it recommended that in future fires residents evacuate their homes rather than try to save them. The Victorian government pledged to implement all of the Royal Commission's interim recommendations in time for the beginning of the 2009–10 fire season. The Commission's final report was expected in July 2010.

(CAMERON STEWART)

alcohol were discriminatory and breached Australia's treaty obligations. Rudd authorized ministerial priority to find ways to reduce the numbers of Aborigines in prison and to improve Aboriginal life expectancy.

The Economy. At the beginning of 2009, Australia's national accounts were in a relatively healthy condition, largely because of mineral exports to China. By Easter, however, unemployment had risen to 5.7%. In April the national airline Qantas announced that 1,750 jobs were to be eliminated and deferred new aircraft delivery. Other industries took similar steps.

In the May budget the government followed up its previous policies of cutting interest rates and giving handouts to appropriate sectors of the popula-

tion, including pensioners, the unemployed, and Aborigines. Treasurer Wayne Swan expected growth to fall by 0.5% and unemployment to rise to 8.25%, low by international standards but unacceptably high in Australia. In his budget speech Swan announced a massive infrastructure program. As a result, fiscal 2009 saw a record deficit and unprecedented revenue losses. The stunning rebound of Chinese industrial production helped Australia shrug off the global financial crisis better than anyone expected, however, and on October 6 Australia became the first major world economy to raise interest rates (by 25 basis points to 3.25%) since the crisis began.

Foreign Affairs. In a series of disputes with China, the Rudd government

faced its most serious foreign crisis since it took office in 2007. Aluminum Corp. of China (Chinalco) failed in a bid to obtain a \$A 25 billion (about U.S.\$19.5 billion) stake in Anglo-Australian mining giant Rio Tinto. Shortly afterward, Stern Hu, a Chinese-born Australian citizen and head of Rio Tinto's iron ore operations in China, was arrested for industrial espionage and bribery, together with three senior Chinese employees of Rio. Relations remained frosty, as Canberra declined to refuse a visa to the exiled Uighur leader Rebiya Kadeer (*see* BIOGRAPHIES), even when asked to do so by Chinese Foreign Minister Yang Jiechi, and Beijing canceled a scheduled visit to Australia by Vice Minister He Yafei.

(A.R.G. GRIFFITHS)

AUSTRIA

Area: 83,879 sq km (32,386 sq mi)

Population (2009 est.): 8,378,000

Capital: Vienna

Chief of state: President Heinz Fischer

Head of government: Chancellor Werner Faymann

In 2009 Austria's new "grand" coalition between the Social Democratic Party of Austria (SPÖ) and the Austrian People's Party (ÖVP) was characterized as more cooperative than the previous government, in part because several of the new ministers were previously representatives of social partners. The coalition was sworn in on Dec. 2, 2008, following a snap election on September 28 in which the SPÖ had emerged as the largest party, with 29.3% of the vote, compared with 26% for the ÖVP, 17.5% for the Freedom Party of Austria (FPÖ), 10.7% for the Alliance for the Future of Austria (BZÖ), and 10.4% for the Greens.

The SPÖ had a spate of poor electoral outcomes in 2009, performing relatively poorly in the Salzburg and Carinthian provincial elections in March and placing behind the ÖVP in the European Parliament elections in June with 23.7% of the vote, compared with 30% for the ÖVP. According to

The leader of the far-right Freedom Party of Austria, Heinz-Christian Strache, speaks at a campaign rally ahead of the European Parliament elections in June.

Dieter Nagl—AFP/Getty Images

public-opinion polls, the SPÖ and ÖVP both had about 31% support in August. Support for the FPÖ rose to 21%, and the party seemed poised to remain one of the largest forces in Austrian politics. The FPÖ campaign in the European Parliament elections was highly provocative, however, as a result of its anti-Muslim and anti-Jewish statements. This made it difficult for the ÖVP to find domestic or international acceptance for a possible partnership with the FPÖ, and, for the time being, left no viable alternative to an SPÖ-ÖVP grand coalition. While the BZÖ remained popular in Carinthia, its support dwindled elsewhere in Austria following the sudden death in October 2008 of its popular leader, Jörg Haider. Support for the Greens remained relatively constant at about 10%.

Austria's economy contracted sharply in 2009, largely owing to a significant fall in investment and exports. In the first half of the year, investment was severely restrained by a dramatic drop in manufacturing output, which stabilized midyear and began to recover very slowly thereafter. Investment also contracted owing to low business consumer confidence and tight credit conditions. Exports declined drastically in 2009, largely as a result of a contraction in GDP growth in Germany (Austria's main trading partner), the rest of the euro area, Russia, and Central and Eastern Europe.

In response to these ongoing problems, Chancellor Werner Faymann's SPÖ-led government accelerated the tax cuts originally planned for 2010 to take effect in 2009 and introduced an economic-recovery program to ameliorate the impact of the global economic recession on consumers and businesses. Other measures that were implemented to boost domestic demand included abolishing student fees, extending family allowances, increasing care subsidies, allowing for accelerated investment into infrastructure, promoting research and development, providing special loan guarantees to facilitate lending to medium and large companies, and enabling companies to employ people on short working hours for up to two years. Unemployment reached 6.5% in September, a 27.9% year-on-year increase.

Finance Minister Josef Pröll of the ÖVP reported that the government expected the deficit to reach 3.5% of GDP in 2009 (later revised to 3.9%) and 4.7% of GDP in 2010. As a result, the European Commission announced in late

June that before the end of the year it would initiate procedures against Austria for having exceeded the 3% of GDP threshold established in the EU's Stability and Growth Pact. Meanwhile, the government focused on shoring up the banking sector, particularly given Austrian banks' high degree of exposure to the rapidly deteriorating economies in Central and Eastern Europe, which amounted to up to 80% of Austria's GDP. By mid-2009 most of the country's largest banks had received state aid.

AZERBAIJAN

Area: 86,600 sq km (33,436 sq mi), including the 5,500-sq-km (2,100-sq-mi) exclave of Nakhichevan and the 4,400-sq-km (1,700-sq-mi) disputed region (with Armenia) of Nagorno-Karabakh

Population (2009 est.): 8,832,000

Capital: Baku

Head of state and government: President Ilham Aliyev, assisted by Prime Minister Artur Rasizade

Developments in Azerbaijan in 2009 caused some to cast further doubt on the country's commitment to democracy. On March 18 voters approved sweeping amendments to the constitution, one of which empowered Pres. Ilham Aliyev to seek additional terms as president after the expiration of his current term in 2013. Opposition parties, which had called for a boycott of the vote, questioned the official turnout figure of 71%. The opposition ignored a subsequent invitation to embark on an extraparlimentary dialogue with the ruling Yeni Azerbaijan Party (YAP). In August draft amendments to the law on political parties were announced that, if voted into law, would impose new restrictions on party registration and funding.

Various curbs on media freedom took place in Azerbaijan in 2009. On January 1 a radio ban took effect that barred international broadcasts from being featured on national frequencies. Observers also expressed regret over the July arrest of two young bloggers, Emin Milli and Adnan Hadji Zadeh, who were later convicted on charges of hooliganism and sentenced to two and

a half and two years' imprisonment, respectively. Journalists and nongovernmental organization workers were denied entry to the hearing proceedings, and individuals who appeared outside the courthouse in a show of support were arrested. In mid-August Azerbaijani security services summoned for interrogation several of the 43 people who voted for Armenia in the Eurovision Song Contest.

In early November, after a four-month trial, 26 men accused of having engineered an August 2008 explosion in Baku's Abu-Bakr mosque were sentenced to between 2 and 15 years' imprisonment. On October 5 four Azerbaijanis and two Lebanese citizens were jailed for planning a terror attack on the Israeli embassy in Baku.

The economy—in particular, the financial, construction, and petrochemical sectors—was badly affected by the global financial crisis. GDP growth slowed dramatically, reaching only 2.7% during the first seven months of the year.

In 2009 President Aliyev met several times with his Armenian counterpart, Pres. Serzh Sarkisyan, to discuss the Nagorno-Karabakh conflict, but the two failed to reach a formal settlement. In April the announcement of the incipient Armenian-Turkish rapprochement—and the subsequent commitment by those two countries in October to establish diplomatic relations—occasioned official protests from the Azerbaijani government. President Aliyev, who declined to attend a UN-sponsored conference in Istanbul in early April, hinted in October that Azerbaijan could choose Russia, rather than Turkey, as the route for future gas exports. On June 29 Azerbaijan had signed a deal that gave Russia's Gazprom the right to purchase gas from the Shah Deniz field beginning in 2014–15. (ELIZABETH FULLER)

BAHAMAS, THE

Area: 13,939 sq km (5,382 sq mi)

Population (2009 est.): 342,000

Capital: Nassau

Chief of state: Queen Elizabeth II, represented by Governor-General Arthur Dion Hanna

Head of government: Prime Minister Hubert Ingraham

In May 2009 The Bahamas submitted a claim to the United Nations for formal delineation of its maritime boundaries under the Law of the Sea regime, proposing to extend the limits of its continental shelf beyond the 200-nautical-mile exclusive economic zone it had claimed in 2008. In December 2008 The Bahamas had submitted the formal claim to the United Nations proposing a 12-nautical-mile territorial sea limit and a 200-nautical-mile exclusive economic zone. Negotiations on the proposal with other countries would be required; the area claimed overlapped into U.S., Haitian, Cuban, and Turks and Caicos waters. Cuba reportedly was preparing to drill in the Cay Sal Bank area that The Bahamas regarded as its own, moreover adding urgency to the need to settle maritime boundaries on a permanent basis.

Like elsewhere in the Caribbean Community (Caricom) region, The Bahamas was moving ahead as fast as it could to expand the role of renewable energy in its energy matrix. By midyear the Bahamas Electricity Corporation had short-listed as many as 13 proposals for various types of renewable-energy projects (including solar, wind, biomass, and ocean wave), and in December it was still considering renewable-energy bids by six companies.

Privatization of government-owned assets was still on the agenda in the Caribbean, and The Bahamas proved no exception. In July it launched the process to sell 51% of the Bahamas Telecommunications Co. (BTC).

Head of government: Prime Minister Khalifah ibn Sulman al-Khalifah

On May 5, 2009, Bahrain announced that it would abolish its sponsorship system for foreign workers. The move was the first of its kind in the Gulf Arab states, where some 12–14 million foreigners worked (an estimated 512,000 of them in Bahrain). The action meant that the workers, mainly poorly paid Asians, would be able to change jobs and eventually get better pay without having to secure the approval of their sponsor (*kafeel*). The labour sponsorship system, which was riddled with corruption, had been criticized by international human rights groups as operating in a mode little short of slavery. Most of the remaining Gulf countries subsequently indicated that they would revise their own sponsorship laws.

In April, in a move designed to ease tensions with the opposition, King Hamad ibn Isa al-Khalifah ordered the pardon and release of 178 Shi'ite political prisoners. The detainees had been accused of having committed security offenses.

Under pressure from conservative Islamic groups, both Sunni and Shi'ite,

the Bahraini government imposed severe restrictions on live entertainment and the consumption of alcohol in most of its hotels. Bahrain, which had traditionally been known as an oasis of tolerance surrounded by mostly conservative Islamic countries, faced a possible impact on its tourism industry.

The construction of the long-awaited 40-km (about 25-mi)-long "Friendship Causeway" linking the island of Bahrain to Qatar was scheduled to begin in 2010. The estimated \$2.7 billion project was expected to take four years to complete. (LOUAY BAHRY)

BANGLADESH

Area: 147,570 sq km (56,977 sq mi)

Population (2009 est.): 156,051,000

Capital: Dhaka

Chief of state: Presidents Iajuddin Ahmed and, from February 12, Zillur Rahman

Head of government: Chief Adviser Fakhruddin Ahmed and, from January 6, Prime Minister Sheikh Hasina Wazed

A new government came into power in Bangladesh as the year 2009 began. The election that had taken place on Dec. 29, 2008, was important for many reasons. First, it marked the end of the two-year rule of an unelected military-backed interim government; the parliament had been suspended during this time, and many political leaders were jailed on charges ranging from graft to the illegal possession of liquor. More significant, however, was the fact that the election witnessed the overwhelming defeat of the pro-Islamist right-wing alliance that had ruled for five years prior to the interim government. Emerging victorious at the polls was instead Sheikh Hasina Wazed's secular centre-left Awami League, which claimed 230 of the 299 contested parliamentary seats. Prior to the election, a number of detained politicians were released on bail, and charges against many of them—including Hasina—were eventually dropped. Hasina took office as prime minister on January 6.

Perhaps even more jolting to the country than the election was a deadly mutiny on February 25–26 by border guards in the Bangladesh Rifles, a paramilitary security force. During the in-

surrection at least 74 persons, including 57 senior military officers, were killed by the guards, who reportedly had been upset over their pay and living conditions. The mutiny ended after the government offered the mutineers an amnesty deal, though Hasina later rescinded amnesty for those directly responsible for the killings. The government seemed to be teetering on the edge of collapse in the wake of the mutiny as the army accused it of having failed to protect the lives of military personnel. Though the army wanted the suspects in the killings to be tried under military law, the government decided to create a special civil tribunal to handle the prosecutions.

The year also saw a sudden increase in extrajudicial killings carried out by police and the Rapid Action Battalion, the country's elite anticrime and antiterrorism force. In the first nine months of the year, 97 such killings took place, which prompted criticism of the battalion by human rights organizations. In April the government announced plans to investigate and prosecute persons for war crimes committed during Bangladesh's 1971 liberation struggle. Bringing war criminals to trial was a popular campaign pledge made by the Awami League, but the move was strongly opposed by the country's pro-Islamist parties, several of which had allegedly collaborated with Pakistani forces in 1971.

On the economic front, imports declined by 20% and exports by about 3% in July–August compared with the same period a year earlier. Despite these drops, the country fared relatively well during the global recession, with GDP growth estimated at 5.9% for 2009, down only slightly from its 2008 rate of 6.2%. Agricultural output growth reached 4.6%, and the ready-made-garment sector remained strong, with export growth of more than 20% during the first half of the year.

(INAM AHMED)

BARBADOS

Area: 430 sq km (166 sq mi)

Population (2009 est.): 276,000

Capital: Bridgetown

Chief of state: Queen Elizabeth II, represented by Governor-General Sir Clifford Husbands

Head of government: Prime Minister David Thompson

In January 2009 Barbados launched an economic diversification plan that included the development of pharmaceutical and biotechnology industries and placed a new emphasis on creative activities, such as art, fashion, music, and film. The expansion of renewable and alternative energy would also be a key part of the program.

In May Barbados removed the death penalty as the mandatory sentence for murder, applicable since colonial times. Henceforth, judges would be able to determine the type of sentence to be imposed on convicted murderers, taking into account the circumstances of each case.

Barbados's "get-tough" immigration policy (which was instituted in June) upset many of its fellow Caribbean Community (Caricom) member states, which regarded it as inconsistent with regional principles. Nevertheless, in July, Prime Minister David Thompson announced that the policy would remain in place. Thompson repeatedly asserted that Barbados's economy had weathered the economic storm better than most Caribbean countries and was experiencing an "unacceptably high" level of immigration. In May, Thompson decreed that Caricom nationals living illegally in Barbados had six months to prove that they had resided in the country for at least eight years prior to Dec. 31, 2005, and needed to pass a security background check and provide evidence of employment. Those who did not regularize their status would be deported when identified. (DAVID RENWICK)

BELARUS

Area: 207,595 sq km (80,153 sq mi)

Population (2009 est.): 9,658,000

Capital: Minsk

Head of state and government: President Alyaksandr Lukashenka, assisted by Prime Minister Syarhey Sidorski

In 2009 Belarus achieved mixed economic results as it struggled to deal with the world recession. On January 2 the official currency, the Belarusian ruble (zaichik), was devalued by 20.5% against the U.S. dollar. Inflation hovered around 9–11%, and GDP dropped by 0.5% over the first nine months of

the year. Export of heavy transport vehicles to Russia fell by 55.3% between January and August, and trade with Russia declined by more than 40% overall. On October 28 the government abandoned its regulation of retail prices other than for “socially important products” such as milk, meat, salt, and sugar.

The country's complex relationship with Russia overshadowed other events. In May Russia refused to provide Belarus with the remaining \$500 million of a \$2 billion loan that had been negotiated in 2008. On June 6, after Belarus had held talks with the EU on dairy exports, Russia instituted a ban on all Belarusian milk products—a move that had a deep impact on Belarus, which sells 95% of its dairy exports to Russia. The ban was eventually lifted on June 17, but not before Belarus had expressed its anger by skipping a meeting of the Collective Security Treaty Organization (CSTO) in Moscow, at which it was scheduled to take up the rotating chairmanship. Belarusian Pres. Alyaksandr Lukashenka also maintained that his country would not be pressured by Russia into recognizing the breakaway Georgian republics of South Ossetia and Abkhazia.

On July 31 Lukashenka did participate in a CSTO meeting in Kyrgyzstan, but he refused to sign documents creating a collective rapid-response force to meet regional security threats. He eventually signed in October and committed 5,000 troops to the force. On September 18–29 a joint Russian-Belarusian military exercise called Zapad 2009 was held in Belarus that involved some 12,500 soldiers, about half of them Russian; the controversial exercise simulated a response to a NATO attack on Kaliningrad. Russia also provided funding and expertise for the construction of a nuclear plant at Astravets in Belarus's Hrodna region.

Belarus moved notably closer to the EU. On February 19 EU High Representative Javier Solana visited Minsk, and Lukashenka made his first European trip after the EU's lifting of a travel ban on him and other government officials when he traveled to Rome for a meeting on April 27 with Pope Benedict XVI. In mid-September Lukashenka made a highly publicized visit to Lithuania, where he declared that Europe's policy of isolating Belarus had failed.

On May 7 in Prague, Belarus was accepted as a member of the EU's Eastern Partnership project (along with

Georgia, Moldova, Armenia, Azerbaijan, and Ukraine), and Deputy Prime Minister Uladzimir Syamashka attended the inaugural meeting. The goal of the project was to promote economic integration and enhance political links between EU border countries.

A nationwide census was held on October 14–24. The results of the accounting were expected to be released in February 2010. (DAVID R. MARPLES)

BELGIUM

Area: 30,528 sq km (11,787 sq mi)

Population (2009 est.): 10,779,000

Capital: Brussels

Chief of state: King Albert II

Head of government: Prime Ministers

Herman Van Rompuy, and from
November 25, Yves Leterme

Belgium enjoyed some much-needed political stability in 2009 after having had three governments in the previous 18 months. On January 2 a new coalition under Herman Van Rompuy (see BIOGRAPHIES) of the Flemish Christian Democrats (CD&V) received a solid vote of confidence: 88 deputies voted in favour and 45 against. The government contained the same five political parties—both the French- and Dutch-speaking Liberals and Christian Democrats and the French-speaking Socialists—as its predecessor. That government had been forced to resign after ministers were accused of having intervened in the judiciary.

While the federal coalition held firm, after elections in June different combinations of political parties were formed to govern the three regions. A bitter row between Francophone Liberals and Socialists ruled out any partnership between them in French-speaking Wallonia and the bilingual Brussels-Capital Region. In the former, a ruling coalition was formed between the Socialist Party (PS), the Democratic Humanist Centre (CDH), and the Ecologists. In Brussels, Christian Democrats (CDH and CD&V) and environmentalists (the Ecologists and the Green Party) from both language communities, the French-speaking Socialist Party (PS), and the Dutch-speaking Liberals (Open VLD) joined forces.

Yves Logghe/AP

Museumgoers in Louvain-la-Neuve, Belg., trek toward the entrance to a newly opened museum devoted to the cartoonist Hergé, the creator of the comic-strip character Tintin.

In Flanders the CD&V remained at the head of a coalition that included the Socialist Party-Different (SPA). The success of the right-wing New Flemish Alliance (N-VA) enabled the party to join the government at the expense of the Open VLD.

Some of the country's leading politicians moved on to new posts. After having been forced to resign as prime minister in December 2008, Yves Leterme returned to the government in the summer of 2009 as foreign minister. He replaced Karel De Gucht, who became Belgium's European Commissioner after the holder of that office, Louis Michel, was elected to the European Parliament (EP). Former prime minister Guy Verhofstadt became the leader of the Alliance of Liberals and Democrats for Europe (ALDE) in the European Parliament. In November it was announced that Prime Minister Van Rompuy would become the first-ever president of the EU. King Albert gave Leterme a second chance at the prime ministership, appointing him to succeed Van Rompuy as Belgium's head of government.

Meanwhile, in March the government had been presented with a bleak economic forecast by the High Council of Finance, which projected that savings of at least \$5 billion would be neces-

sary in each of the next four years if the annual budget was to be balanced by 2013. In the first quarter of the year, there were a record number (2,570) of bankruptcies, and in April the IMF predicted that the country's economy would shrink by 3.8% in 2009—the biggest decline since 1939.

The Belgian banking sector continued to be fraught. In February angry Fortis shareholders narrowly rejected a government-backed plan to sell 75% of the Belgian bank to France's BNP Paribas. After further negotiations between the Belgian government and the prospective French purchaser, the sale was ultimately approved in April. Two weeks later the federal government provided the Flanders-based banking and insurance group KBC with an initial loan guarantee of about \$31.5 billion, after the company had reported first-quarter losses of about \$5 billion.

In foreign affairs, a 2005 agreement between Belgium and The Netherlands (see below) about a Dutch estuary continued to remain controversial. The Dutch had promised to widen the estuary, which provided Antwerp with access to the North Sea, but the work had not yet begun.

Museums dedicated to two of Belgium's most famous citizens debuted in 2009. In June a museum devoted to Hergé, the pen name of Georges Rémi, opened in Louvain-la-Neuve to honour the 80th year of his creation of the comic-strip character Tintin. The museum was designed by French architect Christian de Portzamparc. Also in June, the Magritte Museum, featuring more than 200 of the Surrealist painter's works, opened in Brussels. In other news, Belgian tennis fans were given a major treat when the country's two leading women players, Kim Clijsters and Justine Henin, decided to come out of retirement. (RORY WATSON)

BELIZE

Area: 22,965 sq km (8,867 sq mi)

Population (2009 est.): 334,000

Capital: Belmopan

Chief of state: Queen Elizabeth II, represented by Governor-General Sir Colville Young

Head of government: Prime Minister Dean Barrow

On March 4, 2009, the administration of Prime Minister Dean Barrow won a landslide victory in Belize's municipal elections. The government, however, was engaged in many litigations, including some with groups challenging its constitutional amendments and others with Mayan leaders who sought to prevent the granting of lands in their villages, but most of them involved billionaire Michael Ashcroft. The new government rejected the terms of a 2005 secret Accommodation Agreement (signed with the former administration of Said Musa) that guaranteed the telecommunications company Belize Telemedia Ltd. a 15% rate of return or a tax holiday. To end the legal struggles, the government nationalized the Ashcroft-owned Telemedia on Aug. 25, 2009. Despite the government's \$200 million economic stimulus package, by the end of the first quarter of the fiscal year, the economy was feeling the effects of high inflation (9.6%), a decline in merchandise imports (15.1%), and a drop in domestic exports (2.6%). The fall in the price of petroleum, the loss of tourists' dollars, and debt servicing added to the downturn. Meanwhile, the Belizean government remained committed to pursuing the process of resolving a territorial dispute with Guatemala. In 2008 Belize had signed a special agreement with Guatemala, subject to simultaneous referenda, to refer the latter's claim to the International Court of Justice.

In early August cheering citizens welcomed home the men's national basketball team. It had placed second in the COCABA Championship games in Cancún, Mex. (HERMAN J. BYRD)

BENIN

Area: 112,622 sq km (43,484 sq mi)

Population (2009 est.): 8,792,000

Capital: Porto-Novo (executive and ministerial offices remain in Cotonou)

Head of state and government: President Thomas Yayi Boni

The year 2009 opened with charges of widespread corruption leveled against local agencies participating in the Beninese government's microfinance program. Aboubacar Aboudou, former

director of the program, blamed inadequate controls that allowed unscrupulous intermediaries to take advantage of borrowers. Since its inception in 2007, the scheme had made more than 500,000 loans.

In February the Ministry of Energy and Water blamed corrupt public officials for the slow progress in implementing multinational donor projects designed to bring safe water to the people. On July 13, Pres. Thomas Yayi Boni suspended Minister for Urban Affairs François Noudégbessi, pending an investigation into the disappearance of €9.7 million (about \$13.5 million) that had been allocated to finance the summit of the Community of Sahel-Saharan States held in 2008 in Cotonou.

The government announced on February 3 that substantial offshore oil reserves, estimated at 14,000 bbl a day, had been found. On February 7 the World Bank granted Benin \$30 million for the creation of small businesses and the provision of electricity to less-developed parts of the country. On May 31 Germany awarded Benin €50 million (about \$71 million) for improvements in infrastructure.

The hospital ship *Africa Mercy* docked in Cotonou in February for a 10-month stay to provide free surgery and other essential medical care. In July, following massive flooding that displaced more than 20,000 people throughout the country, various UN agencies stepped up efforts to assist the cash-strapped government.

The European Union on April 8 added Benin's air carriers to its aviation blacklist. Airlines considered unsafe were forbidden to fly to any EU member country. (NANCY ELLEN LAWLER)

BHUTAN

Area: 38,394 sq km (14,824 sq mi)

Population (2009 est.): 691,000

Capital: Thimphu

Head of state: Druk Gyalpo (King) Jigme Khesar Namgyal Wangchuk

Head of government: Prime Minister Lyonchen Jigme Thinley

Bhutan remained peaceful and tranquil in 2009, following the country's first democratic elections and its transfor-

Aizar Raldes—AFP/Getty Images

mation in 2008 from an absolute to a constitutional monarchy, but reports of outlawed Indian insurgent groups reforming inside Bhutan (near the border of the Indian state of Assam) raised alarms. Following the official visit in June of Bhutanese Prime Minister Lyonchen Jigmi Thinley to India—where discussions focused on the exportation of hydropower to India and the final list of 10 hydropower projects to be constructed in Bhutan—Indian Home Minister P. Chidambaram paid a three-day visit to Thimphu. Discussions focused on security issues along the border and the activities of militants in the northeast.

Though Bhutan enjoyed robust economic growth of more than 8%, according to the country's Labour Ministry, the unemployment rate jumped to 4% in 2009, from 3.7% in 2007. An important milestone occurred in Bhutan; all 20 of its districts became connected to the rest of the world through broadband Internet access.

In an effort to attract foreign aid and investment, Prime Minister Thinley visited Japan in September. Bhutan also liberalized its foreign-direct-investment laws to attract Indian investors. On September 21 a magnitude-6.3 earthquake shook the country. The temblor damaged nearly 200 structures and killed at least 12 people in a little-populated eastern region of the country.

BOLIVIA

Area: 1,098,581 sq km (424,164 sq mi)

Population (2009 est.): 9,775,000

Capitals: La Paz (administrative); Sucre (constitutional)

Head of state and government: President Evo Morales Ayma

Bolivian Pres. Evo Morales was re-elected to a five-year term in December 2009, and his Movement Toward Socialism party made major gains in legislative elections, capping a year of major political and institutional reform. The stage for Morales's victory had been set in January when Bolivians approved a new constitution. The charter, drafted with the help of Spanish legal scholars, gave sweeping rights to Bo-

Demonstrators in La Paz, Bol., display signs condemning Leopoldo Fernández outside the jail where the former governor of Pando province was being held on charges of having orchestrated the killings of several supporters of Bolivian Pres. Evo Morales.

livia's Indian majority, including guaranteed political representation, recognition of communal forms of property, and the right to employ indigenous justice systems. The charter won 62% voter approval in a nationwide referendum, but four provinces in the eastern lowlands rejected it, underscoring the division between the economically rich eastern region and the impoverished Indian-dominated highlands.

The referendum result reaffirmed Morales's popularity and strengthened his hand in Bolivia's internal political battles. The extent of these battles was underscored when in April police burst into a hotel in Santa Cruz, shot three men dead, and arrested two others; the police claimed that they had thwarted a plot by allies of powerful separatist businessmen in the eastern region to kill Morales. The businessmen denied the allegation, saying that the affair was a ruse by Morales to boost his chances of reelection. One of those killed was a Bolivian Hungarian who had fought in the Balkan wars of the 1990s; the victim had told an interviewer that he was returning to Bolivia to fight for a breakaway state. Meanwhile, Leopoldo Fernández, former governor of Pando province, remained in jail, accused of having been involved in the killings of several Morales supporters during opposition protests that had occurred in 2008.

Relations with Washington, strained under the administration of Pres. George W. Bush, remained tense after the inauguration of Pres. Barack Obama. The U.S. maintained its suspension of tariff exemptions, saying that Bolivia had failed to cooperate sufficiently with antinarcotics efforts. The last of some 38 agents of the Drug Enforcement Agency who had been ordered out of Bolivia left in January, and a U.S. diplomat was expelled in March, the second in six months. President Morales drew a sharp distinction between the growing of coca leaf, a legal crop traditionally chewed to ward off hunger and altitude sickness, and the illegal production of cocaine. Annual cocaine seizures had doubled between 2006 and 2008, and police raided several clandestine drug laboratories, which they said were among the largest ever discovered. Morales strengthened Bolivia's ties with Russia by signing agreements on drug eradication and military cooperation, including the acquisition of a presidential jet and of helicopters.

A number of global issues affected Bolivia during the year. Rising temperatures wiped out the Chacaltaya glacier near La Paz, which threatened the city's water supply. Though the world economic downturn dampened demand for Bolivia's natural gas, fears that the nationalization of resource industries would sour relations with foreign in-

vestors proved largely unfounded. The most exciting development in natural resources concerned lithium, which is used in the batteries that power electric automobiles. About half of the world's known lithium deposits were located in the Salar de Uyuni, a salt desert in southwestern Bolivia. The government continued construction of a pilot plant to process the mineral and held talks with French, Japanese, and South Korean firms on development. (PAUL KNOX)

BOSNIA AND HERZEGOVINA

Area: 51,209 sq km (19,772 sq mi)

Population (2009 est.): 3,835,000

Capital: Sarajevo

Heads of state: Nominally a tripartite (Serb, Croat, Muslim) presidency with a chair that rotates every eight months; members in 2009 were Nebojsa Radmanovic (Serb; chairman until July 6), Zeljko Komsic (Croat; chairman from July 6), and Haris Silajdzic (Muslim). Final authority resides in the Office of the High Representative and EU Special Representative, Miroslav Lajcak (Slovakia) and, from March 26, Valentin Inzko (Austria)

Head of government: Prime Minister Nikola Spiric

Threats of secession and political infighting between the three main ethnic groups in Bosnia and Herzegovina renewed speculation among observers in 2009 about a fresh round of violence prior to the September 2010 general election. The EU and the U.S. described the situation in both entities of Bosnia and Herzegovina as "dysfunctional in nature." The Muslim-Croat Federation was criticized for having lacked a consensus, and the Republika Srpska (RS; Bosnian Serb Republic) for having resisted the international community's efforts to strengthen federal institutions. Paddy Ashdown, who served (2002–06) in the UN-appointed post of high representative in Bosnia and Herzegovina, stated that he had seen a dramatic reversal of progress in the entities.

RS Prime Minister Milorad Dodik challenged the international community, calling for an end to the 14-year-old EU-run Office of the High Representative (OHR). On October 1 the RS parliament voted to withdraw from participation in all state institutions

A Bosnian Muslim woman from Srebrenica watches a television broadcast of the genocide trial of former Bosnian Serb leader Radovan Karadzic that began in late October in The Hague; on the wall behind her are photographs of victims of the 1995 Srebrenica massacre, which Karadzic was accused of overseeing.

Amel Emric/AP

unless the OHR reversed a decision concerning control of the national electric company. High Representative Valentin Inzko, who replaced Miroslav Lajcak in March, wanted to keep the energy grid operational under a power-sharing agreement, but Bosnian Serbs wished to keep electric power distribution locally controlled.

Worsening economic conditions unleashed an unprecedented wave of labour and social discontent. During the first 10 months of 2009, more than 50,000 Bosnians lost their jobs, and remittances sent from workers abroad declined because of the downturn in the global economy.

In an attempt to jump-start the economy and curb growing discontent, the governments of both entities negotiated a €1.1 billion (about \$1.6 billion) stand-by arrangement with the IMF. Two-thirds of the funds were earmarked for the Muslim-Croat Federation and one-third for RS. The arrangement called for a 10% cut to the Federation and RS budgets—some €207 million (about \$292 million) and €73 million (about \$103 million), respectively.

Muslim-Croat Federation Prime Minister Mustafa Mujezinovic faced public protests as the budget cuts called for the lowering of public-sector salaries and wages by 10% as well as reduced payments to social-entitlement programs. After the IMF approved the 36-month stand-by arrangement in July, nearly all unions and veterans' associations staged daily two-hour strikes over a two-week period.

According to IMF data, Bosnia and Herzegovina's GDP was expected to drop 3% in 2009. The World Bank de-

scribed the economies of both entities as "gloomy," owing to rising joblessness, shrinking exports, and a reduction in remittances, which in 2007 accounted for 23% of GDP (some \$2.4 billion). Most of the unemployed (more than 22% of workers) lived in rural areas and received up to six months of assistance (about \$133 per month). The average monthly wage was \$450.

In October, Bosnia and Herzegovina submitted an official application for the NATO Membership Action Plan, which prepares candidates for full NATO membership. Although NATO foreign ministers did not offer Bosnia a formal plan in December to join the alliance, the country still expected to join NATO by 2015. (MILAN ANDREJEVICH)

BOTSWANA

Area: 582,356 sq km (224,848 sq mi)

Population (2009 est.): 1,991,000

Capital: Gaborone

Head of state and government: President Ian Khama

In Botswana in 2009 diamond production fell to 20 million carats from 33 million in 2008. After temporary mine closures, however, the production of base metals for East Asian markets surged ahead, as did plans for the massive expansion of coal mining at Mmamabula and the construction of an

electrical power plant there. The government responded to the recession by making drastic cuts in its recurrent expenditures while boosting capital spending on infrastructure projects—leading to an unprecedented budget deficit covered by a \$1.5 billion loan from the African Development Bank.

Pres. Ian Khama came under fire from privately owned media outlets for his alleged authoritarianism and “militarization” of the state. He presented himself, however, in a more flattering light in consulting rural masses over urban elites and in issuing directives to negligent government officials. The issue that generated the most controversy was the killing by state security agents of reputed master-crook John Kalafatis, who was shot eight times while sitting unarmed in his limousine.

Both the ruling Botswana Democratic Party (BDP) and the main opposition Botswana National Front (BNF) were rent by internal dissent, but the BDP factions led by President Khama and top party official Daniel Kwelagobe called a truce six weeks prior to the general election held on October 16. The political debate stimulated high voter registration and a 74% turnout; young people aged 18 to 29 voted in notably high numbers. The BDP was returned to power again, gaining one more seat in the National Assembly over its 2004 total of 44. The BNF, which was still divided internally, lost half of its dozen seats, while its splinter party, the Botswana Congress Party, upped its seat count from one to four.

Relations with Zimbabwe improved in 2009. Botswana pledged \$75 million toward that country's economic reconstruction, starting with the restoration of the Bulawayo city power station.

(NEIL PARSONS)

BRAZIL

Area: 8,514,877 sq km (3,287,612 sq mi)

Population (2009 est.): 191,481,000

Capital: Brasília

Head of state and government: President
Luiz Inácio Lula da Silva

Anticipation of the October 2010 presidential and congressional elections dominated politics in Brazil in 2009. In

mid-April, Pres. Luiz Inácio Lula da Silva formally articulated his preference for Dilma Rousseff, his chief of staff, to be the presidential candidate of the ruling Workers' Party (PT). Among the opposition, Gov. José Serra of São Paulo state and Gov. Aécio Neves of Minas Gerais state spent the year positioning themselves to become the official candidate of the Brazilian Social Democratic Party. Another official believed to be planning a presidential run was Marina Silva, a former minister of the environment and current senator from the state of Acre, who defected from the PT in August to join the Green Party. Several other senators and more than two dozen federal deputies also changed political parties during the year as a means of improving their chances of holding on to office. In addition, a number of members of Lula's cabinet were expected to resign their posts by April 2010, a mandatory step for cabinet ministers who wished to run in the elections.

New oil discoveries continued to be made by the Brazilian state oil company, Petrobrás, and its partners in the ultra-deepwater subsalt areas of the Santos basin. Multiple discoveries over the previous three years of multibillion-barrel reserves raised Brazil's profile as a top future oil producer and gave impetus to increased investment in ports, shipyards, naval construction, refineries, and oil and gas exploration. On August 31 Lula unveiled the federal government's plan for a new regulatory regime to manage this new oil wealth. He proposed the creation of a new government enterprise, called Petrosal, to manage and oversee the contracts for subsalt exploration and production. Under this regime Petrobrás would be the only operator with a guaranteed stake of 30% in each concession. Moreover, current royalty distributions would be changed, and a social and environmental fund would be created to spread oil revenues to other states outside the production areas. These provisions caused fiery debate from the producer regions, which stood to lose revenues from royalties, as well as from those who viewed the new regulatory body as a redundant bureaucracy. The proposal was certain to become a major campaign issue in 2010.

Through its Growth Acceleration Program, which aimed to boost the country's economic growth to 5% annually, the federal government continued its funding of social and educational projects, rural-electrification efforts, housing initiatives, and infrastructure development. The Brazilian Congress,

however, was prevented from advancing on any meaningful reforms by a corruption scandal that embroiled the Senate for much of the year. Agaciel Maia, who had served as the director general of the Senate since 1995, resigned his post in early March after allegations emerged that he had hidden ownership of a mansion in Brasília from federal tax authorities. An ensuing investigation linked Maia to the operation of a secret Senate bank account and to the awarding of lucrative patronage jobs and pay raises via hundreds of secret acts that were passed by the Senate during Maia's tenure as director general. Also implicated in the scandal was the president of the Senate, José Sarney, who was accused of having approved the secret acts and of having secured jobs for a number of his family members and political allies.

As Sarney and others faced mounting evidence of corruption, many in Congress called for his ouster. On August 19, however, the Senate Ethics Committee absolved Sarney of all accusations. Also in August, Sarney's son, Fernando, who faced allegations of money laundering, won an injunction from Federal District Court Judge Dácio Vieira that prohibited any reporting of accusations against him by one of Brazil's leading daily newspapers, *O Estado de São Paulo*. The newspaper sought to overturn this injunction, but on December 10 Brazil's Supreme Court ruled against the newspaper's appeal of Vieira's decision.

By a vote of 10 to 1, the Supreme Court in March ruled in favour of a continuous demarcation of the Raposa Serra do Sol Indian reservation, located in northern Roraima state near the Venezuelan and Guyanese borders, and ordered all non-Indians to exit the reserve and end economic activities there by April 30. Brazil also moved forward with infrastructure investments in the country's Amazon region. Three major hydroelectric power plants were planned for the region; these included the Santo Antonio and Jirau projects in Rondônia state and the Belo Monte project in Pará state. The Brazilian Environmental Institute on June 3 approved an economic-impact study for the Jirau project, clearing the way for construction on the project to begin.

At its meeting in Copenhagen on October 2, the International Olympic Committee (IOC) chose Rio de Janeiro as the site of the 2016 Olympic Games; Rio was selected over three other finalists—Madrid, Tokyo, and Chicago—and

would become the first city in South America to host an Olympics. The IOC decision came just months after the May 31 selection by the Fédération Internationale de Football Association of 12 Brazilian cities to host World Cup matches in 2014. On October 17, however, Brazil was reminded of the major public safety challenge it faced ahead of these events as violence in Rio de Janeiro between drug gangs and police left at least 26 people dead. The country also faced infrastructure challenges. This was underscored by a nationwide blackout that occurred on November 10 as transmission problems at the Itaipú hydroelectric power plant spurred a prolonged power outage.

The year saw Brazil emerge relatively unscathed by the global economic crisis. For the 12-month period ended on September 30, GDP shrank just 1%. The central bank's Open Market Committee reduced the benchmark discount interest rate from 13.75% to 8.75% at year's end, affording Brazil an opportunity to cut barriers to credit and help stimulate domestic consumer spending. The Lula administration also extended and granted tax breaks on consumer purchases of automobiles, motorcycles, and appliances. Accumulated inflation as measured by the National Consumer Price Index was 3.93% through November. (JOHN CHARLES CUTTINO)

BRUNEI

Area: 5,765 sq km (2,226 sq mi)

Population (2009 est.): 400,000

Capital: Bandar Seri Begawan

Head of state and government: Sultan and Prime Minister Sir Haji Hassanal Bolkiah Mu'izzaddin Waddaulah

According to the Asian Development Bank, the Brunei economy was expected to shrink by 0.4% in 2009. This represented a slight improvement over 2008, when GDP fell by 1.9%, owing largely to the decline in the oil and gas sector's performance based on constant prices. The country's oil and gas sector had declined by 6.3% in 2008,

In January 2009 the worst floods and landslides in memory were witnessed in Brunei. As a result of the cutting off of electricity and water supplies, the

overflow from drains caused temporary havoc in some parts of Bandar Seri Begawan, the capital.

In March 2009 outgoing Malaysian prime minister Abdullah Ahmad Badawi announced that his country and Brunei had reached a landmark agreement in resolving their border disputes; a settlement could clear the way for exploration in potentially oil- and gas-rich waters shared by both countries. Nevertheless, one of the main and contentious issues—the long-standing border dispute over Limbang, Malay—remained unresolved. In August the new Malaysian prime minister, Najib Tun Razak, announced that Malaysia's national oil company, Petronas, would have a role in a joint oil-extraction venture with Brunei within the framework of the Malaysia-Brunei Letters of Exchange signed in March.

In 2009 it was disclosed that the much-touted "Visit Brunei" campaign in 2008—designed to attract visitors from abroad, especially from neighbouring Southeast Asian countries—had met with little success. Looking forward to 2010, however, Brunei would play host (for the second time) to the ASEAN Tourism Forum.

(B.A. HUSSAINMIYA)

BULGARIA

Area: 111,002 sq km (42,858 sq mi)

Population (2009 est.): 7,584,000

Capital: Sofia

Chief of state: President Georgi Parvanov

Head of government: Prime Ministers Sergey Stanishev and, from July 27, Boiko Borisov

Bulgaria began 2009 as one of the 17 countries affected by the Russian-Ukrainian gas dispute that led to the disruption of natural gas deliveries throughout eastern and southern Europe. During January, which was an extremely cold month, thousands of Bulgarians did not have electricity or heat, and production was halted in major enterprises across the country. The crisis highlighted the weakness of Prime Minister Sergey Stanishev's Socialist-led government, which was already struggling to deal with the effects of the global recession; the government also faced mounting allegations of corruption and

the misappropriation of EU funds and saw its approval ratings plummet to 20% in the months before the July parliamentary elections. In March, after the government's continued failure to fulfill the European Commission's corruption- and crime-reduction requirements for the unfreezing of Special Accession Programme for Agricultural and Rural Development (SAPARD) funds to Bulgaria, Stanishev requested that European diplomats be involved in the implementation of legal and structural changes in the country. This proposal, however—viewed by many observers as a final attempt by the Socialist party to gain some credibility with voters—was rejected by the European Commission.
